THE SERVICE BILL. On March 6th an attack was made by the Labor party and by some of the Liberals upon the new Service Bill at its second reading. The purpose of the measure was to prolong the Conscription acts to Apr. 30, 1920. The government set forth its reasons for maintaining the armies of occupation on a compulsory basis for another year. In the debate that followed it was pointed out that the working classes would not consent to such measures involving a further waste of blood, and it was argued that voluntary enlistment would provide sufficiently for all post-war conditions. For the government it was said that it did not intend to fasten conscription upon the country. On the contrary it intended to make an end of it as fast as possible, and to use its influence against it throughout Europe. The government did not intend to send large bodies of troops to Russia for example. If the bill were not passed, it was argued that the entire machinery of the army would fall to pieces, and the result would be anarchy in England. The Labor party continued to oppose the measure but it passed the House of Commons March 31st. It provided for an army of about 850,000 men. Mr. Churchill, speaking for the government, explained that the army of occupation would cost about £133,000,000 as compared with the expenditure of £1,500,000,000 on the army, navy and munitions during the previous twelve months. He denied the charge that Great Britain was going to keep an army on the Rhine to serve as a debt-collecting agency. He declared that for enforcing compliance with the terms of peace and for securing the safety of the British Empire the force provided could not be regarded as excessive.

LAND FOR SOLDIERS. Measures for the settlement of soldiers on the land were under discussion at the beginning of the year. According to the outlines published a new system of land acquisition was involved, whereby public acquisition would be secured in exchange for an annuity to the present owner, the state having the right to redeem the annuity. The plan of farm colonies was given up and the new measure was to provide land as near as possible to the homes of the applicants.

HOUSING BILL. A bill empowering the local authorities to submit plans for the provision of new houses was discussed in April and passed July 17th. In default of action by the local authorities the Local Government Board could present plans and provide houses. A housing bill for Scotland was enacted August 11th and one for Ireland, August 15th.

ALIENS BILL. A measure introduced, March 31, providing for the continuance in peace time of the war-time policy of restrictions on aliens caused repeated conflicts in the House. It was sharply criticized for the discretion allowed by it to the Home Secretary in the matter of its application. The government made modifications under pressure and discussion of it was renewed in November.

GOVERNMENT MACHINERY. An important re-

port was made at the beginning of the year on the machinery of government. Its recommendations were based on studies not only by prominent civil servants but by representatives of labor. It recommended the distribution of the business of the departments according to the class of service, and an analysis of the work of the civil service. As matters stood each minister was responsible to Parliament for those government activities which affected the sectional interests of particular classes of persons. This meant overlapping, repetition, and the evasion of responsibility. In general the committee recommended the organization of ministries in accordance with the functions which they performed. The ministries in question were: Finance, national defense, external affairs, research and information, production, employment, supplies, education, health, justice. Several of these were new, notably, the ministry of research and information. Another abuse which the report indicated was the undue limitation of expenditures by the Treasury, which led to the swelling of the estimates by the departments. It concluded on this point that "obligation upon spending departments to formulate a full and reasoned statement of their proposals must be recognized as placing upon the treasury a corresponding obligation not to assume a negative attitude in the first instance toward suggestions for improving the quality of the service or the efficiency of the staff which administers it."

PEACE CABINET. In the middle of October the government was defeated unexpectedly in a vote on an unimportant measure when many were absent. Nevertheless it was regarded as a reverse, and led to a discussion as to the resignation of the cabinet and appeal to the country. The serious condition of the finances led to a demand for various reforms on the part of the press. The budget estimate showed a deficit of £250,000,000, but the actual estimated deficit, according to the revised figures submitted to Parliament on October 27, was £473,000,000. This condition, coupled with the defeat the week before, led the Government to accede to certain demands made upon it, especially in regard to the return of the cabinet to a peace basis. It was announced on October 27th that the cabinet would assume its peace time form, and all the ministers would be responsible for the decisions instead of the few ministers that constituted the war cabinet. The change was announced in the House of Commons by Mr. Bonar Law, who invited the following officials to become members of the cabinet:

Lord President of the Council; the Lord Lieutenant of Ireland or Chief Secretary for Ireland; the Lord Chancellor; the Home Secretary; the Secretaries of State for Foreign Affairs, the Colonies, War and Air, and India; the First Lord of the Admiralty, the Secretary for Scotland, the President of the Board of Trade, the Minister of Health, the President of the Board of Agriculture, the President of the Board of Education, the Ministers of Labor and Transport, the Lord Privy Seal, and George Nicoll Barnes, Minister Without Portfolio.

LABOR DIFFICULTIES. The danger of a serious labor war with the miners, railway men, and other great bodies of working men showed itself early in the year. In February the Ministry of Labor declared that the government had decided to call a national industrial conference

on February 27th. This met with general approval among the laboring classes. At that time an offer from the government was under consideration by the Miners' Federation which had made proposals for higher wages, shorter hours, and a more liberal scheme of demobilization, and nationalization of mines. The government's answer consisted of a list of counter-proposals which the conference rejected after only an hour's consideration. In regard to the wage question Mr. Robert Smillie, president of the federation, declared that unless the government could show that the increase demanded was unreasonable, its answer manifestly would have no force. The miners demanded an increase of 30 per cent in wages; a six-hour day; the maintenance at trade union rates of wages of mine workers who were unemployed on account of demobilization, and the nationalization of the mines. Meanwhile the government was proceeding with its inquiry into the questions raised by the miners and into conditions of the coal trade generally. By this time close relations had been established between the miners and the railway men and transport workers and the three bodies were referred to as the "Triple Alliance," which was seen to have the power of practically controlling the industrial situation. The Industrial Conference met on February 27th and appointed a joint committee with equal representation of employers and working-men under a chairman chosen by the government to report on the causes of and remedies for the situation. This report unanimously adopted on April 4th recommended the establishment of a 48-hour week; a universal minimum wage; recognition of and negotiations between organizations of employers and work-people; housing schemes, development plans, etc., for preventing unemployment; normal provision for maintenance during unemployment, and the establishment of a permanent national industrial council to advise the government. The government promised to give a sympathetic study of these proposals.

In February a coal commission was created as a result of the threatened strike of the 700,000 miners. It consisted of Mr. Justice Sankey, chairman, and coal owners, miners, and persons appointed by the government including Mr. Balfour and Mr. Sydney Webb. Meanwhile the miners by an overwhelming majority had voted to strike but decided to defer action until a report of the commission appeared. The Sankey report led the government to offer the miners an increase of two shillings; a seven hour day reduced to six hours after 1921; £1,000,000 a year from the coal revenue for miners' housing and progressive reorganization of the industry; and an effective voice for miners in the direction of mines. The miners voted on April 9th and 10th to accept the terms pending a further report by the commission. This report was published on June 20th. It recommended that coal should be nationalized. This policy was accepted unanimously. A majority of 10 to 3 advocated the payment of a fair compensation to the holders. The chairman and half the members of the commission, a majority of 7 to 6, recommended nationalization of the collieries in 1922 and in the meantime the reorganization of the control of the industry. In spite of these concessions the miners were far from satisfied and a strike was in progress in the summer in the Yorkshire mining district

FUEL SHORTAGE ACUTE DURING THE LONDON RAILWAY STRIKE
Girl workers stacking 20,000 empty petrol cans

Many factories were closed for lack of coal but the strike was settled by the intervention of the government.

In October the railway strike came to an end, and the railway men returned to work. This was characterized by some as the end of a revolutionary attempt against the government, for the cause of the strike was not less political than economical. Mr. Lloyd George saw in the movement from the first a revolutionary conspiracy. The contest was not over wages or any other difference pertaining to the treatment of labor. The strike was designed as an expression of power and was a part of the international revolutionary trade unionism. This international movement had been tending for some time past toward some kind of an effective demonstration, and it had chosen England as the proper place for it on account of the strength of trade unionism in that country. The alliance of the railway men, the transport workers, and the miners had formed an enormous mass of organized labor, and according to its enemies aimed to revolutionize the system of government. During the railway strike the zeal on the part of the people to fill the gaps in the service was extraordinary. Almost every class in society including the highest took up the work that the strikers had abandoned. Public opinion generally seemed hostile to the strike, which, if successful, would have practically brought the industries of the country to a standstill. The failure of the strike was held by the British press as a triumph of the public. The above point of view, however, was exclusively that of the conservative and capitalistic organs.

The strikers and a portion of the public did not accept it. One of the demands of the strikers had been a minimum of 50 shillings a week. This indeed had been granted by the government. But it was pointed out that the government proposal as to the wages and their duration was not accepted. Moreover, Mr Lloyd George had imposed as an essential condition of settlement that work should be resumed in advance and as it turned out work was not resumed in advance, the order for it not having been issued until agreement had been reached in regard to other matters. Again, the government had given way just before the date for holding a meeting of the great trade unions which threatened a general strike. The probable reason for regarding the outcome as a victory for the government was the latter's apprehension of serious results. The government had feared that the strike of the railway-men might be the first step in a revolutionary movement, and they had at all events thought it possible that a serious attack would be made upon the mechanism of the state. From this point of view the government had characterized the strike as an anarchistic measure. On the other hand, the leader of the railway men, Mr. Thomas, had maintained that the union aimed simply at industrial and economic results. The strikers believed that if the government had continued its course it would have drawn other trade unionists into the movement, and that the result would have been of a more serious nature. See **STRIKES AND LOCKOUTS; TRADE UNIONS.**

THE GOVERNMENT PROGRAMME. In the latter part of October the government set forth its programme, as follows:

Labor. A national maximum 48-hour week.

A living wage for all workers.

Workers to have:

- (a) A voice in working conditions.
- (b) A financial interest in their work.
- (c) Provision for unemployment.

Whitley councils to be developed.

Healthy houses and expeditious transport.

Coal Mines. State purchase of mineral rights.

A levy on purchase price for social amelioration of mining areas.

Miners to help shape conditions of industry.

Reorganization and economical management of mines.

Labor representation on controlling boards of mining areas.

A free career to talent throughout the industry.

A committee on output to be set up immediately.

Trade Policy. Free imports (with certain exceptions) from Sept. 1, 1919.

No government support of foreign exchanges except to prevent complete collapse.

No dumping of foreign goods for sale at sweated prices.

Powers to prevent any flood of imports competing unfairly with British goods through a collapse of exchange in the country of origin.

Protection for unstable "key" industries, i.e.:

- (a) Products essential for war.

- (b) Industries so neglected before the war that there was an inadequate supply of their products.

- (c) Industries which it was found necessary to foster and promote during the war.

- (d) Industries that cannot maintain the level of production essential to the nation without government support.

No undue profits at the expense of the community to be made by reason of protection of unstable "key" industries.

Development of technical instruction and research for all classes.

Inquiry and propaganda to promote increased output.

Standardization to be promoted and coördinated by the state.

Development and control of electric and water power supply.

Imperial trade to be fostered, and an imperial investigation board to improve communication and transport within the empire.

Export credits to facilitate resumption of trade with disorganized European countries.

Stimulation of export trade.

Agriculture to be further developed, and fixed prices for crops to continue for another year at least.

Protection against trusts, combines, and harmful trade combinations, government to collect fuller statistics of national trade, prices, costs, profits, etc.

THE PARTY SITUATION. From the time of the general elections at the close of 1918 down to the end of 1919 some 15 by-elections were held and in about a third of these the contest was a three-cornered one between the Coalition, Liberal and Labor candidates. In every contest where the three were represented the Labor candidate polled the largest vote. In the by-elections as a whole the Labor vote also exceeded that cast for either of the other parties. The Labor and Liberal vote considerably exceeded the government vote, being about two-thirds of the total.

The average of the vote cast for the Labor candidate was considerably greater than the average for the independent Liberal candidate. Thus at the close of the year there were predictions in many quarters that the present Coalition cabinet would be overthrown and that the Labor party was in a fair way to become its successor. While these were merely conjectures, it was clearly shown that the Labor party had at length arrived at a position where it must be reckoned with as one of the great national parties of England. Its programme had not changed during the latter part of the year but a change in the attitude of the public was manifest, for it was generally realized that it had become an organized party and stood on a permanent basis and was not merely the expression of discontent of a class; although there was still a considerable body of comment in the press which indicated that its true nature was misunderstood, referring to it as a class movement or as a party of laborers. It was pointed out on the other hand that the Labor party was not a party of laborers but included representatives of all classes and was based upon a body of opinion as definite if not more definite than the programme of the other parties. During the preceding five years it had been recruited by large bodies of intellectuals, by professional men and women including lawyers, teachers, doctors, architects, authors, newspaper men, workers in physical science laboratories, clerks and even manufacturers and employers. It included some generals in the army and admirals in the navy, three or four members of the House of Lords, one or two bishops, etc. It so happened that among the candidates in the recent by-elections not one had been a laborer in the usual sense of the word. Among them were a physician, a manager of a cooperative society, a retired engineer, etc. It was recruited also from among the 20,000,000 male and female voters admitted to the ballot by the law of 1917 and it drew to it a large number of women and young men who had not been brought up under the old political tradition of party warfare. Many of its members had suffered especially from the war and saw in the Labor party the only way of restoring prosperity. In general it appealed to the younger generation which took little interest in the distinction between Asquith Liberals, Independent Liberals, Unionists, Conservatives, etc., and who found nothing in the old parties that satisfied their whole aspirations. There was much alarm in the conservative parties over its successes. It was regarded as a dangerous step toward Socialism and it was feared on account of its inexperience and ignorance of public affairs. Mr. Winston Churchill for instance declared that it was totally incapable of governing. This provoked the immediate response that if the Labor chiefs had not studied at universities and did not equal their opponents in elegance of language still they had no less practical common sense than their adversaries and they pointed to the capable men that had represented them in Parliament and in the government. Moderate supporters of the Labor party were not alarmed by the spectre of Socialism. They pointed out that there was no tendency in England to go to the extremes of Continental Socialism and that the great mass of English workingmen were remarkable for their attach-

ment to tradition. They held to a conservative and slow progress toward the realization of their advanced ideas. Another feature of the situation was the decline of the Liberal party in spite of an occasional large vote in its favor. By the general election of 1918 they had been reduced to 30 seats in Parliament which was only half of the strength of the Labor party and in the course of the year not one of the Liberal leaders had succeeded in getting back to Parliament.

LLOYD GEORGE AT THE PEACE CONFERENCE. In the latter part of April an address which Mr. Lloyd George delivered in the House of Commons on the subject of his work at the Peace Conference was widely commented upon by the British press and in certain quarters severely criticized. His speech answered complaints which had appeared in the press in regard to the failure of the Conference to take proper measures for insuring the peace of Europe. A telegram had been sent to him by some four hundred members of the House of Commons expressing their anxiety. After this telegram he inclined to the side of France and accepted her demands. He insisted in his speech that there was no Russia and pointed out the absurdity of attempting a conquest of Russia. On this point he was criticized by the interventionists who said it was a question of helping patriotic Russians to help themselves. The London *Times* attacked this portion of his speech as insincere. It also was dissatisfied with his treatment of the question of recognizing the Bolshevik government. He had declared that there was no question of such recognition. But there were reasons to suppose that some form of recognition had been seriously discussed at the Peace Conference and had been advocated by interested parties. The *Times* critic maintained that if it was defeated the result was due in part to the resistance of the French government and in part to publicity. The policy of aiding the people who were living in the vicinity of the Bolsheviks was approved by Lloyd George but the fear was expressed that he would not pursue this policy with firmness. He said in his speech that two of the great Allied powers had been on the point of quarreling over the question of Teschen, and he asked how many members of the House of Commons ever heard of Teschen. The *Times* critic took the stand that everybody had heard of it and that everybody knew the origin of Russian influence in Germany and added that Mr. Lloyd George evidently judged the knowledge of the members of Parliament by the standard of his own. The *Times* characterized him as grossly ignorant of the matters under discussion, saying that while he was able to read and write he did neither and suggesting that if he had consulted the columns of the *Times* in years gone by he might have been better fitted for his discussion. The *Times* considered him completely ignorant also of other aspects of the Polish question and asked if he did not know that the Poles were anti-Bolshevist until M. Paderewski told him so. The *Times* referred to Mr. Lloyd George as having wasted weeks at the Conference by requiring it to serve the purpose of an elementary school and supply him with primary instruction in European politics and geography. The above perhaps may suffice to show the spirit of a large part of the criticism directed against him for whatever the

faults of his policy may have been there was a large body of British criticism which revealed no higher a degree of intelligence than the passage above summarized. In regard to Bolshevism Mr. Lloyd George said that it threatened to conquer the population that revolted against it and that had been organized at the request of the Allies. The Allies could not dismiss the latter as soon as they had served their purpose. They could not say "We do not need you any longer and we permit the Bolsheviks to cut your throats." Where the population was not behind this resistance their organized effort against Bolshevism had failed as for example in the Ukraine. It had been proved that the population in Siberia, the Don and elsewhere were offering a real resistance and it was the business of the Allies to support them in accordance with their promises. Therefore he did not see any departure from the policy of non-interference in the fact that Great Britain felt bound to support Admiral Kolchak and Generals Denikin and Kharkoff. As to the supply of food he believed that Great Britain was not supplying it for they were fairly well off as regarded food. What they needed was arms and equipment. The policy of Great Britain was to organize all the forces of the Allied countries bordering on Bolshevik territory including Poland, Rumania and Czechoslovakia, who were undoubtedly anti-Bolshevik. If the Bolsheviks attacked any of the friends of the Allies it was the business of the Allies to come to their defense. See RUSSIA, and WAR.

LLOYD GEORGE AND THE TIMES. Reports of conflict between Lloyd George and Lord Northcliffe who controlled the *Times* and a chain of influential newspapers were frequent throughout the year. In the speech above-mentioned Lloyd George made certain remarks about these newspapers which in part accounted for the tone of the *Times's* criticism above quoted. He said that at the beginning of the Conference there were strong appeals to everybody all round to support President Wilson and his great ideals and that these appeals came from the same papers that were now hysterically attacking all those great ideals. In the press a short time before there had been a cartoon representing Bolshevism as a bogey and Lloyd George as a person trying to frighten the working classes with that mere bogey. Now Bolshevism was no longer a bogey but it was a monster and Lloyd George was represented as trying to dress it up as an angel. He added that when a man has deluded himself and every one whom he permits to approach him to add to that delusion that he is the only one that can win the war and then finds that there is no demand for him among those who are directing the destinies of the world and that the war has been won without him it is naturally somewhat disappointing. If then he comes to the conclusion that he is the only man to make peace and is not called upon to do that either, it is still more disappointing. These words hinting plainly at Lord Northcliffe accounted for the sharpness of the *Times's* retort. Mr. Lloyd George went on to say that they still believed in France that the *Times* is a serious organ and do not know that it is merely a threepenny edition of the *Daily Mail*. This accounted for his speaking of the matter. His interest in maintaining the good will of the two countries was his only apology for taking notice of that

kind of trash. After the speech, in addition to the criticism above mentioned the *Times* printed various extracts from the French press in praise of its policy and calling it a friend of France, as well as tributes to the paper and to Lord Northcliffe from a variety of other sources.

THE PRINCE OF WALES'S VISIT. In the interest of good will between Great Britain and the Dominion of Canada and the United States, the Prince of Wales paid a long visit to both countries. He was received with great enthusiasm by both the Canadian and the American public.

GREECE. A maritime kingdom in the south-east of Europe between the Ægean and the Ionian seas consisting of the lower part of the Balkan Peninsula, the island of Crete and new territories acquired as a result of the Balkan wars. The mainland of Greece is nearly cut in two by the gulfs of Patras and Lepanto on the west and the Gulf of Ægina on the east. Besides the continental portion there is the Archipelago of the Ægean Sea and the Ionian Islands. The surface is mountainous and the coasts are high, rocky, and indented.

AREA AND POPULATION. The area before the Balkan wars given at 25,014 square miles with a population in 1907 of 2,643,109. The area of the new territories was placed at 16,919 square miles making a total of 41,933. The population of the new territories in 1913 was placed at 2,101,616. The total population estimated in 1914 was 4,821,300. In 1914 Greece with the consent of the Allied Powers occupied Northern Epirus and in March, 1916, took formal possession of the country but its claims to it were still unsettled at the close of 1919. Athens in 1907 had a population of 167,479. Saloniki the largest town in the new territories had a population estimated in 1915 at 157,889. The majority of the inhabitants are Greek Orthodox. Education is compulsory between the ages of 6 and 12 but the law is not well enforced and illiteracy prevails. It was reported that 30 per cent of the army recruits could not read or write and that 15 per cent could read only.

PRODUCTION AND INDUSTRY. Agriculture is the main occupation although owing to the irregular and rocky surface only one-fifth of the land is cultivable. The chief crops are currants, olives, nuts, figs, tobacco, grapes, cereals, and fruit. The yield of currants for 1918 was placed at 123,000 tons; of olive oil, 31,702,800 gallons; of tobacco, 48,699,000 pounds, a falling off of over 50 per cent from the previous year; of wine, 10,566,800 gallons; of nuts, 4,486,185 pounds. In 1919 Greece, like most of the other countries, was suffering from the extremely high price of food-stuffs, the increase as compared with 1914 being from 100 to 500 per cent at the beginning of 1919. The livestock at the end of 1918 was estimated as follows: Sheep, 4,795,597; cattle, 441,865; asses, 298,640; mules, 123,285; horses, 212,148; swine, 30,241. The chief minerals in respect to value are lead, magnesite, marble, lignite, salt, and emery. No figures for the production are available later than for 1916 and 1917. In 1916 the value of raw ores was placed at \$2,812,329 and in 1917, \$3,443,953; of finished products, 1916, \$2,994,219, and 1917, \$1,313,943; of marbles and quarry products for 1916, \$6,541,152, and 1917, \$6,163,821. An important industry is that of emery which however underwent a decline in 1918. It is a monopoly of the state under the control of the Interna-

tional Financial Commission. During the war the entire output of emery was taken by the French government on account of the Allies. The value of emery mined in 1911 was \$491,600 and in 1918, \$314,783. According to the industrial census of 1917 there were 2213 factories employing 36,124 hands. Cotton manufacturing in recent years has been making steady progress. In 1919 the number of employees was placed at 5731 and there were 128,255 spindles and 16,965 looms. The government issued a decree prohibiting the importation of cotton goods indefinitely except under special permits. Wages in all industries advanced greatly during the war. The wages of heavy manual labor for example rose from about 98 cents in 1914 to \$2.38 in 1918; of dockworkers from \$1.54 to \$2.30; of car conductors, from 77 cents to \$1.74; of machinists, \$1.16 to \$2.70, etc.

COMMERCE. The following table shows imported articles during 1916 and 1917:

Articles	1916	1917
Agricultural products . . .	\$37,786,221	\$19,225,306
Animal products	1,293,536	788,795
Chemical products	5,301,791	2,432,428
Cotton yarns and fabric....	6,707,620	4,923,199
Esparto and hat-making material	561,527	351,305
Fish and fish products . . .	1,941,251	962,672
Forest products	1,500,425	297,372
Furniture and other wooden articles	42,310	79,045
Glassware and pottery . . .	395,596	114,623
Leather, and manufactures of	1,310,867	976,019
Live stock	174,765	131,311
Metals and, minerals, crude	7,321,183	774,414
Metals and minerals, manufactured	1,473,439	454,020
Oil and oil substances . . .	486,814	227,855
Paper products and objects of art	2,548,200	1,404,185
Scientific apparatus	452,929	328,219
Sugar and sugar products . .	6,482,426	3,989,140
Tannery materials and dyes	115,560	59,536
Wines and liquors.	309,109	446,480
All other articles	886,127	1,474,465
Total	\$77,091,696	\$39,440,692

The following table shows the value of the exported articles during 1916 and 1917:

Articles	1916	1917
Agricultural products . . .	\$17,575,356	\$10,402,709
Animal products	3,609,329	1,318,925
Chemical products	254,407	40,071
Cotton yarns and fabrics..	5,196	270
Esparto and hat-making material	1,400	.
Fish and fish products . . .	125,445	21,944
Forest products	1,287,841	380,241
Glassware and pottery . . .	5,936	2
Leather and manufactures of	16,722
Live stock	695
Metals and minerals, crude.	2,636,962	6,116,308
Metals and minerals, manufactured	240,184
Oil and oil substances....	4,734,877	1,848,281
Paper products and objects of art	7,936	3,227
Sugar and sugar products..	1,401
Tannery materials and dyes	148,512	76,567
Wines and liquors.....	2,097,003	962,983
All other articles.....	103,362	20,383
Total	\$32,852,564	\$21,191,911

In 1918 the exports to the United States exceeded in value those of any preceding year, owing to the heavy exports of tobacco. The export of licorice root to the United States has become a considerable factor in the trade.

COMMUNICATIONS. The number of steamships that entered the Port of Piraeus during 1917 was 923 and of sailing vessels, 6813. Of these 848 steamships and 6735 sailing vessels were under the Greek flag. The freight rates between the United States and Greece reached an enormously high figure during 1918. According to the report of the United States Bureau of Foreign and Domestic Commerce 223 sailing vessels entered with 12,271 tons and 201 steamships with 265,356 tons in 1917 and in 1918 the figures were respectively: Sailing vessels 310 of 27,921 tons and steamships 266 of 389,127 tons. Those cleared during the same years were in 1917, 137 sailing vessels of 7309 tons and 185 steamships of 252,951; and in 1918, 157 of 12,575 and 230 of 343,583. The latest figures for railways available are for 1914 when the total length was 1365 miles. A junction line was completed in 1918 on the government-owned Larissa railway extending from Papapouli to a point on the Belgrade-Constantinople line. This marked an important event in the economic development of the country for it offered easy means of communication with the rest of Europe and opened the way to a trade with the east.

It was arranged during the year that the Greek railways should be organized under French auspices and late in December a party of 50 French railway experts left Paris for Athens to take up the work of supervision. The Greek railways were to be materially extended after the coming into force of the Treaty of Versailles. In fact one of the projects passed upon with a favorable decision by the Greek government was to build the Drama-Cavalla Railway, an important railway and sea connection which will bring the Salonica-Serres-Constantinople Railway at Drama into connection with the Ægean Sea at Cavalla. In 1919 the only outside outlet was in Western Thrace at Dedegatch, an open roadstead unprotected from the strong southerly winds. The necessity of building the Drama-Cavalla line had long been apparent but the Turkish government did not act in the matter. Cavalla is the only important Macedonian port except Salonica, and is the most important tobacco-exporting port in Greece.

As laid out the right of way will be 43 kilometers (27 miles), compared with 36 kilometers (22.5 miles) by the carriage road. The country is mountainous, necessitating several tunnels, one of them about 2½ kilometers (1.5 miles) long. A conservative estimate stated there would be required at least two years for the completion of this line.

FINANCE. The unit of value is the drachma, equivalent to a franc, or 19.3 cents. At the close of the war, exchange was extraordinarily stable. This was attributed to many causes including the growing difficulty of buying goods abroad; the large expenditure for the Greek army in 1917; and the holding of large sums abroad under the control of the National Bank of Greece. During 1918 the drachma varied only from 5.14 to 5.225 to a dollar. The budget estimates for 1918 are: Revenue, 1,150,494,459 drachmas; expenditure, 1,361,666,378 drachmas. The public debt has been largely under the control of the International Finance Commission created in 1898 after the war with Turkey. This commission assumes charge of the government monopolies of salt, kerosene, matches, cigarette paper, playing cards, and emery, also

of various stamp taxes, the revenues of certain custom houses, and a certain portion of the tobacco taxes. The receipts from these sources during the year 1918 were in spite of the war considerably in excess of the average. They amounted to \$17,396,691 against \$10,619,179 in 1913. The outstanding foreign debt on Jan. 1, 1918, was according to a British source, £45,863,692. Agreements between the Greek government and representatives of the United States, France and Great Britain on Feb. 10, 1918, provided that the three latter governments should advance to the Greek government during 1918 the sum of \$144,750,000, the control of which was to be in the hands of the International Finance Commission and Inter-Allied Military Commission with headquarters at Athens. During the year 1918 these commissions recommended to their governments the opening of credits amounting \$118,695,000. Further credits were opened in 1919, leaving a comparatively small balance.

GOVERNMENT. The legislative power is vested in the assembly or *boulé* and the executive in the King acting through a responsible ministry. The ministry at the beginning of 1918 was as follows: Premier and Minister of War, E. K. Venizelos; Vice-President of the Ministerial Council, E. Repoulis; Minister of Foreign Affairs, N. Politis; Minister of the Interior, M. Raktivan; Minister of Finance, M. Negrepontis; Minister of Justice, J. Tsirimocos; Minister of Marine, Admiral P. Kounduriottis. Minister of Food Supplies, P. Bourlounis. Minister of Education, D. Dingas; Minister of Agriculture, G. Kafandaris. Minister for Refugees, S. Simos; Minister of Communications, A. Papanastasion; Minister of National Economy, K. Spyridis; Minister without Portfolio, A. Michalacopoulos.

HISTORY. The former Prime Minister, Stephanos Skouloudis, and some of the members of his cabinet were arrested early in February on a charge of a treasonable plot along with the former King. A campaign to win the people to the policy of freeing the Greeks of Asia Minor was carried on successfully early in the year and the policy became extremely popular. It also included the liberation of the *Ægean Islands*. On May 4th it was announced that Greece had been made a mandatarly for the city of Smyrna and Greek forces were landed there. Later a Greek high commissioner was appointed to this post. There had been some talk of a plebiscite and in view of the possibility Greek and British agents had tried to win over the support of the natives. Greece was represented at the Peace Conference by Prime Minister Venizelos and Foreign Minister Politis. Through their efforts they secured from the Peace Conference the right to the Dodecanese and these islands voted for union with Greece on April 29th. Meanwhile on April 18th Greece had concluded a treaty of friendship with Yugoslavia. According to the Greek press on November 20th an agreement was reached with Italy whereby the Dodecanese was to be given to Greece, Italy retaining a coaling station, and Italy was to receive concessions to the south of Smyrna. The Greek papers also reported a similar agreement to the above in respect to Epirus, and said that Greek troops in accordance with it were beginning to occupy Northern Epirus to the line set by the protocol of Florence and that the Italian troops were withdrawing to that line,

expressions of good-will being exchanged by the two governments. Despite the strict censorship enforced by the new Greek government, there were frequent reports of attacks upon it by friends of the ex-King. The latter himself on December 1st declared that Venizelos held the power only by terrorism and by setting up martial law. He declared that over 90 per cent of the people were opposed to him. The loyalists contended that Greece had lost her chance of gaining a predominant position in the Near East when she abandoned her neutrality. The ex-King denied that he was ever on the side of the Central Powers, asserting that he only desired neutrality. There were press rumors late in November of an attempt to restore the old régime, but they were not confirmed. See WAR.

GREEN, GABRIEL MARCUS. Mathematician, died at Cambridge, Mass., January 24. He was born in New York, Oct. 19, 1891, and graduated at the head of his class at the College of the City of New York in 1911. He won several prizes in mathematics and gained further distinction by his doctor's dissertation at Columbia University in 1913. He received the instructorship in Harvard in 1914, and two years later became the head of the faculty. Though young, he had already given promise of a highly distinguished career.

GREENLAND. A colony belonging to Denmark in the Arctic Ocean, with an estimated area of 849,420 square miles. A large part of the country is uninhabited, and the area of settlement which constitutes the colony proper is only about 34,015 square miles. Its population in 1911 numbered 13,449. The largest settlement in Greenland is the town of Sydproven, which had by the 1911 census, a population of 789. The smallest is Skansen, in North Greenland, with 46 inhabitants. The imports from Greenland into Denmark in 1917 amounted to £50,283, and the exports from Denmark, £44,543. The trade with the colony is a monopoly of the Danish government. The chief exports are seal and fish, sealskins, oil, and blue fox skins. The administration is under a director who resides in Copenhagen. See POLAR RESEARCH, *Arctic*.

GREER, DAVID HUMMELL. Bishop, died in New York City, May 19. He was born at Wheeling, W. Va., March 20, 1844; graduated at Washington College, Pa., in 1862; studied theology at the Protestant Episcopal Seminary at Gambier, Ohio; was ordained deacon in 1866 and priest in 1868. He was rector at Clarksburg, W. Va., and at Covington, Ky., from 1866 to 1871, when he was called to Grace Church at Providence, R. I., where he remained until 1888. From 1888 to 1904 he was rector of St. Bartholomew's Church, New York City. On Jan. 26, 1904, he was consecrated bishop-coadjutor, and he became bishop of New York on the death of Bishop Potter, July 21, 1908. He was the author of *The Historic Christ* (1890); *From Things to God* (1893); *The Preacher and His Place* (1895); *Visions* (1898).

GREGG, DAVID. American pastor and theologian, died in New York City October 11. He was born at Pittsburgh, Pa., March 25, 1845, and graduated at Jefferson College, Pa., in 1865. Besides holding important pastorates in Presbyterian churches in Pennsylvania and New York, he was president (1904-09) of the Western Theological Seminary, and the author of the following articles: *From Solomon to the Cap-*

tivity (1800); *Studies in John* (1891); *Our Best Moods* (1893); *The Heaven Life* (1895); *The Testimony of the Land to the Book* (1895); *Makers of the American Republic* (1896); *Ideal Young Men and Women* (1897); *Facts that Call for Faith* (1898); *Things of Northfield and Other Things* (1899); *New Epistles from Old Lands* (1900); *The Dictum of Reason on Man's Immortality* (1902); *Between the Testaments* (1907); *The Master as a Preacher* (translated into Greek and published in Athens, Greece, 1909); *Pulpit Stars of the Nineteenth Century*. He edited the religious periodical, *Bana*, from 1874 to 1886.

GRENADA. One of the Windward Islands, belonging to Great Britain. Area, 133 square miles. Half the Grenadine islands are in the colony of Grenada and half in that of St. Vincent. Population, estimated Dec. 31, 1917, 73,373. The capital and chief town is St. Georges, with a population of 4916, which are mainly negroes, only 2 per cent of the population being European. The chief products are spices and cocoa. The imports, in order of their importance for the year 1919, were cotton manufactures, flour, dried and salted fish, and various foodstuffs. The principal exports were cocoa (almost entirely) and nutmegs. Of the 1919 cocoa exports the United Kingdom received 82 per cent, and the United States received 18 per cent. The United Kingdom and the British colonies absorbed the major portion of the foreign trade, in years gone by, but in 1919 the United States practically equalled the trade of the United Kingdom. Revenue in 1917-18 was £105,540, and the expenditure, £108,792. The 1918 public debt was £183,460. The total value of imports in 1918 was £353,978; that of exports £480,553. Total shipping entered in 1917, 375,440 tons.

GRENADINES. See GRENADA and ST. VINCENT.

GROEBER, ADOLF. Leader of the Centre party in Germany, died in Berlin, November 19. He was for a long time an influential member of the Reichstag before the war, but during the war was less prominent in the party than Erzberger. He was born in 1854 and entered the Reichstag in 1887. He appeared sensationally in the press in 1908 when in the course of a debate in Parliament he referred in insulting terms to the newspaper men in the gallery. When Hertling became minister president of Bavaria Groeber succeeded as leader of the Centre. He was in the cabinet of Prince Max of Baden at the outbreak of the revolution, and was elected to the National Assembly from Württemberg after the revolution.

GUADELOUPE. A French colony in the Lesser Antilles, consisting of two main islands, separated by a narrow channel, with a united area of 722 square miles, and five dependencies of smaller islands, whose area is 688 square miles. Population in 1919, estimated unofficially at 213,229. Capital Basse-Terre, with 8656 inhabitants. The chief products are sugar, coffee, and cacao. Two steam navigation companies supply direct communication with France. Much valuable timber is contained in the forests, which, however, is not extensively worked. Practically all of the 75,000 acres which are planted with sugar cane find difficulty in being cultivated, because of the shortage of mules and oxen. It is estimated that approximately 12,000 oxen

and 3000 mules are now being used in the sugar industry. It is also estimated that the 1919 crop of vanilla beans which were harvested and cured during the past winter and spring amounted to 40,000 pounds. Of this total, which is less than the average production, more than 23,000 pounds had already been shipped to the United States, and the probability indicated that most of the remainder would be sent to the United States.

GUAM. An insular possession of the United States situated in the Pacific Ocean, lying between 13° 13' and 13° 39' north latitude and 144° 37' and 144° 58' east longitude. Area, estimated 225 square miles; population exclusive of officers and enlisted men of the navy and marine corps and their families, on July 1, 1919, 14,165, of whom 13,623 were classed as "natives" and the remainder as "foreigners." Of the latter, the largest number were Japanese, 91. Only 66 were classed as Americans. Death rate per thousand 72.3 (due to epidemic of influenza), birth rate 38.7. Imports, fiscal year ending June 30, 1919, exclusive of naval and military stores and supplies, \$328,571.14 of which all but \$41,259.45 was received from the United States and its possessions. Exports \$95,770.56. The principal export was copra of which 851,680 pounds was shipped to Japan and 1,140,924 to the United States. Principal imports were lumber, rice, flour, tinned and fresh meats, canned provisions, automobiles, kerosene and gasoline, tobacco, clothing, and cotton goods. The revenues of the insular government were \$128,814.28, expenditures \$131,346.44. Guam is a station of the Commercial Pacific Cable Company and cables from Manila, Yokohama, Midway, and Yap Islands are landed here. A high power radio station was constructed by the Navy Department, opened for communication in November, 1917. The United States Department of Agriculture maintains an experiment station in Guam. The port of entry is Apra Harbor, 5 miles from Agaña, the seat of government. Apra is closed to foreign vessels except by special permission of the United States government. During the fiscal year ending June 30, 1919, 33 vessels having a total tonnage of 63,794 visited the port. It was acquired from Spain by the Treaty of Paris, 1898; captured by the United States naval forces under Capt. Henry Glass, U. S. N., June 21, 1898; formally taken possession of by the United States Feb. 1, 1899. For administrative purposes Guam comes under the Navy Department, and, to facilitate such administration, the whole island with surrounding islands and cays has been designated as a naval station. The governor, who is a naval officer designated by the President, is also commandant of the naval station, Guam. Governor in 1919, Capt. William W. Gilmer, U. S. navy, who assumed office Nov. 15, 1918.

GUATEMALA. A Central American republic in the northwestern part of Central America, extending from the Caribbean Sea to the Pacific Ocean. Capital, Guatemala City. Boundary disputes cause divergent estimates of area, one area being estimated at 48,290 square miles, and another at 43,641 square miles. The population was estimated Dec. 31, 1917, unofficially, at 2,123,091, of whom about 61.5 per cent were Indians, the large portion of the remainder being mestizos. Guatemala City has an estimated population of over 100,000. Other towns are

Quezaltenango (28,940); Coban (30,770); and Totonicapán (23,310).

EDUCATION. Primary instruction is free and compulsory for all children between 6 and 14 years of age. In 1917 there were 1942 government schools, with an attendance of 54,479. The main university, opened in 1918, was the University of Guatemala, known as Universidad Estrada Cabrera. The National Central Institute confers degrees recognized in all Central American republics. There was a school of handicraft for women, a National Conservatoire of Music, and a school of art. There were also schools of commerce, law, medicine, pharmacy, and dentistry. Roman Catholicism is the prevailing religion, but all other creeds have complete liberty of worship. The state does not recognize any creed.

PRODUCTION AND COMMERCE. The fertile soil yields many tropical and sub-tropical products. Coffee, the most important crop, was estimated in 1919 at approximately 1,100,420 quintals (a quintal equals 101.4 pounds) and in normal years about 200,000 quintals are consumed in the country, the remainder being left for exportation. There were in 1919, 1500 plantations under cultivation, containing some 450,000,000 coffee trees. The Germans owned and controlled between 50 and 60 per cent of the coffee plantations. Other crops, arranged in order of their importance, in 1919, were: Plantains and bananas, maize, beans, wheat, rice, and potatoes. The department of Peten is rich in mahogany and dyewoods, most of which go to the United States. This is also the centre of the chicle industry, 407,195 pounds being produced in 1916. Small quantities of cotton were grown. There are silver, gold, copper, and lead mines. As transport facilities are lacking, mining has been little developed, there being 129 mines fully registered. The total imports for 1917 and 1918, respectively, were \$8,991,573 and \$6,634,000; and the exports were, respectively, \$7,809,732 and \$11,319,000. Imports for 1917 were: Cotton, \$2,294,425; foodstuffs, \$437,687; linen, hemp, and jute, \$232,737; paper, etc., \$239,263; iron and steel, \$399,609; leather, \$206,952. The exports for 1917 were: Coffee, \$5,355,577; rubber, \$64,184; timber, \$138,254; hides, \$35,477; bananas, \$990,790; sugar, \$449,945. In 1919 the trade was distributed among the following countries in order of the amount: United States, United Kingdom and Belize, France, Mexico, and Central America. Large sums of money were advanced in 1919 from the United States for the purchase of coffee on a large scale. The area of cereals under cultivation during the first six months of 1919 in manzanas (equivalent to 1¼ acres), corn, 122,007; beans, 3994; wheat, 2705; rice, 3489; potatoes, 1198; yuca, 289.

COMMUNICATIONS. In recent years, much attention has been paid to road-building and improvements. July 19, 1919, the governor of Quiché officially opened a new road connecting Quezaltenango with Totoni Capán through the hills of Maria Tecum, which attains an altitude of 13,000 feet at places. The main railway in the southeastern part of the country connects Puerto Barrios on the Caribbean Sea with San José on the Pacific, a distance of 270 miles. An international bridge is at present under construction, crossing the Suchiate River. It was estimated that the bridge would cost 500,000 pesos, to be shared equally by both the Mexican and

Guatemala governments. The bridge was to be 400 meters long, and was to be completed in six months. There were 4245 miles of telegraph line and about 400 post offices, and the total length of railway open to traffic was 563 miles.

FINANCE. Silver is the legal standard of value, the unit being the silver peso, which fluctuates with the value of silver. The revenue for 1918 was \$110,937,325, and the expenditure, \$77,666,023. The receipts fell off \$24,534,259 as compared with the previous year, and the expenditure decreased \$53,747,205. During 1919 measures were under way for the establishment of the national bank which had been decreed by the Assembly. On Dec. 31, 1917, the outstanding amount of 4 per cent external debt was, in pounds sterling, 1,512,460. Certificates in respect of unpaid interest, £844,603 sterling Total, £2,357,063. The internal debt on Dec. 31, 1916, amounted to \$135,799,843 currency, and 1,091,702 gold.

GOVERNMENT. The National Assembly constitutes the legislative power. There are 69 members, elected by direct vote for four years, with universal suffrage. The President is elected by direct vote for six years. There is a Council of State of 13 members, part of whom the Assembly elects, and part the President appoints. The President in 1919 was Manuel Estrada Cabrera, whose term expires in 1923.

GUERNSEY. See ARCHÆOLOGY.

GULF STREAM. See HURRICANES.

GULLIVER, FREDERIC PUTNAM Scientist, died in Philadelphia, Pa., February 8. He taught at St. Mark's Scientific School for a number of years and was active in the American Association for the Advancement of Science where he was secretary of the geological and geographical department from 1907 to 1911. He served also as topographer in the United States Geological Survey and was afterward in the commission on chestnut blight in Philadelphia.

GYMNASTICS. The national Amateur Athletic Union gymnastic championships were held at Los Angeles on May 10th. The Los Angeles School of Physical Training won the team honors with 24 points. The Norwegian A. C. of Brooklyn finished second with 16 points and the Los Angeles A. C. third with 7 points.

The winners in the individual events were: Horizontal bar, Peter Hol, Norwegian A. C.; long horse, P. Krempel, Los Angeles, S. P. T.; parallel bars, Peter Hol; side horse, P. Krempel; flying rings, J. Gleason, Los Angeles A. C.; club swinging, A. McCloud, New York A. C.; rope climbing, K. Fintzelberg, Concordia Turnverein, San Diego, Cal.; tumbling, A. Nugent, Newark, N. J.

HAASE, HUGO. Leader of the Independent Socialist party in Germany, died in Berlin November 7th as the result of wounds received on October 8th, when he was shot by an Austrian named Johann Voss. Though operations had been several times performed resulting in the amputation of one of his legs, he succumbed after a long struggle. He was born in 1863. He became prominent in Socialist councils and succeeded Bebel as president of the German Socialist Democratic party. He was elected to the Reichstag in 1897 and regularly reelected except in 1907 when the Socialist party was generally defeated. During the war he disagreed with the majority's war policy and split off in 1915, forming an Independent Socialist party, whose

principle was that financial credits must be refused the government even at the risk of German defeat. The new party was believed to have resorted to secret measures for the stirring up of a feeling against the government and for the organization of a general strike. The naval mutiny of August, 1918, was attributed to its propaganda. In November, 1918, when the imperial government fell, Haase became a member of the first coalition cabinet, but resigned a month later after frequent conflicts with his colleagues. As a member of the National Assembly he attacked the Social Democracy and the Clericals who together formed a *bloc*, and he cooperated to some extent with the Spartacides. On June 29, 1918, he already predicted the ruin of Germany under its military autocracy, and at this time he said that Count Hertling and Herr von Kühlmann were merely figureheads and that the imperial government ruled alone. He was considered for the office of Chancellor when Germany was forming a government to sign the Peace Treaty, but refused. He had been opposed to Noske's policy, when Minister of Defense, in putting down strikes and revolts.

HABIBULLAH, KHAN. Ameer of Afghanistan, assassinated in the valley of Laghman, Afghanistan, February 24. He was born in Samarkand in 1872 while his father, Abdur Rahman, was in exile. He was married in early youth to seven wives from among the powerful families of the country for political motives. During his father's life time he was governor of Kabul. He succeeded to the throne on his father's death in 1901. At first inclined to hostility toward the British régime, he changed his attitude after a visit to India and was on friendly terms with the viceroy. In general he was described as genial in his character, and versatile in his interests and accomplishments. During the war he was loyally neutral and maintained order on the frontiers. A short time before his death he entered into an alliance with the Ameer of Bokhara and other rulers in central Asia, which was especially designed to arrest the spread of Bolshevism.

HACKER, ARTHUR. British painter, died November 12. He was born in London, England, Dec. 25, 1858, studied in Paris under Bonnat, and traveled widely on the continent and in North Africa. His specialty was figure painting. Among his works may be mentioned the following: "Her Daughter's Legacy," 1880; "The Mother," "Children's Prayer," and other domestic subjects, "Pelagia and Philammon," 1887; "Via Victis," "Christ and the Magdalen," "Annunciation," "The Cloud," "Vale," "Studies of London," etc.

HAECKEL, ERNST. German zoologist and natural philosopher, died at Jena, Germany, August 9. He was born at Potsdam and studied medicine and the natural sciences at Berlin, where he practiced medicine for a short time. He passed some years of travel in the study of marine zoology and in 1862 he entered the faculty of the university of Jena, becoming professor of zoology in 1865. Many scientific journeys followed, resulting in the publication of monographs on sponges and other topics in marine zoology. In the 1880's he published reports on various deep sea species and in 1890 *Plankton-Studien*. Darwin's *Origin of Species* was attributed largely to the inspiration of Haeckel's writings, especially to the *General Morphology of*

Organisms, published in 1866, which was the first attempt to apply the development theory to the whole field of morphology and to found a classification of animals and plants based on relationship. More famous was the work which was translated into English under the title *History of Creation*, a popular exposition of the doctrine of evolution, which had the widest circulation of all his writings. His influence upon contemporary thought was very considerable. The feeling in the Allied countries turned against him in the latter part of his life owing to his having signed the celebrated manifesto of the 93 intellectuals which defended Germany's course at the beginning of the war. Other works of his were the following: *Ueber die Entstehung und den Stammbaum des Menschengeschlechtes*, (1870); *Anthropogenie*, (1874); *Die Gastratheorie* (1874); *Die Welträtsel, Gemeinverständliche Studien über monistische Philosophie* (4th ed., 1900, English translation, *The Riddle of the Universe*, 1902); *Die systematische Phylogenie*, (1894); *Indische Reisebriefe*, (1882); *Aus Insulinae*, (1883); *Kunstformen der Natur* (1904); *Wanderbilder* (1905); *Anthropogenie* (5th ed., 1903); *Ueber unsere gegenwärtige Kenntniss vom Ursprung der Menschen* (1898); *Der Kampf um den Entwicklungsgedanken*, (1905).

HAESLER, GOTTLIEB VON. German field marshal; death reported in Berlin, October 27. He was born in 1835 and served in the Danish war in 1864, the Austro-Prussian war of 1866, and the Franco-German war of 1870. In the last-named he was one of von Moltke's favorite generals, and was quartermaster of the army during the occupation after the war. He was widely known as a strategist, and his qualities as a soldier and his epigrammatic remarks were much quoted. He was retired in 1903 with the highest rank in the army, but worked under the general staff and was active during the great war. After the failure before Verdun where he had been attached to the Crown Prince's staff, he was recalled.

HAITI. A West Indian republic, occupying the western part of the island of Haiti, the other portion of the island constituting the Dominican Republic. Capital, Port au Prince. The area is estimated at 11,072 square miles. The ecclesiastical estimate of population, from parish registers, indicated a population of 2,029,700. The density was greater than any other South American republic, with the exception of Salvador. Negroes composed about 90 per cent, the rest being mulattoes. The language is a French dialect. The largest city is Port au Prince, with an estimated population in 1919 of 101,272. Cap Haitien was estimated to have a population in 1919 of 18,952. However, various other unofficial estimates place it as high as 30,000. Other important towns are Cayes, 12,000; Gonaïves, 30,000; Port de Paix, 10,000; and Jérémie.

The public instruction costs nearly \$1,000,000 annually, but education, though made compulsory in 1910, was still very imperfect. In 1918 there were 854 primary schools, with 61,956 pupils; 29 secondary schools, with 4816 pupils; 1 normal school, a school of medicine, and a school of law, with 102 students.

PRODUCTION, COMMERCE. Etc. The imports for 1917 and 1918, respectively, were: \$8,606,086 and \$10,500,000. The exports for the same

periods were, respectively, \$7,220,290 and \$11,000,000. The imports were from the following countries, in order of amount: United States, United Kingdom, France, and Spain. The 1918 exports went to the following countries, in order of amount: United States, France, Spain, and United Kingdom. According to official statements made public in the early part of 1920, the foreign trade for the fiscal year ending Sept. 30, 1917, amounted to \$15,826,344, of which \$8,606,055 were imports and \$7,220,289 exports. The chief articles of export were: Coffee, 46,384,084 pounds; log-wood and log-wood extracts, 93,574,196 pounds; cocoa, 3,891,997 pounds; cotton, 2,517,880 pounds; honey, 1,760,998 pounds; goat skins, 355,090 pounds; hides, 355,587 pounds; lignum vitae, 15,572 pounds; cotton seed, 3,731,754 pounds; corn, 1,114,202 pounds; cotton oil, 940,911 pounds; castor beans, 853,467 pounds. Official reports in 1919 concerning the cotton crop were to the effect that although Haitian cotton is usually put on the market in a badly-prepared state, owing to the difficulty of obtaining laborers when gathering season arrived, the cotton was considered to be of a fair grade. When once planted, it grows and continues to produce for 15 or 20 years. Formerly the greater part of the crop went to Europe, principally to France. Since the war sales have been increasing in the United States. An import company is now being organized to encourage the cultivation of cotton on a large scale.

Press reports stated that the government, following out its plan of increasing the arable areas by irrigation of tracts of wild land, would begin, in November, 1919, to irrigate the plains of L'Archaie and Leogane.

FINANCE There is an inconvertible paper currency, the monetary unit being the gourde, or dollar, that has a fluctuating market value. In late 1919 this value was about \$.20. The revenue is derived mainly from export and import duties, paid in American gold. The largest portion of expenditure is for debt charges, 2,882,468 U. S. gold dollars. On Dec. 31, 1917, the debt consisting of gold loans, amounted to 120,912,060 francs. The internal debt amounts to 3,368,705 francs. The budget for 1918-19 balanced at 3,057,803 U. S. gold dollars, or 3,999,646 currency goudes. The National Bank of Haiti was authorized by the Council of State to coin 20,000,000 goudes.

GOVERNMENT The legislative power is constituted in the National Assembly, consisting of two chambers, the Chamber of Communes, and the Senate. Members of the former are elected for three years by direct vote, and the latter for six years by vote of the lower house. The two chambers, in joint session, elect a President, whose term is seven years, and who is ineligible for reelection except after the interval of at least one term. The United States established a virtual protectorate over the republic by a treaty ratified by the Haitian National Assembly November, 1915, and by the United States Senate, February, 1916. The President of the republic in 1919 was M. Sudre Dartiguenave (elected Aug. 12, 1915). In 1919, the military representation of the United States in Haiti was placed under the charge of Rear-Admiral Thomas Snowden of the United States navy on February 25th, who, at the same time, assumed charge of the military government of Santo Domingo.

HALE, WILLIAM HENRY. Lawyer and public official, died May 4 at Brooklyn, N. Y. He was born in Albany, N. Y., Aug. 20, 1840 and graduated at Yale in 1860. He was admitted to the bar in 1861 and after engaging in business began the practice of law at Albany in 1888. After that he practiced in Brooklyn where he was superintendent of public baths from 1906 to the time of his death. While holding this office he was a member of the first International Conference on public and school baths held at the Hague in 1912 and was appointed to the second fixed for 1914 but not held on account of the war. He was a frequent contributor to the scientific press.

HALL, PAULINE. American singer in light opera, died at Yonkers, N. Y., December 29. She had been on the stage for more than 40 years. She was born at Cincinnati, Ohio, Feb. 26, 1860, and made her debut in that city as a ballet dancer in 1875. She appeared in a great variety of light operas, being especially successful in the opera *Ermione* which was played 800 times. She was one of the best singers in operetta, gaining an immense popularity as a star in Aronson's Casino Company (New York, 1885-92). Later she toured the country with her own company. Toward the end of her life she appeared frequently in vaudeville, and was on the stage a week before her death, in a piece called *The Gold Digger*.

HALLAM, ALFRED. Musical conductor died in New York City, December 31. He was born at Rugby, England, in 1859, and came to the United States in 1893. He was for many years in charge of the music in the schools at Mt. Vernon, and in 1913 became musical director at Saratoga. He afterwards held the same position with the Chautauqua Institution. He conducted the well-known chorus of the Labor Temple and the People's Choral Union of New York. Previous to his illness he served as song leader of the War Camp Community Service in Boston, Mass.

HALSEY, FRANCIS WHITING. Editor and author, died in New York City, November 24. Shortly before his death he had finished editing a 10 volume *History of the European War*. He was born in Unadilla, N. Y., Oct. 15, 1851, graduated at Cornell University in 1873, served on the staff of the New York *Tribune*, 1875-80, and on the New York *Times* from 1880 to 1902, being editor for six years of *The Times Saturday Review*. Besides his many books and magazine articles he was widely known as a lecturer. His writings include: *Two Months Abroad* (1878); *The Old New York Frontier* (1901); *Virginia Isabel Forbes* (memoir of his wife, 1900); *Our Literary Deluge* (1902); *The Pioneers of Unadilla Village* (1902); historical and biographical introduction to Mrs. Rowson's *Charlotte Temple* (1905); historical introduction and foot notes to Richard Smith's *Tour of Four Great Rivers* (1906). Editor: *American Authors and Their Homes* (1901); *Authors of Our Day in Their Homes* (1902); *Women Authors of Our Day in Their Homes* (1903); *Of the Making of a Book* (1904); *The World's Famous Orations* (associate to William J. Bryan, 10 vols., 1906); *The Best of the World's Classics* (associate to Henry Cabot Lodge, 10 vols., 1907); *Great Epochs in American History Described by Famous Writers* (10 vols., 1912); *Seeing Europe With Famous Authors* (10 vols., 1914); *Balfour,*

Viviani, and Joffre, Their Speeches in America (1917).

HAMILTON, ALLAN McLANE. American neurologist, died at Great Barrington, Mass., November 23; well known as an alienist and specialist on nervous diseases. He was born at Brooklyn, N. Y., Oct. 6, 1848, and graduated at the Columbia College of Physicians and Surgeons in 1870. In 1879 he received the first prize from the American Medical Association. He came into public prominence after the assassination of Garfield when he testified for the government as expert in the trial of Guiteau. He was professor of mental diseases at Cornell University Medical College from 1900 to 1903 and he was a member of the most important medical societies. Among his works may be mentioned: *Clinical Electro-Therapeutics*, (1873); *Nervous Diseases*, (1878); *Medical Jurisprudence*, (1883); *A System of Legal Medicine*, (1894); *Railway and Other Accidents*, etc., (1904); *Intimate Life of Alexander Hamilton*, (1911); *Recollections of an Alienist*, (1916).

HAMILTON COLLEGE. A non-sectarian institution for the education of men, at Clinton, N. Y. In the fall of 1919 the enrollment was 298 and there were 27 members in the faculty. Productive funds amount to \$1,487,700, and the income for the year was \$117,883. The library contains 84,000 volumes and 12,000 pamphlets. Hamilton is one of the many colleges to benefit by the will of Mrs. Russell Sage; the gift is approximately \$800,000. The college was founded in 1812. President, Frederick Carlos Ferry, Ph.D., Sc.D., LL.D.

HAMMERSTEIN, OSCAR. Opera and theatre director, died in New York City, Aug. 1, 1919. He was born in Berlin, Germany, in 1847 and came to the United States in 1863. After several ventures in other employment he engaged in the theatrical business in the 1880's and succeeded in building the Harlem Opera House and several other theatres. In 1906 he entered upon the important enterprise of the Manhattan Opera House where he gave grand opera in rivalry with the Metropolitan and showed unusual shrewdness and skill in its management. He was foremost in establishing French opera in America. While managing the Manhattan Opera House he built and opened the Philadelphia Opera House in 1880. In 1911 he removed to London and opened the London Opera House. Difficulties arising in his endeavor to establish a new grand opera company in 1912 and the controversy which followed are described in the NEW INTERNATIONAL YEAR BOOK for the years 1907-14 under the title *Music*.

HAMPTON NORMAL INSTITUTE. An institution for the education of negroes and American Indians situated at Hampton, Va. It is non-sectarian and co-educational; founded in 1868. There were over 1800 students at the beginning, and between seven and eight hundred had been in active war service. Principal James E. Gregg, D.D.

HANDLEY, WILLIAM WHITE. American diplomat, died at Callao, Peru, September 27. He was born at Washington, D. C., June 29, 1872, and studied at Columbian University. From 1898 to 1904 he was in business in Venezuela and at Trinidad and he served on commissions in Africa for the United States government. After holding several consular positions in South America he became consul-gen-

eral in the Belgian Congo in 1908, at Naples in 1910, and at Callao in Peru from 1913 to the time of his death.

HARBEN, WILLIAM NATHANIEL. Author, died at New York City August 7. He was born at Dalton, Ga., July 5, 1858, engaged in business until 1888 and after that devoted himself to journalism. He was on the staff of *The Youth's Companion* and contributed to the leading magazines. The list of his writings is very long, those which date from 1900 being as follows: *Northern Georgia Sketches* (collected), (1900); *The Woman Who Trusted*, (1901); *Westerfelt* (Harper's American Novel series, 1901); *Abner Daniel*, (1902); *The Substitute*, (1903); *The Georgians*, (1904); *Pole Baker*, (1905); *Ann Boyd*, (1906); *Mam' Landy*, (1907); *Gilbert Neal* (1908); *The Redemption of Kenneth Galt*, (1909); *Dixie Hart*, (1910); *Jane Dawson*, (1911); *Paul Rundel*, (1912); *The Desired Woman*, (1913); *The New Clarion*, (1914); *The Inner Law*, (1915); *Second Choice*, (1916).

HARBORS. See DOCKS AND HARBORS.

HARRIS, ROBERT. Canadian painter, died at Montreal, February 27. From 1893 to 1906 he was president of the Royal Canadian Academy. He was born in Wales in 1849 and taken in childhood to Prince Edward Island. He studied in London and on the continent of Europe, and settled in Montreal where he was director of the art school from 1883 to 1887. His works include many paintings from Canadian life and also portraits of prominent Canadians. He received prizes and awards from several exhibitions.

HARRISON, THOMAS SKELTON. Manufacturer and philanthropist, died in Philadelphia, Pa., May 2. He was born on Sept. 19, 1837 and served in the United States navy during the Civil War, after which he became a member of the firm of Harrison Bros. and Co. in Philadelphia. He was president of it from 1899 to 1902. Meanwhile he had served as a diplomatic agent and consul-general to Egypt (1897). He was prominent in the political reform movement of Philadelphia and a member of the command of Fifty and also of that of One Hundred (1913). He held a prominent place in various important patriotic and other societies.

HARTMANN, Cardinal FELIX VON. German archbishop, died at Cologne, November 11. He had been a prominent figure during the war. He was born at Münster, Westphalia, Dec. 15, 1851. He was made a cardinal on May 25, 1914. In the early days of the war he issued a pastoral letter calling upon Catholics to pray for peace, which caused some adverse criticism in Germany. In 1915 he represented Germany at the Vatican where it was thought that he was making proposals for peace. In 1916 as one of the leaders of the Pan-German element, he visited the western front and informed the emperor that all Catholics among the soldiers were ready for further sacrifices. In the spring of 1918 he requested the Allies not to attack Cologne from the air during Corpus Christi day, and the city was not molested.

HARVARD GLEE CLUB. See MUSIC, *Choral Societies*.

HARVARD UNIVERSITY. A non-sectarian institution of learning at Cambridge, Mass. The enrollment in the summer schools of 1919 was as follows: School of Arts and Sciences,

2376; Graduate School of Medicine, 316; total 2692. The enrollment in the fall was as follows: the college, 2534; Graduate School of Arts and Sciences, 531; Special Students, 68; Engineering School, 126; Graduate School of Business Administration, 394; School of Architecture, 38; School of Landscape Architecture, 27; Bussey Institution, 10; Divinity School, 58; Law School, 879; Medical School, 419; Dental School, 189; total, 5273. There is also a registration of 37 in the School for Health Officers. The grand total, with deductions for duplication, is therefore 7342. The number of members of the teaching staff is 782, and the total number of officers of instruction and administration is 969. The productive funds of the university as of June 30, 1918, were \$33,742,954; they were in December, 1919, estimated to be about \$45,000,000. The income on these funds in 1917-18 was \$1,664,153, this year it will be well over two million dollars. This large increase is caused by the raising of the Harvard Endowment Fund, which began Oct. 1, 1919, the goal being \$15,250,000. The bulk of this will go to increasing the salaries of the teachers at the university. By the end of 1919 about \$11,000,000 had been raised in this campaign. On July 1, 1919, the College Library contained 1,176,500 volumes; there are in addition, 11 departmental libraries, bringing the grand total to 1,940,600. During the year there was established an Artillery Reserve Officers' Training Corps. Arrangements have been made so that men can belong to this while they are students in Harvard College. The military courses will count toward the degree in the College. Each man, to qualify for recommendation for a commission, must satisfactorily pass four of these courses, and also do a certain amount of practical work, and attend at least one summer camp. The unit supplants the Infantry R. O. T. C. established in 1916. A system of compulsory athletic training for Freshmen was instituted. The aim is to get men into enjoyable athletic games three times a week, with an instructor to teach the games the men may enjoy in after life. Harvard was founded in 1636. President, Abbott Lawrence Lowell, LL.D., Ph.D.

HAVERFORD COLLEGE. An educational institution under the control of the Society of Friends, located at Haverford, Pa. In 1919 there were 200 undergraduate students, and 25 members of the faculty. Endowment, \$2,733,029. The library contains 79,167 volumes. In September, 1919, the Isaac Sharpless Science Hall, for physics and biology, was opened for use. Haverford was founded in 1833. President, William Wistar Comfort, Ph.D., Litt.D., LL.D.

HAWAII. POPULATION. The total population of the Hawaiian Islands was 191,909 in 1910. The estimated population including that of the army and navy on June 30, 1919 was 263,666. The population of Honolulu, the capital, was estimated at 78,200. The population by races was distributed according to race on June 30, 1919 as follows: Japanese, 110,000; Hawaiian, 22,600; part Hawaiian, 16,660; Portuguese, 25,000; Chinese, 22,600; Filipinos, 22,000; Porto Rican, 5400; Spanish, 2400; other Caucasian races, 31,000; of others, 5806. The birth rate per 1000 was 34.76. The total number of deaths was 4051. The total number of steerage arrivals was 7435 as against 7321 the year before and the number of departures was 7401 as against 8885 the year before. The number of lepers living at the leper settlements during the year was 669.

AGRICULTURE. The two main crops of the island continued to be sugar and pineapples. The yield of sugar for 1919 was placed at 600,000 tons and that of pineapples at 5,000,000 cases. The greater part of the land best suited to agriculture is in parts of the territory deficient in rainfall. This has made a large irrigation necessary and justifies the heavy expenditures on that account in recent years. Extensive irrigation systems have been developed on the four main islands and without them the larger plantations could not exist. Along with the rest of the United States, the territory felt seriously the high cost of living. The policy of home production of food stuffs begun during the war, and the lessons of thrift inculcated at that time tended to relieve the situation. The high wages paid called out an adequate supply of labor. During the year five new forest reserves were proclaimed by the governor, including a large part of the forest land which remained for allotment. There were at that time 74 forest reserves with a total area of 818,739 acres of which 68 per cent was government land. The planting of trees continued to be encouraged throughout the year and operations were carried on in several different localities of the country. During the year 552 homestead lands covering an area of 8877 acres were taken up. The Hawaiians received the largest share.

COMMERCE. The imports for the fiscal year of 1919 were \$50,743,793 and for the fiscal year 1918 \$51,801,204. The exports amounted to \$88,250,021 as compared with \$80,546,606 in 1918. The following tables show the imports and exports by countries for the fiscal years 1918-1919 and the domestic exports by articles for the fiscal years 1918-1919:

Countries	Imports		Exports	
	1918	1919	1918	1919
Australia	\$118,443	\$138,289	\$20,284	\$36,141
Other British Oceania	71,974	67,914	161,923	106,720
British India	834,512	1,372,469
Canada	345,340	431,760	88,856	3,975,849
Chile	1,001,089	871,328
France	4,304	1,822
Germany	6,064	1,535
Hongkong	385,011	465,209	11,125	7,485

* For fiscal years ending March 31 † Mostly pineapples

TRANSPORTATION. The gross tonnage of vessels arriving during the fiscal year was 3,460,205 as compared with 3,800,949 for the year before. Throughout the year there was a serious congestion in passenger traffic and there were frequent long delays in freight and mail deliveries on account of the large number of vessels engaged in war service in the Atlantic. Four steamers were plying between the island and the mainland, three of the larger steamers of the company engaged in this traffic being retained by the government in the war zone. Before the close of the year some of the freight vessels were returned to the Hawaiian service. Other traffic is in the hands of the Chinese Mail Steamship Company, the Pacific Mail Steamship Company, the Oceanic Steamship Company, a Japanese Company and others. Most of the inter-island traffic is in the hands of Inter-island Steam Navigation Company. There is only one railway system in the territory. During 1919 the number of passengers was 14,304,489, a considerable decrease from the previous year.

EDUCATION. There were 168 public schools with 36,102 pupils, an increase of 5.1 per cent from the previous year. The pupils of all races in public and private schools numbered 43,271 as against 41,644 for the previous year. The number of private schools was 61 with 370 teachers and a total attendance of 7169. The cost of the general maintenance of schools during the fiscal year of 1919 was \$1,206,924 and the cost of new buildings was \$167,910. At the beginning of 1918 nearly all the men of the College of Hawaii were enrolled in the Students Army Training Corps. After the war the total registration was 145, of whom the majority came from the Island of Oahu. There are two industrial schools in the territory and they receive and care for all juvenile delinquents who are not put on probation.

FINANCE. The assessable property of the territory for the fiscal year 1919 amounted to \$250,524,346 as compared with \$235,650,967 in 1918. The cash on hand July 1, 1919, was \$442,610. The total revenue collected during the year amounted to \$7,921,672; the total expenditures \$8,633,189 and the cash balance on hand,

in January, 1919, was \$9,194,000, as compared with \$8,749,000 the year before. The territory is permitted to issue bonds not to exceed 7 per cent of the total assessed value of the property of the territory and no more than 1 per cent in any one year. At its 1919 session the legislature provided for a bond issue of \$2,231,000.

LEGISLATION. The following report as to the general work of the legislative session was made by the governor: The principal business enacted by the legislature at the session of 1919 was financial. Of the 242 acts approved, 94 involved money from the general fund. In addition the legislature enacted a loan bill providing for public improvements to the amount of \$4,901,698, more than half of which is for wharf and harbor improvements. Concurrent resolutions were also adopted recommending that the governor set aside lands for nine public parks. Certain members of the 1919 legislature, by going back on their pledge to support woman suffrage, earned the ill will of a large majority of the people, and as a result the legislature received little credit for any good legislation.

NATIONAL GUARD. The following report as to the National Guard was submitted by the governor: Prospects for a small, but exceedingly efficient National Guard were good. The discharge of officers and enlisted men of the First Hawaiian Infantry, United States army, made available a considerable number of well-trained officers and men. Schools for officers and enlisted men in Honolulu were being conducted once a week under the supervision of an officer, inspector-instructor, and a sergeant-instructor from the United States army, and in Hawaii by the battalion commander; this work was in addition to company drills, and is done on schedules approved by the commanding general, Hawaiian Department. The First Separate Company of Engineers, Company B, Signal Corps, and First Separate Troop of Cavalry were disbanded by orders, dated Oct. 11, 1918, upon the approval of the Secretary of War. Considerable gallery and target practice was had during the year as a part of the schedule of instruction for the companies organized and under organization. The strength of the National Guard of

Hawaii, June 30, 1919, was: Officers, 26; enlisted men, 688.

GENERAL CONDITIONS. Throughout the country the conditions during the fiscal year 1919 were reported as generally good. On Aug. 20, 1919 the act enforcing prohibition went into effect in the territory. During the fiscal year of 1919 under the new régime it was reported that there had been a remarkable decrease in crime. The act was administered partly by territorial officials because the dealing in intoxicants for sacramental, medicinal and scientific purposes was carried on under the rules and regulations decreed by the governor. No liquor except for these purposes may be sold within the territory. Nevertheless it was reported that a large amount of illicit liquor was manufactured which according to physicians was of a very low grade and frequently contained poisonous elements. The Federal officials were endeavoring to stamp out the trade. Various harbor improvements were projected in the course of the year. On Aug. 21, 1919, the Secretary of the Navy opened the new concrete dry-dock at Pearl Harbor in the Island of Oahu (see DOCKS AND HARBORS). The election laws were amended in 1919 so that general elections of the counties and of the city and county of Honolulu would be held on the first Tuesday after the first Monday in June, 1919.

TERRITORIAL OFFICIALS. Some of the more important public officials were: C. J. McCarthy, Governor; C. P. Laukae, Secretary; Harry Irwin, Attorney-General; Delbert E. Mitzger, Treasurer; C. J. Bailey, Commissioner of Public Lands; Lyman A. Bigelow, Superintendent of Public Works; Vaughan MacCaighey, Superintendent of Public Instruction; J. K. Kalamianaole, Delegate to Congress. See WORKMEN'S COMPENSATION.

HAY. The Department of Agriculture estimated the hay crop of the United States at 108,666,000 tons, of which 17,340,000 tons were wild hay and 91,326,000 tons tame hay. The season of 1919 was exceptionally good for hay production despite the drouths which prevailed in certain sections and the yields of tame hay as well as of tame and wild hay combined were the largest ever recorded.

The area in hay in 1919 was 72,034,000 acres, of which 56,348,000 acres were in tame hay and both these figures were never surpassed. The average yield per acre of all hay was 1.51 tons and for the tame hay and wild hay 1.62 tons and 1.11 tons, respectively. The average farm price for all hay on December 1st was \$19.59 per ton and at this rate the total production was valued at \$2,129,087,000. The corresponding price for tame hay was \$20.15 and for wild hay \$16.67. While some wild grass is cut for hay in every State in the Union, the largest producing States are South Dakota, Nebraska, Minnesota, North Dakota, and Iowa. In South Dakota the yield of wild hay amounts to more than 3,250,000 tons.

Grains cut green for hay, a practice in vogue largely on the Pacific Coast and in some sections of the South, constitute about 6 per cent of the hay crop. Clover and timothy grown singly or mixed make up more than half of the tame hay produced. Of the tame hay crop in Ohio and Indiana 92 per cent is clover and timothy, in Pennsylvania, Maryland, and Michigan 88 per cent and in Iowa and Maine 86 per cent.

HAZEN, JOHN VOSE. Educator, died at Hanover, N. H., October 2. He was born at Ralston, Mass., Nov. 22, 1850, and graduated at Dartmouth College where he took the degree of civil engineer. He was professor of civil engineering at Dartmouth after August, 1878.

HEALTH INSURANCE. See SOCIAL INSURANCE.

HEARST, Mrs. PHOEBE APPERSON. Philanthropist and widow of United States Senator George Hearst and the mother of William Randolph Hearst, died at Pleasanton, Cal., April 13. She was born Dec. 3, 1842. For many years she was prominent in philanthropy, especially in connection with educational work. She maintained a kindergarten school in San Francisco and maintained a school for kindergarten teachers at Washington. She contributed to the building of schools and libraries and she built and equipped a building at the University of California in memory of her husband.

HEGEMAN, JOHN ROGERS. Financier, died at Mamaroneck, N. Y., April 6. He was born in Brooklyn, N. Y., Apr. 18, 1844, and became an accountant for the Manhattan Life Insurance Company in 1862. He rose rapidly in his business and was president of the Metropolitan Life Insurance Company after October, 1891. He was also director of other important financial institutions.

HEINRICH, JULIA. An American concert soprano, died at Hammond, La., September 18 (accidentally killed by a train). She was born about 1890, and was one of the most promising of the younger artists. During 1914-15 she was singing at the Metropolitan Opera House.

HEINZ, HENRY JOHN. Manufacturer, died at Pittsburgh, Pa., May 14. He was widely known as the leading member of the pickle firm of H. J. Heinz Co. He was born at Pittsburgh, Oct. 11, 1844, and began business in the packing industry at Sharpsburg, Pa., in 1869, but soon removed to Pittsburgh, and began the manufacture of pickles. His business expanded rapidly and in 1906 it was organized as a corporation. Many branches were established in this country and in all parts of the world.

HELICOPTER. See AERONAUTICS.

HELIGOLAND. A fortified island in the North Sea, ceded by England to Germany in 1890. By the terms of the treaty (see WAR OF THE NATIONS), Germany was required to dismantle it. In November the dismantling of the batteries was going on, pursuant to the provisions of the Peace Treaty. Several hundred workmen were engaged and the work was almost completed. At the beginning of the war the people were expelled at six hours' notice and sent to Hamburg and Altona where they were kept under police supervision. Upon their return they found their houses occupied by German officers.

HELIUM. See CHEMISTRY, INDUSTRIAL.

HELM, HARVEY. Congressman, died at Columbus, Miss., March 3. He was born at Danville, Ky., graduated at the Central University of Kentucky, and was admitted to the bar in 1890. He was County Attorney of Lincoln County, Kentucky, from 1897 to 1904 and he was a member of Congress from 1907 to 1919.

HENDERSON, CHARLES ENGLISH. Railway official and philanthropist, died at Easton, Md., April 8. He was born in Jefferson County, Va.,

Sept. 28, 1844, and after studying medicine in the University of Pennsylvania, practiced at Baltimore, Md., but in 1870 he entered the railway service as a clerk at the Fort Scott station on the Missouri River. He rose rapidly in the service and was made general manager and receiver of the Atchinson and Nebraska Railway in 1881. From that time on he successively held the position of general manager in many important roads.

HENRY, EDWARD LAMSON. Painter, died at Ellenville, N. Y., May 9. He was born at Charlestown, S. C., Jan. 18, 1841. He became an associate of the National Academy in 1867 and subsequently won medals for his work at several exhibitions. His paintings included especially interiors of early New England life.

HERBERT, HILARY ABNER. Former secretary of the navy, died at Tampa, Fla., March 6. He was born at Laurensville, S. C., Mar. 12, 1831, and studied at the University of Virginia. He was admitted to the bar and practiced law at Greenville, Ala., from 1857 to 1872 but meanwhile served in the Alabama volunteers during the Civil War. He was a member of Congress from Alabama from 1877 to 1893. President Cleveland appointed him Secretary of the Navy, which office he held from 1893 to 1897 after which he practiced law at Washington, D. C.

HEREDITY. See ZOOLOGY.

HERTLING, COUNT VON. Former German Imperial Chancellor, died in Bavaria January 4. He had been Chancellor of the Empire only three months before—the seventh holder of that office and the last but one; born at Darmstadt in 1843. In his youth he had shown marked ultramontane tendencies. He began his career as a teacher at Bonn, and in 1880 he became professor of philosophy in Munich. Meanwhile he had served for several years as a member of the Reichstag, always on the side of the Roman Catholics, and an opponent of every phase of liberalism, and he won his way to the leadership of the Roman Catholic Centre. In 1912 he became minister-president of Bavaria. During the chancellorship of Bethmann-Hollweg he did much to undermine his influence by his opposition to any measure of reform. The Kaiser offered him the post of Chancellor on July 13, 1917, without consulting Bethmann-Hollweg, but Hertling refused, and the office was bestowed upon the Prussian official Herr Michaelis. Upon the failure of the Michaelis's administration on Nov. 1, 1917, Hertling was appointed Chancellor. From the first he managed the situation with skill, placating the Reichstag by certain concessions which were, however, more apparent than real, and bringing a certain measure of stability into affairs, and his position was strengthened by the fact that at that time the German armies were successful, for it was the period of the invasion of Italy and the collapse of Russia. As to foreign policy he seemed to keep himself in the background, leaving the responsibility to Herr von Kühlmann, who negotiated the treaties of Brest-Litovsk and Bucharest, and incurred whatever odium was attached to these treaties by liberal minds in Germany. Kühlmann made his famous speech in June in regard to the impossibility of ending the war by merely military means, and not long afterwards he was dropped. Admiral von Hintze succeeded him as foreign secretary, and proved a failure, though by that time conditions were

such as not to admit of success, as Germany was fast on her way to defeat. When Bulgaria capitulated at the end of September, Hertling was driven from office and succeeded by Prince Max of Baden who set forth a democratic programme. In his last speech Hertling attributed the discontent in Germany exclusively to the military reverses. He declared, however, that the German people would stand firm and not beg for mercy; that the iron wall on the western front would not be broken; that the U-boat war was slowly tending to success, and gradually would restrict the reinforcements from the United States; and that the hour would come when the enemy would see reason and be ready to make an end of war.

HERZEGOVINA. See BOSNIA AND HERZEGOVINA.

HESSE. One of the states of the former German Empire; a grand duchy situated in the western part of Germany. Capital, Darmstadt. Total area, 2968 square miles; population (Dec. 1, 1910), 1,282,051. In common with the other states of Germany it overthrew its government under the revolutionary movement at the close of the year 1918. The work of drafting a constitution was begun in the following spring. The new Diet was elected in January, 1919, composed of 31 Majority Socialists, 13 Democrats, 13 Catholics of the Centre, 7 German People's Party, 5 Hessian People's Party, and one Independent. A new ministry was appointed Feb. 21, 1919 under the premiership of Herr Ulrich. See GERMANY.

HETCHY DAM. See DAMS.

HIDES. See LEATHER.

HIGGINS, EDWARD. Consul, died at Bahia, Brazil, November 18. He was born at Boston, Mass., May 13, 1856; studied theology and became a preacher and lecturer 1881-1903. In the latter year he was appointed consul at Berne, next at Stuttgart, 1907-1916, and finally at Bahia, Brazil, 1916, to the time of his death.

HIGGINSON, HENRY LEE. Boston philanthropist and banker, died at Cambridge, Mass., November 14. He was especially known as a patron of music, being a founder of the Boston Symphony Orchestra. He was born in New York City, Nov. 18, 1834, and studied at Harvard. He went to Vienna and studied music, but entered the Civil War and became major in the First Massachusetts Cavalry. He was severely wounded in Virginia in June, 1863. After Jan. 1, 1868, he was a member of a well-known firm of bankers and brokers in Boston and he became an official or director of many important commercial institutions. He was a trustee of Harvard University, and the founder of the Harvard Union.

HIGH SCHOOLS. See EDUCATION.

HILLS-JOHNES, Lieutenant, Sir JAMES. British soldier, oldest wearer of the Victoria Cross, died in Wales, January 3. He was born Aug. 20, 1833, the son of an officer in the Indian service, passed his early life in Scotland, was commissioned in the Bengal artillery June 11, 1853, and served with a horse battery during the Indian Mutiny. He fought in the siege of Delhi, at Lucknow, and in other important engagements, displaying extraordinary bravery, and served in 1867 in command of the expedition to Abyssinia. During the Afghan war (1878) he was Assistant Adjutant-General of the Kandahar field forces, accompanied Lord

Roberts's column to Kabul, where he was made military governor, and did noteworthy work in northern Afghanistan in 1880. He was promoted to the rank of major-general after the war, receiving the thanks of Parliament. He retired in 1888.

HINDS, ASHER CROSBY. Congressman and writer on parliamentary law, died at Washington, D. C., May 2. He was born at Benton, Me., Feb. 6, 1863, graduated at Colby College 1883, and then went into newspaper work in Portland, Me. In 1889 he was made speaker's clerk of the House of Representatives and from 1895 to 1911 was parliamentary clerk. He compiled the following works: *Rules, Manual and Digest of House of Representatives*; *Parliamentary Precedents of the House of Representatives*, (1889); *Precedents of the House of Representatives*, (1908).

HISTORICAL ASSOCIATION, AMERICAN.

A national organization for the promotion of historical studies. The 34th annual meeting, which was not held last year due to the health conditions at that time, was held in Cleveland, Ohio, Dec. 29-31, 1919. Other organizations that held joint conferences with this association at that time were: Mississippi Valley Historical Association, National Association of State War Historical Organizations, Agricultural History Society, American Association of University Professors, Political Science Association. Many subjects of present day interest were discussed. The officers in 1919 were: President, William Roscoe Thayer, first vice-president, Edward Channing; second vice-president, Jean Jules Jusserand; secretary, Waldo G. Leland, and treasurer, Charles Moore. Headquarters of the association are in the Woodward Building, Washington, D. C.

HISTORY. See LITERATURE, AMERICAN and ENGLISH.

HITCHCOCK, CHARLES HENRY. Geologist, died at Honolulu, November 7. He was born at Amherst, Mass., Aug. 23, 1836, graduated at Amherst College 1856, and after pursuing theological courses entered the Royal School of Mines, London. He was professor of geology and mineralogy at Dartmouth College, 1868 to 1908, and lectured during that period at other institutions as well as served as State Geologist of Maine 1861-2, and of New Hampshire 1868-78. In the winter of 1870-1 he headed the expedition which occupied the Mt. Washington Observatory, the first high mountain observatory in the U. S. He was best known as compiler of geological maps of the United States, and for researches in ichnology, geology of the crystalline schists, and glacial geology. He wrote 150 reports, pamphlets, etc., on geology, besides a textbook on elementary geology (1861); *Mt. Washington in the Winter*, (1871); *Report on the Geology of New Hampshire*, (1873-8); *Geological Map of the United States*, (1881), and *Hawaii and its Volcanoes*, (1909).

HOCKEY. Very little hockey was played in the United States in 1919 as compared with other recent years as the rink accommodations were inadequate. The matches for the Stanley Cup, emblematic of the world's championship were contested at Seattle, Wash., and resulted in a tie between the Seattle team and Les Canadiens of Montreal, Canada. Each team won two games and lost two while one contest was a tie. An outbreak of influenza forced several of

the players into hospitals and it was impossible to continue the series. The results of the games played follow: Seattle 7, Les Canadiens 0; Les Canadiens 4, Seattle 2; Seattle 7, Canadiens 2; Seattle 0, Les Canadiens 0, Les Canadiens 4, Seattle 3.

A few college games were played during the year but the Intercollegiate League again failed to conduct a series. Erasmus Hall High School for the second year in succession won the Public School Athletic League championship of New York City.

HODGE, HENRY WILSON. Civil engineer, died in New York City, December 21. He was born at Washington D. C., Apr. 14, 1865, and educated at the Rensselaer Polytechnic Institute. He constructed some of the largest buildings in New York City, including the Singer, the Woolworth, the Bankers' Trust Company and the Cunard buildings, the last-named being under construction in 1919. He was also among the most prominent American bridge-builders. He designed the municipal bridge over the Mississippi River, the Great Northern railroad bridge at St. Louis, and a large number of important railway bridges including the cantilever bridges over the Monongahela and Ohio Rivers, the former being the largest railroad bridge in the United States. He was engineer for the city of New York in the building of the Melrose Avenue viaduct bridge, the Blackwell's Island Bridge, and the Manhattan Suspension Bridge, over the East River. He served during the war on the staff of General Pershing as director of military railroads and bridges in France, where he was instrumental in the building of a system of docks at various ports and of railroads leading from American bases toward the front. He was member of important engineering associations in this country and abroad.

HODGES, GEORGE. Clergyman and author, died at Boston, Mass., May 27. He was born at Rome, N. Y., Oct. 6, 1856; graduated at Hamilton College in 1877, and was ordained deacon in 1881 and priest in 1882. He was rector in Pittsburgh, Pa., from 1889 to 1894, and after that up to the time of his death was dean of the Episcopal Theological School at Cambridge, Mass. He was a prolific writer and the list of his books is as follows: *The Episcopal Church*, (1889); *Christianity between Sundays*, (1892); *The Heresy of Cain*, (1894); *In This Present World*, (1896); *Faith and Social Service*, (1896); *The Battles of Peace*, (1897); *The Path of Life*, (1899). William Penn (Riverside Biographical Series, 1900); *Fountains Abbey*, (1904); *The Human Nature of the Saints*, (1904); *When the King Came*, (1904); *The Cross and Passion*, (1904); *Three Hundred Years of the Episcopal Church in America*, (1906); *The Administration of an Institutional Church*, (1906); *The Happy Family*, (1906); *The Pursuit of Happiness*, (1906); *The Year of Grace*, (1906); *Holderness*, (1907); *The Apprenticeship of Washington*, (1909); *The Garden of Eden*, (1909); *The Training of Children in Religion*, (1910); *A Child's Guide to the Bible*, (1911); *Everyman's Religion*, (1911); *Saints and Heroes*, (1911); *Class Book of Old Testament History*, (1914); *The Early Church*, (1914); *Henry Codman Potter, Seventh Bishop of New York*, (1915); *Religion in a World at War*, (1917).

HOLDEN, Sir EDWARD. British financier, died in August. He made his success in establishing on its present basis the important Joint City and Midland Bank of London, and he was member of the French and British Commission in 1915 which visited the United States and organized the Anglo-French loan. He was born May 11, 1848, near Manchester, England; was member of Parliament from 1906 to 1910, and was chairman of the London Joint City and Midland Bank.

HOLLAND. See NETHERLANDS.

HOLLYER, SAMUEL. British-American engraver, died in New York City, December 29. He was born in London in 1825 and came to the United States in 1851. He belonged to the old school of engravers and his first signed work was said to date from 1842. From that time on he worked at engraving, etching and mezzotints, and also engaged in photography and lithography. Some of his plates were well known, especially "The Flaw in the Title," "Charles Dickens in His Study," and the "Gleaners."

HOLY CROSS, COLLEGE OF THE. An educational institution for men, conducted under the direction of the Society of Jesus, a religious order of the Roman Catholic Church at Worcester, Mass. The library contains about 45,000 volumes. It was founded in 1843. President, Rev. James J. Carlin, S.J.

HOME DEMONSTRATION WORK. See AGRICULTURAL EXTENSION WORK.

HOMER, WILLIAM J. Prison warden, died at Glens Falls, N. Y., October 5. He was born at Elmira, N. Y., Feb. 1, 1869, and entered the employ of the Erie R. R. in the passenger department and was afterwards engaged in the manufacture of boxes and shipping cases in Elmira. On July 17th, he was appointed warden of Great Meadow prison where he introduced a number of distinctive features, such as the honor system, the reduction of guards to a minimum, and the requiring of no factory work. He was one of the well known penologists of the country.

HOME RULE. See GREAT BRITAIN, History.

HONDURAS. A Central American republic. Capital, Tegucigalpa.

AREA, POPULATION, ETC. The area is estimated at about 44,275 square miles and the population according to the census of 1916 was 613,458 but this was regarded as only approximate. The inhabitants are for the most part Indians with an admixture of Spanish blood. Tegucigalpa, the capital and also the largest city, had in 1914, 28,950 inhabitants. Primary education is free and nominally compulsory between the years of seven and 15. In 1917 there were 925 schools (584 public), and in 1918 the children of school age numbered 80,158. There are also a central university at the capital and several technical and special schools. A central teacher's academy was opened at the capital on June 9th.

PRODUCTION AND COMMERCE. The chief crop in point of commercial value is bananas, which are grown chiefly on the Caribbean coast. Coconuts are also raised in that region. Corn

is the staple food crop. Other products are rubber, coffee, tobacco, beans, rice, wheat, millet, sugar cane, yucca, and indigo. The foreign trade of Honduras in 1918 was estimated at \$10,518,100 as compared with \$11,646,600 in 1917. In the year 1916-1917 the imports according to British authority were valued at £1,258,632 and the exports at £1,070,690. In respect to foreign trade, the United States holds the leading place and supplies four-fifths of the imports, the average value being from \$4,000,000 to \$6,000,000.

RAILWAYS. The railways in operation had a mileage of about 360, the chief line being the National which runs from Puerto Cortes to Potrillo. A new line from a point east of Puerto Cortes, namely the port of Tela, running to El Progreso, was completed in 1918 and a line was under construction in 1919 to connect Trujillo with Juticalpa and the capital.

FINANCE. The receipts in 1917-18, 4,805,781 pesos, a falling off of 801,678 since 1916-17; expenditures 1917-18, 5,423,073 pesos. The Budget estimates for the year 1919-1920 made the receipts and expenditures balance at 6,482,487 pesos. The expenditures were distributed as follows: Department of Home Government, \$41,929; Justice, 230,559; Foreign Relations, 256,823; Public Instruction, 600,895; Fomento, Public Works and Agriculture, 969,055; War and Marine, 1,997,920; Finance, 521,306; Public Credit, 100,000; National Railway, 534,000, and Public Highways, 430,000. The legal standard of value is silver and the monetary unit is the peso which had a value on Dec. 31, 1919, of .9271. On Aug. 8, 1918, United States coin and paper currency were made by presidential decree the legal tender throughout the country, the rate of exchange being fixed at 200. The chief sources of revenue have been customs and the government monopolies on spirits, tobacco and explosives. The external debt on Dec. 31, 1918 amounted to £5,398,570 and there were arrears of interest on Jan. 1, 1919 amounting to £21,399,382, thus making a total indebtedness of £26,797,952. The internal debt was given on July 1, 1917 at \$3,397,418 (silver dollars).

GOVERNMENT. The legislative power is vested in a congress of deputies consisting of 42 members elected directly for four years. The executive authority is vested in a president elected by popular vote for four years who acts through a Council of Five elected for four years, namely of Foreign Relations, Government and Justice, War, Treasury and Public Credit, Public Works, and Instruction. President for the term 1916-1920, Dr. Francisco Bertrand.

HONGKONG. A crown colony of Great Britain at the mouth of the Canton River off the southeast coast of China. It consists of an island containing about 32 square miles and a strip of land on the mainland (376 square miles); also of about four square miles of the peninsula of Kowloon which lies opposite it on the mainland. Civil population estimated in the middle of 1917, 535,100; of whom the Chinese numbered 521,600. Of the white residents about one-half are British and one-half Portuguese. It is one of the chief centres of Far Eastern trade. Its commerce is mainly with Great Britain which has nearly one-half of the total trade. After Great Britain come India, Australia and the United States. The trade with Great Britain in 1918 was placed at over £5,000,000,000. From the United States the

staple import during the war was flour but the trade was practically suspended during the war. The exports to the United States comprised chiefly breadstuffs, especially rice, tin, various fruits and woods, and wolfram. The articles invoiced at the Consulate-General during the first six months of 1918 amounted to \$24,406,278 and for the first six months of 1919 to \$6,572,623. To the Philippines the exports during the first six months of 1918 were \$3,428,465 and for the first six months of 1919 \$4,442,145. Japanese competition was felt particularly in 1919 in all lines of trade. The exchange value of silver was very high, with the Hongkong dollar at \$715 American gold, in the beginning of the year. At the end of the year it was below the 80-cent point. The general business situation for 1919 was satisfactory. Ship-building, one of the leading industries, turned out 75,000 tons of shipping in 1919, and commenced the construction of other vessels aggregating almost as much more. A large number of smaller local industries were interfered with greatly by a lack of raw materials, which either could not be obtained at all, or were restricted on account of high cost. In 1918 579,541 vessels, of a tonnage of 29,518,189, cleared, which was a decrease from 1917 statistics. Estimated revenue for 1918, \$17,080,000; expenditure, \$15,752,000; for 1919, revenue, \$16,884,000; expenditure, \$14,678,000. In 1917 the tonnage entered was 10,292,772 and tonnage cleared 10,266,435. The executive power is vested in a governor assisted by an executive council; the legislative power in a legislative council, over which the governor presides. Governor for 1919, R. E. Stubbs.

HOOD, JOHN. Naval officer, died at Annapolis, February 11. He was born at Florence, Ala., Dec. 3, 1859, and graduated at the United States Naval Academy in 1879. He became lieutenant in 1895 and lieutenant commander in 1901. He was on board the *Kearsarge* when it was wrecked in 1894 and on the *Maine* when it was sunk in 1898. During the Spanish-American War he commanded the *Hawk* which carried information of the arrival of the Spanish squadron at Santiago. Among his other important duties was the survey for the Pacific cable, 1899-1900, and he served in Chinese waters during the Russo-Japanese war. In 1911-12 he commanded the *Delaware* in the Atlantic Fleet and won the pennant for battle efficiency. He was a member of the General Navy Board 1912-15 and commanded the *Texas* in the Atlantic Fleet 1915-16, winning again the battle efficiency pennant as well as other honors. From 1916 to 1917 he was in command of the reserves and was ordered to the command of the 4th Division when the reserves were mobilized for war, Apr. 6, 1917.

HOPKINS, CYRIL GEORGE. Expert in agricultural chemistry and university professor, died at Gibraltar during the first week of October, news of his death being received October 8. He was born near Chatfield, Minn., on July 2, 1866, and studied at the Agricultural College in Illinois. He afterwards took a graduate course at Grinnell and studied agricultural chemistry in Göttingen 1899-1900. He taught chemistry in the Agricultural College at Brookings, S. D., and at Grinnell in the 1890's, and after 1900 was professor of agronomy in the University of Illinois Agricultural Experiment Station. He invented the Hopkins condenser distilling tube

and limestone tester, and was a member of many important societies within his field of research. He wrote *Soil Fertility and Permanent Agriculture*, (1910); *Story of the Soil*, (1911), and *The Farm That Won't Wear Out*, (1913), besides special bulletins and papers; and he was the agricultural director of the Southern Settlement and Development Organization, 1913-14. When the Red Cross Mission was sent to Greece, he accompanied it as an agricultural expert, and at the time of his death he was making a tour of southern Europe. He was decorated by the King of Greece for distinguished services. He held to the belief that sufficient amounts of nitrogen for farming purposes could be obtained by the proper rotation of crops and he insisted upon what he called a permanent agriculture, meaning thereby that regards should be had not only for immediate results from fertilizers but for a permanent effect upon the land.

HOPKINS, TIGHE. British writer, died in London, England, Feb. 14. He was born Dec. 8, 1856, and besides the following works which were mainly novels he wrote much on penal reform: *Twist Love and Duty* (1886); *For Freedom*, (1888); *Nugents of Carriconna*, (1890); *Incomplete Adventurer*, (1892); *Lady Bonnet's Experiment*, (1895); *Kilmainham Memories*, (1896); *Pepita of the Pagoda* (Arrowsmith's Annual), (1897); *Dungeons of Old Paris*, (1898); *An Idler in Old France*, (1899); *The Silent Gate: A Voyage into Prison*, (1900); *The Man in the Iron Mask*, (1901); *The Women Napoleon Loved*, (1910); *Some Forty Chapters in London Stories*, (1911); *Wards of the State, an Unofficial View of Prison and the Prisoner*, (1913); *Romance of Fraud; Prisoners of War*, (1914); *Romance of Escapes*, (1916); *Your Unsuspected Self*, (1917).

HOPS. The world's hop production in 1919 did not show a very marked recovery from the deranged conditions resulting from the war. In the principal European hop-producing countries the acreage during the war period dropped to less than half of the area in hops for the years immediately preceding the outbreak of hostilities and the average yield per acre also was lower than that secured in normal times.

As reported by the International Institute of Agriculture, Rome, the area in France was about 3200 acres and in England nearly 17,000 acres, a recovery over 1918 of 20 per cent and 7 per cent, respectively, but still under 60 per cent of the normal acreage. According to trade reports the production in Germany was estimated at 65,000 cwts. and in Austria at 100,000 cwts. as compared with a normal production of 350,000 cwts and 300,000 cwts. respectively. Data published by the Department of Agriculture placed the crop of the United States at 29,346,000 pounds on 23,900 acres, or a yield per acre of 1,227.9 pounds. The corresponding figures for 1918 were 21,481,000 pounds, 25,900 acres and 829.4 pounds respectively.

Largely as a result of laws affecting the manufacture of intoxicating beverages, the acreage has declined rapidly since 1915 when 44,700 acres were grown. In the four States growing hops on a commercial scale the reduction in acreage as compared with the preceding year was made in New York and Washington, while the areas in Oregon and California remained about the same. The international trade in hops was very light during the earlier part of the

year but in the fall a brisk movement resulted from heavy purchases largely by British buyers which raised prices rapidly.

As estimated by the Department of Agriculture the average price to producers had reached 56.6 cents per pound on September 15th and 77.2 cents on December 1st as against 19.3 cents on Dec. 1, 1918. The crop of 1919 at 77.2 cents per pound was valued at \$22,656,000 and the crop of 1918 at 19.3 cents per pound at \$4,150,000. The greater portion of the 1919 crop left the producers' hands before the maximum price was reached. Good prices were reported also from Bohemia due to buying for French and English account.

HORSES. See LIVE STOCK and VETERINARY MEDICINE.

HORTICULTURE. With few exceptions abundant crops of fruit were produced in North America during 1919. Climatic conditions were generally more favorable in the far western fruit districts than in the East. The western New York apple crop was short about four million barrels, and fruit crops were light in Ontario. Nova Scotia produced a bumper apple crop of about 1,500,000 barrels. The California orange crop was short. Total fruit production was quite close to that of 1918. Production in Europe continued below normal but was better than in 1918. Crops were light in the Almeria district of Spain. Italy will be obliged to import most of her olive oil. The harvested Smyrna fig crop was seriously reduced by the burning of the greater part of Aidin and surrounding villages in the heart of the fig district. There was a material reduction in staple vegetable crops both in this country and abroad. The short canned vegetable pack in the United States has been conserved to some extent by previous release to the public of excess army and navy supplies. Labor was more plentiful in the fruit districts, but at higher wages. There was no improvement in the car shortage and distribution was difficult. Export trade, though handicapped by fluctuations in foreign exchange, was active.

Of the commercial vegetable crops in the United States, 357,901,000 bushels of white potatoes were produced in 1919 as compared with 411,860,000 bushels in 1918; sweet potatoes, 103,579,000 bushels as compared with 87,924,000 bushels; dry beans, 11,488,000 bushels as compared with 17,397,000 bushels; onions, 12,833,500 bushels as compared with 19,336,000 bushels; cabbage, 443,400 tons as compared with 684,812 tons; and canned peas, 8,685,000 cases as compared with 11,063,000 cases. The total apple crop was 49,152,000 barrels as compared with 56,637,000 barrels in 1918; peaches, 51,340,000 bushels as compared with 34,133,000 bushels; pears, 13,498,000 bushels as compared with 12,993,000 bushels; and oranges, 23,916,000 boxes as compared with 24,200,000 boxes. California shipped over 30,000 cars of fresh deciduous fruits in 1919. California's walnut crop, the largest in the history of the industry, was estimated at 48,000,000 pounds. Hawaii shipped 3,847,315 cases of canned pineapples in 1918, with prospects for a considerable increase in 1919.

EXPORT TRADE. For the fiscal year ended June 30, 1919, the United States exported fruits worth \$69,144,187; vegetables, \$53,513,794; nuts, \$2,148,607, or a total of \$124,806,607 as compared with \$61,445,379 in 1918. The imports

for the same period were fruits, \$25,816,703; vegetables, \$33,687,305; nuts, \$42,515,661, a total of \$102,019,669 as compared with \$107,432,859 in 1918. Exports of nursery stock amounted to \$333,356 as compared with \$260,763 in 1918, and imports of nursery stock to \$2,363,553 as compared with \$3,327,697 in 1918. The export trade was marked by a general increase in shipments at higher prices. Imports of oil-bearing nuts fell off but were more than replaced by increased shipments of \$43,496,543 worth of coconut butter as compared with \$30,919,783 in 1918, and \$11,495,849 worth of peanut oil as compared with \$7,311,824 in 1918.

Nurserymen in the United States and abroad were actively engaged in an attempt to secure the repeal of the United States Plant Quarantine Act, which governs the importation of nursery stock, plants, bulbs and seeds as a protection against the introduction of insect pests and plant diseases. The regulations under this act were modified to some extent during the year to facilitate the entry of such classes of plants as were represented by experts to be essential to the floriculture and horticulture of the country under existing conditions. Ample measures were provided, however, to prevent the dissemination of pests and diseases. In order to prevent the introduction of citrus canker the Fruit Commission of Australia has issued a general order prohibiting the importation of oranges from practically all countries except the United States, and then only from California and Arizona. Toward the close of the year Italy raised an embargo on the exportation of chestnuts that has been in force since early in 1915. Spain partially removed restrictions on exports of olive oil but required exporters to duplicate shipments with a home reserve stock under Government control. England limited profits of retail fruit dealers to 33⅓ per cent.

NEW ORCHARD ENTERPRISES. Quite noticeable during the year were the increased sales of developed orchards in different sections of the United States. Contrary to the boom of a few years ago when many small investors parted with their money in numerous now-forgotten orchard enterprises, most of the present development is of a substantial nature backed up by experienced fruit men and investors. The present tendency is to buy promising orchard properties rather than raw fruit lands. Towering above every other transaction is that of the American Fruit Growers, which concern, incorporated under Delaware Charter on July 7th with an authorized capital stock of \$50,000,000, has already acquired several million dollars' worth of successful orchard properties in the leading fruit regions and has placed them in charge of experienced fruit men, assisted by a general staff of experts in every phase of the business. This corporation, under the leadership of an old and successful Pittsburgh fruit and vegetable commission house, proposes to distribute and market its own produce and to own, as far as possible, such subsidiary enterprises as canning, crate, and fertilizer factories. It is further planned to develop vegetable industries and to maintain a distributing and marketing service for other growers.

CITRUS BY-PRODUCTS. The by-product laboratory of the U. S. Department of Agriculture at Los Angeles has improved existing methods for the manufacture of citrate of lime and citric

acid, and adapted them to California conditions. They are now being used satisfactorily on a large commercial scale. Since this work began, four stable concerns have developed a total annual manufacturing capacity of over 1,500,000 pounds of citric acid, over 500,000 pounds of citrate of lime, and over 50,000 pounds of lemon oil. Methods of producing orange marmalade, jellies, and candied peel have also been developed and manufacturers have been assisted in extending the industry. The total output of orange by-products in 1919 approximated 6,000,000 pounds. Work with frozen oranges has shown that, though unfit for shipment, they are suitable for making marmalade if used promptly near the centre of production. The preparation of pure orange juice has made little headway, but juice of excellent quality can be prepared from grapefruit. Similar investigations are now under way in Florida.

EXPERIMENT STATION WORK. As the result of studies conducted for several years the California Agricultural Experiment Station reported that, for all practical purposes, the cultivated almond is self-sterile, and orchards must be inter-planted with pollinizing varieties if they are to prove commercially profitable. Experiments conducted at the Arizona Experiment Station have shown that many varieties of dates may be harvested and held in dry cold storage (36 to 38° F.) for several months to be sold as fresh fruit, thereby avoiding overstocked markets. Other varieties required partial evaporation to be safely kept in cold storage. The Wisconsin Experiment Station has found, contrary to the frequent advice that the cherry tree should be pruned little if any, that the sour cherry tree thrives best when regularly and often heavily pruned. After reviewing the experimental literature on bud variations among horticultural plants, M. J. Dorsey of the Minnesota Experiment Station concluded that bud variation may affect such important commercial fruit characters as color, season, size, growth, habit, and yield, but that such variations have not been much of a factor in the origin of new varieties in the apple, cherry, plum, or grape. More successful results have been secured among bud variations in citrus fruits, ornamentals, and flowers. After an extensive test, the South Dakota Experiment Station has found that two species of Siberian pear (*Pyrus ussuriensis* and *P. ovoides*) appear to be resistant, both to the blight and the rigorous climate of the Northwest. Seedlings of these species are to be used as stocks for cultivated varieties. Experiments covering several years at the Iowa Experiment Station have shown that the canker on limbs and trunks of apple trees of bearing age, which is known as Illinois blister canker, may be checked by chiseling out the infected wood and painting the entire wood with an antiseptic paint.

In the search for hardy and disease-resistant stocks on which to top-graft some of the less hardy commercial apples, the Iowa Experiment Station finds that the Wealthy and Virginia Crab varieties are valuable as stocks for Jonathan, and the Virginia Crab and Delicious varieties as stocks for Grimes Golden. The Delicious variety, when top-worked on Virginia Crab, comes into bearing earlier and gives a more satisfactory yield than on its own stock. At the Illinois Experiment Station tomato strains have been developed which have proved

highly wilt-resistant, as compared with commercial strains when grown on badly infected soil. The North Dakota Experiment Station has developed sufficiently early maturing strains to make the production of tomatoes practical in that climate. Experiments conducted at the Missouri Botanical Garden for three seasons with tomatoes, string beans, sweet corn, and salvia have shown that electrically stimulated plants make a considerable increase in vegetative and reproductive growth and the date of maturing is hastened. The investigators state, however, that much has yet to be learned relative to the required quantity and intensity of the stimulus, as well as the proper time of application during the life of the plant. Summing up the results of 10 years' work, the Missouri Experiment Station concludes that fall planting of hardy fruits is better than spring planting, and that late fall planting just before the ground freezes is superior to early fall planting. The same station also finds that the alternate-year bearing habit of most apple trees is due to the inability of the individual fruit spurs to mature fruit and at the same time develop a fruiting bud for the following year. Although exceptions to this rule have occurred, it is concluded that varieties which produce regular annual crops, such as Jonathan and Winesap, do so because only a portion of the fruit spurs set fruit in a given year. Removing the blossoms from a tree by accident or design may result in a change in the fruiting year.

PROMISING FRUITS AND PLANTS. Investigations now being conducted by the U. S. Department of Agriculture have thus far shown that the Panariti grape, one of the leading currant grapes of Greece, is adapted to the California raisin districts and that this early ripening grape will produce currants of good quality in the Bay counties where raisin production has not heretofore developed. It has also been found that to secure a large annual production of fruit from the Panariti grape, a narrow band of bark must be removed from the trunk or bearing canes of the vine at the time the vines are in bloom. On vines thus treated, the fruits are large, uniform in character, and ripen evenly. Experiments conducted with the Ohanez grape from Spain indicate that this variety also may be grown on a commercial basis in California for the purpose of replacing the Almeria and other types of long-keeping grapes now imported into this country from Spain and elsewhere. The search for new crops in foreign countries was continued. Twenty-three new and promising avocados have been secured from Guatemala and are now being tested in Florida, California, Hawaii, Porto Rico, and Cuba. The varieties introduced have a wide range as they represent types coming from near sea level up to an altitude of more than 5000 feet. Two avocados were secured from a high altitude in Ecuador which may prove cold resistant. The Department's plant-breeders have recently developed a number of everbearing strawberries, as well as large strawberries of good quality that are hardy in the interior of Alaska and a new hardy pillar or low-climbing rose, bearing pure white blossoms with prominent yellow stamens. The Chinese chestnut (*Castanea mollissima*) continues to give promise as a blight-resistant substitute for the doomed American variety.

Several thousand of these young trees are now being grown, also several thousand hybrid chestnuts, with the object of testing them for disease resistance and nut production. Sufficient progress has been made in the growing and testing of bamboos in the South to show that six or seven types are suitable for a wide range of soil and climate and useful for a great variety of purposes. Promising new stocks of pear, apple, peach, cherry, and plum have been assembled from foreign countries, chiefly the Orient. About 75,000 new pear stocks have been distributed to nurserymen and others for test under varying conditions.

INSTITUTIONS, SOCIETIES, ETC. The University of London has added horticulture to its curriculum and will give the degree of Bachelor of Science in Horticulture. A Chamber of Horticulture for Great Britain was formally inaugurated at London, Dec 2, 1918. The Board of Agriculture and Fisheries of Great Britain recently purchased a farm at Ormskirk, Lancashire, for experimental work with potatoes. At an international conference of horticultural traders held in Paris early in September, to which American representatives were invited but failed to attend, a new association was formed under the title of The International Federation of the Horticultural Trade. Mr. Arthur De Smet is the first president, and M. Turbat (Orleans), secretary. All allied countries will be admitted to the Federation—including the new countries—at a fee of 500 francs a year; neutral countries may be admitted, if they desire, provided the conference agrees. The admission of former enemy countries was left for future consideration. The French National Society of Horticulture resumed its autumn flower and fruit shows after a lapse of five years. The Society held a general exposition and Congress of Horticulture in June. A National Horticultural Society is being formed in the Grand Duchy of Luxemburg under the auspices and with the cooperation of the Luxemburg Department of Agriculture. The Florida Agricultural Experiment Station is to locate a citrus substation at Lake Alfred. Mr. E. H. Wilson, well known for his botanical and horticultural explorations in China, and as a plant introducer, was made assistant director of Arnold Arboretum.

Bibliography. Recent contributions to horticultural literature include the following books: J. M. Priego, *Arboriculture General*, (Madrid, 1917); Duke of Bedford and S. U. Pickering, *Science and Fruit Growing*, (London, 1919); A. Rolet, *Plantes a Parfums et Plantes Aromatiques*, (Paris, 1918); H. P. Gould, *Peach Growing*, (New York, 1918); U. P. Hedrick, *Manual of American Grape Growing*, (New York, 1919); G. Truffaut, *Production des Légumes*, (Versailles, 1918); G. C. Roeding, *Roeding's Fruit Grower's Guide*, (Fresno, Cal., 1919); F. D. Gardner, et al. *Fruits, Vegetables and Flowers*, (Philadelphia, 1918); E. L. Fullerton, *The Book of the Home Garden*, (New York and London, 1919); L. B. Wilder, *Color in My Garden*, (Garden City, N. Y., 1918); and I. D. Bennett, *The Making of a Flower Garden*, (New York, 1919). Recent publications of the United States Department of Agriculture include: H. P. Gould and F. Andrews, *Peaches: Production Estimates and Important Commercial Districts and Varieties*, U. S. D. A. Bulletin No. 806; D. Griffiths and

H. E. Juenemann, *Commercial Dutch-Bulb Culture in the United States*, U. S. D. A. Bulletin No. 797; W. Popenoe, *The Avocado in Guatemala*, U. S. D. A. Bulletin No. 743, and H. P. Gould, *Fig Growing in the South Atlantic and Gulf States*, Farmers' Bulletin No. 1031 (Govt. Printing Office, Washington, 1919).

HOSS, ELIJAH EMBREE. Methodist Episcopal bishop, died at South Muskogee, Okla., April 23. He was born in Washington County, Tenn., April 14, 1849, graduated at Emory and Henry College, Va., in 1869, and was ordained to the Methodist Episcopal ministry in 1870. He was president of Martha Washington College, Virginia, 1876-81; president of Emory and Henry College to 1885, and professor of ecclesiastical history at Vanderbilt University to 1890. He then edited the *Nashville Christian Advocate* until 1902, when he was appointed bishop in the Methodist Episcopal Church, South.

HOURS OF LABOR. See LABOR LEGISLATION.

HOUSE, Colonel EDWARD M. American representative at the Paris Peace Conference. He held no official position at that time, but had long been the confidential representative of the President in the most important issues of his administration. He was born in Texas on July 26, 1858, and at an early age interested himself in State politics. In this he was not actuated by any motive of self-interest and he soon acquired a great reputation in the State for insight and impartiality. He was said to have almost dictatorial power as the result of his influence over the political leaders. He was one of the earliest to see the making of a president in Mr. Wilson, and to press his candidacy. During the period of American neutrality, Colonel House made frequent trips abroad and kept the administration informed as to conditions. In 1918 he created an organization of specialists on European affairs and on all matters pertaining to the war, with the result that the means of obtaining first-hand information were provided for the administration. It was believed that he had played a leading part in 1917 in the movement on unity of command which resulted in the appointment of General Foch as generalissimo. The office of Colonel House at the Hotel Crillon was the clearing house at the beginning of the Conference for all matters pertaining to the American delegation.

HOUSING. One of the most important after the war problems with which practically every country has been confronted is that created by a scarcity of housing accommodations. The almost universal lack of sufficient homes has led to an exceptional amount of interest in this problem. Causes of this deficiency in homes in the United States may be attributed to the following causes: "the general paralysis in construction work during the war due to shortage of men and materials; increased cost of labor, land and materials, with an increased cost of maintenance since the signing of the armistice, general inactivity in building circles because many are waiting for prices to drop; higher standards of living demanded by workers, and the return of men who had been in the service abroad." Efforts are being made in nearly all countries to relieve and remedy the situation through government aid and the activities of local organizations.

On the entrance of the United States into

the war, the housing shortage became acute in most of the manufacturing and shipbuilding centres. The cost of labor and materials had caused a decrease in the rate of new construction for some time prior to our entrance and, in addition, war needs required the concentration of war workers in industrial centres. At first several departments of the government attempted to relieve the housing shortage, but it was found necessary to delegate the housing work to the Department of Labor, and in consequence the Bureau of Industrial Housing and Transportation was formed and later the United States Housing Corporation was organized. The Bureau of Industrial Housing and Transportation was created in February, 1918, but its work did not become effective until June. On July 9, 1918, the United States Housing Corporation was formed to meet the housing situation by supplying additional dwellings. It was incorporated under the laws of the State of New York. Mr. Otto M. Eidlitz was made president of the corporation. For its work Congress appropriated \$100,000,000 and the funds became available by the end of July. Upon the signing of the armistice a large part of the corporation's work was halted and only those projects then in an advanced stage were completed. The corporation sought to solve the housing problem in five ways: (1) By making available housing facilities found by careful investigation to exist in or near the particular communities in question; (2) By connecting, through improved transportation, places where labor was needed with places capable of housing it; (3) By encouraging and aiding private capital to build; (4) By aiding in the distribution of labor and the placing of war contracts in such a manner that housing congestion might be avoided or reduced; (5) By construction and operation of houses, apartments, and dormitories. The last named was the principal purpose for which the corporation was created but it was used only as a last resort. Before housing work was undertaken in any community, its great need for housing had to be certified by the Army or Navy Department and then agents of the corporation made a careful survey of the community.

In spite of the efforts to provide adequate housing facilities, the rentals of both rooms and houses advanced materially. The rise was most marked in cities and was due in many instances to profiteering rather than to increased costs in taxes, repairs, service, etc. One of the problems which the Bureau of Industrial Housing and Transportation sought to solve was the prevention of profiteering. To this end, it encouraged the formation of committees on rent profiteering in industrial communities. "These committees, consisting of representatives of organized labor, real estate interests, the legal profession, and the general public, undertook, by democratic methods to investigate and adjust the various difficulties arising between landlords and tenants." Active committees were formed in 76 cities and in 50 other cities the Bureau adjusted complaints brought to its attention through local representative organizations. The local committees have been very successful in preventing rent profiteering. Thousands of cases have been settled to the satisfaction of all in many cities. In Philadelphia, for example, of 1123 cases recorded, 864 were sat-

isfactorily adjusted. In Cleveland, the saving to tenants averaged \$464 per month. The committees have also succeeded in preventing evictions and through their activities indirectly discouraged landlords from attempting to profiteer. In addition their work has furthered necessary repairs and improvements in sanitary conditions.

Although the emphasis of the National Conference of Social Work held at Atlantic City, N. J., June 1st-8th, was on community problems, much interest was manifested in the housing shortage and the problems thus created. Mrs. Eva White of the United States Department of Labor strongly dwelt upon the uplifting effect of good standards of health, housing and recreation. The danger arising from bringing into use unfit, unsanitary dwellings to meet the shortage in accommodations was pointed out in an outline of the housing experience during the war, by Mr. John Ihlder, Secretary of the Pennsylvania Housing and Town Planning Association. Mr. Laurence Veiller, Secretary of the National Housing Association, in a special paper discussed the standards set up by the Federal Government, and a paper discussing the relation of structural arrangement of houses to health was contributed by Dr. James Ford of the United States Housing Corporation.

In spite of the measures taken to relieve the situation, there is still a great scarcity of houses. Chicago, for example, reports that her housing facilities are 20 per cent less than those required by her population, the St. Louis Chamber of Commerce has formed a \$2,000,000 association for the construction of new homes and in San Francisco rent has advanced 50 per cent. It is estimated that 700,000 to 1,000,000 houses are needed in the United States.

FEDERAL LEGISLATION. In order to solve the problem various measures have been introduced in Congress. Senator Calder introduced a bill, known as the "Federal Home Loan Act," which provides for a system of home loan banks. The purpose of this measure is "to make part of the \$2,000,000,000 of assets held by the Building and Loan Associations immediately available for building." Senator Kenyon has introduced a bill which makes provision for the creation of a commission "to investigate and report to Congress a plan on the question involved in the financing of house construction and home ownership and Federal aid therefor." The Sundry Civil Appropriation Bill for the fiscal year ending June 30, 1920, provided for an appropriation of \$3,070,115 for continuing the activities of the United States Housing Corporation. It also provided that, upon the termination of the war, all the property of the corporation be sold at market value and that the corporation wind up its affairs and dissolve. On December 18th, the House unanimously passed a bill introduced by Mr. Clark of Florida, which ordered the sale of housing facilities erected by the government during the war. The bill abolishes the United States Housing Bureau, transferring its property to the treasury for sale to private persons. Great waste and extravagance were charged and criminal prosecution of the officers of the Bureau was considered.

STATE LEGISLATION. North Dakota has entered upon an extensive programme of State aid to home-builders. Early in the year the Legislature enacted a law under which the State

will establish and operate the North Dakota Home Building Association. In order to help inhabitants of the State, \$100,000 has been appropriated to the association. Another bill authorizes an issue of bonds not to exceed \$10,000,000 in amount, to cover first mortgages on real estate which shall have been issued by the Bank of North Dakota. The Home Building Association is to be operated by the State Industrial Commission which is authorized to acquire by purchase, lease, or exercise of the right of eminent domain, all requisite property rights and may construct, repair and remodel buildings. No (dwelling) house may be built, bought or sold at a price greater than \$5000. In July, the Legislature of Wisconsin added a section to its general corporation law making it possible for municipalities to engage in homing and permitting individuals to form corporative housing companies. Under the law such a corporation may acquire land and prepare it for residential use on approval of any public land commission or city planning commission of any locality where the corporation's property is situated. The maximum cost of any dwelling erected by such a corporation is \$5000.

In June the New York Legislature unanimously passed several bills to relieve the housing situation. It is estimated that the Dodge Bill which permits the remodeling of old type houses in New York City will make 70,000 more houses available. The other bills were designed to protect tenants against rapacity and to stimulate building. On December 12th, Governor Coolidge of Massachusetts signed a bill empowering the state commission to investigate rents and to require landlords to produce their books on demand. The law is directly against rent-proftteers. Between August and December the commission adjusted more than 2000 rent complaints.

REFERENCES *The Public Affair, Information Service, the Monthly Labor Review and Housing Betterment*, a quarterly issued by the National Housing Association, and the *New York Times Index* will give adequate references as to where information on *Housing* and its allied subjects may be found.

ABROAD—ENGLAND. The seriousness of the housing situation in England has resulted in the enactment of government measures, calculated to ameliorate the existing conditions. The keynote of the English situation is sounded by Lloyd George in his statement, "You cannot maintain an A-1 empire on a C-3 population." The housing construction programme provides for an increase in the local tax rate of one penny in the pound. The National Government then lends money to the local government, which, after construction, pays it back as well as it can from the penny in the pound tax and the rents. Provision is made for sanitation and the safeguards against crowded tenement construction. Only eight to 12 houses per acre are permitted, in comparison with 50 per acre at present. It is estimated that during the next few years the government must help build from 600,000 to a million homes at a cost of about 600 pounds each. It is figured that the first 300,000 homes will cost nearly a billion dollars. At the same time, England is encouraging tremendous imports of lumber. During the war the raising of rents was prohibited. Soon after the cessation of hostilities, labor organizations and

housing associations agitated for an extension of the Rent Act. It was estimated that unless this extension was made, seven to eight million houses in the United Kingdom would be affected by a rise in rents ranging from 45 to 100 per cent. Early in the year, an Act of Parliament extended the period of application of the Rent Act, with certain amendments, to the spring of 1921.

CANADA. No effort was made by the Canadian government to carry out a housing programme during the war. Inevitable extravagance was thus avoided. Immediately after the armistice was signed, the Federal and Provincial Governments met to consider the scarcity of housing facilities. On December 3d upon the recommendations of the Privy Council, an order in council was issued granting a loan of \$25,000,000. This loan, administered by five members of the cabinet, was apportioned among the nine Provinces of Canada pro rata to the population. "The money will be lent to the provinces at 5 per cent and will be repayable by them, in most cases, in six equal monthly installments of principal and interest." The Provincial Government of Ontario prior to this action of the Dominion Government, appropriated \$2,000,000 for housing as an addition to whatever Federal loan might be made. The observance of minimum standards formulated by the Ontario Housing Committee is required in all building which is being done under the Ontario Act.

FRANCE. The devastation wrought by the war has made the housing problem a very real one in France. According to the Minister of Liberated Territories, 550,000 buildings are to be rebuilt in the devastated areas. In the vicinity of Paris the shortage is especially acute and plans are being made to construct garden cities under the law of 1912. This law created the public office of Low-cost Dwellings of the Department of the Seine and appropriated 10,000,000 francs (\$1,930,000) for the acquisition of land to serve as sites for such villages in the outskirts of Paris. The French Parliament has authorized the removal of the wall of Paris. This will release 1150 acres of ground. The abolition of the military zone will add 1875 acres, most of which will be used for a new park.

ITALY. On Mar. 23, 1919, a vice regal decree was issued under which aid in the construction of workmen's dwellings may be obtained by the following: The Communes, Workmen's Building and Coöperative Societies, Public Welfare Associations and the National Building and Coöperative Society of Government Employees at Rome. In accordance with this decree, the Deposit and Loan Bank will place 100,000,000 lire (\$19,300,000) at the disposal of the communes and local authorities. When this has been used up further amounts will be provided.

PERU. Under a law enacted Dec. 28, 1918, it is planned to build 100 workmen's houses, to be sold to public employees of over five years' service and who receive ("presumably per month") wages of not more than 15 libras (\$75). The houses will be built according to plans and estimates approved by the executive department. For additional information, see BUILDING, CITY PLANNING, ARCHITECTURE and WELFARE WORK.

HOUSTON, TEXAS. See DOCKS AND HARBORS.

HUGHES, WILLIAM MAURICE. Australian representative at the Paris Peace Conference. He was at the time of the Conference Prime Minister of the Australian Commonwealth. He was born in London of wealthy parents on Sept. 25, 1864, went to Australia, and taking a part in state politics became a member of the Legislative Assembly of New South Wales in 1894. In 1901 he was elected to the first House of Representatives of the Commonwealth, where he became the leading supporter of Mr. Andrew Fisher, the head of the Australian Labor party. Meanwhile he had practiced law, and he was afterwards chosen Attorney-General in the Fisher cabinet. After the resignation of Mr. Fisher in 1915, he became Prime Minister. He furthered a vigorous policy during the war and encountered considerable opposition. He twice forced the issue of conscription upon the country and in the referendum which was taken on each occasion he was defeated. His own party having partly deserted him, he formed an alliance with the Liberals under Sir Joseph Cook. He represented Australia at the Imperial Conference in England in 1918.

HUNGARY. See AUSTRO-HUNGARY.

HUNTINGTON, CHARLES PRATT. Architect, nephew of the late Collis P. Huntington, died in New York City October 15. He was born at Logansport, Ind., Nov. 22, 1871, graduated at Harvard University in 1893, and studied at the Ecole des Beaux-Arts in Paris, and after 1903 practiced his profession of architect in New York. Among the buildings that he designed in New York may be mentioned the Museum and Library of the Hispanic Society, the Museum for the American Numismatic Society, the Museum of the American Indian, and the building of the American Geographical Society, all in New York City.

HURRICANES. Once again in 1919 the Southern States were visited by a severe tropical storm in the early autumn which left destruction in its path and again emphasized the need of proper protection. The effects were most marked at Galveston and Corpus Christi, Texas.

GALVESTON FLOOD. A tropical hurricane on Sept. 14, 1919, flooded a part of the city of Galveston, Texas, and furnished a severe test for the sea wall which was built after the 1900 disaster. On the south side of the island the sea wall and the accompanying grade elevation prevented such a catastrophe as befell the city in 1900, but the north side of the island, which was yet at the low level, was flooded to a depth of from three to six feet. As the flood was slow in rising and not violent, the damage done was due merely to water soaking. This flood stimulated discussion of the further grade elevation work which was proposed for the north side of the island. On the south side, up to about the east and west centre line of the city, the grade previous to 1919 had been raised to some 21 feet above the sea level, but the north side was still low, and a report made in the spring of 1919 by J. B. Lippincott, consulting engineer, recommended a graduated scheme of improvement which would involve the placing of about 20,000 yards of fill. By doing this the section of the city lying north and west of the sea wall south of the bay and east of 40th Street, exclusive of the railway yards, could be

raised from its present elevation of 6½ feet to an elevation of 15½ feet at the north or bay front, rising with a grade of one foot in 1600 to the south, with an elevation of approximately 21 feet at the south wall.

There was considerable engineering work under construction or completed around the city at the time the hurricane passed, but all of the structures stood the test, and the public utilities operated notwithstanding the storm. Approximately 3300 linear feet of the sea wall extension east of 6th Street was not damaged by the heavy sea coming in from the gulf, and the arch-work under construction at the causeway, together with the old original arch structure, also remained intact. The temporary wagon bridge across Galveston Bay experienced no damage, and the fill back of the Galveston County portion of the sea wall, which had been raised after the 1915 storm, met every requirement.

CORPUS CHRISTI DISASTER. The same hurricane which struck Galveston did vast damage at Corpus Christi, Texas, and occasioned a loss of life and property. This severe tropical storm and tidal wave, which was the most severe in the history of the Texas Gulf coast, on the morning of Sept. 14, 1919, passed over the barrier islands and swept away portions of the city of Corpus Christi and the towns of Port Aransas, Aransas Pass and Rockport, causing a property loss of many millions of dollars and a loss of life estimated at 350. The greatest damage and loss of life was at Corpus Christi, a city of 20,000 population, where some 300 persons perished needlessly, it is said, as they could have taken refuge in the bluff or upper residential portion of the city 35 feet above the sea level. The storm was marked by an extreme tidal height reaching a level of 12.4 feet above mean low tide as against 5.9 feet in 1916. The storm was a typical West Indian hurricane, and was undoubtedly more severe than the Galveston storm in 1900, although much of its force was broken at the outer islands. The town of Aransas Pass, on Mustang Island, was entirely destroyed, although there was small loss of life, as adequate warnings had been received. The damage done was the result of the combined force of waves, floating timber and wind, which reached a maximum velocity of 80 miles an hour, all acting jointly. It was demonstrated that the great tidal height possible in one of the West Indian hurricanes renders uncertain the protection afforded by the outer or barrier islands to the inner shore line. The effect of the flood was so great as to almost prostrate the commercial activity of the region temporarily, and considerable discussion resulted as to the best method of providing protection in the future. It was realized that the scheme provisionally adopted for a sea wall was quite inadequate, and that some further system of development must be evolved to provide against a similar contingency.

HYMANS, PAUL. Belgian representative at the Paris Peace Conference. He held the office of Belgian Minister for Foreign Affairs. He had been a leader of the Liberal party in Belgium before the war and had been a prominent lawyer known for his abilities and his wide political experience.

ICE CREAM. See DAIRYING.

ICELAND. A Danish crown colony with an

area of 40,456 square miles, of which 16,245 are inhabited, with a population estimated in 1919 at 92,700. The Danish king is also king of Iceland, although the government has recognized Iceland as a sovereign state. The foreign affairs of the country are under the control of Denmark, and Iceland has decided on a foreign policy of perpetual neutrality. The national church is Evangelical Lutheran, but there is complete religious liberty. There is a university in Reykjavík, and several other schools. The budget estimates for the year of 1919 gave a total revenue of 2,422,325 krónur, and a total expenditure of 2,905,782 krónur. The state possesses a comparatively large reserve fund, invested in different loans, amounting at the beginning of 1918 to 1,730,000 krónur. In 1917 the total hay crop was about 780,000 cwt., the crop of potatoes 15,000 cwt., and of turnips 8000 cwt. The total value of fisheries in 1915 was estimated at 14,800,000 krónur. The President of the Council and Minister of Justice and of Ecclesiastical Affairs in 1919 was Jón Magnússon. The display of the new Icelandic flag at Reykjavík on Dec. 1, 1918, marked the advent of Iceland into the family of nations. Denmark and Iceland now form a Union wherein the same king is at the head of each country. Equal rights obtain for all natives in both Iceland and Denmark, though military service can be required only in the country of which the man is a citizen. All domestic affairs are administered independently by each country. A consultative committee, composed of three Danes and three Icelanders, passes on all measures affecting both countries before such bills are presented to parliament. Foreign affairs are entrusted to Denmark, and at each Danish legation there is to be an Icelandic attaché. Where there are neither diplomatic nor consular officials Iceland may maintain her own representatives. Any controversy regarding the terms of the Union is to be settled by arbitration. After 1940 the Parliament of either nation may at any time demand a revision of the act of Union.

In October, 1918, the volcano of Katla, buried under the neve of Myrdals Jokull, burst forth with marked violence and its outflow continued for several weeks, damaging pasturage greatly. It is the thirteenth outburst in historic times, the last being in 1860 when its violence continued for 19 days. For the first time the Vatna Jokull has been crossed from west to east, by Wardell and Ygberg in 1919, when they discovered a new crater about three to five miles in extent.

IDAHO. POPULATION. The population of the State in 1910 was 325,594, and on July 1, 1919 it was estimated to be 478,356, a gain during the year of 16,000.

AGRICULTURE. The following is compiled from an annual report of the Federal Department of Agriculture.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1919	24,000	840,000	\$1,386,000
	1918	23,000	920,000	1,684,000
Oats	1919	220,000	7,700,000	7,546,000
	1918	237,000	9,480,000	8,911,000
Barley	1919	120,000	3,360,000	4,704,000
	1918	170,000	4,760,000	6,188,000
Wheat	1919	1,030,000	18,705,000	38,345,000
	1918	950,000	20,275,000	38,928,000
Hay	1919	650,000	2,625,000	35,750,000
	1918	667,000	2,001,000	35,218,000

Crop	Year	Acreage	Prod. Bu.	Value
Potatoes	1919	36,000	5,400,000	8,154,000
	1918	34,000	6,290,000	5,095,000

a Tons.

TRANSPORTATION. The total railway mileage of the State for 1919 was 3629 of main line single track; of this four miles were constructed during the year. The largest systems are the Oregon Short Line, the Northern Pacific, and the Chicago, Milwaukee & St. Paul.

FINANCE. During the biennium ending September 30, 1918, the total receipts were \$8,641,270 and the disbursements amounted to \$9,121,013. The balance at the beginning of this time was \$1,184,930 and at the end it was \$705,187. The bonded debt of the State is \$2,818,750.

CHARITIES AND CORRECTIONS. The following is a list of institutions under State control: Penitentiary, at Boise; Soldiers' Home, at Boise; Insane Asylum, at Blackfoot; Sanitarium, at Orofino; Sanitarium, at Nampa; University of Idaho, at Moscow; State Normal School, at Lewiston; State Normal School, at Albion; Idaho Technical Institute, at Pocatello.

OFFICERS. Governor, D. W. Davis, R.; Lieutenant-Governor, C. C. Moore, R.; Secretary of State, Robert O. Jones, R.; Auditor, E. G. Gallet, R.; Treasurer, John W. Eagleson, R.; Attorney-General, Roy L. Black, R.; Superintendent of Public Instruction, Ethel E. Redfield, R-D; Inspector of Mines, R N Bell, R

JUDICIARY. Supreme Court: Chief Justice, William M Morgan; Associate Justices, John C. Rice, Alfred Budge.

IDAHO, UNIVERSITY OF. A State institution of learning, located at Moscow, Idaho. The enrollment for the summer session of 1919 was 115 and the autumn total was 782; the faculty numbers 80. The endowment was originally 286,000 acres of land, of which one-fourth has been sold, the total value estimated at \$6,000,000. The income for the year was \$684,908. The library contains 45,000 volumes. The university was founded in 1889. President, Ernest Hiram Lindley, Ph.D.

IJUI, MR. Japanese representative at the Paris Peace Conference. He was born in 1864, entered the diplomatic service in 1890, served at London, Vienna, and Peking, became minister to China in 1908, and ambassador to Italy in 1916.

ILLINOIS. POPULATION. The population of the State in 1910 was 5,638,591, and on July 1, 1919 it was estimated to be 6,400,473, a gain during the year of 82,000.

AGRICULTURE. The following table is compiled from a report of the Federal Department of Agriculture, for December 1919.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1919	8,600,000	301,000,000	\$391,500,000
	1918	9,700,000	344,350,000	413,220,000
Oats	1919	4,102,000	123,060,000	86,142,000
	1918	4,508,000	198,352,000	132,896,000
Wheat	1919	4,150,000	65,675,000	137,918,000
	1918	2,900,000	63,970,000	133,058,000
Hay	1919	3,250,000	2,481,000	102,934,000
	1918	3,372,000	2,455,200	95,592,000
Potatoes	1919	155,000	8,060,000	15,798,000
	1918	160,000	11,520,000	17,050,000

a Tons.

FINANCE. The balance in the treasury on Sept. 30, 1918 was \$20,995,540 and a year la-

tér it was \$26,861,321. The receipts for this period amounted to \$32,240,681 and the disbursements were \$26,374,900. The principal of the State outstanding bonded debt as of Oct. 1, 1919, was \$17,500. Bonds totalling this amount were called in by the Governor's proclamation. These bonds have ceased to draw interest but have not yet been surrendered.

TRANSPORTATION. The total railway mileage of the State for 1919 was about 13,413 miles of single main line track; of this, over six miles were constructed in the year. The longer roads are the Illinois Central, the Wabash, and the Cleveland, Cincinnati, Chicago & St. Louis.

CHARITIES AND CORRECTIONS. The following is a list of the State institutions, under the control of the Department of Public Welfare. Hospitals, at Elgin, Kankakee, Jacksonville, Anna, Watertown, Peoria, Chicago, Chester, and Alton; School and Colony, at Lincoln; Colony, at Dixon; Schools for the Deaf and the Blind, at Jacksonville, Soldiers' Home, at Quincy; Widow's Home, at Wilmington; Orphans' Home, at Normal; Eye and Ear Infirmary, at Chicago; Training School for Girls, at Geneva; School for Boys, at St. Charles; Industrial School for the Blind, at Chicago; Reformatory, at Pontiac; Prison, at Joliet, and the Southern Illinois Prison. The total expenditure for these approximates \$7,500,000. The total population of these institutions on Apr. 30, 1919 was 26,231, an increase of 581 from Dec. 31, 1918. See OLD AGE PENSIONS.

OFFICERS. Governor, Frank O. Lowden, R.; Lieutenant Governor, John G. Oglesby, R.; Secretary of State, Louis L. Emmerson, R.; Auditor, Andrew Russell, R.; Treasurer, Fred E. Sterling, R.; Superintendent of Public Instruction, Francis G. Blair, R.; Attorney General, Edward J. Brundage, R.; Adjutant General, Frank S. Dickson.

SUPREME COURT. Justices, Warren W. Duncan, William M. Faure, Frank K. Dunn, Floyd E. Thompson, Clyde E. Stone, James H. Cartwright, Orrin N. Carter, Clerk, C. W. Vail. (See CHILD LABOR.)

See ZINC: AGRICULTURAL EXPERIMENT STATIONS.

ILLINOIS, UNIVERSITY OF. A co educational non-sectarian institution of higher learning, situated at Urbana, Ill., but whose faculties of medicine, dentistry and pharmacy are located in Chicago, Ill. In the fall of 1919 the number of students attending in all schools was reported as 8052; number on the teaching staff,

672. President, Edmund J. James, Ph.D., LL.D., absent on leave; Acting President David Kinley, Ph.D., LL.D.

IMMIGRATION AND EMIGRATION.

During the fiscal year ending June 30, 1919, the total number of immigrants entering the United States was 141,132, as compared with 110,618 for the fiscal year 1918, 295,403 for 1917, 298,826 for 1916, and 326,700 for 1915. While the number of immigrant aliens admitted in 1919 was larger than for 1918 by 30,514, it was smaller than that of any year previous to 1918 since 1862. Besides the aforementioned 141,132 immigrant aliens, there were admitted during the year 95,889 non-immigrant aliens, making a total of 237,021 aliens admitted. During the same fiscal year a total of 123,522 emigrant aliens departed from our shores and 92,709 non-emigrant aliens left—a total of 216,231 aliens leaving the United States. This signified a net gain in population of 20,790 persons, compared with a similar increase of 18,585 in 1918, 216,494 in 1917, 125,941 in 1916, and 50,070 in 1915. The increase in population from foreign sources in 1914, the last year before the war, amounted to 769,276.

A total of 8626 immigrants were debarred during the fiscal year 1919, or 3.6 per cent of the total number of applicants, as against 7297 rejections in the previous year, or 3.3 per cent. In 1917 there were 16,028 rejected or 4.2 per cent; in 1916, 18,867, or 4.9 per cent; in 1915, 24,111, or 5.3 per cent; and in 1914, 33,041, or 2.3 per cent. The largest single cause in 1919 was listed as "likely to become a public charge," which accounted for 3994 or 46.3 per cent, and 1455 were barred by the literacy test as against 1598 for the same cause in the previous year. There were 40 alien enemies excluded. Besides this, 164 stowaways were detected as compared with 161 the previous year. During the fiscal year 1919, 3102 persons were deported after landing, in comparison with 1619 in 1918. Here again the likelihood of the person becoming a public charge was responsible for the largest number; 1150.

It was the opinion of the immigration service at the time the statistics for the fiscal year 1919 were published that there was a strong possibility of an increase in immigration now that the war was over. It was pointed out that the low ebb of 1918 had been passed and that the figures for 1919 showed a substantial increase, although peace had not yet been formally concluded.

IMMIGRATION AND EMIGRATION FOR YEAR ENDING JUNE 30, 1919

* Non-immigrant arrivals are not recorded in this table.

IMPORTS. See FINANCIAL REVIEW; also articles on countries.

INCOME TAX. See TAXATION.

INDEPENDENT LABOR PARTY. See GREAT BRITAIN.

INDIA, BRITISH. The territory administered by the British sovereign as Emperor of India, through the viceroy or governor-general, in council. In addition to British India it includes the native states that are under the suzerainty of the British government. Capital of British India, Delhi.

AREA AND POPULATION. Area, 1,802,657 square miles, population, 315,156,396. No later figures are available than those given in the 1917 YEAR BOOK, which present the details.

EDUCATION. Persons with a knowledge of English in 1919 numbered slightly under 18,000,000. Instruction in India generally conforms to the standards of public instruction, which are called "Public," and those that do not fulfill these conditions, "Private." The following table giving the number of institutions and scholars in British India, including Ajmer-Merwara, British Baluchistan, and the station of Bangalore (1917) is from the *Statesman's Year Book* of 1919.

	Institutions for		Scholars	
	Males	Females	Males	Females
Colleges	179	16	57,617	1,022
General education				
Secondary	7,004	689	1,084,356	101,979
Primary	124,081	18,122	4,782,605	1,036,125
Special schools	4,323	538	126,262	17,342
Private institu- tions	35,848	1,955	570,687	73,951
Total	171,345	21,320	6,621,527	1,230,119
Grand total	192,755		7,851,946	

In the year 1915-16, £7,407,968, and in 1916-17, £7,525,538, were the expenditures for public institutions, over 50 per cent of which came from fees, provincial resources, local rates, municipal funds, and endowments.

PRODUCTION, ETC. Agriculture is the chief industry of India, and it was estimated that in 1919 over 226,000,000 out of a total population of 313,000,000 were thus employed. The following are the provisional figures for the 1917-18 crop production, yield in tons: Rice, 35,952,000; wheat, 10,162,000; cotton, 4,036,000 (bales); pure linseed, 390,000; mixed, 117,000; rape and mustard, pure, 711,200; mixed, 405,000; sesamum, pure, 319,000; mixed, 67,000; ground

nut, 1,042,000; jute, 6,945,600 (bales); indigo, 87,800 (in cwts. of dye); sugar cane, 3,266,000; tea, 370,180,800 (pounds).

The sugar cane crop in 1919 was reported, unofficially in trade journals, to be slightly in excess of the 1918 production. The acreage for these crops and their yield have generally increased over 1918, by unofficial estimate, to the extent of 12.2 per cent. For the figures of the area, crop, and yield of provinces and states, see preceding YEAR BOOK, no later data being available.

One of the chief industries connected with agriculture is the tea industry. The number of persons employed in this industry was about 753,000 in 1919. The area under tea plucked in 1917-18 was about 664,000 acres, distributed as follows: Assam, 399,700; Bengal, 167,800; Madras, 33,000; Punjab, 7500; Agra, 8000; Bihar and Orissa, 2200; Upper Burma, 2800; and the Travancore State, 43,300. The production in 1917-18 was slightly over 370,000,000 pounds, as against about 369,000,000 pounds in 1916-17. The exports of Indian tea from British India (including the Travancore State) in 1917-18 were: United Kingdom, 266,964,000 pounds, Russia, 8,122,000 pounds; Canada, 21,153,000 pounds; China, 3,245,000 pounds; Aus-

portant industry to agriculture in India, although no statistics for this industry are available for the current year.

MINERALS. The mineral production in 1917 totalled £13,351,364 in value, 17,326,384 tons of coal were produced in 1917. The average number of persons working in or about mines regulated by the Indian Mines Act was 211,881 in 1917, with 133,042 underground. The other principal minerals were manganese ore, gold, salt, saltpetre, lead, tungsten ore, and mica.

COMMERCE. The following information in regard to commerce was supplied by the United States Bureau of Foreign and Domestic Commerce, October 24th: The summary of the results of India's trade for the 12 months ended March, 1919, as compared with the corresponding period of 1913-14 (pre-war 12 months) and of 1917-18, is shown in the table below. In the 12 months ended March, 1919, exports, including reexports, were higher by \$36,660,966, or 5 per cent, than in 1917-18, and by \$16,124,336, or 2 per cent, than in 1913-14. In the same period imports were higher by \$60,377,043, or 12 per cent, than in 1917-18, but less by \$46,134,420, or 8 per cent, than in 1913-14.

The total value of the import and export trade in merchandise for the years mentioned follows:

Item	Year ended March, 1914 (pre-war year)	Year ended March, 1918	Year ended March, 1919
Exports, including reexports	\$807,449,680	\$786,913,050	\$823,574,016
Imports	594,524,083	488,012,620	548,389,663
Actual net excess of exports over imports	\$212,925,597	\$298,900,430	\$275,184,353

tralia, 10,776,000 pounds; Ceylon, 4,484,000 pounds; Asiatic Turkey, 1,977,000 pounds; United States, 20,665,000 pounds; elsewhere, including exports across the land frontier, 23,236,000 pounds; making a total of 360,622,000 pounds, as against 292,594,000 pounds in 1916-17.

There were state irrigation works in 1919 of about 27,000,000 acres in area. The net revenue from these works in 1917 was £4,716,000, and the estimated value of crops for that year on this area was over £61,250,000.

Of the forested areas in 1916-17, there were 100,308 square miles of reserve forest, 9140 square miles of protected forest, and 137,131 square miles of unclassified forest land, making a total of 246,579 square miles, which produced in that year about £1,221,000 sterling.

The Indian Department of Agriculture made public, toward the end of 1919, its final forecast of the jute crop for that year, placing the area under this crop at 2,821,575 acres, and the yield at 8,486,234 bales, of 400 pounds each. This was an increase of 321,193 acres, and 1,467,146 bales over the returns of the previous year.

The first official forecast of India's 1919-20 indigo crop places the area sown at 208,100 acres, or 26 per cent below the estimate for the corresponding period of 1918-19. The total yield of dye is estimated at 27,300 cwt., as against 32,100 cwt., the first estimate for 1918-19.

On account of the drought in 1919, agricultural conditions in general were not favorable in most parts of the provinces. However, toward the end of the year, the weather improved, but the increase in acreage was mainly due to the better prices obtained last year.

The weaving of cotton cloths is the next im-

In the 12 months ended March, 1919, as compared with the corresponding period of the preceding year, the quantity of imported cotton piece goods decreased by 433,000,000 yards, or 28 per cent, to 1,122,000,000 yards, and the value, \$157,493,566, was nearly the same as in the preceding year. The value of cotton twist and yarn imported increased by \$14,830,171 to \$28,765,232, the receipts from Japan being over 27,000,000 pounds, valued at \$17,292,297. Articles imported by post increased by \$6,082,476, wheat by \$3,130,457, tea by \$911,009, cigarettes by \$1,291,245, mineral oil (other than kerosene) by \$2,512,736, salt by \$422,412, silk piece goods by \$2,259,029, raw cotton by \$2,571,134, aniline and alizarine dyes by \$620,316; sugar, 16 D. S. and above, by \$1,072,901; paper by \$1,131,299, betel nuts by \$1,590,372, spirits by \$1,417,124, steel bars and channel by \$4,909,650; ale, beer, and porter by \$545,048, and cotton-mill machinery by \$1,582,585. Imports of motor cars and motor cycles decreased by \$1,079,390, kerosene oil by \$2,601,956, cement by \$1,187,102, matches by \$2,273,953, jute-mill machinery by \$545,048, cotton hosiery by \$494,761, and wood (timber) by \$1,564,742.

Under exports the quantity of rice, not in the husk, increased by 77,871 tons to 2,017,321 tons and the value by \$7,653,707, to \$74,487,622, while wheat showed a decrease of 978,272 tons to 413,103 tons in quantity and \$39,742,110 to \$21,909,307 in value. The quantity of raw cotton exported decreased by 181,455 tons and the value by \$37,873,699. The quantity of raw jute exported showed an increase of 120,046 tons or nearly 44 per cent. The value of jute gunny bags exported increased by \$9,280,415 and of gunny cloth by \$21,491,113, of raw skins by

\$5,770,696; of skins, tanned, by \$3,878,601, of tea by \$324,443; of hides, tanned, by \$7,180,034, and of seeds by \$97,333,000, while the value of raw hides decreased by \$1,529,703, pulse by \$9,693,419, and barley by \$4,128,739.

TRADE WITH THE EMPIRE. Considerable loss was said to have been caused to British merchants trading with India as the result of the reduction of freight to India, which caused hardship to those whose contracts were based on war rates. This affected considerably the iron and steel and cotton trades.

SHIPPING. Bombay and Calcutta are the chief ports, having had about 73 per cent of the foreign trade in 1919. This year also marked considerable progress in the project of an Indian mercantile marine as planned in 1918. This was designed to relieve the shortage of shipping, and it was believed that it will have a very stimulating effect on the production and foreign trade of India. In 1919 the plan to give the government a control through bodies similar to those controlling railways and irrigation, of harbor improvements, was practically, though not officially announced, in operation.

RAILWAYS. The railways open on March 31, 1918, were as follows:

	<i>Miles</i>
State lines worked by the state	7,194
State lines worked by companies	19,068
Branch line companies' railways under guarantee and rebate terms	2,027
Companies' lines subsidized by central or local governments	2,346
Unassisted companies' lines	76
District board lines	214
Native state lines worked by native states	2,479
Native state lines worked by the main line	1,788
Companies' lines guaranteed by native states	760
Lines in foreign territory, worked by British Indian railway companies	74
Total miles	36,333

The gauges of the Indian railways vary. There is the standard gauge of 5 feet 6 inches, the meter gauge of 3 feet, 3½ inches, and the special gauges of 2 feet 6 inches, and 2 feet. The total expenditure on railways for the end of 1917-18, including lines under construction and survey, was 5,48,07,95,000 Rs. The net profit to the state in 1917-18 was £9,992,134 sterling, against £7,482,314 in 1916-17. There were in 1918 6796 Europeans, 10,233 Anglo-Indians, and 636,936 Indians employed on the railway staff, making a total of 653,965. India and Ceylon had been connected by rail and steamer ferry combined. It was projected to replace the ferry by a railway constructed on the causeway over the reef known as Adam's bridge.

The great war and the necessity of facilitating military operations in every way possible had a serious effect on the railways of India. Material of all kinds was supplied for the campaigns in Mesopotamia, East Africa, and elsewhere from a supply that even normally was all too scanty. An official statement of the materials belonging to Indian railways sent out of the country for war purposes related that in such supplies and equipment were included 774 miles of new and second hand rails, 217 locomotives and 5423 vehicles. Of the rolling stock 196 locomotives and 4908 vehicles were meter gauge. The other materials sent were varied in character and very large in quantity. Before the cessation of hostilities the replacement of 157 meter gauge

locomotives and 2500 vehicles had been arranged.

FINANCE. The revenue in 1918 in India, in pounds sterling, was: Imperial, 74,492, and provincial, 33,361, in England, 2071, making a total of 109,924. The expenditure, chargeable to revenue, for 1918, was, Imperial, 44,405, provincial, 33,361, in England, 26,447, making a total of 104,213. The total revenue for 1918-19, according to official figures, was £109,190,300, and the expenditure, £106,608,800. The debt of British India, bearing and not bearing interest, was £445,125,567 on March 31, 1918. The total financial contribution of India to the war in final official estimate, was £100,000,000. According to official information supplied by the Indian government at the beginning of 1919, the position of the national debt down to Sept. 30, 1918, that is to say, after four years of war, was exceedingly favorable. Apart from the floating debt of about 40 crores of rupees in the shape of treasury bills and temporary loans from the Presidency banks, the national debt was 558 crores or about \$372,000,000, which would come to less than 23 rupees per head of the population. The unproductive debt before the war had been 19 crores per head on which the entire interest was 1 crore. The productive debt as regards railways and irrigation works was 411 rupees with interest at the rate of about 13 crores, but the state earned the equivalent of 16,000,000. On March 31, 1918, India's unproductive debt was less than the war loan of £100,000,000.

HISTORY

SUMMARY. During the early part of the year there was much disturbance among the people. Famine and influenza followed by an epidemic of the plague, constant increase in the cost of living; the Rowlatt acts; the unrest among the Mohammedans on account of the war; and the resentment of the educated classes against the censorship—all these factors contributed to the discontent. In April disorders extended over a large part of the country, and everywhere there was a tendency among the Hindus, Mohammedans, Sikhs, and Marwaris to draw together against the British power, but the government acted promptly and for the time being at least suppressed the movement. The so-called Rowlatt acts included the Indian Criminal Law Act and the Emergency Criminal Law Act which gave the governor-general power to invest the police with special authorities of search and punishment in regions affected by sedition. They were passed in March, 1919, and they gave great offense to a powerful element in the country. They were not supported by the legislative council or by the leaders of the Indians outside and several members of the government resigned in protest. A Passive Resistance League was formed at Bombay to oppose the laws and it soon passed from the passive to the active state. Nevertheless the government defended its policy. In the British Parliament Mr. Montagu spoke on its behalf on the occasion of the budget. At this time also a bill was introduced for the constitutional reform for India based upon the celebrated Montagu-Chelmsford Report of 1918 (summarized in preceding YEAR BOOK). Two reports were presented along with it by the so-called Southborough Committees. The first recommended the giving of the vote to more

than 5,000,000 electors many of whom did not speak English; property qualifications based upon land revenue districts; and communal representation not only for Mohammedans but for Sikhs, Indian Christians, Europeans, and Eurasians. The second presented a plan for the division of powers between the supreme and provincial governments. The Montagu bill incorporated the recommendations of both reports. It was discussed widely throughout the year. The Indian extremists wished to give the Legislature complete control of the budget and to reduce the governor-general's authority in respect to the Indian ministry; while the moderates in general accepted the main principles of the existing system. In the latter part of the year there was serious trouble with the tribesmen on the Afghan border who were threatening to combine with the Bolsheviks. The Mahsuds and Waziris were offering a stout resistance to the British forces at the close of the year. In December the government announced its programme for India, declaring it a great step toward self-government. The following paragraphs deal with the year's events in detail.

RAVAGES OF THE INFLUENZA. At the beginning of the year figures in regard to the influenza epidemic were published from which it appeared that 6,000,000 deaths had been caused by it, amounting to more than half of the deaths by plague during 22 years; and the cases of influenza were placed at from 50 to 80 per cent of the total population.

ATTITUDE OF THE PRINCES. A conference of the ruling princes was held at Delhi toward the end of January. At this the view that the reform measures would improve and aid future relations between the Crown and the states if the rulers who possessed full powers of internal administration were definitely marked off from those who did not, was discussed by the princes, who showed considerable diversity of opinion on the subject. The conference endorsed the principle of the council of princes and approved the plan of a standing committee of this council.

INDIAN NATIONAL CONGRESS. The National Congress was held at Allahabad at the beginning of the year. A resolution was proposed condemning the Rowlatt report on conspiracies. Mrs. Besant moved a resolution for self-determination, saying that if the Indians failed to obtain their request from Parliament, they would appeal to the Peace Conference. Messrs. Tilak, Gandhi, and Hassan Imam were nominated as representatives to the Peace Conference. It was evident from these measures that the moderate element in Congress would not compromise with the extremists.

THE ROWLATT ACTS. On February 10th the government at the Imperial Council introduced the second Rowlatt bill proposing permanent changes in the Indian penal code and the code of criminal procedure. At the same time the government announced that the previous measure, namely, the Rowlatt Emergency Powers bill, would remain in operation only three years after the end of the war. The object of these measures was the suppression of seditious movements. The Indian speakers were opposed to the measure in regard to criminal procedure, especially to one of its provisions to the effect that persons found in possession of seditious documents were liable to imprisonment.

INTERNAL DISORDERS. Serious strikes were reported at the end of January in Bombay, and it was said that some 15 mills involving about 15,000 workers were at that time involved. The coercion of workers who did not wish to strike was charged against the strikers and it was said that mills had been invaded for this purpose, and that the authorities were unable to give protection. The strike was the more dangerous in that a cholera epidemic was raging at the time. In March riots occurred at Delhi. At this centre the programme of passive resistance had been preached by its adherents. The mobs on the street however passed beyond the passive stage. They were said to have driven people out of the street cars, held up traffic in the streets and stopped British officials; also to have made an attack on the railway station; and according to the reports at the time six persons were killed and 17 wounded by the troops who fired upon the mob. The agitation was attributed to the false reports circulated among the ignorant population in regard to the consequences of the Rowlatt Act. The passive resistance movement was announced in February after the resolution was introduced to put into effect the recommendations of Justice Rowlatt. It was originated by the so called "home rulers" of Bombay who were supported by the native Indian statesman Mr. Gandhi. In spite of the danger of anarchy he advocated opposition to the proposed legislation, holding that it was unjust to apply it to the entire country. In addition to the riots resulting from the passive resistance movement at Delhi serious disturbances were reported in other parts of India on April 5th, mainly in the Punjab and in the Bombay Presidency. At Amritsar government buildings were burned, telegraph wires cut and three bank managers burned to death. Troops were called out and fired upon the mob at various points and a considerable loss of life resulted on both sides. Thereupon the Indian government assumed new powers for the purpose of enforcing drastic measures and the governor-general announced that he would use military force to put down riots.

Better conditions were reported at the chief centres of disturbance on April 17th but even then the country between Amritsar and Lahore was said to be in a state of open revolt and serious trouble was reported near Ahmedabad. The governor-general at this time issued a proclamation setting forth the government's attitude toward the agitation against the Rowlatt act. He said that this had been misunderstood and he assured the people that there was no danger from its application to any one who was not a revolutionary or anarchist. Martial law was extended throughout the region to the north of Lahore and the disturbances were for the most part confined to the Punjab. On April 19th the rioters caused damage on one of the railway lines and killed a fireman and a passenger. Deliberate attacks were also made upon telegraph and telephone lines, and there was evidence of a high degree of organization among the rioters and of coöperation between the Moslems and the Hindus. On April 15th, the mob attacked and wrecked the railway station at Gujerat and Government troops fired upon the rioters at that point. There were also attacks upon railway property near Amballa about the same time.

THE CAUSES OF THE REVOLTS. A great deal was said in the press about the relation of Bolshevism to the Indian riots. It was implied that a Bolshevik organization was working through the Indian revolutionary party. It was alleged during 1918 that the Bolshevik representatives at Stockholm had sent money and explosives to Bombay and had been informed by their agents that a Bolshevik movement would break out in India in March or April, 1919. Other evidence to the same effect was printed in the newspapers. The attacks were directed specifically against Englishmen and against certain unpopular native officials. It appeared that the rioters were well supplied with food although the mass of the population was in want; and it appeared also that they were working upon a concerted plan under the guidance of intelligent persons. The following account of the riots at Ahmedabad appeared in the London *Times* under date of April 18th from Bombay. Labor unrest had for a long time been evident in the city which was the centre of textile industry under Indian management and a strike for higher wages had occurred. When the news of the arrest of the native Indian leader Mr. Gandhi reached the city, shops were closed and the mill hands paraded the streets. They soon began to attack the English inhabitants and in some instances handled them roughly. The passive resistance element tried to maintain order but the mob of mill hands got out of hand and began burning buildings, attacking electric plants, telegraph offices, etc. Meanwhile representatives of the moderate element among the natives made repeated attempts to restore order. In regard to the Rowlatt Act the government declared that it was absolutely necessary in order to protect the lives and property of peaceful subjects.

SUPPRESSION OF THE REVOLTS In the revolt at Amritsar, noted above, it appeared that 500 natives had been killed by the British troops. The latter were under the command of General Dyer who believed that extreme severity was necessary to prevent an uprising and who set up martial law in the region. It was brought out afterwards that the troops had fired repeated volleys upon a mob of 5000 people who were headed by native agitators. Sharp criticism on the score of cruelty was directed against the commanding officer and the matter was made the subject of an official investigation. The commission of inquiry justified the general in ordering the troops to keep on firing. Nevertheless criticism continued during the year and the natives described him as a butcher of the Indians.

BOLSHEVISTS AND REBELS. In November there was trouble with the tribesmen who attacked the British posts to the southeast of Kabul. There was more alarm, however, from danger of the combination of the Afghan rebels with the Bolsheviks. An Afghan mission was sent to Moscow and a Russian Bolshevik mission was sent to Kabul, their aims being to open commercial intercourse and to come to a friendly understanding. In December the British forces met with a slight reverse near the Afghan border in the hill country adjacent to the Punjab. An expedition under Gen. S. H. Climo consisting of the Waziristan field force was operating in the region against the savage Afghan tribesmen, the Mahsuds, and Waziris. A check to his advance was reported and a considerable loss was said to have been sustained, namely about 58 killed

and 222 wounded. It was said that the British recovered the ground which they had lost. The general in command had distinguished himself in many Indian campaigns since 1897 and had served in Mesopotamia in 1915-16 where he led mixed troops of British and Indians and was four times wounded.

ADMINISTRATIVE REFORM. The subject of reform was discussed by Mr. Montagu at the beginning of March. He emphasized as the main object of the reform the decentralization of power. There was great and justifiable irritation on the part of the provincial governments against the present system, he said. Decrees issued many hundred miles away from the point at which they were to be applied had no relation to local conditions. The reforms, however, sought to guard against an increase of the bureaucratic character of the local governments. Responsible government must be substituted for government by the India office; the government by dispatch must give way to government by vote. But the question was how India would be able to use the vote, and it seemed only reasonable that a few years of experiment should intervene. Only a few people in India now voted, whereas the work of Lord Southborough's committee would enfranchise millions of Indians. It was a question whether they would vote at all, and if they did, whether they would do so with intelligence. There must be a few years' trial of the new system in order that its application might be studied. It was necessary to devise a representative electorate. He was not in favor of communal representation, but if that was the only means of obtaining representative legislative councils, it must be accepted. He did not believe there was essential antagonism between the interests of any one section of the Indian people and any other. The pledges to the Mohammedans would be observed by the government, and an exception would be made in their favor, but he did not believe there was any necessity for separate electorates. The announcement of Aug. 20, 1917, promised the transfer of responsibility from the civil service of India to the people of India. The Indian civil service which had proved its great efficiency would still retain an honorable part under the new conditions. The reforms which were wanted for India should give the Indians the right to lead the way in the realization of their own destiny. Growth of parliamentary and self-governing institutions in India was an inevitable consequence of British rule. A joint committee reported on the government bill November 19th. It recommended among other changes the giving of greater financial powers to the Legislature, the fostering of free consultation between the two parts of the government, the appointment of two ministers in each province, the provision that the franchise should not be changed for the first 10 years, the reshaping of the council of state to form a true second chamber, the reduction of a part of the members in the Indian council, etc.

On the eve of the Christmas holidays a royal proclamation announced a new programme for India saying that it marked a new epoch in the history of India and that the law would take its place among the great measures voted by Parliament on behalf of the government and the people of India. The law was described as bestowing upon the representatives elected by the

people a more extended power than they had previously possessed and as preparing a way for a completely responsible government in the future. The King declared his confidence in the new popular Assembly as interpreter of the desires of those whom they represented and as guardian of the interests of the masses.

INDIANA. POPULATION. The population of the State during the year ending July 1, 1919, increased 18,000, the estimate for that date being 2,872,842. The population in 1910 was 2,700,876

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture, for December, 1919.

Crop	Year	Acreage	Prod Bu.	Value
Corn	1919	4,750,000	175,750,000	\$219,688,000
	1918	5,000,000	165,000,000	196,350,000
Wheat	1919	2,886,000	46,020,000	96,642,000
	1918	2,353,000	49,427,000	102,808,000
Tobacco	1919	17,900	a 15,215,000	5,356,000
	1918	16,300	a 15,159,000	3,138,000
Hay	1919	2,200,000	b 3,080,000	66,528,000
	1918	2,270,000	b 3,292,000	65,182,000
Potatoes	1919	100,000	4,400,000	8,580,000
	1918	108,000	8,640,000	11,664,000
Oats	1919	1,825,000	60,225,000	41,555,000
	1918	2,025,000	85,050,000	56,984,000
Rye	1919	380,000	5,320,000	7,448,000
	1918	400,000	6,600,000	10,032,000

See AGRICULTURAL EXPERIMENT STATIONS

FINANCE. The latest available figures are those for the fiscal year ending Sept. 30, 1918. The balance on hand at that time was \$3,700,161, that of a year earlier, \$3,413,117. The receipts during this period amounted to \$13,680,371 while the disbursements were \$13,393,327.

TRANSPORTATION. The total railway mileage of the state in 1919 was about 7808. There has been little new construction of recent date.

CHARITIES AND CORRECTIONS. The institutions under the control of the Board of State Charities with situation, date of establishment, and population on Sept. 30, 1918, are as follows:

Reformatory, Jeffersonville (1821), 441 School for the Deaf, Indianapolis (1844), Central Hospital for the Insane, Indianapolis (1845), 1412 School for the Blind, Indianapolis (1847), Prison, Michigan City (1859), 1322 Boys' School, Plainfield (1867), 554 Soldiers' and Sailors' Orphans' Home, Knightstown (1867), 355 Woman's Prison, Indianapolis (1869), 105 School for Feeble Minded Youth, Fort Wayne (1879), 1409 Northern Hospital for the Insane, Logansport (1883), 934 Eastern Hospital for the Insane, Richmond (1883), 874 Southern Hospital for the Insane, Evansville (1883), 796 Soldiers' Home, Lafayette (1896), 710, Girls' School, Clermont (1903), 365 Southeastern Hospital for the Insane, North Madison (1905), 1176 Village for Epileptics, Newcastle (1905), 348, Hospital for Treatment of Tuberculosis, Rockville (1907), 150 Robert W Long Hospital, Indianapolis (1911), 94 State Farm, Putnamville (1913), 471

On Sept. 30, 1918 the total population of State and local charitable and correctional institutions was 17,471. Expenses for these purposes in 1918 may be divided as follows: state institutions, \$3,615,860; county poor asylums, \$903,453; dependent children, \$348,256; county jails, \$328,196; outdoor poor relief, \$427,469.

EDUCATION. The school revenue in 1918 was \$22,727,925. In 1918 there were 776,868 children of school age in the state, an increase of 2226 over 1917. The enrollment in the schools in this year was 564,152. The average daily wage was as follows: supervisors and special

teachers, \$4.32; high school principals, \$5.89; elementary school principals, \$4.58; high school teachers, \$4.35; elementary school teachers, \$3.31; teachers in consolidated grade schools, \$3.38; teachers in district schools, \$2.93. There were 20,066 teachers and supervisors.

OFFICERS. Governor, James P. Goodrich; Lieutenant-Governor, Edgar D. Bush; Secretary of State, William A. Roach; Treasurer, U. McMurtrie; Auditor, Otto Klauss; Attorney General, Ele Stansbury.

JUDICIARY. Supreme Court: Chief Justice, David A. Myers; Associate Justices, Lawson M. Harvey, Moses B. Lairy, Howard L. Townsend, John W. Spencer; Clerk, J. Fred France.

INDIANA, UNIVERSITY OF. A co-educational institution, conducted by the State of Indiana, at Bloomington, Ind. Like most colleges, the enrollment in the school year 1919-1920 was materially enlarged. The library contains over 100,000 volumes. The institution was founded in 1820. President, William L. Bryan, Ph.D.

INDIANS. According to the report of the Board of Indian Commissioners for the fiscal year ending June 30, 1919, a reorganization of the medical service was needed. Comment is made on the devotion to duty of the Indian service employees during the influenza epidemic in 1918-19. The need for a spirit of law and order was emphasized, for at present the Indians do not come under the State health, marriage, educational, and criminal laws. The self-supporting Navajo tribe was threatened with economic ruin, owing to their expansion, and a plan was under way whereby they would eventually become tax-paying citizens of New Mexico and Arizona. One of the most interesting developments in Indian progress, was their employment on the staple cotton fields in Arizona. Over 1000 Papago Indians left their homes in 1918-19 to work in the cotton fields. Several years ago the plan of releasing from government supervision all Indians having one-half white blood was instituted. This was not successful at first, but is now proving that the Indian can become a useful citizen, as well as relieving the congestion in parts of the reservation and allowing more room for expansion. The latest report of the supervisor of schools enumerates the total number of children of school age in the Five Civilized Tribes at 25,612. The total number enrolled in the public schools of Oklahoma (in aid of which Congress appropriated in 1919 \$250,000) was 18,869; in tribal boarding schools, 1347; in the contract schools, 585; in non-reservation schools, 837, which makes a total enrollment of 21,638. The supervisor estimated that over 3000 children were in no school at all. In the entire United States there were 22,972 Indian children who had no school facilities at all. The theory that full-bloods can be educated conjointly with the white children in the Oklahoma schools was proving false, and an increase in the tribal schools would have to be made.

The appropriation for the purchase of supplies laid before the House Indian Committee is \$500,000, for the fiscal year ending June 30, 1920. The value of the crop raised by the Indians on the 75 reservations on 370,101 acres of cultivated land in 1918, was \$9,781,862; the live stock owned by the Indians was valued at \$37,401,101. The total Indian population in 1918 in the entire United States was 336,243. See ANTHROPOLOGY.

INDIAN TRAINING AND INDUSTRIAL SCHOOL. This institution, established in 1879 at Carlisle, Pa., for the education of the American Indian, was permanently closed on Sept. 1, 1918. The property was turned over to the War Department, for hospital purposes.

INDIVIDUAL BARGAINING. See LABOR LEGISLATION.

INDO-CHINA. Known also as Farther India; the southeastern peninsula of Asia including the following divisions: Burma, politically attached to British India; Siam, an independent kingdom; French Indo-China including Annam, Cambodia, Cochinchina, Laos, and Tongking; the Federated Malay States; the Straits Settlements proper and the Malay states of Johore, Kedah, Perlis, Kelantan and Trengganu. See the articles FRENCH INDO-CHINA, BURMA, SIAM and the other principal states mentioned above.

INDUSTRIAL DISEASES. See OCCUPATIONAL DISEASES.

INDUSTRIAL RECONSTRUCTION. Immediately after the signing of the armistice, industry in this country tended to return to its pre-war basis. Not in war as long as was England, the war methods did not have as much chance to take root and were rather easily discarded. And so, one finds very little reconstruction due to the war. The field offering the greatest promise, is in the settlement of labor disputes, see ARBITRATION AND CONCILIATION. However, there has been much advance in labor legislation (q.v.) along such lines, especially, as child labor (q.v.). The prohibition amendment required the closing of saloons, breweries, etc., but the demand for buildings was such as to meet the supply, and it was quickly absorbed.

There have been a number of programmes drawn up for reconstruction work. For the programme of labor, see LABOR. AMERICAN FEDERATION OF. At the Farmers' National Conference on reconstruction, which was held in Washington on Jan. 6th-8th, a programme for reconstruction both in America and internationally was adopted. Besides presenting a scheme for demobilization, the conference presented the following resolutions as involving principles essential to international peace,—recognition of common interests of working peoples of all countries, regardless of form of government under which they live; international control over international trade and international investment; freedom of production and a uniform free exchange between all peoples; no secret treaties; gradual reductions of armament; power of declaring war to rest with the people.

The reconstruction programme of the National Catholic War Council is as follows: immediate dealing with the problem of unemployment, and a continuance of the United States Employment Service; continuance of the National War Labor Board; a minimum wage, with the understanding that wages should not be lowered below the war basis; relief of woman workers, equal pay for equal tasks, abolition of child labor; undertaking of municipal housing projects; reduction of the cost of living by development of coöperative stores; social insurance; collective bargaining; vocational training; development of co-operation and copartnership.

INTERNATIONAL. On January 31st, the Commission on International Labor Legislation was appointed by the Peace Conference as follows: "that a commission, composed of two represen-

tatives apiece from each of the five Great Powers, and five representatives to be elected by the other Powers represented at the Peace Conference, be appointed to inquire into the condition of employment from the international aspect, and to consider the international means necessary to secure common action on matters affecting the conditions of employment, and to recommend the form of a permanent agency to continue such inquiry and consideration in coöperation with and under the direction of the League of Nations." This Commission made its report March 24th, and the report, containing a draft convention creating a permanent organization for the promotion of international regulation of labor conditions, was accepted by the Peace Conference on April 11, 1919, together with certain amendments proposed by G. N. Barnes of Great Britain.

The Commission was composed as follows: United States, Samuel Gompers, Hon. E. N. Hurley; British Empire, Right Hon. G. N. Barnes, Sir Malcolm Delevingue; France, Mr. Colhard, Mr. Loucheur; Italy, Baron Mayor Des Planches, Mr. Cabrini; Japan, Mr. Otchala, Mr. Oka, Belgium, Mr. Vandervelde, Mr. Mahaim; Cuba, Mr. De Bustamante; Poland, Count Zolowski, afterwards replaced by Mr. Patek; Czechoslovakia, Mr. Benès, afterwards replaced by Mr. Broz. The commission held 35 meetings. Its report was in two parts. The first part is a draft convention proposing a permanent international organization. The second part is the commission's conclusions with regard to the declarations of principle concerning matters of vital import to the labor world.

The first part of the report provides for an International Labor Conference, and an International Labor Office. The Conference will meet at least annually, and each nation shall send an equal number of delegates. The International Labor Office will be established at the seat of the League of Nations as part of the administrative organization. This Office will be governed by a controlling body of 24 members.

The second part of the report consisted of the following clauses which were adopted by the Peace Conference and incorporated into the treaty: "The guiding principle above enunciated that labor should not be regarded merely as a commodity or article of commerce. The right of association for all lawful purposes by the employees as well as the employers. The payment to the employees of wage adequate to maintain a reasonable standard of life as this is understood in their time and country. Adoption of an 8-hour day or 48-hour week as standard to be aimed at where it has not been already attained. Adoption of a weekly rest of 24 hours, which should include Sunday whenever practicable. Abolition of child labor, and imposition of such limitations on the labor of young persons as shall permit the continuance of their education and assure their proper physical development. Principle that men and women should receive equal remuneration for work of equal value. Standard set by law in each country with respect to the condition of labor should have due regard to the equitable economic treatment of all workers lawfully resident therein. Each state should make provision for a system of inspection in which women should take part in order to insure the enforcement of laws and regulations for the protection of employees."

GREAT BRITAIN. In January, the Miners' Federation of Great Britain presented to the government claims for a readjustment of their position, covering four points—a 30 per cent wage increase and retention of war bonuses, a six hour day, specified provisions for demobilized miners, and the nationalization of the coal mines. To these demands, the government submitted a reply February 10th, offering an increase in wages of one shilling per day, and proposed to set up a committee of inquiry for which the miners might nominate their own representatives, to inquire into matters raised and the position of the coal trade generally. The miners found this reply unsatisfactory. A strike ballot was prepared and sent out, the question being whether the government's offer should be accepted or whether the miners should strike. The Miners' Federation has a membership of 750,000 members; the vote stood 611,998 against acceptance and 104,997 for. A compromise was at last agreed upon by which the executive committee of the Miners' Federation was to recommend a postponement of the strike date to March 22d, provided, first, the commission should render an interim report on hours and wages by March 20th, and secondly, the miners to choose half the members of the commission. This bill was rapidly passed and received the royal assent on February 26th. The commission was immediately appointed, its personnel being as follows: Chairman, Mr. Justice Sankey; representing employers in general, Arthur Balfour, Sir Arthur Duckham, and Sir Thomas Royden; representing mine owners, J. T. Forgie, R. W. Cooper, and Evan Williams; representing labor in general, Sir Leo C. Money, Sidney Webb, R. H. Tawney; representing miners, Robert Smillie, Frank Hodges, and Herbert Smith.

The hearings were very completely reported in the newspapers, and public interest was widely aroused. On March 20th, three interim reports were finally presented. Upon the receipt of these reports, the government adopted that signed by the chairman and the representatives of the employers, known as the Sankey report, with slight changes, offering its conditions for wages and hours to the miners, and promising further hearings on the question of nationalization. On the question, the Miners Federation voted—for acceptance, 693,004; against acceptance, 76,992.

The commission resumed hearing on April 23d, with the same personnel, save that Sir Thomas Royden and Mr. J. T. Forgie retired and their places were taken by Sir Adam Nimmo and Sir Allan M. Smith. On June 20th, the commission issued its report. As in the earlier case, the different groups issued different reports. However, the men reported as follows: as to ownership, there was unanimity that this ownership should vest in the nation itself; as to the means of acquisition, the commission stood ten to three in favor of compensating the present owners; on the question of management, seven were in favor of state managership, and six desired the retention of authority by the owners.

This report was presented to Parliament for action. However, the Coal Bill had not reached its second reading on December 23d, and it seemed to be the sentiment, as stated in the *Manchester Guardian*, that the "Coal Bill was placed in Parliament's moratorium."

INDUSTRIAL WORKERS OF THE WORLD. The Industrial Workers of the World, more commonly known as the I. W. W., is an American labor organization founded on principles that find expression in one part of the labor movement throughout the world. It stands for Industrial as opposed to Trade unionism, and aims ultimately for the centralization of the workers of all industries in one large union. Its membership, contrary to popular opinion, is not largely composed of foreigners, but of men of American birth engaged for the most part in migratory occupations such as lumbering and harvesting. Since voting is dependent on fixed residence, a considerable number of these men are automatically disenfranchised. This condition must be considered as a factor in the I. W. W. contention that nothing is to be gained through political activity, and that, accordingly, their programme must be installed by direct industrial action. This programme calls for the replacement of the capitalist or competitive system of production by a system in which the machinery of production is owned and operated by the workers themselves. Adequate figures as to the numerical strength of the organization are not available. In November, 1917, the late Carlton N. Parker estimated their membership at 75,000, but he qualified this estimate by stating that "in the history of American labor there has appeared no organization so subject to fluctuation in membership and strength." The *One Big Union Monthly* for December, 1919 (an official I. W. W. magazine), states that there has been a growth of 50,000 in membership from Sept. 1, 1918 to Sept. 1, 1919, and that the last three months of the year show an even greater ratio of increase.

In connection with the general condemnation of the I. W. W. during the War (see *YEAR BOOK*, 1918), it is worthy of note that many I. W. W. local unions engaged in war industries without disturbance, and that government investigations of widely published charges to the effect that strikes were being financed by German money, showed the books of the organization in good shape, and no evidence to support the accusation.

The past year has seen a continuation of governmental action against the I. W. W. Many of its members have been arrested in connection with government activity against radical groups in general, and a number have been deported. Throughout the country I. W. W. halls have been raided by local authorities and by the United States Department of Justice. Literature has been seized, and leaders arrested. Prosecutions, for the most part, have been brought under war-time sedition legislation.

On January 23d, in Sacramento, Cal., 46 members of the I. W. W. were convicted and sentenced to terms ranging from one to 10 years in Leavenworth penitentiary. The trial received wide notoriety because of the "Silent Defense" employed by 43 of the defendants; these men refused to testify in their defense in order to express their conviction that the court was incapable of rendering them justice, and were sentenced without having broken their silence. At the end of the year trials against I. W. W. members were being conducted in Michigan, Nebraska, California, Washington, Oregon, and Kansas. It was charged by W. D. Haywood, the

I. W. W. Secretary (himself recently released from Leavenworth on \$15,000 bond, after having served 11 months of a 20 year sentence), that the Kansas prisoners had been held in jail for over two years, two indictments having been quashed, and were then being brought to trial on a third indictment.

The most conspicuous happening of the year in which the I. W. W. figured, occurred at Centralia, Wash., a town in the heart of the lumbering district, on Armistice Day, Nov. 11, 1919. A parade of overseas veterans was fired upon from an I. W. W. hall, and six of the paraders were wounded, four seriously; three of these died a few days afterwards, and another man was killed in the chase that followed the riot. Conflicting reports of the affair were circulated. The press of almost the entire country reported that the I. W. W. had attacked without warning or provocation. However, the *Seattle Union Record*, a paper run by unions affiliated with the American Federation of Labor, announced that all press reports of the affair were untrue, and that it would publish the facts, but the edition which carried the promised news item was suppressed by the Federal Authorities. I. W. W. publications state that the parade had halted before the door of the hall, that the paraders had attacked, and started to batter down the door before a shot was fired, and that therefore the shooting was in self-defense and justifiable under the law. This contention was corroborated, in a measure at least, by evidence presented at the coroner's inquest, where Dr. Frank Bickford, a local merchant who witnessed the attack, testified that the paraders had halted and rushed the door before they were fired on. Great excitement followed the disturbance, and certain citizens of Centralia entered the jail where captured I. W. W.'s had been confined, seized upon one of them whom they supposed to be Britt Smith, the secretary of the I. W. W. local, and after taking him into the open, lynched him. The victim was afterwards found to be Wesley Everetts, a member of the I. W. W., and according to his friends, an overseas veteran. A general round up of all known I. W. W.'s was made, but the cases had not been decided by the end of the year.

Of interest also, is the recent development of the "One Big Union" movement in Canada and Australia. In Canada this movement had its birth in the general strike called in Winnipeg on May 15, 1919, in support of striking building and metal trades workers. From that time to the present the O. B. U. has grown very extensively. It is modeled on almost the exact lines of the I. W. W., and its preamble seems to have been largely borrowed from that of the American organization. It stands for industrial unionism and class consciousness, declaring that "whenever a strike in any industry or district takes place, no member of the O. B. U. shall handle directly or indirectly any product of the industry on strike." A convention was held in Calgary on June 5th, and there the locals attending severed their relations with the American Federation of Labor. The Australian movement has been on foot since the middle of 1918. The organization there, the Workers Industrial Union of Australia, commonly known as the "One Big Union," like the Canadian body seems to have sprung from I. W. W. propaganda, and it too has adopted the I. W. W. platform and litera-

ture with slight alteration. It has reached proportions sufficient to make it a matter of concern to government officials, and to attract considerable attention in British official and semi-official publications.

I. W. W. publications point to syndicalist movements in various countries of the world, as either directly reflecting or furthering I. W. W. aims and principles. The *One Big Union Monthly* for December, 1919 states (without statistical evidence), that the movement has gained footing in Mexico, and throughout South America, citing an I. W. W. organization of 2800 marine transport workers in Buenos Ayres as an example; and that the syndicalist movement is growing in France, Italy, Russia, Spain, England, Scandinavia, Germany and Greece.

INFLUENZA. Inasmuch as the great pandemic of 1918 appeared in two or three successive waves with an interval of from two to three months between them, while the latest of these prevailed in the winter and spring of 1919, it does not now seem that the original disease can return in its original shape. If we have an outbreak of the disease during the winter of 1919-20, it would be probably difficult to distinguish it from the ordinary endemic winter grippe which visits us annually. The statement that the latter form of grippe dates only from the older pandemic of 1889-90 is only partly true, for in some parts of the world the existence of an endemic winter grippe had been recognized before that epoch. Thus it was well known in Minnesota, and was described by a medical man of that State in a classical manner before the said pandemic had started from its Asiatic source. From the viewpoint of successive waves of the recent pandemic, the United States were somewhat fortunate for they not only escaped the first of the waves in the summer of 1918, but a third wave which occurred in certain countries—Finland is one—in the winter of 1918-19. In our country during that period we had only ordinary winter grippe which partook somewhat of the nature of the pandemic and was perhaps modified by it but was clearly only our regular annual visitor. A comparison with the disease seen in Finland shows that the latter, which followed a first wave in the fall, was fully as deadly as its predecessor. In most countries the first wave was relatively mild and the second severe, while exceptionally the first wave was the worst or as seen in Finland the two were of equal severity. The United States, as already implied, had its one wave in the fall and it was most severe. That they escaped the first wave was due to the fact that the infection did not arrive at our shores until the close of the summer. Why there was no second wave with us and our cis-Atlantic neighbors is not easily surmised although a reappearance of the infection in 1919 was exceptional.

We are now in position to estimate the damage done by the entire pandemic and to contrast it with the losses which resulted from the war. This has been done by Laumonier in the *Gazette des hôpitaux* for Sept. 30 and Oct. 2, 1919. He computes the total duration of the pandemic as 11 months, or from May, 1918, to March, 1919. The earlier estimates were silent on the occurrence of the pandemic in China and certain parts of the Far East, but we know that it prevailed everywhere and was very deadly in the large Chinese coast cities and in Siam. We know

something of its ravages in British and native India and that 5,000,000 to 6,000,000 deaths is not an extravagant estimate, for that region alone. Allowing for analogous mortalities in central Asia and the Far East the world mortality could easily have exceeded 25,000,000, a figure seen only once before in the world's history when the Black Death ravaged Europe in the fourteenth century. The fear of many people that the pandemic of 1918 was the lung plague or pestous pneumonia seems almost ludicrous now for influenza showed itself by much the more serious malady. The plague destroys its hundreds of thousands annually in parts of Hindustan but when influenza reached those states it exacted a far heavier toll in a few months time. The total number of deaths amid the warring nations among the soldiers at the fronts is computed as not over 7,000,000 during a period of 51 months. Hence while warfare killed at the rate of 137,000 per month the disease slew at the rate of 2,436,000 a month; in other words the difference in favor of disease was 20-fold.

Despite the heavy death tolls so many people were smitten with the disease that death percentages remained low. There were exceptions, however, for in Samoa of 30,000 inhabitants 8000 perished from the visitation. Similar figures were seen in other Polynesian peoples, including the Maoris of New Zealand. Of other countries and peoples 10 per cent of those attacked and 2 per cent of the entire population appear to be the top figures for fatalities.

INORGANIC CHEMISTRY. See **CHEMISTRY**, GENERAL PROGRESS OF.

INSANITY. The Fifth Report of the British Lunacy and Mental Deficiency Board of Control brings to light the startling fact that for the past two years the mortality among the interned insane and defective population has increased to an alarming extent. This has attained a ratio of 208 cases of death to each 1000 of these unfortunates. The report attributes this terrible figure largely to the food supply and it is especially interesting to learn that from the viewpoints of calory requirements the diet was sufficient. The trouble lay in the fact that the ration was either unbalanced, or the food selection was such that certain articles essential to health were wanting. The diet was defective in milk and fats, and according to modern teaching one should therefore accuse lack of vitamins in the ration. Yet the dead did not develop any clear cut deficiency disease, like scurvy, nor is there any evidence of anything like pellagra, which in countries where the latter affection flourishes is responsible for much insanity and eventually death in the insane. The actual causes of death comprise tuberculosis, diarrhea, dysentery, typhoid fever, etc. Undoubtedly other factors were present and one is cold weather with insufficient heating and clothing. This in turn was due to lack of fuel owing to the war. It is a well known fact that warm clothing has its exact equivalent in food and that a man who has plenty of warm bedding and underclothing with proper protection against out of door rigors needs considerably less fuel food than one lacking in those necessities. It is evident that the lunatic, who seems to have suffered much more than the mental defective, needs an excess ration rather than one computed for the average man; for in the main he is indifferent to his necessities and as in the case of children

should be given the benefit of all uncertainty in this respect. Other and indirect factors were inadequate staffs, overcrowding, and in general the tendency to temporary makeshifts during the war. The great number of deaths has notably reduced the number of certified insane. The unfavorable conditions will be remedied as soon as possible.

INSTITUTE OF MUSICAL ART. See **MUSIC**, *General News*.

INSURANCE. Although the War Risk Insurance Bureau was doing a larger business than all the private life insurance companies put together, the latter companies continued in the year 1919 to increase considerably in size and prosperity. A number of new companies began business and all those which had been taken over in the preceding year by the alien property custodian were completely liquidated. The following statistics show the financial status of the various types of insurance companies as compiled from their annual statements after being audited.

LIFE INSURANCE. The Sixtieth Annual Report of the superintendent of insurance of the State of New York (July, 1919) showed that there were 40 life insurance companies doing business in that State on Dec. 31, 1918. Here were included 15 New York State companies and 25 companies of other States. The total assets of all these companies were \$5,915,687,963; liabilities, \$5,668,239,682; number of policies in force, 10,197,730; amount of insurance in force, \$20,196,274,253; and surplus for policy holders, \$247,448,280. The assets included among other items the following: Stocks and bonds, \$2,994,408,478; mortgage loans, \$1,775,796,382; loans to policy holders, \$713,087,748. The principal items of liabilities were: Reinsurance reserve, \$4,905,592,790; capital, \$12,464,000; surplus and special funds, \$234,984,000; and claims adjusted and unadjusted, \$66,245,653. The aggregate income of the 40 companies during the year 1918 was \$1,315,471,392, of which the principal items were: Premiums, \$866,269,808; interest and dividends, \$250,769,900. The excess of income over disbursements was \$431,181,380. Aggregate disbursements were \$885,003,692, of which the principal items were: Claims paid, \$414,776,865; lapsed, surrendered, and purchased policies, \$90,543,453; dividends to policy holders, \$137,601,546; dividends to stockholders, \$1,243,327; commissions, \$80,973,600; salaries and medical fees, \$75,747,345. During the year there were issued, revived, and increased, 1,336,230 policies, aggregating \$3,185,769,655, a decrease of about 50,000 policies over the preceding year but an increase in the aggregate amount of policies of \$175,000,000. The number of policies terminated during the year was 656,441; of these 132,367 were terminated by death, an increase of 50,000 over the preceding year; 45,851 by maturity; 155 by disability; 76,545 by expiry; 125,533 by surrender; 272,187 by lapse; and 3803 by decrease. The total amount of all policies terminated was \$1,446,873,963. The net increase in policies outstanding was 683,157 and the net increase in insurance in force was \$1,742,741,848. The following figures represent the distribution of the policies and of the insurance in force among the different kinds of policies: Whole life, 6,632,836 policies representing \$13,562,689,221 insurance; endowment, 2,915,809 policies

representing \$4,068,681,947 insurance; all others, 649,085 policies representing \$2,416,492,732 insurance. These New York State companies are estimated to represent about nine-tenths of the insurance business transacted in this country.

FIRE AND MARINE INSURANCE. There were 257 fire and fire marine companies doing business in New York State at the close of the year 1918 besides 26 companies doing exclusively a marine business. The aggregate resources of these 283 companies were \$1,090,365,673, an increase of \$112,759,639 as compared with 1918. Their aggregate liabilities were \$652,325,780, an increase of \$79,410,243 over the return of the preceding year: their income, \$758,561,673; disbursements, \$621,806,671; premiums written, \$677,091,593; and losses paid, \$311,617,276. The 257 fire and fire marine companies included 146 American joint stock companies, 58 foreign joint-stock companies, and 53 mutual companies. The total amount of risks in force in these companies was \$86,243,766,000. The strictly marine companies included 9 domestic joint-stock companies, 1 New York mutual, and 16 foreign joint-stock companies. They had an aggregate of more than \$5,125,745,604 of risks in force.

CASUALTY, FIDELITY, SURETY, AND CREDIT INSURANCE. These companies cover a large variety of types of insurance such as employer's liability, workmen's compensation, burglary losses, business losses, automobile accidents, health, and other contingencies. The report of the New York State Insurance Department (September, 1919) showed that on Dec. 31, 1918, there were 78 such companies doing business in that State as compared to 74 the year before, 71 in 1916, 77 in 1915, and 79 in 1914. Their assets aggregated \$352,613,531, an increase over 1917 of \$60,934,709. Their liabilities, exclusive of capital and surplus, were \$249,542,121 as compared with \$190,767,000 in 1917. Their premiums amounted to \$276,759,192 as compared with \$221,804,778 for 1917 and \$168,590,000 for 1916, and \$139,072,000 for 1914. They paid claims totaling \$97,148,833 in 1918, and \$84,599,000 in 1917, out of a total amount of disbursements of \$221,762,127. For investigation and adjustment of claims \$13,165,231 was paid. Dividends in 1918 were \$9,060,462 on capital and surplus amounting to \$103,071,407, as compared with \$6,191,000 in 1917 on capital and surplus amounting to \$91,911,000. Sources of income were as follows: Accident, \$29,186,560; health, \$8,520,840; liability, \$61,108,824; workmen's compensation, \$111,236,589; fidelity and surety, \$29,322,591; plate glass, \$6,845,978; steam boiler, \$4,310,115; burglary and theft, \$8,140,302; automobiles and teams, \$11,930,792; workmen's collective, \$250,473; other classes, \$5,906,032.

TITLE AND MORTGAGE INSURANCE. The same report showed 12 title and mortgage concerns with \$112,341,741 assets; liabilities, except capital, \$57,406,741; capital, \$24,785,000; surplus, \$30,149,960; income, \$11,442,594; and disbursements, \$11,380,331, for the year 1918.

FRATERNAL INSURANCE. The following statistics on fraternal orders which have insurance features cover only those societies which operate in the State of New York. There are several hundred of these fraternal societies scattered throughout the United States but as most of them are of a distinctly local nature accurate information concerning their financial status is not available. The New York superintendent of

insurance issued a report covering 73 societies operating in that State. They showed combined assets of \$216,638,547; liabilities, \$92,534,733; income, \$192,946,210; disbursements, \$93,447,929; total insurance in force, \$6,570,818,322.

A few of the larger societies with the amount of insurance in force on Dec. 31, 1918, were as follows: Aid Association for Lutherans, \$10,780,754; Artisans' Order of Mutual Protection, \$17,826,500; Ben Hur, Supreme Tribe, \$75,964,709; Brith Abraham, Independent Order, \$97,736,000; Brith Abraham, U. S. Grand Lodge, \$16,135,000; Brotherhood of American Yeomen, \$322,177,000; Catholic Benevolent Legion, \$12,818,250; Catholic Knights of America, \$19,580,000; Catholic Mutual Benefit Association, \$52,709,700; Columbian Circle, \$22,101,000; Foresters, Independent Order, \$170,999,917; Fraternal Mystic Circle, \$12,807,000; French Canadian Artisans' Society, \$33,790,383; United Order of the Golden Cross, \$15,079,175; Knights of Columbus, \$137,214,343; Knights of Pythias Insurance Department, \$96,365,445; Ladies' Catholic Benevolent Association, \$117,631,250; Ladies of the Maccabees, \$31,256,750; Maccabees, \$354,254,160; Modern Woodmen of America, \$1,644,662,000; National Protective Legion, \$11,985,000; National Slovak Society, \$31,117,750; National Union Assurance Society, \$91,202,000; Order of the Golden Seal, \$13,189,000; Order of the United Commercial Travelers of America, \$373,205,000; Polish National Alliance, \$70,366,000; Protected Home Circle, \$87,087,000; Royal Arcanum, \$228,009,000; Royal Neighbors of America, \$378,851,000; Serb Federation "Sloga," \$11,579,000; Slovenic National Benefit Society, \$12,082,450; Travelers Protective Association of America, \$331,210,000; Women's Benefit Association of the Maccabees, \$138,492,000; Woodmen Circle, Supreme Forest, \$210,876,600; Woodmen of the World, Sovereign Camp, \$1,187,718,000; Workmen's Circle, \$16,872,600; Workmen's Sick and Death Benefit Fund, \$13,081,000.

WAR RISK INSURANCE. Almost immediately upon the entrance of the United States into the war, plans for compensating soldiers and sailors for injuries and insuring them against loss of life were proposed. A plan was finally adopted on Oct. 6, 1917, providing compensation and insurance. The aggregate amount of insurance carried by the War Risk Insurance Bureau, which was organized to handle the situation, was approximately \$36,000,000,000 in May, 1919, the sum being divided among some 4,000,000 policyholders. Its activities are broadly divided into five general divisions: Allotments and allowances, compensation for disability and death, insurance, reeducation, and civil relief measures. The life insurance feature of the undertaking is probably its largest phase, while the compensation for disability is the most complicated. Having begun operations in the basement of the treasury building with a staff of 20 employees a year and a half ago, the bureau now occupies a 10-story building, engages the services of 14,000 clerks, and has a vast staff of inspectors and investigators busy throughout the country.

Up to May, 1919, death awards for insurance amounting to \$785,613,500 had been made by the bureau to 102,286 beneficiaries, and 139 awards with a commuted value of \$804,500 had been made for total permanent disability of insured men. Under the provision which provides com-

pensation for dependents in case of death, exclusive of whether or not the man in service held an insurance, there had been made 19,295 awards with monthly payments of \$458,403. Compensation for disability is paid by the bureau to 14,975 beneficiaries with monthly payments of \$411,366. Claims for insurance awards for deaths were being filed at this time at the rate of approximately 350 a day and awards were being made at the rate of 500 a day. Claims for compensation due to disability were filed at the rate of over 500 a day. Burial expenses for men who died in the service have been paid by the bureau in 19,225 cases at an expense of \$1,358,436.

The life insurance phase of the war risk plan is in addition to the compensation and disability benefits and provides protection to the insured or his dependents in amounts ranging from \$1000 to \$10,000. Practically 95 per cent of the personnel of the army, navy, and nursing corps are insured with an average figure of \$8700. The government has strongly advised the holders of these policies to convert them immediately into any one of the following six types of insurance policy: Annual premium policy, 20 payment life, 30 payment life, 20-year endowment, 30-year endowment, and endowment maturing at the age of 62. The advantages in converting the original policies as outlined by members of the War Risk Insurance Bureau are that the new policies would have a loan value, a cash value, paid-up policy rates, and extended insurance rates.

See FIRE PROTECTION, SOCIAL INSURANCE, and WORKMEN'S COMPENSATION.

INTERALLIED AND NEUTRAL COÖPERATIVE CONFERENCE. See COÖPERATION.

INTERALLIED COÖPERATIVE CONFERENCE. See COÖPERATION.

INTERCHURCH WORLD MOVEMENT, OF NORTH AMERICA. Founded on Dec. 17, 1918, this is an organization whose main principle is a thorough-going plan of cooperation between evangelical churches in North America in their entire educational missionary programme at home and abroad. The first meeting was called by the Southern Presbyterian Church in New York City where a committee was appointed to form a plan for the closer coöperation of churches, and this plan was later endorsed by 59 mission societies. The plan recommends a general survey of the foreign missionary fields, a united budget, a united missionary educational programme to acquaint the people of the home churches with the missionary movement, a united financial appeal, and a united programme of actual field work. A conference was held in Cleveland on April 30, 1919, where the movement was put on a firm basis, as it was found to have passed the preparatory stages. At the end of 1919 much work had been done in rural counties where 797 county supervisors have been appointed. Chairman of the Executive Committee is John R. Mott; and secretary, William B. Miller. Headquarters are maintained at 111 Fifth Ave., New York City.

INTERNAL REVENUE. See LIQUORS AND TOBACCO.

INTERNAL WATERWAYS. The development of the Ohio River from Pittsburgh to its mouth at Cairo, in order to secure a nine-foot stage of water, was begun by the Federal government in 1908 under the direct charge of the United States Engineer Department. This work

consisted largely in the construction of docks and movable dams, and while by 1919 it had exceeded the \$64,000,000 originally estimated for the construction, yet considerable progress had been made in the work. At the end of the working season of 1919, 29 locks and dams had been completed and were in operation, while 15 were under construction. Nine locks and dams provided for in the original project had not yet been commenced, and in one case a project had been eliminated entirely. These locks and dams begin just below Pittsburgh, and extend down the river for a distance of nearly a thousand miles, Project No. 54 being located at Mound City, Ill.

CANADIAN WATERWAYS. The first Canadian Waterways Convention was held at Windsor, Ontario, Nov. 18, 1919, with the object of effecting an organization to further the project of a great inland waterway from the Atlantic to Lake Superior. It was believed that only in this way could the needs of the great Northwest be taken care of, as the railroads had failed to handle the great productions from this region. At an expense of \$100,000,000, or less than one-fifth the cost of the Panama Canal, the St. Lawrence River could be deepened, and with the present enlargement of the Welland Canal, access could be had for large vessels to the Great Lakes. An organization was formed under the name of the Canadian Deep Waterways and Power Association, and resolutions were adopted favoring the Great Lakes-Welland-St. Lawrence route to the ocean, and declaring that one of the objects of the association was to be securing the development and deepening of the St. Lawrence waterways system along the lines on which the Great Lakes-St. Lawrence Tidewater Association was working. This project was the subject of considerable discussion during the year both as to its effect on American commerce and industry and as to whether from the standpoint of the Dominion the outlay was justifiable.

INTERNATIONAL LABOR LEGISLATION, COMMISSION ON. See INDUSTRIAL RECONSTRUCTION.

INTERNATIONAL LANGUAGE. While so many problems of reconstruction are pressed to the front, the representatives of International Languages fail to get much hearing; but they are more convinced than ever of the excellence of their cause; if only people had listened to their advice earlier, agreement might be much easier to-day in so many formidable questions. So they all continue their propaganda with much conviction. (1) The believers in the *Projet Chappelier* (see former YEAR BOOKS) are trying to derive much advantage from the present friendly feelings between French and English speaking people. See Albert Dauzat, *Le français et l'anglais, langues internationales de demain*, in *Revue mondiale*, May 1, 1919. (2) The Idists are working hard by throwing on the market grammars, dictionaries, and textbooks which, they think, must convince whoever compares them with Esperanto books that Ido is really the better language of the two. The editor of one of the European periodicals for Ido has elicited the following letter from the:

American Commission to Negotiate Peace,
Place de la Concorde, Paris, Jan. 13, 1919.

Sir:

I am requested by President Wilson to acknowledge receipt for your letter in which you

call his attention to the usefulness of an Universal Language. The President wishes me to say in answer, that he is convinced that this question will be thoroughly investigated by competent authorities when the League of Nations is once established.

For the President,
GIBERT CLOSE.

(3) As to the Esperantists, possibly with a view to counteract the sad use made of Esperanto by Germany for propaganda purposes during the war, they have tried another move, namely, to appeal to advanced internationalists and socialists; they claim they are "making excellent progress among the liberals and radicals of this country." (For information, address 2633 Creston Ave., New York.) (4) Finally we must record a move long contemplated, to bring about by mutual concessions a reconciliation between Idists and Esperantists, namely, the launching of the Esperantidist movement (with central quarters in Bern, Switzerland, 10 Hotelgasse). The leader is Dr. R. de Saussure; the honorary president is Dr. A. Forel, the famous scientist. Esperantido is a simplified Esperanto, but with less radical reforms than those proposed by Ido. The guiding principle of Dr. de Saussure is: "To tell all which is necessary and only what is sufficient for clear understanding." Those who have studied artificial languages will appreciate the really useful element thus introduced into the discussion. For years Dr. de Saussure has been working on this problem. The first number of their monthly periodical *Internacia Lingvo Esperantida* is dated November, 1919.

The "Academia pro interlingua," established in 1887 by followers of Volapuk, has since then carried out investigations on the subject of the international language, and now stands for a simplified Latin, adopting all words common to western European languages and reducing grammar to a minimum. Its president is now Prof. G. Peano of the University of Turin, Italy.

It is Professor Peano's opinion that all international languages recently invented are like dialects of a common one, based on Latin.

INTERNATIONAL TRADE UNION CONFERENCE. See **TRADE UNIONS.**

IOWA. POPULATION. By the Federal census, on April 15, 1910, the population of the State was 2,224,771, a decrease since 1900. By the State census of 1915 there was a population of 2,358,066. This is the latest available estimate.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu.	Value
Corn	1919	10,000,000	416,000,000	\$499,200,000
	1918	9,800,000	352,800,000	430,416,000
Oats	1919	5,670,000	196,182,000	125,556,000
	1918	5,823,000	244,566,000	156,522,000
Wheat	1919	1,700,000	23,675,000	47,850,000
	1918	1,240,000	23,382,000	46,764,000
Hay	1919	3,140,000	a 5,181,000	90,149,000
	1918	3,235,000	a 4,206,000	76,549,000
Potatoes	1919	115,000	4,945,000	9,494,000
	1918	128,000	9,216,000	12,257,000

a Tons.

FINANCE. According to the report of the State Treasurer, the balance on hand on July 1, 1916, was \$717,825 and on June 30, 1918, it was \$2,125,644. The total receipts during this

period amounted to \$20,806,476, while the total disbursements were \$19,398,657. The State has no bonded debt, but on Jan. 1, 1918, the floating debt amounted to \$1,565,051, a net debt of \$1,293,885.

TRANSPORTATION. The total of single track in the State in 1919 was 9935 miles. The grand total of mileage was 13,822. Very little construction has been undertaken in the last three years, only .75 miles of new first track being built in 1919.

CHARITIES AND CORRECTIONS. The following institutions are under the control of the Board of Control: five state hospitals, the Sanatorium for the Treatment of Tuberculosis, a Soldiers' Orphans' Home, a Soldiers' Home, an institution for feeble minded children, training schools for boys, and for girls, the Penitentiary, the Reformatory, and a Women's Reformatory. Expenditures for a year approximate \$1,500,000.

OFFICERS. Governor, W. L. Harding; Lieutenant-Governor, Ernest R. Moore; Secretary of State, W. S. Allen; Treasurer, E. H. Hoyt, Auditor, F. S. Shaw; Attorney-General, H. M. Havner.

See **CHILD LABOR; ROADS.**

IOWA, UNIVERSITY OF. A co-educational State institution, at Iowa City, Iowa. In the summer session of 1919 there were registered 577 men and 713 women; in the fall there were 2445 men and 1469 women, a total of 3914. In the fall there were 438 members in the faculty, not including 60 holding minor positions; 177 additions to the faculty were made in 1919. The library contains 153,700 volumes. During the year there were constructed a men's dormitory with 300 beds and a cafeteria, a children's hospital, a nurses' home, a psychopathic hospital and an armory. The relatively great increase of interest in courses in commerce and vocational subjects has been marked in the last few years. The university was founded in 1847. President, Walter Albert Jessup, Ph.D.

IRELAND. See **GREAT BRITAIN.**

IRON. See **CHEMISTRY, INDUSTRIAL.**

IRON AND STEEL. After the signing of the armistice the steel producers endeavored to find a sound basis for transacting a normal volume of business. It was their desire to set a price level that would encourage consumption, invite orders, and be reasonably profitable to the industry. In view of the fact that capacity had increased nearly 40 per cent, it seemed doubtful to some producers that a demand could be found sufficient to keep output up to capacity. They therefore desired to have the war-time prices continued, in the hope that this high figure for peace times would give them a sufficient return on a smaller volume of business to carry their enlarged plants successfully.

The first general price reduction was made by the publishing of a list of prices prepared by the general price committee of the American Iron and Steel Institute to be submitted to the War Industries Board. However, as the board was about to disband, it refused to receive it. The first reductions were effective Dec. 12, 1918, for steel, but recognition of the reductions on pig iron was withheld by the merchants until Jan. 2, 1919. These resulted in a reduction of \$3 per gross ton on all pig iron, and the reductions on finished steel lowered the average price for the whole list by about \$4.25 per net ton. The second reductions were specified in an agreement

between representatives of the iron and steel industry and the Industrial Board appointed by Secretary Redfield. They involved decreases of \$4.25 on pig iron and an average of about \$6.70 for steel. Thus the total reductions were \$7.25 on pig iron and approximately \$11 a net ton on steel.

According to certain authorities, a mistake was made in arranging these reductions so that while the prices of steel products were lowered about 14 per cent, a reduction of 22 per cent was made in pig iron. This caused dissatisfaction among the merchant furnaces who were thus required to sell pig iron at a restricted price to foundry interests that were scarcely restricted as to price at all. The large establishments who were not obliged to secure their pig iron because they were manufacturing it themselves were not bothered by this arrangement.

The blast furnaces found an opportunity to advance prices in the last three months of the year. The advance carried prices some \$3 a ton above the war level. This proved embarrassing to the United States Steel Corporation which was endeavoring to keep steel prices down to the price level of March 21st. With a view to stimulating construction which creates the largest demand for steel, the steel industry made two reductions. Obvious signs that the general level of commodity prices was rising caused the abandonment of any further thought of reductions in May. The Steel Corporation and some of the larger independents held the prices of March 21st at the close of the year though some sellers were obtaining advanced prices. This was estimated to be only 81 per cent above their 10-year average before the war, on the basis of weighted averages, compared with an advance of commodity prices of around 135 per cent.

WORLD'S PRODUCTION. As will appear later in the present summary this troubled and uncertain condition in no way was confined to the United States but was practically universal and in Europe was still further complicated by the economic and political situation following the great war in which iron, along with coal, figured so conspicuously at every stage and by no means the least in the attempted settlement. Therefore it is of advantage to consider briefly the iron and steel situation of the world generally prior to 1919 as well as developed during that year. An interesting series of tables giving the output of iron and steel in the principal countries of the world was issued in England by the National Federation of Iron and Steel Manufacturers. It shows the output of pig-iron for the leading countries from 1900 to 1918 inclusive, and may be summarized as follows:

In 1900 the United Kingdom produced 8,900,000 tons, United States produced 13,789,000 tons; Germany produced 8,521,000 metric tons; France produced 2,714,000 metric tons.

In 1918 corresponding figures for pig-iron were:

United Kingdom	tons..	9,066,000
United States	do...	39,052,000
Germany	metric tons	11,590,000
France	do...	1,297,000

The years of the largest output of pig-iron were the following:

Y-B-19-12

1918, United Kingdom	tons..	10,260,000
1916, United States	do...	89,435,000
1913, Germany	metric tons	19,292,000
1918, France	do...	5,207,000

The figures for the steel output in 1900 were:

United Kingdom	tons..	4,901,000
United States	do...	10,188,000
Germany	metric tons	6,646,000
France	tons..	1,565,000

In 1918 they were:

United Kingdom (including 306,851 tons of steel castings)	tons	9,591,000
United States	do	45,073,000
Germany	metric tons	14,874,000
France	do	1,912,000

The highest figures were reached

In 1917, United Kingdom, with an output (including steel castings), of ..	tons	9,804,000
In 1918, United States, with ..	do	45,073,000
In 1913, Germany, with ..	metric tons	18,959,000
In 1913, France with ..	do..	4,687,000

Leaving out other minor countries, the pig-iron output of Belgium, which was an annual average of 2,183,000 metric tons for the four years 1910 to 1913, fell to 1,454,500 metric tons in 1914, being as low as 68,150 metric tons in 1915, and 127,825 metric tons in 1916.

The steel production of Belgium, which was an annual average of 2,280,000 metric tons for the four years 1910 to 1913, was 1,360,000 metric tons in 1914, 94,500 metric tons in 1915, and 95,830 metric tons in 1916.

Italy had for the five years 1900 to 1904 an average annual output of pig-iron of 44,680 metric tons, and an average annual output of steel of 163,000 metric tons; her corresponding figures for 1917 were, pig-iron 475,400 metric tons and steel 1,304,000 metric tons.

The detail figures of pig-iron output for the United Kingdom for the year 1918 were as follows:

	Tons
Hematite	3,547,804
Basic	3,202,098
Foundry pig-iron	1,272,288
Forge pig-iron	777,704
Spiegel, ferro-manganese, ferro-silicon, etc..	246,943
Direct iron castings	18,780

In the same year there were produced in the United Kingdom:

	Tons
Bessemer steel ingots, acid	788,355
Basic	567,650
Open-hearth steel ingots, acid	3,901,136
Basic	3,924,415
Electric steel ingots	103,201
Electric steel castings	44,901
Bessemer and open-hearth steel castings...	261,950

UNITED STATES ORE PRODUCTION. The greater part of the iron ore produced in the United States, about 86 per cent, comes from the Lake Superior region, where as in other fields of the industry conditions were unsatisfactory and production fell off materially. A few small strikes, a scarcity of labor, which also was in the main inefficient, and increasing costs were features of the year to which bad weather conditions on

the lakes and in the northwest generally might be added. As a result the total water shipments from the Lake Superior region totalled 47,177,395 tons, or a decrease of 14,850,000 tons from 1918 and 17,200,000 from 1917. A corresponding decline in the rail shipments which normally average somewhat less than 2,000,000 tons also was reported. Of the total output of the Lake Superior region the Mesaba range supplied 64.70 per cent in 1919 of which 84 per cent was for the U. S. Steel Corporation.

The total shipments from 1915 to 1919 are given in the accompanying summary which also shows the proportion taken by the U. S. Steel Corporation.

	Total shipment	Total U. S. Steel Corporation	Per cent U. S. Steel
1915 . . .	47,272,751	21,318,320	47.63
1916	66,658,466	30,255,616	47.52
1917	64,437,003	28,655,771	44.34
1918	62,036,082	25,801,503	41.66
1919 * . . .	47,177,395	21,591,412	45.75

* Water only.

Naturally iron ore production during 1919 in the United States was hindered by the shutting down of blast furnaces during the steel and coal strikes, and the total output was estimated by the U. S. Geological Survey in its preliminary estimates at 60,466,000 gross tons, a decrease of 13 per cent compared with 1918.

Shipments from the mines also fell off, being 56,319,000 tons, or nearly 22 per cent less than 1918. Shipments were valued at \$203,274,000, the average selling price at the mines being \$3.60 per ton, compared with \$3.39 in 1918. Stocks of ore at mines at the end of 1919, mainly in Michigan and Minnesota, were 12,986,000, an apparent increase of about 53 per cent.

Imports of iron ore into the United States for the 11 months ending Nov. 30, 1919, were 423,507 gross tons, valued at \$2,192,619, or \$5.19 a ton. Imports for 1918 were 687,468 gross tons valued at \$3,468,304, or \$4.40 a ton. Exports for the 11 months ending Nov. 30, 1919, were 995,577 gross tons, valued at \$4,302,734, or \$4.32 a ton, compared with exports for the entire year, 1918, of 1,256,383 tons, valued at \$5,535,090, or \$4.41 a ton.

AMERICAN IRON AND STEEL PRODUCTION. In the United States the production of iron and steel in 1919 was considerably below the average of the war years, 1916, 1917 and 1918. Pig-iron production was estimated at about 30,900,000 tons and steel ingot production probably at 34,000,000 tons. Comparison with the three preceding years is given below:

	Pig iron Gross tons	Steel ingots Gross tons
1916	39,434,797	41,401,917
1917	38,621,216	43,619,200
1918	39,054,644	43,051,022
1919	30,900,000*	34,000,000*

* Estimated.

BLAST FURNACES. The additional blast furnace capacity completed in 1919 was indeed meagre. But two blast furnaces—one for the Jones and Laughlin Steel Co. at Pittsburgh and one for the Weirton Steel Co. of Weirton, W. Va.—were built the smallest number in many years and to be compared with 8 in 1918, 14 in

1917, and 4 in 1916. The two furnaces referred to represented a capacity of 350,000 gross tons of pig-iron. At the end of the year four blast furnaces were under construction to be blown in early in 1920 and had an estimated capacity of 700,000 gross tons of pig-iron per year.

During the year there was an unusual fluctuation in the number of blast furnaces active. There was a steady decline from January due to the insufficient demand, forcibly expressed by a blowing out in the month of April of 54 furnaces. As will appear in the following tabulation from the *Iron Age* there was a gain of 51 in October and the end of the year saw 262 in blast.

NUMBER OF FURNACES IN BLAST, 1919

January 1 . . .	350	August 1 . . .	239
February 1 . . .	323	September 1 . . .	265
March 1	306	October 1	162
April 1	266	November 1 . . .	213
May 1	212	December 1 . . .	249
June 1	195	December 31 . . .	262
July 1	200		

OPEN HEARTH FURNACES. In 1919 only nine new open hearth furnaces were completed with a capacity of 625,000 tons, an insignificant number and amount when compared with 46 in 1918 with 1,945,000 tons capacity, 97 in 1917 with 4,326,500 tons capacity, and 103 in 1916 with 4,205,000 tons capacity. Of the nine new furnaces eight were for independent companies and their increased annual capacity 350,000 gross tons, included the conversion of two 30-ton furnaces to 80-ton capacity by the Canton Sheet Steel Co., Canton, Ohio, one 60-ton changed to a 120-ton furnace by the Central Iron and Steel Co., Harrisburg, Pa., and a new 700-ton mixer. The new open-hearth capacity of the U. S. Steel Corporation amounting to 275,000 gross tons included that due to a new converter at the duplex open-hearth plant at the South Works of the Illinois Steel Co., and a third 100-ton furnace at its duplex plant at Gary, Ind.

At the end of 1919 there were 22 open-hearth furnaces with an annual capacity of 875,000 gross tons under construction. Most of these probably would be completed in 1920. This number compared with 16 projected for 1919, with 35 for 1918, with 72 for 1917 and 91 for 1916. The reason that the 1920 programme exceeded that for 1919 was that some of those proposed for the latter year were postponed until 1920. The estimated annual capacity, 875,000 gross tons, compared with 1,130,000 tons planned for 1919, with 1,645,000 tons for 1918 and 4,515,000 tons for 1917. In both 1918 and 1919, in the list of furnaces under construction and projected, the Bethlehem Steel Corporation was credited with a duplexing plant at its Maryland Works at Sparrows Point, consisting of four 200-ton tilting open-hearth furnaces and four 25-ton Bessemer converters. For 1920 only one of the 200-ton tilting furnaces was reported as authorized for building in 1920.

MARKET CONDITIONS. The year 1919 opened with a free market as the War Industries Board had ceased to act on Dec. 31, 1918, and there was to be no further government control. There had been a reduction of prices in December, 1918, but there was a general hesitation on the part of purchasers in the early months of the year and naturally large cancellations of war orders. Threatened unemployment was an important con-

sideration at the national capital and both the Department of Commerce and the Department of Labor favored some move towards price stabilizing. A committee of steel manufacturers met a newly formed Industrial Board of the Department of Commerce, and on March 20th, reduced prices were announced on iron and steel products with the aim of stimulating purchases which had been temporarily suspended. Certain buyers came into the market as a result of this movement, though it was announced that the prices would not be binding on any one, but the Railway Administration refused to pay the price fixed for rails, \$45 for Bessemer and \$47 for open-hearth, and later the Attorney-General denounced the entire scheme as illegal in view of the Sherman Act. By May 9th, when the Industrial Board resigned, all attempts at price fixing vanished and there was a natural market with increased demands for iron and steel. Prices held strong though the U. S. Steel Corporation endeavored to maintain its announced and often lower rates than certain of the independents who were in a position to deliver. The reason assigned was that an increase of prices would produce a demand for increased wages and thus disturb conditions.

The strike on Sept. 22d altered all conditions in the iron and steel industry, and while it was fought to a finish by the manufacturers (see STRIKES AND LOCKOUTS), directly and indirectly it was most expensive for them and for the country at large which was in need of iron and steel products. Naturally there was slackened production, the output in pig-iron in October being 600,000 tons less than in September, which in turn was about 200,000 tons below August. However, as the strike in the steel mills gradually faded the coal strike came on, and along with the failure of adequate production there was considerable demand for iron and steel products. Perhaps as notable as any feature of the steel business in 1919 was the demand from automobile manufacturers for materials and especially sheets of which there was a shortage during the latter part of the year.

BRITISH IRON AND STEEL INDUSTRY. In the United Kingdom during 1919 the demand for iron and steel products was continuously in excess of the supply and as a result high prices and large profits ruled. There was a marked decline in the exports of pig-iron as well as of finished iron and steel. In fact certain pessimists who traced the decline in pig-iron exports from the tees from 1,246,884 tons in 1913 to 926,596 tons in 1914 to 250,000 tons in 1919, had serious forebodings for the immediate future of the industry. In 1914 there were exported 500,614 tons of railway rails, 137,305 tons of wrought iron such as rods, bars, etc., and 81,458 tons of cast iron, while in 1914 these figures for 10 months were 97,752 tons, 29,304 tons, and 17,237 tons respectively. Tin plates in 1914 were 494,921 tons as compared with 236,513 tons for 10 months of 1919 and galvanized sheets 762,244 tons in 1914, as compared with 131,340 tons in 10 months of 1919.

The reasons for the decreased production were not difficult to explain, and in fact reflected in large measure British industrial conditions generally. The number of furnaces in blast fell from 71 in January to 63 in December with 54 idle and both ore and coke were lacking in adequate amounts. A holiday in July and later the

railway strike preventing supplies, especially of coke brought down the Cleveland production in 1919 to less than 2,750,000 tons where in 1913 it was 3,869,000. Lack of coal, lack of ore, lack of cars, all were serious factors, and the introduction of a seven-hour day at the Cleveland mines was a leading cause of reduced output.

The production capacity was present and an investigation made for the Board of Conciliation and Arbitration of the manufactured Iron and Steel Trade of the North of England showed that the country's productive capacity of finished steel was double that of 1914. However, notwithstanding increased and enlarged plant facilities owing to lack of railroad transport facilities, however, the output in 1919 was below that of 1914. The inability to get material carried away was such that 80,000 tons of finished steel were lying in the works on the northeast coast of England at the end of the year. If the railroads could have taken away the finished material the production would have been enormously increased.

On Apr. 30, 1919 the state subsidy on pig-iron and government control of prices terminated, and iron that was sold at 95s. per ton for domestic consumption and 145s. for export straightway was taken at 140s. for standard No. 3, and with the eager demand went to 160s. While prices could have gone higher it was decided by the Cleveland iron masters to hold them at this figure for domestic consumption with an added 5s. for foreign trade. Reference has been made to diminished exports of pig-iron which were reduced greatly in the case of France and Italy and increased in the case of Belgium. In the Cleveland district the wages both in the mines and at the furnaces were regulated by a sliding scale with advances depending upon the prices at which pig-iron was selling in the market. There was no labor difficulty during the year in the industry.

IRON AND STEEL INDUSTRY IN GERMANY. In 1919 there was a heavy demand for iron and steel products in Germany and a corresponding scarcity not only of coal and iron, but also of finished materials. These advances reached extraordinary figures by December, ranging for all products from crude ores to finished articles. The depreciation of the German currency led to certain sales to foreign countries at rates higher than those prevailing at home and towards the end of the year many foreign contracts could have been placed in Germany had raw materials been available.

During the latter part of the year coal was increasingly scarce while not only did the Germans miss the ores from the territory which they had lost in the war, but the failure of Swedish ore imports on account of the blockade and the reduced shipments of ores from France were also features. The shortage of coal too had its effect in reducing the production of the Siegerland mines.

It was believed that one result of the war and the peace treaty would be a radical transformation in the German iron and steel industry which would be forced to work up its products into more highly finished goods and not attempt to compete with France in semi-manufactured goods or heavy bars, especially as the French works in Lorraine and Luxemburg equipped largely with excellent German furnaces and machinery were in a position to handle most ad-

vantageously and economically the cheap ores available. The German cutlery and hardware trade was rapidly establishing itself in foreign markets and in some cases as in that of the Solingen manufacturers payment was required in the currency of the purchaser at a substantial advance over the pre-war prices, this practice being followed in western Europe, Italy and Scandinavia.

The readjustment to peace conditions of great plants that during the war worked on ordnance and munitions was proceeding apace. The Mannesman Tube Works of Duesseldorf which was credited with almost a monopoly of the German pipe production, declared a dividend of 5 per cent as compared with 15 per cent, while the Krupp works having passed its dividend as in 1918, was engaged in preparations for the extensive manufacture of locomotives and railway cars.

The following table from the London correspondent of the *Iron Age* (New York), shows certain of the losses to Germany under the peace treaty, the output being of course in tons:

	In No of Works	Silesia Annual Output	In Alsace-Lorraine No. of Works	Annual Output	In Saar District No of Works	Annual Output
Iron mines	10	137,469	54	21,136,265
Lead, silver, and zinc mines	12	1,341,713
Sulphur	8	388
Pig iron works ..	8	994,601	13	3,863,524	5	1,371,389
Iron foundries ..	42	99,742	40	94,808	16	98,242
Steel works ..	11	1,396,287	7	2,289,250	7	2,079,856
Rolling mills ..	13	1,415,436	8	1,554,001	8	1,056,702
Lead, silver, and copper refineries, etc ..	3	93,522
Spelter refineries, etc ..	18	176,446

BELGIAN CONDITIONS. Considerable promise for the Belgian iron and steel industry was held forth in 1919 inasmuch as the population was resolutely engaged in reestablishing the manufacturing plants on a producing basis, notwithstanding the systematic and complete destruction accomplished by the Germans in many manufacturing centres. However it was expected that another year would see the Belgian iron and steel industry in a position to be a factor in the commerce and reconstruction of the country.

FRENCH CONDITIONS. In France, notwithstanding the changed conditions and the newly acquired Alsace-Lorraine works, conditions in the iron and steel industry were in large measure chaotic, due both to business and political influences and also to the fuel shortage and the general railway situation which was far from satisfactory.

ELECTRIC FURNACES. From Jan 1, 1919 to December 31st of that year, the number of electric furnaces in the United States increased from 287 to 323, while in Canada there was a net loss of three, there being 40 electric furnaces in all at the end of 1919. When it is recalled that on July 1, 1913 there were but 19 electric furnaces in the United States and but three in Canada, the development can be appreciated. The most popular type of electric furnace in 1919 was the Heroult, of which there were 152 in the United States and 18 in Canada at the end of the year or a gain of seven during the 12 months. There was a considerable expansion in the construction and use of this type of furnace in 1917, due to war conditions, but in 1918 and 1919 the development was more normal and the utility was recognized at the Naval Ordnance Factory at Charleston, W. Va., two 30-ton Her-

oult furnaces were being installed. The relative use of the various types of electric furnaces at the end of 1919, those in the United States and Canada being taken together, was as follows:

Snyder	49	Induction	3
Rennerfelt	18	Webb	2
Greaves-Etchells ..	18	Stassano	1
Gronwall-Dixon ..	13	Greene	11
Ludlum	12	Vom Baur	4
Girod	5	Detroit	1
Booth	11	Special	24
Moore	20		

There were over 815 electric furnaces in use in the different steel plants of the world at the end of 1919, Great Britain coming next after the United States in point of numbers, followed by Germany, France, Sweden, Italy, Austria, Norway, and Japan.

PLATE MILLS. The Lukens Steel Company, Coatesville, Pa., which furnishes the greater part of the railroad locomotive boiler steel used in the United States, early in 1919 put into use the largest plate mill in the United States, which

also exceeds in dimensions any in the other countries of the world. The first boiler plate in America was made at the plant of the Lukens Steel Company in 1820, and in 1890 a 120-inch plate mill was in operation, which was later rebuilt to 134 inches. In 1903 a 140-inch unit was put in commission, and the last No. 5 mill is 204 inches in measurement. The Withowitz Works in Austria has a 178-inch mill, and the largest mill in Great Britain is 168 inches. In the No. 5 Lukens mill plates up to 192 inches in width and circular pieces a few inches wider may be rolled. Attempts have been made to build in a three-high mill, but it was not possible to secure chilled rolls of the size and weight demanded, which would be 50 inches in diameter. Accordingly a two-high mill such as more usual in Great Britain was used, where the rolls are of smaller diameter, being 34 inches in diameter, with a working face of 204 inches with 27-inch necks. They weigh about 30 tons each. The backing rolls, 50 inches in diameter, are made of cast steel with 36-inch necks, and weigh about 60 tons each. This mill will handle ingots up to 60,000 pounds in weight, and at full capacity will roll from 4000 to 5000 tons of plate. With this and other improvements in contemplation, the Lukens Steel Company would have an estimated annual capacity of about 500,000 tons of finished plate. See METALLURGY.

IRRIGATION. See RECLAMATION.

IRVING, HENRY BRODRIBB. British actor-manager, eldest son of the late Sir Henry Irving, died in London, October 17. He was born in London, Aug. 5, 1870, educated at Marlborough College and New College, Oxford. He appeared on the stage in 1891. He was called to the bar in 1894, but did not practice and continued his career as an actor. He was man-

ager of the Shaftesbury (in 1908-09) and of the Queen's Theatre during the two following seasons. He made tours in Australia and South Africa, and produced several of his father's well-known plays. Among his writings may be mentioned a *Life of Lord Jeffreys*, (1898); *French Criminals of the 19th Century*, (1901); and the *Trial of Mrs. Maybrick*, (1913).

ISTRIA. Before the downfall of the Austro-Hungarian empire, a crown land of the former kingdom of Austria and consisting of a peninsula extending from Trieste and Carniola to the Adriatic Sea. Area 1914 square miles; population according to the census of Dec. 31, 1910, 403,566, of whom 386,463 were reported as Austrian subjects. Of these 43.52 per cent spoke Croatian; 38.15 per cent Italian and 3.3 per cent German. Capital, Capodistria, with a population of about 9000 in 1910. See article WAR OF THE NATIONS.

ISTRIA. See ARCHÆOLOGY.

ISVOLSKY, M. Russian diplomat, died in Paris during the first week of September. He was Russian ambassador at Rome and afterwards at Copenhagen, and in 1906 was chosen Russian Minister of Foreign Affairs. This was the time of difficulties with Great Britain over Persia and it was largely through his efforts that the accord in regard to Persia was reached between the two governments. He also succeeded in effecting a reconciliation with Japan, but his policy in regard to Austria-Hungary has been characterized as a failure. He held the famous interview with von Aehrenthal, the Austro-Hungarian Foreign Minister resulting in the Balkan agreement, which was not maintained by Austria-Hungary. He went to France as ambassador in 1910, and remained there until June, 1917, when he resigned two months after the abdication of the Czar. The revolution was the end of his public career, despite the fact that he was believed to desire an understanding with the revolutionists. After his retirement he wrote memoirs, portions of which were published in the European reviews. In his writings and intercourse he gave it to be understood that he shared the liberal views of the times, and did not sympathize with the imperialistic spirit of his successor, M. Sazonov. He declared that he had favored the internationalization of Constantinople, and that the Emperor also wished it, and that the Russian claim to Constantinople and the Straits in 1915 had come as a complete surprise to him. He lived quietly while in retirement and he died at the sanitarium of the Holy Savior, where M. Clemenceau had previously been cared for during his illness.

ITALIAN SOMALILAND. An Italian colony and protectorate in eastern Africa on the coast, extending from the British Somaliland protectorate southward to the Juba river. Area, 139,430 square miles; population, about 450,000. In 1917 the imports were valued at 3,877,609 lire and the exports at 6,064,782 lire. The budget for 1918-1919 was as follows: Revenue, 6,356,000 lire; expenditures, 6,005,998 lire. Governor in 1919, G. Cerrina Feroni.

ITALY. The constitutional monarchy in southern Europe comprising Italy proper, the islands of Sardinia, Sicily, Elba, and between 60 and 70 smaller islands, together with territory on the eastern coast of the Adriatic—of an area undetermined at the close of 1919, being the

subject of disputed claims (see below under *History*, and also the article WAR OF THE NATIONS). Area, 110,632 square miles (exclusive of accessions resulting from the war); population, estimated, Jan. 1, 1915, 36,120,118. For details, see preceding YEAR BOOKS. Emigrants, 1917: 46,493 of whom 33,480 went to European or Mediterranean countries, and 13,013 overseas (11,459 to the United States). In 1917, 16,885 Italians returned to Italy, (8763 from the United States). Capital, Rome, with a population, Jan. 1, 1915, estimated at 590,960; largest city, Naples, (697,917); other large cities, Milan, (663,059); Turin, (451,994); and Palermo, (345,891).

RAILWAYS. The Council of Ministers during the year approved a scheme, proposed by the Transport Minister, De Vito, for the electrification of the Italian State railways. The plan proposed provided for the exploitation of the national water power resources and their utilization for railway purposes. The first programme, which limited the improvement to 2000 kilometers was later extended to 6000 kilometers. This included the two principal trunk lines across the Apennines, viz., the two "Direttissime," Genoa-Tortone and Bologna-Florence, eight mountain passes and the principal arteries of the railway system of the peninsula from Trient to Reggio, Calabria, or from Turin to Trieste. The bill provided for an expenditure of 800,000,000 lire spread over eight years. Other expenditures were provided for the acquisition of material and for the government's subsidies to the new plants, the financial side of the matter being more serious than the engineering. There was available in Italy adequate water power as the Tientino alone could furnish at least 1,000,000 horse-power, while the mountain basins of numerous rivers and torrents along the Alps and the Apennines could be dammed and made into artificial lakes with a comparatively small amount of dam construction.

It was realized that before new railways in Italy could be constructed or converted to electricity it would be possible still to increase the use of motor vehicles for passengers and freight as feeders to the present lines. The use of motor vehicles as auxiliary to the railroads had been developed during the last 10 years to a higher degree in Italy than in any other country in the world, owing to the fact that Italy is a mountainous country in which railroad lines can only be built at considerable cost and labor. The total length of railroad lines in Italy in 1919 was 8700 miles, while the length of routes over which motor services were run with a fixed time table is 8070 miles. There were 400 of these lines over which regular public services were run either as feeders to the railroad or in order to open up country which had been inaccessible to the railroad.

During 1919 Italy was considering the resumption of through traffic with Germany and an agreement aiming to reestablish traffic through Switzerland was made. Passenger and freight traffic were thus reopened, though subject to certain restrictions. This is of great economic significance for Italy because of the abnormal exchange rate, which was greatly in favor of Italy and enabled advantageous purchases of goods to be made.

The serious economic condition of Italy naturally affected the railways and many trains

were not running for lack of fuel. From Belgium 2000 tons of coal was being received daily and prevented much distress.

The Italian State Railways on Jan. 1, 1920, was to take over the chief normal gauge railways on the island of Sardinia, which have hitherto been worked by a private company. The service was to be thoroughly reorganized, rolling stock overhauled, and various other improvements effected.

Italy was to have an important connection with Eastern Europe by the completion of a new railroad to run from Valona on the Adriatic to Monastir. This not only would benefit the undeveloped country of Albania, but would give Italy through communications across the Balkans with Constantinople. Two ferries which were to carry the train over the Otranto Passage and thus the Italian system would be linked up with the new railway.

It was also proposed to connect up Durazzo, the most important port of Albania, by a branch which will run in an almost straight line through the plain of Kavaja along the old Roman road, via Egnatia. After diverging from this road and taking the Musejeja road, it would join the Trans-Balkan line not far from Pekini, at a suitable spot between Fieri and Berat.

EDUCATION. No later figures for elementary education were available than those given in the preceding YEAR BOOK. In 1916 the public elementary schools numbered 120,196 with 75,993 teachers and 3,792,024 pupils. The latest figures for the universities were for 1916-17, when the total number of students was placed at 29,075. In 1917-18 the 35 schools of agriculture had 1198 students. There are besides, industrial schools, schools of design and numerous professional and technical schools. In 1919, as a part of its reconstruction work the government provided in 1919 for a national institute for the instruction of illiterate adults. Its immediate purpose was to give illiterate demobilized soldiers the minimum instruction required for the increase of their productiveness and their usefulness as citizens. It was authorized to make use of the teaching staff of the elementary public schools. Its administration was in the hands of a committee of 10 members of which the president was to be appointed by the prime minister.

PRODUCTION AND INDUSTRY. Of the total acreage, namely, 70,811,000, about 51,309,310 are under crops, and 11,272,339 are forests. The following table shows the acreage and production in hundredweights of the principal crops for 1917 and 1918:

	Acrea		Cuts	
	1917	1918	1917	1918
Wheat	10,680,250	10,914,250	76,204,000	99,776,000
Barley	475,000	483,500	3,232,000	4,218,000
Oats	1,119,750	1,228,525	9,838,000	13,166,000
Rye	282,500	273,000	2,266,000	2,658,000
Maize	3,898,500	3,598,000	42,932,000	38,798,000
Rice	350,000	346,000	10,244,000	10,470,000
Beans	1,099,500	1,077,000	7,046,000	8,362,000
Potatoes				
(tons)	740,500	747,250	26,248,000	28,198,000
Sugar beet-				
root				
(tons)	121,500	107,000	22,440,000	22,920,000
Vines				
(1000				
gals.)	10,846,750	7,261,000	1,061,500	1,237,632
Olives				
gals.	5,753,000	5,750,000	45,012
(1000				

In August it was reported that the yield for the year 1919 was larger than the average yield for the past 10 years, but was still insufficient for the yearly consumption. The average annual requirement was 1,500,000 quintals. The estimate for the following year was 1,300,000 quintals. The area which planted in sugar beets in 1919 was about 148,000 acres. This is considerably greater than the acreage in this crop for the past few years, as is indicated by the following figures: 1913, 152,710 acres; 1914, 100,571 acres; 1915, 122,810 acres; 1916, 123,157 acres; 1917, 120,092 acres. It was estimated for 1919 that the production of sugar would reach 286,520,000 pounds, which is an increase of 110,200,000 pounds over that for 1918. See article AGRICULTURE.

In 1917 the mineral output was valued at 303,038,718 lire and employed 56,705 persons. As a result of the experience gained by the Italian government since the signing of the armistice, in November, 1918, with reference to combating unemployment, new measures were approved by the Italian ministry making radical changes in the plan of organization and the provisions for the payment of unemployment subsidies established by the decrees of Nov. 17, 1918, and Jan. 5, 1919. In addition to modifying the administrative organization previously established, in such a way as to centralize and coordinate more effectively all the activities of the government with regard both to employment and to unemployment, provision was made for the establishment of a permanent system of unemployment insurance which is to be paid out of a fund to which not only the State but also the employers and the workers will contribute. In the past, the State bore the entire burden of the unemployment subsidies. Provision was also made for advancing money out of the fund for unemployment to municipalities, or consortia, for the immediate initiation of public works.

Statistics regarding the extent of unemployment in Italy were not available. However, with the rapid demobilization of the army, and the comparative inactivity in certain important industries, notably the iron and steel industries, on account of the shortage of raw materials, there was every reason to believe that the number of unemployed was very considerable. Italy has made great progress along the lines of social legislation, and the new compulsory insurance against unemployment would, it was hoped, do much to relieve the situation. (See STRIKES AND LOCKOUTS.)

FOREIGN TRADE. The following table shows the imports and exports in millions of lire in 1913, 1917, and 1918 (figures for the last-named year being provisional):

Date	Imports	Exports
1913	3,645 6	2,511 6
1917	13,991.2	3,308 5
1918	14,101 6	2,483 5

The amount reached by the imports in 1918, namely, more than 14,000,000,000 lire was without precedent in the economic history of Italy, and was even higher than the figures indicate, because they were not computed at current prices which were 30 per cent higher than they were in 1917. The main sources of these imports were first the United States, which had

held that rank for three years, with 6,226,000,000; second, Great Britain, with 2,189,000,000; third, Argentina, 1,493,000,000; fourth, British India, 1,164,000,000; fifth, France, 1,062,000,000. Of the Italian exports to foreign countries France received the largest amount, namely, 902,600,000; and then came Great Britain with 559,000,000; Switzerland, 283,000,000; United States, 127,000,000; Greece, 100,000,000; Argentina, 99,000,000; Egypt, 96,000,000. The chief exports from America in 1918 were food-stuffs and raw material, but there was also a considerable quantity of manufactured and partly manufactured goods. From Great Britain one-third of the imports were represented by coal. From France one-half of the imports were represented by coal and explosives.

FINANCIAL SITUATION. Budget estimates for the year ending June 30, 1919, were: Revenue, 5,099,929,886 lire, expenditures, 4,810,654,310 lire. There was great interest throughout the country in financial reforms proposed by Signor Nitti and the cabinet. It was necessary to procure for the Italian treasury about 20,000,000,000 lire. Many confusing rumors were abroad. There was talk of a very high income tax to bear especially upon fortunes made during the war. This would not, however, suffice, and it was necessary to tax fortunes that existed before the war. Hence a report was spread that there would be general tax upon capital, based on difference in per cent between the amounts made before the war and those gained rapidly during the war. Then a forced loan was proposed and a special committee was appointed to study the question of rate. The minimum rate proposed was one-half of one per cent, and the maximum two per cent, and the term was fixed at between 60 and 100 years. It was proposed that the limit beyond which the tax would apply should be fixed at about 50,000 francs. As to fortunes acquired or increased during the war, they would be submitted not only to a forced loan, but to a very high tax besides. In some journals it was urged that the difference should be determined between the fortunes gained by war munitions or in business relating to the war, and fortunes gained in industries and business that had no direct relation with the war, and there was prolonged discussion in regard to this. The loan, it was estimated, would yield between 15,000,000,000 and 20,000,000,000 and the income tax, a little more than 5,000,000,000, and that after deducting costs, there would remain 20,000,000,000 for the treasury. In spite of this large sum there would still remain heavy expenses to meet for which the pre-war taxes were inadequate. The ordinary budget would be considerably increased. Before the war it had been about 2,500,000,000, and it would now be about 6,000,000,000. The income tax prepared by the preceding finance minister, Signor Meda, would be adopted by the present minister with some amendments of detail. As to the general prospects from the economic point of view, the present Minister of Finance, Signor Tedesco, was on the whole optimistic. He said that the war had served to prove to Italians their potent strength and wealth. He predicted an immense exploitation of the soil in the future. He said great undertakings were certain to be started. The Italian means of transport would be transformed and over 6000 kilometers of railways would be electrified. Means

of applying liquid fuel on railroads and in industries were under consideration. In many of the mountainous regions, especially in Calabria, water works on a large scale would be established and immense reservoirs would furnish water regularly to the agricultural regions, and supply water power for the industries. The result was certain to be an increase in intensive culture.

GOVERNMENT. The ministry at the beginning of the year was as follows: President of the Council and Minister of the Interior, Signor Vittorio Emanuele Orlando; Vice-President of the Council, Giovanni Villa; Minister of Foreign Affairs, Baron Sidney Sonnino; Minister for the Colonies, Signor Gaspare Colosimo; Minister of Justice and of Ecclesiastical Affairs, Signor Luigi Fausta; Minister of the Treasury, Signor Bonaldo Stringher; Minister of Finance, Signor F. Meda; Minister of War, General Enrico Caviglia; Minister of Marine, Admiral Alberto Del Bono; Minister of Food, Silvio Crespi; Minister of Public Assistance and Pensions, Signor Giuseppe Giardini; Minister of Public Instruction, Signor Agostino Berenini; Minister of Public Works, Signor Ivanoe Bononi; Minister of Agriculture, Signor Vincenzo Riccio; Minister of Industry and Commerce, Signor Augusto Ciuffelli; Minister of Posts and Telegraphs, Signor Luigi Fera; Minister of Railways and Merchant Marine, Signor Giuseppe De Nava. For later ministry, see below under *History*.

HISTORY

THE GOVERNMENT AND NATIONALISM. Down to the fall of the Orlando Ministry Italy was represented at the Peace Conference by Orlando, Baron Sonnino, General Di Robilant, Salvatore Barzilai, Marquis Salvago-Raggi and Signor Salandra. It had been evident before the end of 1918 that the nationalist spirit was gaining ground in Italy and threatening to commit the country to a line of policy condemned by liberals as imperialistic. Already (December 28th) the Socialist minister Bissolati had resigned in protest against the policy of Baron Sonnino and his followers, holding that such a policy was a discredit to Italy abroad and ran the risk of bringing her into war with the Jugo-Slavs. At this time he said that Italy should content herself with Fiume as a free port under Italian rule, and with Istria. He thought that Italy also would have to give up her claim to the Dodecanese in return for compensation, in order not to drive Greece into an alliance with the Jugo-Slavs. Part of the ministry agreed with him and the Socialists and Clericals in parliament supported him. The enthusiasm with which President Wilson was received disguised the actual condition of affairs for a short time. He was hailed as liberator only so long as he was supposed to be in sympathy with nationalist aims of Baron Sonnino and his supporters. As soon as his real view in respect to Fiume became known there was an end to his popularity. The resignation of Bissolati led eventually to a ministerial crisis. On January 12th Signor F. S. Nitti, minister of the treasury, offered to resign and a few days afterwards tendered his resignation along with other moderate members of the cabinet, apparently with the design of driving from office the foreign minister Sonnino and thus bringing in a government supported by

Socialists and Clericals which might institute a policy of concession toward Jugo-Slavia and repudiate the treaty of London. This did not happen however for both Orlando and Sonnino held their posts although some changes were made in the cabinet, including the creation of a new ministry for the reconstruction of invaded territory, to which Signor Fradeletto, former minister of public instruction was appointed. All the new members of the cabinet were supporters of Italy's claims to Fiume and to the Dalmatian coast. As noted in the WAR OF NATIONS (q.v.), President Wilson on April 23d in a public statement emphasized the importance of Fiume to the new states created out of the old Austro-Hungarian dominions and appealed to the generosity of the Italian people and their friendship for their new neighbors as against the extreme attitude of the Italian government. This caused a storm of indignation among all classes and led to an enthusiastic ovation of Orlando and Sonnino when they left for the time being the Peace Conference and returned to Rome; and the government received a vote of confidence of 382 to 40, the minority consisting of the irreconcilable Socialist group. Nevertheless the ministry fell soon afterwards. It was condemned for its failure to satisfy national hopes in respect to the Adriatic, and for its inability to remedy the serious economic conditions, especially the strikes and the high cost of living. On June 19th a vote was cast against it of 259 to 78, and the cabinet thereupon resigned. Signor Nitti, who was known as a former supporter of Giolitti succeeded as Prime Minister. He assumed the portfolio of minister of the interior and chose among others the following members: Foreign Affairs, Tittoni, (succeeded toward the end of the year by Scialoja); Colonies, Rossi, War, Lieutenant-General Albricci; Finance, Tedesco; Marine, Rear-Admiral Sechi. There was much opposition to the new cabinet but when it came to a vote in the Chamber on July 14th it was supported by 257 to 111. The political situation had been complicated by the formation of the Catholic Popular Party. This resulted from the action of the Vatican in removing the rule against the participation of Catholics in politics. This new party did not thoroughly agree with the Orlando programme but favored a compromise in respect to the Adriatic. Its programme in general involved the following points: Strict reorganization of finance; guarantee of rights and liberty; a just solution of the land problem; proportional representation; reform of the senate in such a way as would make it represent the organic corporations of the country; administrative decentralization; support of the League of Nations; publicity of treaties; and compulsory arbitration.

SIGNOR NITTI'S PROGRAMME. At the beginning of September the Prime Minister announced his programme which comprised the following main points: He declared that the country's need was for peace, discipline, and work, and he appealed for harmony to those ends. In regard to relations with France he declared in an interview with a French newspaper that the interests of the two countries were in perfect accord, and that this condition ought to be maintained. He referred to the employment of Italian labor in France, and said that he had warned Italian representatives in

France that they must not interfere with or lower the standard of the local working-men. He said he desired to secure for the working class a share in the government and that that was the principal note of his policy. The difficulties that presented themselves at present, he said, would probably be overcome within the next two or three years, for Italy was of all countries the one that had come out of the war under the best conditions and with the strongest body of men fit for labor. The debt had risen to only 80,000,000,000, of which 15,000,000,000 had already existed. His financial policy included first, a general income tax which would tend to increase and whose returns were placed at from 20 to 25,000,000,000. This income tax would provide for the expenses caused by the new debt. As to his foreign policy, he said it consisted simply in an attitude of frankness and simplicity and that the time for dissimulation was past. The external policy of the country must be democratic. In regard to the realization of Italy's national aims, he relied upon the complete support of France and urged that a solid bloc should be formed between the two countries.

THE ELECTIONS. The elections to the Chamber of Deputies were held on November 16th. The figures as finally presented on December 24th were as follows: Socialists, 160; Catholics, 103; Liberal Democrats, 93; Radicals, 58; Socialist Reformists, 14; Democrats, 23; Republicans, 4; Combatants, 24; Giolittians, 5; Radical Christian Democrats, 1; Nationalists, 2; Independents, 6; Radical Socialists, 1; Independent Socialists, 1. Among the chief features of the elections may be mentioned the increase of the Socialist representation and the appearance for the first time in the Chamber of the new Popular or Catholic party. This participation of Catholics now admitted by the Holy See marked a departure from the policy followed consistently by the Vatican since Rome was occupied by the Italian government, Sept. 20, 1870, during which time the Catholics had been required to abstain from voting and to refuse election to office. Another feature was the large number of abstentions during the election from among the moderate parties. In the final result, although the constitutional royalists in the various groups continued to hold the majority, the opposition had increased in power. Alliance between the Catholics and the Socialists however, seemed hardly possible.

On the eve of the opening of parliament the directors of the Socialist party held a meeting at which a resolution was passed declaring that the Socialist victory at the elections was an act of complete solidarity with the Soviet republic of Russia, clearly expressing to the Italian government an order to recognize that republic immediately. Before parliament met the Socialist deputies at a meeting adopted the proposal by a vote of 105 to 23 that on attending the first meeting of the new Chamber, they should refuse homage to the king, and leave the Chamber before delivery of the speech from the throne. This was the general spirit of the entire Socialist representation, for those who cast the negative votes did not do so on principle, but merely because they favored the alternative proposal that they should not attend the session at all. The new session promised to be a stormy one as many of the Socialists

had promised the electors to take extreme action against parliament.

PARLIAMENTARY SITUATION. The elections gave the Socialists nearly one-third of the seats in the new Chamber which was opened by the king in December and they had never before appeared in parliament in any such strength. They determined from the first to show their power but they were not united in their policy. Two divisions or tendencies soon showed themselves. One element represented by Signor Turati tended toward compromise holding that it was to the interest of the Socialists to support the Nitti ministry. Signor Turati advised his associates to take no part in parliamentary proceedings and not to attend the opening session over which the king presided. On the other side were the extremists with Bolshevik tendencies. This division corresponded to the situation in the country at large where there was a sharp line between those Socialists whose attitude toward the Italian parliament was like that of the Bolsheviks toward their Constituent Assembly and on the other hand the more moderate socialists who wished to proceed by gradual and orderly means. In the discussion over the proper attitude for the party to take Signor Turati was defeated, receiving only 23 votes out of about 130 in the conference. It was decided however by 105 votes that the Socialist deputies should begin by taking their seats but withdraw on the speech from the throne. Accordingly when the king appeared the socialists arose and left the Chamber singing revolutionary hymns. In respect to internal policy the question had been raised whether Socialists ought to take an oath of allegiance. The new deputies under the influence of the campaign oratory and their recent contact with the theories and dogmas of socialism felt hesitation about taking the oath, but if they did not do so they would lose their seats. They decided to take the oath and then for the sake of saving their principles to demand its abolition in the future. In respect to foreign policy the Socialists did not avail themselves of the opportunity which now presented itself of uniting with the peoples of the Allied countries or even with the Socialist groups in some of the countries in attacking the danger of a return to militarism in Germany. On the other hand they preferred to attack France for retaining the German prisoners. By the non-Socialist elements the success of the Socialists was explained as not the result of any positive demand on the part of the people but of lack of interest on the part of large bodies of citizens, and their disappointment with the government. The old Chamber had been dissolved simply because the government believed it would vote against it and there was nothing in particular to draw the people to the government's support. The Socialists had profited by this general lack of interest. A vote of confidence brought the majority of only 26, the vote standing 242 for and 216 against. The Chamber adjourned for the Christmas holidays, to re-convene on January 28th, and just before the adjournment the ministry received a strong majority vote in favor of its proposed measure to reform the constitution in order to give parliament the sole power to declare war; and the Chamber sustained the government also when it announced that it had sent a dispatch severely criticizing Admiral Millo who had supported

D'Annunzio at Fiume. At the close of the year it did not appear that the Nitti government would resign on account of its small majority but that it intended to follow the policy of holding the balance between the two opposite extremes of Bolsheviks against whom the government would rely on the parties who stood for stability in public affairs including the new Catholic party and of reactionaries on the opposite side who showed an imperialistic tendency illustrated in the whole adventure of D'Annunzio against whom it would appeal to the popular parties and even to the Socialists and Catholics.

ADRIATIC POLICY. The Prime Minister Nitti was advocating a policy at the close of the year that tended toward moderation. He announced on December 29th in the course of a debate that he intended to break with the old diplomacy and to go to Paris for the purpose of informing the Allies exactly what Italy required. He referred to the policy of claiming everything in the hope of getting a part and said that the Italian method had been to demand everything on the Adriatic though expecting to get much less. He declared that the statement that the Fiume demand had been omitted from the agreement of London on account of Russian opposition was absolutely false. At the same time he gave assurances that no compromise had been accepted in regard to the Adriatic. A memorandum had been handed to the Italian Foreign Minister Scialoja by Mr. Lloyd George and M. Clemenceau and Mr. Davis, the American Ambassador, which according to the newspapers was of much importance, but it simply contained explanations of the American Secretary of State's remarks in regard to the Tittoni proposals. It went into both sides of the question but inclined toward the American view. At the same time it was understood that no pressure would be brought to bear on Italy to enforce this view. The Italian Foreign Minister declared that M. Clemenceau and Mr. Lloyd George had told him that after France, England and Italy agreed they believed they could induce President Wilson to accept the agreement. The reproach against Italy according to the Foreign Secretary was that she asked for Dalmatia and also for Fiume although Fiume had been granted to Croatia under the terms of the agreement of London. As to this he said that Italy had a treaty with France, and Great Britain which unfortunately was not recognized by the United States granting Dalmatia to her. Italy asked for the fulfillment of that but had not asked for Fiume. It was Fiume which had asked to be annexed to Italy. Italy could not avoid supporting the claims of Fiume in the circumstances according to the principles of self-determination. Italy was ready to enter into a direct agreement with the Jugo-Slavs, provided their government was free and not backed up by some other power. Italian aims were to preserve the Italian character of Fiume and to insure the safety of the Adriatic. The object was twofold: Protection of Italian nationality in Dalmatia and in Fiume and military defense of the Adriatic. The American Secretary of State proposed neutralization of the Dalmatian islands and of the sea as far as Ragusa. That would leave a part of the Italian coast exposed to attack as it had been in the last war and this was intolerable. In Asia Minor and on the Eastern Mediterranean

the Italians demanded influences proportionate to her economic and commercial interests. The Prime Minister in the course of his speech denied the statement that the relations between Italy and her Allies were no longer cordial. He said that the opinions expressed by M. Clemenceau had caused anxiety in Italy and he regretted that the French Premier had fallen into certain inaccuracies. Italy had not pledged herself to give Fiume to Croatia. Fiume to be sure was not included in the compact of London but if the compact of London were accepted Dalmatia would immediately be given to Italy. The compact of London had said that Italy would not fight alone against Austria but Italy had fought alone against Austria. As to the Jugo-Slavs they should understand that Italy had no desire for domination but only wished to open her markets to neighboring peoples. Above all Italy wished to avoid wars in the future. But so long as some of the Allied Powers made the Jugo-Slav minority believe that it would be supported, the demands of the Jugo-Slavs would continue to be excessive. The question of Fiume, Dalmatia, and Albania were allied to the internal situation of Italy and to credit abroad. After September Italy had been unable to obtain loans in Allied or neutral countries on account of fear of war or of bad conditions in Italy. Stability in affairs was absolutely necessary and the government would do everything in its power to this end if it were supported by parliament. In this connection the Minister of Finance expressed the hope that within six months the international conditions would be such as would permit Italy to get once more upon a real peace footing. As to the high rate of exchange the American government had abandoned the Allied plan for standardizing exchange and in this had been followed by the other governments. He believed that the United States would suffer serious losses in commerce if it did not open credits to counteract the high exchange. Negotiations with the United States for this purpose were he said now going on. See WAR OF THE NATIONS.

IVORY COAST. A constituent colony of the French government-general of West Africa and situated between Liberia and the British colony of the Gold Coast. Area, about 125,000 square miles; population 1,559,251 of whom 716 are Europeans. Capital, Bingerville, with about 79 European inhabitants. The chief products are corn, beans, pineapples and other fruit, coffee, coconuts, rubber, mahogany, and gold. The chief exports are palm kernels, palm oil and rubber. Exports in 1918, according to a British authority were £507,936; imports, £609,401. There is a railway running between Abidjan and Bouaké (197 miles).

I. W. W. See INDUSTRIAL WORKERS OF THE WORLD.

JACOBI, ABRAHAM. Celebrated American physician regarded as the founder of American pediatrics, died at Bolton Landing, N. Y., on July 10th. He was born of Jewish parents at Westphalia on May 6, 1830; studied at the Gymnasium of Minden and the University of Greifswald where he pursued the subject of oriental languages but later devoted himself to medi-

cine. He studied afterwards at Göttingen and at Bonn where he graduated in 1851. He was an active spirit in the revolution of 1848 and was in prison for a year and a half in a German fortress. He escaped in 1853 and afterwards settled in New York City where he acquired a small practice. His reputation soon extended however as a result of his lectures and discoveries, and in 1860 he was called to the first special chair for diseases of children in the New York Medical College. From that time on his career was distinguished and has been recorded in all the medical journals. A brief account of him may be found in *Science*, Aug. 1, 1919.

JACOBS, CHARLES M. Civil engineer, died in London, England, September 7. He was the chief engineer of the Hudson Companies in New York and he was in charge of the North Tunnel. He was born at Hull, England, June 8, 1850. After practicing in England he came to the United States and became in succession consulting engineer on several railways for which he designed important tunnel plans. His great work was the designing of tunnels under Manhattan Island and vicinity, a project which required the outlay of \$50,000,000. He was also consulting engineer for the construction of a tunnel under the river Seine, at Paris.

JAMAICA. A crown colony of Great Britain comprising the island of Jamaica, which is the largest of the British West Indies and the following dependencies: Turks and Caicos Islands, Cayman Islands, Morant Cays, and Pedro Cays. Area of Jamaica, 4207 square miles; of dependencies 224 square miles. The population was estimated Dec. 31, 1917, at 893,884. Capital, Kingston, with a population of 57,397. Acreage in crops returned in 1917-1918, 1,021,975; tilled lands, 285,757; pasture, 736,218; sugar cane, 37,951; bananas, 67,987; provisions, 77,092; guinea grass, 145,249. In 1919 a considerable part of the land which had been producing bananas was planted in sugar cane on account of the high price of that product and new sugar mills were constructed. Imports (1917-1918), £3,297,665; exports, £2,478,917; revenue (1918-19), £1,157,304; expenditures, £1,228,608. The railway in operation in 1918 had a mileage of 197. Governor in 1919, Sir Leslie Probyn.

JAPAN. An empire in the Far East, capital, Tokyo.

AREA AND POPULATION. The empire exclusive of claims pending as the result of the war consists of Japan proper (the main island), Korea (Chosen), Formosa (Taiwan), Karafuto, Kwantung, Pescadores, and many other groups of islands, the total number composing the empire being placed at nearly 4000. The total area is given at 260,738 square miles. The population of Japan proper was placed on Dec. 31, 1918, at 57,784,935, exclusive of Korea, Formosa, and the army. The corresponding figures for the previous year were 56,860,735, and for 1913, 53,362,682. The population of Korea in 1917 was 16,998,191; of Formosa, 3,650,047; Karafuto, 68,207. The total population of Japan, 1917, was 77,266,793. Japan proper consists of four large and many smaller islands with an area of 148,756 square miles, the chief islands being Honshiu, (known also as Hondo, and Mainland), 86,953 square miles; Hokkaido, (known also as Yezo), 30,340 square miles; Kiushiu, 13,870; Shikoku, 6907. For the dis-

tribution of population by divisions, see the 1917 YEAR BOOK. The number of Japanese who had emigrated down to June 30, 1917, was reported at 430,773, distributed as follows: United States, 151,606 men and 7652 women; Australasia, 21,441 men and 8067 women; Brazil, 3050 men and 2688 women; Europe, 978 men and 130 women. The number of foreigners in Japan, exclusive of Formosa, on Dec. 31, 1916, was reported at 18,310 of the following nationalities: Chinese, 11,869; English, 2321; American, 1688; German, 681; French, 422; Portuguese, 214. The Amos or native inhabitants of Hokkaido, numbered 18,670 in 1915. No later figures for the births, deaths, and marriages were available than those given in the 1918 YEAR BOOK. The populations of the largest cities reported for Dec. 31, 1916, were as follows: Tokyo, 1,224,796; Osaka, 1,460,218; Kyoto, 539,153; Kobe, 498,317; Nagoya, 489,272; Yokohama, 428,663.

PRODUCTION. Three-fifths of the land is reported to be under peasant proprietors and the remainder under tenants. The tax land owned by private persons and local corporations was officially reported on Jan. 1, 1918, at 15,089,949 cho (one cho=2.4507 acres), of which 5,333,863 cho were under cultivation, 7,983,947, forests; 1,307,442, plains; 43,413, pastures. The following table for principal crops in 1916 and 1917 is from the *Statesman's Year Book* of 1919.

Crop	Acreage		Produce (quarters)	
	1916	1917	1916	1917
Rice	7,680,322	7,554,807	36,526,904	31,099,600
Wheat	1,327,735	1,392,219	3,668,507	4,241,757
Barley	1,126,492	1,314,979	5,974,526	5,730,522
Rye	1,713,962	1,572,105	4,951,219	5,123,187
Tobacco *	76,910	69,726	934,478	888,626
Tea *	122,345	118,898	727,361	752,591

* Produce in cwt.

The markets of Japan revolve around a single item of foodstuff—rice, which constitutes from one-third to two-thirds of the Japanese diet. Analysis of statistics for the past 20 years shows that the per capita consumption of rice is gradually increasing. In 1919 it averaged a little more than five bushels per year per person—about 5½ bushels in 1918. From 1905 to 1915, inclusive, the average wholesale price of rice was \$1.26 per bushel, and a laborer's family of five, consuming 5½ bushels per individual per year, would therefore expend \$33.05 for rice annually, computed on the wholesale price. But in 1919 the price of rice rose to \$5 per bushel, wholesale, and the annual cost per family of five thus increased to \$131.25. Rice, however, is not the only factor to be considered. For as rice advances other foodstuffs are substituted and also advance in price. The Tokyo Chamber of Commerce prepared a table of index numbers to show the prices of the principal necessities as of August, 1919. These index numbers are as follows, the basic price index of 100 being that of June, 1914: Rice, 301; barley, 337; sugar, 207; dried bonito, 294; beef, 269; eggs, 270; salted plums, 190; salted vegetables, 337; milk, 195, sake, 184; Japanese cotton, 298; coarse cotton cloth, 489; sheeting, 365; Japanese paper, 198; fuel wood, 293; charcoal, 284.

Rents increased during the past five years by 100 to 400 per cent. Before the war a respectable residence in a good neighborhood could be

secured for \$3.50 to \$5 a month, whereas a family of the middle class in 1919 pay from \$12.50 to \$25 for the same accommodations. The right of labor to organize was denied by the government authorities until 1918. Consequently no great strikes occurred. Instead, the outward manifestations of inability to keep pace with the increasing cost of living took the form of the rice riots of 1918. These demonstrations, however, failed to have any effect, and various methods were attempted by the government to correct the condition. Among the early efforts was the suspension of import duties on foreign rice, permitting free importation from Saigon and Rangoon. Among later attempts to reduce the cost of living was the establishing of government-operated markets, reduction of freights on goods consigned thereto, and the sale of government-imported rice at prices in some cases less than one-half of the exchange quotations. To overcome this controlling measure the rice exchanges adopted the policy of closing whenever a government sale takes place. Another remedy for high prices was the raising of interest rates by the Bank of Japan for the purpose of deflating the currency, if possible; but the increase was so small, amounting to but a small fraction of 1 per cent, that no arrest of prices can be attributed to it. All attempts to bring down the cost of living having failed, labor made demands for substantial increases in wages in all parts of the country, and all industries and walks of life from government officials down. The percentages of increase demanded varied from 40 to 150 per cent. Information concerning the movements in Europe and America for better work conditions and shorter hours also affected the labor market in Japan, and demands of this nature were made. The extent of the demands of labor led the government to draw up a labor-union bill in the autumn. The unions recognized by the bill, however, were not unions in the western sense, but associations formed by employees in individual factories. The bulk of the manufactured articles are made in the homes and the workers often give from 12 to 14 hours a day to their labor. See STRIKES AND LOCKOUTS.

COMMERCE. The following table from the *Statesman's Year Book* for 1919 shows the chief articles of the foreign commerce, excluding re-exports and re-imports, in 1917 and 1918

Imports	1917	1918
	Yen	Yen
Rice	6,513,373	89,778,512

The imports of bullion and specie in 1918 were 392,224,967 yen, and the exports 153,736,340.

The following information is supplied by the United States Bureau of Foreign and Domestic Commerce: With the exception of a month and a half after the signing of the armistice in Europe, the foreign trade of Japan during the year 1918 again gave evidence of great advance. The remarkable increase is due mainly to high prices, however. The following statistics give the value of the imports and exports for the years 1917 and 1918 and a comparison with the figures for the pre-war year, 1914:

	1914	1917	1918
Imports . . .	\$296,676,386	\$516,351,837	\$831,569,701
Exports . . .	294,368,525	799,098,016	978,107,183

The countries showing the most notable increases in the amount of goods shipped to Japan during 1918, in the order of relative importance, were: The United States, China, Kwangtung Province, Dutch India, French Indo-China, Australia, British India, the Straits Settlements, South Africa, and Argentina. Imports from Great Britain show only a slight increase. Marked decreases occurred in the imports from Sweden, France, and Russia. Exports from Japan to the United States, British India, Australia, Dutch India, France, Argentina, the Straits Settlements, China, Kwangtung Province, Egypt, Canada, and South Africa show large increases, but there was a noticeable decrease in the shipments to Great Britain, Russia, and Italy.

The trade between the United States and Japan, both in imports and exports, exceeded that between Japan and any other country. The Japanese statistics show that imports from the United States were valued at \$179,312,973 in 1917, and \$312,073,727 in 1918, and exports to the United States at \$238,550,617 in 1917 and \$264,269,502 in 1918. The declared export returns, based upon the invoices certified for shipment to the United States at American consulates and agencies in Japan, show the total values of \$267,661,660 for the year 1917, and \$271,349,824 for 1918. Increases in these exports are most noticeable under the heads of rice, beans, cocoanuts and copra, wax, potato starch, peanuts, rapeseed oil, porcelain, wolframite, tea, watch glasses, and some chemicals. Decreases appear under exports of raw silk, silk textiles, antimony, copper, toys, hats, camphor, menthol, cotton textiles, tinned fish, rapeseed, bamboo and basket wares, buttons, and some chemicals.

After the close of the war, a decline of ex-

ports set in and lasted steadily during the first part of 1919. The chief decreases during the first quarter of 1919 were in silk, zinc, sugar, rice, tea cotton yarns, and matches. On the other hand, there was a considerable increase in cotton cloth and other manufactures. The falling off in sugar is accounted for by the fact that during the war the sugar exports of Japan were greatly stimulated owing to the lack of competition, which on the return of peace was renewed. In the six months ending June, 1919, the foreign trade showed an increase of more than 100,000,000 yens over the first six months of 1918. The figures are as follows: (one yen equals 48.8 cents at normal exchange). Exports (1919), 827,416,823 yen; in 1918, 896,922,725. Imports (1919), 1,049,372,502 yen; (1918), 839,882,134. The leading exports of both periods in respect to value were articles wholly manufactured, including cotton tissues, silk, cotton clothing, etc., and manufactures for further use in manufacturing, including raw silk, cotton yarn, etc. The leading imports in respect to value during both periods were: Raw materials especially raw cotton, and manufactures for use in manufacturing, including iron in various forms, steel, lead and other minerals.

In respect to Japan's trade in late years with India the following information is supplied by the British Trade Commissioner: Official figures for 1918-19 show Japanese imports into India amounting to \$111,666,665, practically equivalent to one-fifth of India's total import trade. In 1917-18, Japanese imports totaled \$61,666,665 and in 1916-17 \$44,166,665. Japanese houses established in India played an important part in the trade. Large Japanese colonies in both Calcutta and Bombay appeared to be steadily growing in importance. Three Japanese exchange banks were carrying on business in India in 1919, whereas three years before there was only one; and in 1911 there were only 32 Japanese in the whole country, excluding Burma. In 1909, the greater part of Japanese products into India were carried in British ships, financed by British banks, and distributed by British or Indian traders, whereas in 1919 90 per cent of Japanese goods came in Japanese steamers; consigned to Japanese firms, and distributed by Japanese agents. Similar conditions obtained in the export trade. The Japanese Cotton Spinners' Association was said to dominate practically the raw-cotton market, and Japanese buyers were found in the cotton markets in rural areas.

SHIPPING. There were entered in 1917 9279 vessels with a tonnage of 19,406,809. The number of steamships entered from foreign countries was 1816 with a tonnage of 5,228,317; of sailing vessels, 12 with a tonnage of 5853. Of the total foreign ships 625 were British with a tonnage of 2,620,796; 566 Russian with a tonnage of 712,049; 68 Norwegian with a tonnage of 207,141, and 169 American with a tonnage of 475,522. The vessels entered and cleared in 1918 with their tonnage are shown in the following table:

<i>Vessels</i>	<i>ENTERED</i>	<i>Number</i>	<i>Tons</i>
Steam		9,881	17,771,848
Sail		494	71,824
Total		10,375	17,843,672

<i>Vessels</i>	<i>CLEARED</i>	<i>Number</i>	<i>Tons</i>
Steam		10,091	18,211,147
Sail		545	80,910
Total		10,636	18,292,057

The merchant navy of Japan exclusive of Formosa, consisted on Jan. 1, 1917, of 3759 steamers, with a tonnage of 1,716,104; and 20,301 sailing vessels with a tonnage of 701,094. The following list gives particulars of the tonnage in the ocean trade:

<i>Route</i>	<i>No. of vessels</i>	<i>Gross tonnage</i>
Japan-Pacific coast of North America ..	23	125,335
Japan-New York ..	12	72,697
Hongkong-Japan-North America ..	16	140,462

GOVERNMENT. The ministry at the beginning of the year was constituted as follows: Prime Minister and Minister of Justice, Kei Hara; Interior, Takejiro Tokonami; Foreign Affairs, Viscount Yasuya Uchida; War, General Giichi Tanaka; Marine, Admiral Tomosaburo Kato; Finance, Baron Korekiyo Takahashi; Agriculture and Commerce, Tatsua Yamamoto; Education, Tokugoro Nakahashi; Communications, Utaro Noda.

HISTORY. At the beginning of the year the suffrage question was engrossing attention. It had been brought up on December 18th when the minister of the interior promised that the government would bring in a bill for the extension of the suffrage and for more liberal features of constitutional government. This was followed by agitation on the part of students and politicians including members of the imperial diet. The government followed the policy of mildness in dealing with mass meetings and other demonstrations. The need of extending the vote was urgent from the point of view of the liberal element from the fact that out of 60,000,000 people or more only 1,600,000 men could vote. See KOREA. The representatives of Japan at the Peace Conference were Marquis Saionza, Baron Makino, Viscount Chinda, Mr. Matsui and Mr. Ijuin. Upon the formal opening of the parliament at the end of the year the Prime Minister Hara declared that the government intended to apply itself to the serious problems before it including the food question, the foreign difficulties, especially with China, and above all the extension of the franchise. On this last point he said that the government was prepared to meet the will of the people. The franchise at that time was possessed by male subjects of not less than 25 years of age having certain qualifications as tax payers and residents. The Prime Minister declared that social and industrial conditions in Japan compared favorably with those in Europe. As to foreign affairs Japan must undertake a careful propaganda in order to correct the misunderstanding of Japanese motives and ideals and to offset the illiberal propaganda in Japan in respect to her national aims. The main interest of the year centres in Japan's attitude at the Peace Conference and especially in the Shantung question. See WAR OF THE NATIONS.

See NAVAL PROGRESS; ZINC; TERAUCHI; UNIVERSITIES AND COLLEGES.

JAVA. The largest island and the chief seat of Dutch power in the Dutch East Indies, containing about 80 per cent of the population of the Dutch East Indian possessions. Capital, Batavia. Chief export, sugar (production, 1917, 1,124,708 tons). See DUTCH EAST INDIES.

JEFFERSON, JOSEPH. Actor, died in New York City, May 1. He was born in New York City, July 6, 1869, a son of the late Joseph Jefferson. He went on the stage at Denver in 1885, appearing with his father. He afterwards frequently appeared in his father's troupe. In the latter part of his life he appeared in vaudeville.

JERSEY CITY, N. J. See AQUEDUCTS.

JEWS AND JUDAISM IN 1919. STATISTICS. Owing to the chaotic state of the political and social life in all the countries of eastern and central Europe it is still impossible to ascertain the exact figures of the number of Jews in those countries. The estimates given below are therefore of necessity based on censuses taken in the years immediately preceding the war. This, however applies only to the European countries, but as far as the countries outside of the War Zone are concerned, the figures were wherever possible brought up to date. Moreover in view of the fact that no new censuses were as yet taken of the inhabitants in the newly created states in eastern, southeastern and in central Europe, it was deemed advisable to retain the previous political divisions in stating the number of Jews in a given geographical unit. The figures given in the last issue of the (1919 1920) of the *American Jewish Year Book*, the source at hand of authentic Jewish statistics are as follows. Total number of Jews in the world, 15,124,319, distributed through the continents in the following order: Europe, 10,815,655; America, 3,541,225; Asia, 433,332; Africa, 359,722, and Australia, 19,415. The countries with dense Jewish population are: In Europe, Russia (former empire) 6,946,090 followed by Austria-Hungary (former Empire) 2,258,262, Germany with 615,021, Rumania with 239,967, Great Britain with 263,648, the Netherlands with 106,309, France with 100,000, Greece with 88,787 and European Turkey with 75,000. In America the United States, with 3,300,000 Jews, Canada with 120,000, and the Argentine Republic with 110,000. In Asia, Asiatic Turkey with 177,500 and Palestine. In Africa, Morocco with 103,712, Algeria with 70,270, Tunis with 54,664, and Union of South Africa with 47,000; are the leading centres of Jewish population.

In judging the correctness of these figures we are to take in consideration the devastating effects of the war massacres and famine and want prevalent in East and Central European countries upon the Jews inhabiting them. But on the other hand there is to be taken into account the natural increase which though undoubtedly diminished under the circumstances, yet amounts to a considerable figure, and the fact that the tide of immigration from those countries was almost completely stopped for the last five years. The number of Jews throughout the world may still be set as between fourteen and fifteen millions.

GENERAL EVENTS: Jewish history in 1919 presents as far as the European countries are concerned, a continuous dark and gloomy pic-

ture almost without any ray of light. The process of disruption in East European Jewry which was begun last year by the gradual breaking up of the former Russian Empire was completed this year by the creation of a number of new states out of the shattered remains of the two great empires, the Russian and the Austrian. The former two largest centres of Jewish population are now divided in a considerable number of smaller centres which division diminished considerably the moral and spiritual resistance of the Jews to the tribulations that had befallen them. Moreover, this sudden transition from one established political régime to another which has not found its way yet and is still in a chaotic condition, affected disastrously the station of the Jews. The constant strife going on in Bolshevik Russia reduced the economic position of the Jews of that country to the lowest economic situation. Subsisting largely on trade, commerce and industry, their position grew worse daily with the gradual decline of the former. On account of the blockade against Russia they were even deprived of the benefits of the American Jewish relief and were left to shift for themselves.

This constant bitter struggle for mere bare existence has at last affected the spirit of this formerly active Jewry. The inner life of Russian Jewry is rather poor in events. Where want, starvation and famine stalk abroad there is little place for intellectual and cultural activity. Moreover in their endeavors for preservation of their cultural heritage, the Jews of Russia were thwarted by the Bolshevik government which looked upon all such attempts as reactionary aspirations. Yet, Jewish activity was not entirely at a stand-still. A Union of Russo-Jewish communities was effected, a number of secondary schools with Hebrew as the language of instruction, and an attempt was even made to open a Jewish University in Moscow, but it was later closed by the Bolsheviks. Especially precarious was the Jewish situation in Ukraina. This part of the former Russian empire constantly changed hands. It was the battle ground between the Bolsheviks, Denikin, Petlura and numerous bands of robbers. In this mad political and military whirlpool the Jews were completely crushed. Misery and agony were their lot. And the wave of suffering which swept over the Jews of Ukraina swept away all vestiges of the formerly Jewish cultural activity which flourished so beautifully during last year.

Poland presents a slightly better picture. The more stable character of the government and the comparative ease of communication with the outside world gave the Jewish life a more normal aspect. Polish Jewry was greatly benefited by the receipt of millions of relief money from America. During the year the American Joint Distribution Committee sent several ships laden with food and clothing to Poland, and this has contributed greatly to the alleviation of misery of the Polish Jews. But on the other hand, the constant manifestations of hatred both on the part of the populace and the government, the economic boycott and unofficial acts of persecution have continued to aggravate the economic situation of the Jews. Yet the inner life of the Jews of Poland has displayed remarkable vigor. A feverish social activity was manifested during the year. Early in the year a Jewish Congress attended by 500 delegates was held at

Warsaw. This Congress devoted itself to the question of obtaining civil and national rights. Especially intense was the educational activity among the Jews. A large number of elementary and secondary schools where Hebrew is the predominant language were opened during the year and preparations were made by the Mizrachi, the Orthodox branch of the Zionist Organization, to open a Theological Seminary and Teachers' College at Warsaw.

The Jewish situation in Lithuania is probably the brightest spot in this gloomy picture. The Jews have played a considerable part in the political life of this newly created republic and the attitude of the government towards the Jew was exceptionally fair. But the high political position of the Jews could in no wise counterbalance the misery and suffering entailed by economic ruin and unstable conditions, the inner life reflected the poverty of the material life. The same picture of gloom and misery presents itself to us in every country of eastern and southeastern Europe. Rumania has not changed its traditional policy of Jew oppressing. Officially it granted them equal rights, but it evolved a number of technicalities which practically bars almost the majority of the Jews from citizenship. The newly created state of Czecho-Slovakia proved hardly better than her neighbors on the east and south. Poland and Rumania, as far as the Jews are concerned. Theoretically the Jews possess equal rights in that state, but in practice these rights were curtailed by the people themselves innumerable times.

The only single spot of light which relieves monotony of the view is the chapter written by American Jewry. Its page: a page full of activity, general and Jewish, and aglow with life in all its various colors.

POGROMS AND PERSECUTIONS. Disabilities in the old-fashioned way of government enactments against the Jews, have disappeared during the year, at least from the statute books. The spirit of the age has accomplished at least an official incorporation in the constitution of the new states of the grant of civil and political equality to the Jews. In practice however, not only were many disabilities retained but increased in number and have amounted to actual persecutions. But this aspect is only too bright as compared to that of the pogroms. Pogroms is the most terrible word written in Jewish history, of the year. Attacks on the Jews have become a daily occurrence in Jewish life of eastern and south eastern Europe. So frequent have the massacres become that they ceased to stir the conscience of humanity. To Poland and Ukraina belongs the palm in pogrom-making. The number of massacres and pogroms during the year in the former Slavic countries amounts to over a hundred. Especially atrocious were the pogroms at Pinsk and Vilna where a considerable number of Jews were killed in cold blood by the military and the representatives of the government. As the protest against the inhumanities in Poland grew louder the pogroms slackened down and the life of the Jew became comparatively safe. It was then that Ukraina came to the front and exhibited to the world a blood curdling spectacle. Bands of savage Cossacks swept through hundreds of cities and left death and desolation in Jewish communities in their wake. The number of killed in the Ukrainian massacres alone runs into tens of thousands,

besides twice that number in maimed, wounded and outraged women. Attacks upon the Jews occurred, though to a lesser degree in Czecho-Slovakia, Rumania, and even in civilized Hungary. This bloody page in Jewish history of the year is of the bitterest memory to the Jews but it constitutes also a blot upon the 1919 history of the Christian world, which displayed remarkable indifference to the agony of an ancient nation.

RELIEF AND THE STRUGGLE FOR JEWISH RIGHTS. The great suffering of the Jews of eastern Europe during the year stimulated intense relief activity in American Jewry. Over ten millions were raised for the Relief Fund by the various committees. Due to the fact that with the conclusion of the armistice the channels of communication with Poland, Rumania and Austria were opened, the distribution of the funds proceeded in a more orderly way. A number of commissioners were sent to the above countries who personally supervised the distribution of the funds. Moreover the commissioner's experts in social and charitable work devoted themselves to a scientific study of the situation and elaborated plans for widening their scope of relief work to include also the phase of reconstruction. The Joint Distribution Committee has sent in addition to money also food and clothing. Early in the year the committee has fitted out a supply vessel, with a two million cargo of food and clothing destined for Poland. Later additional cargoes of food and meal were sent to Poland and Rumania. Great sympathy for the relief activity was shown by governors of many states who issued proclamations setting aside special days as Jewish relief days.

The terrible massacres and atrocities committed against the Jews of eastern Europe called forth a feverish activity among the American Jews to protest against the outrages and thus, by the protests and demonstrations arouse the public opinion and the conscience of humanity. A number of conferences, mass-meetings and demonstrations were held during the year which have done much to awaken the sense of justice of the American people. Of special importance were the demonstrations arranged on May 21st in New York City as a protest against the pogroms in Poland and the one in October as a protest against the massacres in Ukraina; more than a hundred thousand Jews participated. In each case the demonstration culminated in monstrous mass-meetings in Madison-Square Garden and Carnegie Hall, respectively. American Jews were also greatly instrumental in having the minority rights clause written in the Peace Treaty. An influential delegation of prominent American Jews elected as representatives of American Jewry by the American Jewish Congress held in December, 1918, went to Paris, and together with the other delegation from other countries, presented the memorandum on Jewish rights to the Peace Conference. The influence of the American delegates was greatly felt, due to the sympathetic attitude towards the Jewish claims of President Wilson and the other American delegates to the Conference.

LABOR AND LEGISLATION. The foregoing year which was marked by deep unrest in the general labor world strikes on a large scale having occurred almost daily, was as far as Jew-

ish labor and industry is concerned a rather quiet year. Besides unimportant strikes in some of the lesser industries, such as the millinery trade, there were no disturbances in any of the large industries particularly known as Jewish. The clothing industry has demonstrated during the year, that an amicable adjustment between labor and capital is possible by introducing the 44-hour labor week in almost all union shops of the trade. Legislative acts affecting the Jews are comparatively few. In Arizona the governor vetoed a bill providing for the reading of the Bible in the schools. In New Hampshire and some other States bills were passed making racial discrimination in hotels a misdemeanor.

LITERARY AND MINOR EVENTS. The year boasts of no exceptional record in literary activity. There occurred the usual increases and lapses in the periodical Jewish press. The added member to the Jewish English periodicals family is *The Journal for Jewish Lore and Philosophy*, a scientific quarterly published by the Ark Publishing Co. of Cincinnati and edited by the able scholar and philosopher, Prof. David Neumark, member of the faculty of the "Hebrew Union College." The deceased member of that family is the *American Jewish News*, a weekly of the lighter type which appeared for the last two years. There were also some fluctuations in the Yiddish press, the *Warheit*, a daily appearing for the last eight or nine years coalesced with one of its rivals, *The Day*. It is however, destined that the number of Yiddish newspapers in this country should not be diminished, for preparations were completed by Herman Berenstein, the well-known journalist and correspondent, to issue on the first of the year, a daily by the name of *The Haunt* (The Present). Two notable additions were also made to the Hebrew press by the appearance of two monthlies, *The Mikloth*, (The Refuge) and *The Tarbut* (Culture). The first published by the Stybel Publishing Co., New York, and edited by I. D. Berkowitz, is of a rather high literary character, the second one published by the Histadruth Ivrit, an organization for the spreading of Hebrew culture and edited by Mr. I. Sharfstein, is devoted primarily to the interests of Hebrew pedagogy. Of the books appearing this year, the most important are: A number of volumes of the new edition of the *Babylonian Talmud*, published for the first time in America, by the Union of Orthodox Rabbis, the *Kitzur Hatalmud*, a digest of the *Talmud*, with a new commentary, and scientific introductions to each tractate by Dr. I. Chernowitz of Luzonne, Switzerland, and the *History of Zionism* in two volumes by Nahum Sokolow, a most comprehensive history of the movement. Yiddish literature suffered a great loss in the death of Jacob Dinesohn of Warsaw, the veteran of Yiddish literature who contributed much to its development. Reform Jewry in particular mourns the loss of one of its exponents in Germany, Dr. Ludwig Geiger, for years editor of the *Allgemeine Zeitung des Judenthum*. The death of Adolph Stand, one of the leading Zionists, Jewish Journalists and politicians of Austrian Jewry, forms a heavy blow to that shattered Jewry. Zionists and Nationalists and Jews of all shades joined in the celebration of the seventieth birthday of the famous Zionist leader, Dr. Max Nordau.

Of the minor events there are to be noted the

celebration by Reform Jewry of America, the centenary of birth of Isaac M. Wise, founder of Reform Judaism in America, the celebration of the Seventieth Anniversary of the Congregation Bnai Jeshurun of Newark, N. J., and the establishment by Yale University of the Alexander Kohut fellowship in Semitics on the twenty-fifth anniversary of his death.

ZIONISM AND NATIONALISM. Zionism continues its progress during the year. Intense activity was displayed by the Zionists throughout the world. Even the war-swept countries contributed their share. Zionist Conferences were held in all continental countries including Germany, Poland and parts of Russia. Much constructive work was done by the Zionist Commission in Palestine. Preparations were made to begin work on a large scale as soon as the status of Palestine is definitely determined. The renewed assurance given by the English government through Lord Curzon, the successor of Balfour on the second anniversary of the declaration, of its intentions to keep its promise, added new courage to Zionist work. Preparations were completed in this country by the two Zionist federations, the Zionist Organization of America, and the Mizrahi Zionist Organization, the conservative branch of the movement to launch extensive campaigns for large funds. Of the Zionist Conventions held during the year the most important are, the Zionist Conference in London, in the month of February, in which there participated the leading Zionists of all countries, the Convention of the Mizrahi of America at Cincinnati in May, and that of the Zionist Organization at Chicago in September. Both conventions were attended by hundreds of delegates. The number at the Chicago Convention amounted to about a thousand.

JOHNS HOPKINS UNIVERSITY. A non-sectarian educational institution which admits women to some of its courses, located at Baltimore, Md. It is famed chiefly for its graduate department. The university was founded in 1876, by the will of a Baltimore merchant whose name the institution now bears. The enrollment for the fall of 1919 was 2969 and for the summer session, 422; the faculty numbers 334. Noteworthy additions to the faculty for the year beginning October, 1919, include Tenney Frank, Ph.D., as Professor of Latin; H. Carrington Lancaster, Ph.D., as Professor of French; Gilbert Chinard, also as Professor of French; Lewis H. Weed, M.D., as Professor of Anatomy; Sir Arthur Newsholme, M.D., K.C.B., as Resident Lecturer in Public Health Administration in the School of Hygiene. The productive funds amount to about \$7,000,000; the income from all sources for the year 1918-19 was \$928,000. The books of the library number 215,000 bound volumes. Important gifts to the institution include the bequest of Joseph De La Mar of \$2,500,000 for medical instruction and research; the bequest of \$350,000 from Mrs. William H. Graffin, of Baltimore, for general purposes; \$200,000 from the estate of Mrs. Thomas K. Carey, of Baltimore, for expenditure at the discretion of the trustees; \$200,000 from the estate of Eugene Mergenthaler, of Baltimore, for a scientific laboratory or for scientific research; \$20,000 from the estate of Mrs. J. A. J. Creswell of Maryland, for instruction and research in international law. The newly estab-

lished School of Hygiene and Public Health is now in full operation and is becoming a recognized power in the community. President, Frank J. Goodnow, LL.D.

JOHNSON, THOMAS MOORE. Philosophical writer, died at Kansas City, Mo., March 3. He was born at Osceola, Mo., Mar. 13, 1851, and graduated at the University of Notre Dame, Indiana, in 1871. He practiced law in Missouri and was on two occasions prosecuting attorney for St. Clair County. He was mayor of Osceola for 13 years. For many years preceding his death he had retired from his profession to devote himself to the study of philosophy, especially the philosophy of Plato. He was the author of *Plato and His Philosophy*, (1906), and translated a number of works pertaining to Platonic philosophy.

JONES, GEORGE HERER. Missionary, died at Miami, Fla., May 10. His missionary activities in the Far East, particularly in Korea during many years made him an authority on Korean matters. He was born at Mohawk, N. Y., Aug. 14, 1867, and was appointed missionary to Korea by the Methodist Episcopal Church in 1887. He was president of the Biblical Institute of Korea in 1907-11 and he was delegate from Korea to the General Conference in 1912. From 1915 to 1918, he was a lecturer on missions in the Boston University School of Theology. Besides contributing to periodicals in the Far East and this country he wrote *Korea, Country and People*, (1907); *An English Korean Dictionary of Scientific and Technical Terms*, (1910).

JONES-REAVIS BILL. See ENGINEERING.

JUDSON, FREDERICK NEWTON. Well-known American lawyer and legal writer, died at St. Louis, October 17. His legal text books were widely used, and he was counsel of important interests and member of many public commissions and boards. He was born at St. Mary's, Ga., Oct. 7, 1845, graduated at Yale in 1866, and at the St. Louis Law School, 1871. He was private secretary to the Governor of Missouri (1871-3), president of the Board of Education of St. Louis (1880-82, and 1887-89); and was special counsel of the United States in the affair of the Sante Fé and Colorado fuel rebate cases. In 1910 he was member of the commission to investigate the power of Congress to regulate the security of railroad issues, and in 1912 he was on the board which settled the dispute between locomotive engineers and the railroads in the East. In 1913 he lectured at Yale Law School. During the war he was member of the War Labor Board. Shortly before his death he was one of the signers of the report of the special committee of the American Bar Association supporting the ratification of the Peace Treaty, and he held other important offices. His writings included *Law and Practice of Taxation in Missouri*, (1900); *The Taxation Power, State and Federal in the United States*, (1902, 2d ed., 1917); *The Law of Interstate Commerce*, (1905, 2d ed. 1912, 3d ed. 1916); *The Judiciary of the People*, (1913), and of various writings on legal and economic subjects.

JUGO-SLAVIA. A new state formed out of the component parts of the old Austro-Hungarian Monarchy, consisting of southern Slav or Jugo-Slav lands. On Oct. 30, 1918, a National Assembly of the Croats proclaimed the independence of Croatia, Slovakia, and Dalmatia. At the end of November the National Council

voted for union with Servia and Montenegro, and bestowed the regency of the new kingdom upon the Crown-prince Alexander of Serbia. The National Council assumed to represent all Jugo-Slav territories, namely: Croatia, Slavonia, Dalmatia, Bosnia-Herzegovina, Carniola, Carinthia, Styria, Istria, Gorizia-Gradisca, Quarnero Islands, the Dalmatian Archipelago and Southern Hungary (the Banat, Batecka and Baranya). The status of some of the above lands was unsettled, pending the Peace Conference, the principal points in dispute being with Italy. During the formation of the new government and afterwards there were two separate tendencies which threatened a conflict, first, a movement toward a democratic republic, and second, a movement toward a kingdom of Serbs, Croats, and Slovenes, comprising Serbia and Montenegro along with the Jugo-Slavs and having a population of from twelve to thirteen millions.

RAILWAYS. The railway situation in Jugo-Slavia was of interest during the year as the richest Jugoslav province, Wojwodina, had only one railway connection with Serbia, that over the Sava bridge at Semlin. This railroad was glutted with the traffic with Croatia, Bosnia, Dalmatia, and Slovenia, as well as the transit traffic with Rumania and the result was that Wojwodina is almost entirely cut off from Serbia. It was proposed that foreign capital should build a large railroad bridge over the Danube between the Banat town Kovin and the Serbian Smederevo. Influential circles in the Banat and in Serbia were in favor of the project.

THE NEW GOVERNMENT. As noted in the preceding YEAR BOOK, the government was formed on Dec. 21, 1918 under the former Serbian Premier M. Protitch. One disturbing element was the attitude of Montenegro whose King, Nicholas, claimed independence for his country and rejected the act of the National Assembly. But according to many accounts he had not many supporters in his own country, largely on account of the attitude of himself and his family during the war, which was said to have been too complaisant toward Austria-Hungary. One of the first acts of the new government was to notify the governments of the Entente, and of neutral countries that the new kingdom had been formed by the fusion of the old kingdom of Serbia with the Serbs, Croats, and Slovenes of Austria-Hungary, and with Montenegro. The head of the government was Prince Alexander, and the Prime Minister M. Stoyan-Protitch with M. Trumbitch as Minister of Foreign Affairs, and M. Kovosee Vice-President of the Council. The year opened with a declaration on the part of the government which foreshadowed the difficulties with Italy. On January 2d this manifesto was published: The Jugo-Slavs would do everything to avoid war with the country to whose victory they had contributed by their blood, but they would never permit the unprecedented sacrifices borne by them and by Serbia in it, in order to defeat Austria-Hungary, to result in giving their fellow countrymen over to another power as slaves. In the internal affairs the government was bitterly attacked by those groups who were opposed to a unitary state and who favored a federated union. Also there were tendencies on the part of certain elements to revolt against the dominance of the Serbs.

POLITICAL CONDITIONS. There were frequent

reports in the United States of disorders amounting almost to civil war. These, however, were denied by prominent persons in Yugoslavia. The country, however, was torn by rival national and political factions. The Democratic party held out a measure of agrarian reform which would give the peasants the ownership of the land. There were also the radical Serbs and the radical Croats who were bent on a race programme. Against these were the democratic elements of all the races in the new states with a programme of economic reorganization. The political strength seemed to be about equally divided between this combined Democratic party and the union of all the other parties, but their strength could only be ascertained at the approaching election. As to the Italian claim on Fiume, the Jugoslavs argued that their state could not exist without the entire Adriatic Coast. Fiume they said was the only modern port with a good railway connecting it with the interior. They declared that Dalmatia was almost exclusively Yugoslav, and that even in Fiume the Italians were not in the majority. For further discussion, see *WAR OF THE NATIONS AND ITALY*.

THE AUSTRIAN TREATY. The Jugo-Slavs objected seriously to certain clauses in the treaty with Austria, especially those for the protection of racial minorities. Much indignation was aroused by M. Clemenceau's declaration after the conclusion of the Treaty with Bulgaria implying that Rumania would not be permitted to sign that Treaty unless she signed the Austrian Treaty first. The Jugo-Slav delegates had agreed to sign the latter on November 26th, but on their assertion that they lacked authorization to accept certain annexed clauses, namely those concerning minority protection, Italian reparation, and the apportionment of the cost of liberation from the old Austrian-Hungarian state, eight days were allowed them. The Prince Regent, Alexander of Serbia, arrived in Paris, December 1, to discuss the matter.

JUILLIARD, AUGUSTUS D. Capitalist, died at New York, April 25th. He was born at Canton, Ohio. He was well known in New York and vicinity as the senior member of the firm of A. D. Juilliard & Co., and he was an officer or member of the leading financial institutions of the city.

JUILLIARD MUSICAL FOUNDATION. See *MUSIC, General News*.

JULIEN, ALEXIS ANASTAY, died at South Harwich, Mass., May 7. He was born in New York City, Feb. 13, 1849, and graduated at Union College 1859 and for four years, 1860-64, was resident chemist of the guano island of Iombreo where he studied geology and natural history and made collections. He joined the faculty of the School of Mines, Columbia University, in 1865, and was curator of geology from 1897 to 1909. He was connected with the State surveys and he made report on the building stones of New York for the 10th Census.

JUTLAND, BATTLE OF. See *NAVAL PROGRESS*.

JUVENILE COURTS. The establishment of separate courts for cases of juvenile delinquency has become a recognized part of judicial systems in this and in many foreign countries. Such courts were founded because of the conviction that formal courts were unable to deal intelligently with juvenile offenders, since their cases seemed to call for treatment rather than punishment. Juvenile courts, therefore, provide

for hearings conducted by a special judge, with only those persons present who are immediately concerned, and without a jury. An effort is made to diagnose the causes of delinquency through searching investigation, and when such causes have been determined, to take steps that seem best calculated to remove them. The more efficient juvenile courts make extensive use of medical and psychological examinations as a basis for diagnosis. Probation systems are usually a complement to the courts proper, and often delinquents are given into the charge of their parents or guardians, commitment to reformatories being reserved as a last resort. Probation officers are employed both to investigate conditions attending delinquency, and to report on the progress of probationers. At the present time there is a strong tendency to extend the jurisdiction of the juvenile court to all cases concerning child welfare.

Legislation pertaining to juvenile courts and delinquent children is carefully compiled by the Children's Bureau, United States Department of Labor, Washington, D. C. A brief résumé of 1919 legislation in the United States follows.

Alabama establishes a system of juvenile courts in counties of 150,000 population or over, with exclusive jurisdiction over dependency, neglect, or delinquency of any male child under 16 or female child under 18 years of age. Arizona increases the efficiency of its juvenile court act by providing for volunteer advisory officers, one probation officer (salaried) for each county, more adequate reports concerning paroled delinquents; facilities for physical and mental examination of delinquent children upon order of the court; juvenile court jurisdiction over detention homes. California made some minor changes in its juvenile court law, notably a measure providing that full or partial payment of charges for maintenance of children committed to state institutions be borne by their parents or guardians. Delaware provided for a probation officer for each county to act under the jurisdiction of the Court of General Sessions. Idaho adopted an inclusive act "to provide for the protection, receiving, caring for, aiding, placing out for adoption, or improving the condition of the orphan, homeless, neglected, dependent, abandoned or abused child, conferring power upon charitable societies . . . for the accomplishment of these purposes; conferring power upon the judge of the probate courts and the county commissioners; and providing for the punishment of persons inducing a child to leave the person, institution, or society under whose control it is." Indiana established a juvenile court in Vanderburgh County; provided for salaried probation officers for all counties of the state; and amended former law so as to allow court to commit any male offender between the ages of 10 and 16 to State Reformatory rather than jail. Iowa extended the jurisdiction of juvenile court to certain cases of dependent and neglected, as well as delinquent children. Kansas enacted a law permitting any county having a city of 53,000 population to erect "a parental home for homeless, dependent, neglected, or delinquent children. Maine closed juvenile court records to public inspection, and provided for the appointment of female, as well as male, probation officers. Massachusetts set the salary of the Justice of the Boston Juvenile Court at \$4000 annually. Michigan provided

that when the rehearing of a juvenile case is granted, the probate judge who heard the case may not hear it again, but the circuit judge of that county or the probate judge of another county shall hear such case. Minnesota provided for salaried investigators to report on cases of dependent children for whose support, in their own homes, state funds are being used. Missouri overhauled its juvenile court act, provided for commitment of delinquent girls to Industrial Homes; reduced age limit of children brought before courts of misdemeanor from 18 to 17; raised salaries of juvenile court officers; and established Board of Paroles in counties of over 80,000 population. Montana passed a very strong amendment to its juvenile court act, providing for juvenile court proceedings in the case of every child under 18 taken into custody. Provision is made for careful investigation of every case by probation officer, who can recommend discharge without bringing child to court, the act makes it unlawful to confine juvenile delinquents with adult convicts. Nebraska established juvenile courts in every county of 50,000 population, and provided for probation officers for each court. Nevada made provision for a volunteer "Probation Committee" to investigate state institutions receiving children on commitment; regulated commitment of children under 18, making it possible to have them placed in private families; inaugurated a system of paroles and probation. New Jersey increased the number of officers and attendants of juvenile courts. New Mexico created an unsalaried "Girls Welfare Board," to consist of five women, and to have entire charge of girls under 18 released on probation. New York amended its penal law in regard to commitment of children to house of refuge, state industrial school, and New York Training School for Girls. Oregon enacted a law creating a "Court of Domestic Relations" which also has exclusive jurisdiction in all proceedings concerning dependent, delinquent, and neglected children, a comprehensive act for the "Care and Protection of Children" under 18 years of age was also adopted in 1919. Pennsylvania adjusted some matters of financial administration for its juvenile courts. Tennessee created a juvenile court for the city of Kingsport, with jurisdiction over offenders of either sex under 16. Texas established a State Home for Dependent and Neglected Children. Vermont extended probation privileges after investigation and recommendation of probation officer, and provided for committed children's maintenance. West Virginia amended its juvenile court act, adopting a very complete code the purpose of which is summed up in Section 19: "This act shall be liberally construed to the end that its purpose may be carried out, to wit that the care, custody, and discipline of a child shall approximate, as nearly as may be, that which should be given by its parents, in cases of delinquency; that as far as possible, any delinquent child shall be treated, not as a criminal, but as misdirected and misguided, and needing aid, encouragement, and assistance, and if such child cannot be properly cared for and corrected in its own home, or with the assistance and help of the probation officers, then it may be placed in a suitable institution where it may be helped and educated and equipped for industrial efficiency and useful citizenship." Wyoming amended its law relating to commitments to

the House of Refuge; delinquency was defined as offenses committed by members of either sex under 21 years of age. Connecticut provided for the hearing of first-prosecution cases against children under 16 in private chambers, except in cases involving state-prison or death-penalty sentences. Wisconsin provided for probation or suspended sentence alternative for minors of either sex sentenced for the first time, and for not more than 10 years. The texts of the Ohio and Arkansas laws were not available at the end of the year.

KAISER WILHELMSLAND. A former German colony situated in the northern portion of southeastern New Guinea; bounded on the west (at longitude 141 deg. east) by Dutch New Guinea, and on the southwest by Papua (British). It formerly made up the larger part of what was known as German New Guinea, that is to say the territory held by Germany in the western Pacific. The interior is little known and the estimates of the native population vary from 110,000 to 350,000. It was acquired by Germany in 1884 and was declared a protectorate; from 1885 to 1899 it was under the control of the New Guinea Company. At the outbreak of the great war in 1914 it was occupied by the Australian forces and from that time was under Australian administration.

KAMERUN, CAMEROON or CAMEROONS. Formerly a German protectorate situated in west central Africa between Nigeria (British) and French Equatorial Africa and extending north to Lake Chad and east as far as the Ubangi River. The coast line is interrupted by Spanish Guinea. In 1911 a large tract of French territory was transferred to Germany by the Franco-German treaty of November 4th in that year and is known as New Kamerun. Area, exclusive of French cession, 191,130 square miles; population estimated at 2,540,000. The whites in 1913 numbered 1871. The French cession had an area of 107,210 square miles and a population of about 1,000,000. The seat of administration under German control was at Buea. Other important towns and trading stations are Duala, Victoria, Krivi, Rio del Rey and Campo. A British force invaded the colony Aug. 24, 1914, and French and British troops had completed the conquest by Feb. 18, 1918. After the occupation the administration was divided, the region formerly belonging to France being placed under the government-general of French East Africa and the rest under the government of Nigeria (British). Near the coast the soil is fertile and there are valuable plantations of rubber, cocoa, oil palms, etc., whose products constitute the chief exports. The minerals include gold and iron and the forests are rich in ebony and other hard woods. The total length of railway in 1913 was 149 miles. No later figures for trade, finance, etc., are available than those given in preceding YEAR BOOKS. Direct cable communication with Germany was opened in 1913, and there was already a cable in operation between the colony and Bonny in Southern Nigeria.

KANSAS. POPULATION. The population of the State in 1910 was 1,690,949, and on July 1, 1919, it was estimated to be 1,896,520, a gain during the twelvemonth of 22,000.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod. Bu.	Value
Corn ...	1919	4,475,000	69,362,000	\$97,107,000
	1918	6,130,000	43,523,000	\$4,849,000
Oats .	1919	1,571,000	44,229,000	32,287,000
	1918	3,329,000	51,238,000	37,404,000
Wheat	1919	11,624,000	151,001,000	324,652,000
	1918	7,248,000	102,008,000	202,996,000
Hay ...	1919	1,832,000	a 4,507,000	71,211,000
	1918	1,869,000	a 3,233,000	62,720,000

Sorghums	1919	1,040,000	17,888,000	26,832,000
	1918	2,139,000	20,107,000	30,160,000

a Tons

TRANSPORTATION. The total mileage of single first track in the State in 1919 was 9648. The Atchison, Topeka & Santa Fe, and the Missouri & Pacific are the longest roads in the State.

CHARITIES AND CORRECTIONS. The following is a list of the institutions under the control of the state board of administration: Penitentiary, Lansing; Industrial Reformatory, Hutchinson; girls' industrial school, Beloit; boys' industrial school, Topeka; industrial farm for women, Topeka; hospitals, at Topeka, Osawatimie, Larned, and Parsons; home for feeble-minded, Winfield; orphans' home, Atchison; tubercular sanatorium, Norton; school for the blind, Kansas City; school for the deaf, Olathe.

EDUCATION. The total school population in 1918 was 620,991, and the enrollment was 405,319. The average daily attendance was 288,236. There were 16,398 teachers in the schools.

FINANCE. The receipts for the year ending June 30, 1918 amounted to \$16,066,209 while the disbursements were \$15,005,384. The balance in the treasury on this date was \$2,795,546. The state has no bonded debt. See CHILD LABOR; WORKMEN'S COMPENSATION; ZINC.

OFFICERS. Governor, Henry J. Allen; Lieutenant-Governor, L. J. Pettijohn; Secretary of State, C. H. Hoffman; Treasurer, Walter L. Payne; Auditor, Fred W. Knapp; Attorney-General, Richard J. Hopkins.

KANSAS, UNIVERSITY OF. A co-educational State institution, at Lawrence, Kan. The enrollment for the fall of 1919 was as follows: Graduate School, 53 men and 43 women; College of Liberal Arts and Sciences, 938 men and 1179 women; School of Engineering, 667 men and 7 women; School of Fine Arts, 32 men and 242 women; School of Law, 169 men and 3 women; School of Pharmacy, 38 men and 12 women; School of Medicine, 108 men and 35 women; School of Education, 24 men and 169 women; totals, minus reductions for names counted twice, 1869 men and 1443 women, a sum total of 3312. In the summer session there were enrolled 156 men and 284 women. The faculty numbers 292. The library contains 125,212 bound volumes. The university was founded in 1866. Chancellor, Frank Strong, Ph.D.

KANSAS WESLEYAN UNIVERSITY. An institution of learning under the auspices of the Methodist Episcopal Church, at Salina, Kan. The enrollment for the fall of 1919 was 276, and there were 18 members in the faculty. The library contains 12,500 volumes. In 1919 it was decided to build an Administration building, to cost \$250,000. The university was founded in 1886. President, L. B. Bowers.

KARAFUTO. The Japanese portion of the island of Sakhalin, comprising all of the island that lies south of the 50th parallel of north

latitude. Area, 13,048 square miles; population, estimated in 1917 at 68,207.

KATMAI NATIONAL MONUMENT. See VOLCANOES.

KEARNEY, EDWARD FRANCIS. Railway official, died at St. Louis, March 10. He was born at Logansport, Ind., March 28, 1865, and in his youth became a telegraph operator on the Pennsylvania lines. By 1905 he had become general superintendent of transportation on the St. Louis & Santa Fe Railway, and after 1915 was president of the Wabash.

KELLICOTT, WILLIAM ERSKINE. Biologist, died at Hastings, N. Y., January 29. He was born at Buffalo, N. Y., April 5, 1878; graduated at Ohio State University and was on the staff successively of Barnard College (Columbia University), Goucher College, and the College of the City of New York. In 1911, 1912, and 1914, he was instructor in embryology in the Marine Biological Laboratory. He was subsequently statistician in the United States Food Administration and resigned in July, 1918, after serving a year. An estimate of his work as a writer and a teacher will be found in the *Science*, April 4.

KENTUCKY. POPULATION. The population of the State in 1910 was 2,289,905, and on July 1, 1919, it was estimated to be 2,423,001, a gain of 14,000 during the twelvemonth.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu	Value
Corn	1919	3,300,000	82,500,000	\$127,875,000
	1918	3,500,000	91,000,000	132,860,000
Oats	1919	440,000	9,900,000	9,009,000
	1918	400,000	9,600,000	8,640,000
Wheat .	1919	1,046,000	12,029,000	25,381,000
	1918	933,000	12,129,000	25,956,000
Tobacco	1919	550,000	456,500,000 a	174,383,000
	1918	490,000	470,400,000 a	123,715,000

TRANSPORTATION. The total mileage of single track in the State in 1919 was 4118; of this nearly 50 miles was constructed in the year.

CHARITIES AND CORRECTIONS. The following table shows the State institutions, subject to the Board of Control.

Reformatory	Frankfort
Penitentiary	Eddyville
Houses of Reform	Greendale
Eastern Hospital	Lexington
Central Hospital	Lakeland
Western Hospital	Hopkinsville
Feeble-Minded Institute	Frankfort

OFFICERS. Governor, Augustus O. Stanley; Lieutenant-Governor, James D. Black; Secretary of State, James P. Lewis; Treasurer, Sherman Goodpaster; Attorney-General, Charles H. Morris; Auditor, Robert L. Greene.

KENTUCKY, UNIVERSITY OF. A co-educational State institution, at Lexington, Ky. The enrollment in the summer of 1919 was 247; in the fall, 1056, while there were 114 members in the faculty. The gross revenue for the College Division was in the past year \$440,727; this does not include the Extension Division. The library contains 36,201 volumes. During

the year the university has remodelled the Administration Building, Neville Hall, and White Hall. It has built a live-stock judging pavilion and has in contemplation the erection of a memorial auditorium, and two dormitories. In 1919 the courses in economics, sociology, botany, zoölogy, music, art and agriculture have been enlarged. The institution was founded in 1866. President, Frank LeRond McVey, Ph.D., LL.D.

KENYON COLLEGE. An institution of learning conducted under the auspices of the Protestant Episcopal Church, at Gambier, Ohio. Enrollment, fall of 1919, 164; members of the faculty, 15. Funds for the year amounted to \$385,000 and the income was \$75,000. The library contains 35,000 volumes. During 1919 there was added to the staff, Dr. H. W. Wood as Chaplain, and Dr. D. S. Green, as Professor of Economics. It is planned to have a new athletic field in 1920. Kenyon College was founded in 1824. President, William F. Peirce, LL.D., D.D.

KIAOCHOW. The name of a town, harbor and district on the east coast of the Chinese province of Shantung; before the war constituting a German protectorate and after Nov. 7, 1914 administered by Japan. Area, exclusive of the bay about 215 square miles; population according to German estimates before the war, about 195,000, but, including the neutral zone which comprises a strip along the coast about 30 miles deep with an area of 2500 square miles, the population was estimated at 1,200,000. By far the great majority of the inhabitants are Chinese. In 1915 the Japanese, exclusive of the military, numbered 9300. Tsingtao is the port and chief town. It is a free port for commercial purposes, but in 1919 was being turned into a fortified coaling station. Railways connect it with Tsinanfu and Ichow. No later statistics are available than those given in the preceding YEAR BOOKS. Kiaochow was seized by Germany in November, 1897 and on Mar. 6, 1898 it was transferred to her on a 99-year lease. Immediately after the outbreak of the war Japan demanded its surrender. Meeting with no response she declared war on August 3d, and began the blockade of Tsingtao August 27th, and on Nov. 7, 1914, along with British forces captured the town. The final disposition of Kiaochow was involved in the whole question of Shantung which was one of the subjects of bitter controversy at the Peace Conference and afterwards. See article WAR OF THE NATIONS.

KIDNEY, DISEASES OF. See BRIGHT'S DISEASE.

KIECKHEFER, FERDINAND A. W. Manufacturer, died in New York, March 26. He was one of the leading manufacturers of tin ware. He was born at Milwaukee, Feb. 10, 1852, and began his business life as a clerk. He started on his own account with a small shop in 1872 which grew to an establishment of importance and in 1899 was merged in the International Enameling and Stamping Co., of which he was president.

KINGSBURGH. See MACDONALD, Sir John H. A.

KLEIN, MANUEL. An American composer of light opera and ballet, died at Yonkers, June 1. He was born in London, Dec. 6, 1876. Having served as musical director for the Frohmans and Shuberts, he was connected in a similar capacity with the Hippodrome in New York, writing

the incidental music for a great variety of productions.

KOREA, or CHOSEN. A country in eastern Asia, dependent on Japan after March 2, 1906, and formally annexed by Japan by the treaty of Aug. 22, 1910. Capital, Seoul.

AREA AND POPULATION. Area, 84,103 square miles. An official census was taken down to the end of 1918, which showed the total population at 17,057,032, an increase of 88,035 over the year ending 1917, and of 3,744,015 over the year ending 1910, when the country was annexed to Japan. The Japanese element at the end of 1919 numbered 336,872.

PRODUCTION, COMMERCE, ETC. No later statistics for production and commerce were available than those given in the preceding YEAR BOOK.

During 1919 government permission was granted for the construction of two broad gauge, light railway lines in North Chosen, for the exploitation of the forests along the Yalu and Tumen Rivers, and the development of the mining industry.

One line, the Chosen Forest Railway, was planned to operate from Hamheung, South Hamkyong Province, to Huchang, North Pyongan Province. The other railway, the Ryoko Takuin Tetsudo, was to consist of two lines, one running from Komusan and the other from Kilju, North Hamkyong Province, to Haisanchin.

The total length of these lines would exceed 200 miles and involve a capitalization of about \$12,500,000. The establishment of a paper mill at Hamheung was also contemplated.

FINANCE. The budget estimates for 1918-19 balanced at 64,502,512 yen.

HISTORY

THE MOVEMENT FOR INDEPENDENCE. The numerous adherents of national independence in Korea took advantage of the Peace Conference and the programme of President Wilson to press their claims upon the attention of the world. It was reported on February 28th that an Independence Committee formed by the Korean residents in China had presented a petition to the American minister asking the United States to intercede on behalf of Korea in the Peace Conference. For several months there was marked unrest in Korea although the Japanese authorities sternly put down any demonstrations on behalf of independence. Revolts broke out in March; several cities were scenes of mob violence; means of communication were cut; and public officials murdered. The riots assumed the form of a serious rebellion by the middle of April despite the increase of the Japanese military garrisons. In reply to offset the charges that the Koreans had been guilty of atrocities it was reported on March 31st by the Korean National Association that the Japanese were organizing massacres throughout the country. On the other hand Japanese officials declared that the trouble was due to the good nature of the government and that the mobs had increased their violence as the government had become more lenient; that partly as a result of this and partly through the effect of foreign propaganda the movement had become open rebellion. The Japanese privy council met at Tokio on May 15th and decided upon a modification of the plan for Korean government whereby civil government would replace military

and a larger measure of local self-government would go into effect as soon as the Koreans had abandoned their struggle for independence. Meanwhile the Independence party in Korea had organized early in March a provisional revolutionary government with headquarters in Manchuria and had proclaimed the independence of Korea. The constitution of the Korean Republic was issued on April 27th by this provisional government. This provided for a republican form of government, universal suffrage, equality of citizens before the law, freedom of speech, religious freedom and freedom of the press, compulsory education and military service, and at the same time it was asked that Korea be submitted to the League of Nations. During this time a message had been sent abroad concerning the Japanese atrocities. This was included in an appeal addressed to the American churches which brought a reply from Prime Minister Hara (July 10th) to the effect that the government was investigating these charges of crimes on the part of Japan and that it had been at work for some time past on plans for reforming the administration of Korea. It was announced in November that a Korean mission was on the way to Moscow to negotiate with the Soviet government and that the Koreans hoped to be supported by the Chinese.

KRAMARZH, DR. KAREL. Representative of Czecho-Slovakia at the Paris Peace Conference. He was at that time Prime Minister of Czecho-Slovakia. He had been for many years a leader of the young Czech party in the Austrian Parliament where he led the Czech opposition, attacking the Austro-German alliance and the triple alliance. He was hated by the Austrian Germans as one of their chief foes. He was a leader in the neo-Slav movement, and was a strong partisan of Russia. In the war he was arrested and condemned to death by an Austrian court, but was reprieved and set free. His whole career was devoted to the cause of Bohemian liberty.

KREISLER, FRITZ. See MUSIC, *Artists, Instrumentalists.*

KUNZE, RICHARD ERNEST. Physician and naturalist, died at Phoenix, Ariz., February 10. He was born at Altenburg, Saxony, April 7, 1838, but came to the United States and studied medicine in New York where he practiced until he moved to Arizona in 1896. He made studies of medical botany and insect life in Arizona and was one of the originators of the Arizona cactus farm. He was president of the New York Therapeutical Association.

KURDISTAN. A tract of country to the southeast of Armenia lying for the most part within the limits of the former Turkish empire but partly also in Persia. Area, estimated at 74,000 square miles; population about 3,000,000, of whom some four-fifths are Kurds, a nomadic Mohammedan people celebrated for their plundering and murdering forays among the Armenian Christians. In the Turkish empire, Kurdistan was included in the vilayet or province of Armenia and Kurdistan.

KÜSTENLAND. See COASTLAND.

KWANGCHOW-WAN. A small territory on the coast of the Chinese province of Kwangtung, obtained by the French from China on a 99-year lease in 1898. Area, including two islands acquired by France in 1899, about 190 square miles; population about 168,000. It is

administered under the authority of the government-general of Indo-China and for administrative purposes is divided into three districts; the Chinese organization is retained in the commune.

KWANGTUNG or KWANTO. A territory in the southern part of the Liaotung Peninsula, leased by Japan from China. Area, 538 square miles; population (Dec. 31, 1917), 572,525, of whom 55,633 were Japanese and the rest Chinese. The chief crops are corn, millet, beans, wheat, rice, buckwheat, hemp, and various vegetables, and the chief manufactured product is marine salt. Imports (1917), 148,929,309 yen; exports, 149,412,033 yen. The budget estimates for 1918-19 balanced at 4,553,374 yen. The seat of administration is at Dairen, formerly known as Dalny, which has an excellent harbor free from ice the year round and is connected by railway with Mukden, Kharbin and the eastern Chinese railway system.

LABOR. See ARBITRATION AND CONCILIATION; CHILD LABOR; COÖPERATION; I. W. W.; JUVENILE COURTS. LABOR, AMERICAN FEDERATION OF; LABOR LEGISLATION; MINIMUM WAGE; INDUSTRIAL RECONSTRUCTION; NATIONAL WAR LABOR BOARD; OLD AGE PENSIONS; SOCIAL INSURANCE; STRIKES AND LOCKOUTS; TRADE UNIONS; UNEMPLOYMENT; WAR LABOR POLICIES BOARD. WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION.

LABOR, AMERICAN FEDERATION OF. Organized labor has just completed the most notable year in its existence. The recognition of the trade-union movement by the government through the National War Labor Board and its other conciliatory boards, stimulated organization amongst the workers. The rapidly increasing cost of living also made it imperative for labor to organize for its own protection. The American Federation of Labor, organized in 1881, is the largest and strongest labor organization in this country. For the part which it has played in strikes, and also in the acquiring of a means of settling labor disputes, see STRIKES AND LOCKOUTS; ARBITRATION AND CONCILIATION.

CONVENTION. The 39th annual convention of the American Federation of Labor met at Atlantic City, N. J., on June 9th and remained in session until June 23d.

The secretary's report showed that during the year ending April 30th, a total of 555 charters were issued to national and international, state central, local trade, and federal labor unions; and that charters were revoked or surrendered, and unions disbanded, suspended, or amalgamated in 471 instances. The reports of international and national organizations stated that they issued during the year 6473 charters; and that 1719 lapsed or were surrendered. The gain in individual membership as reported by the secretaries of 66 international organizations, was 826,449. Reports from a like number of internationals show a total of 1515 strikes, in which 234,446 workers were directly involved. The total cost of these controversies to the internationals involved was \$1,391,833.30. In addition, \$82,547.18 was donated by unions for financial aid to unions on strike.

According to the report of the convention, the total membership of all unions affiliated with the American Federation of Labor increased during the year to 3,260,068, as compared with 2,726,478 in 1918. There were, on April 30th,

LABOR LEADERS

Samuel Gompers and Leaders of the American Federation of Labor at the Washington Conference

111 national and international unions, 884 local trade and federal labor unions, 816 city central bodies, 572 local department councils, 46 State federations, and (included in the above figures) 33,852 local unions affiliated with the American Federation of Labor. These bodies were represented at the convention, as well as the British Trades Union Congress, Canadian Trades and Labor Congress, and the Workmen's Friendly Society of Japan.

Among the important resolutions adopted by the convention were: Recommendation for the establishment of a permanent United States Employment Service; demand for the recognition of the right to bargain collectively through trade unions; the extension of the civil service; support of the government action in scientific and technical research, and urging the extension of the same; self-determination for Ireland; adoption of the "Plum plan" for the administration of railroads; endorsement of the League of Nations covenant, and the draft convention of the International Labor Conference.

The officers elected for the ensuing year were: President, Samuel Gompers; first vice-president, James Duncan; second vice-president, Joseph F. Valentine; third vice-president, Frank Duffy; fourth vice-president, William Green; fifth vice-president, William B. Mahon; sixth vice-president, Thomas A. Rickert; seventh vice-president, Jacob Fischer; eighth vice-president, Matthew Woll; secretary, Frank Morrison; treasurer, Daniel J. Tobin.

RECONSTRUCTION PROGRAMME. On January 4th, the American Federation of Labor Reconstruction Programme was submitted to the Senate Committee on Education and Labor in connection with the hearings conducted with regard to S. Res. 382, directing the committee "to investigate and recommend to the Senate methods of promoting better social and industrial conditions in the country." The programme was drafted by a committee on reconstruction headed by John P. Frey, and appointed by instruction of the conference of the American Federation of Labor held at St. Paul in 1918. This report was endorsed by the Executive Council of the Federation. Its important demands are as follows: Reduction of employment by increasing wages; that women should be paid an equal wage with men; the prohibition of child labor; that the right of public employees to organize and bargain collectively be recognized; the development of coöperative agencies; that the reenactment by the Legislature of bills declared unconstitutional shall not be subject to further judicial annulment; a non-partisan political policy of labor; government ownership of public and semi-public utilities; federal regulation of corporations; adequate workmen's compensation; regulation of land ownership, development of waterways and government administration of waterways and water power; development of education; freedom of expression and association; prohibition of immigration for two years; removal of all private employment agencies; and a substantial reward for veterans of the World War.

INTERNATIONAL RELATIONS. Immediately upon the signing of the armistice, the Executive Council of the American Federation of Labor met in San Antonio, Texas, and took up the question of an international conference of representatives of organized labor. This action was

in compliance with the instructions of the St. Paul convention to call an international congress of representatives of labor movements of all nations at the same time and place as the Peace Conference. A delegation to represent the American Federation of Labor was elected, consisting of Samuel Gompers, and vice-presidents Duncan, Alpine, Duffy, and Green.

Upon the arrival of this mission in Europe, and the refusal of President Gompers to take part in the Berne or Leeds programme as offered by the other nations, President Gompers was appointed as the American representative of labor on the Commission for International Labor Legislation, created by the Peace Conference. Upon the organization of this commission, Gompers was unanimously elected president. Constantly advising with him throughout the protracted sessions of the Commission, were the other members of the American Labor Mission. The principles as advocated by the American Federation of Labor in the settlement of the peace were: (1) formation of a league of free peoples for international coöperation; (2) no political or economic restrictions between nations; (3) no indemnities or reprisals based on vindictive purposes; (4) recognition of the right of "self-determination"; (5) no territorial changes or adjustment of power save for the actual welfare of the people affected or the furthering of world peace. To these principles were added as essential features of the treaty of peace: (1) restriction of child-labor on goods shipped in international commerce; (2) a basic eight-hour day; (3) no involuntary servitude, save for penal offenses; (4) recognition of right of trial by jury. The first five principles were recognized by the Peace Conference, and two of the four labor planks were included in the treaty.

AMERICAN FEDERATION OF TEACHERS. Organized in 1916, in which year it was affiliated with the American Federation of Labor, this federation has increased to a membership of 8000 in 90 local unions. The greatest activity in the organization has manifested itself since January 1st. Especially strong unions are found in Washington, D. C., Sacramento, San Francisco, Chicago, Memphis. Among colleges, the most noteworthy are Howard University, Washington, D. C., the University of Illinois, and the College of the City of New York. The officers are: President, Charles B. Stillman; secretary-treasurer, F. G. Stecher; national organizer and first vice-president, L. V. Lampson, Washington, D. C.

A report upon labor's educational programme was presented to the convention of the American Federation of Labor in Atlantic City, and was adopted as a statement of the educational policy of organized labor. Provisions especially worthy of note include: Extension of industrial and vocational courses, smaller classes and better conditions, consideration of the adoption of the metric system, more open and free discussion, and the recognition of the right of teachers to be represented in the determination of educational policy.

LABOR LEGISLATION. The year 1919 witnessed a new and extremely interesting development in the field of labor legislation. From October 29th to November 29th, in Washington, D. C., there met a convention made up of delegates from 41 countries, representing not only the governments but also the principal organizations of both employers and employees

in those countries. This convention was called under the provisions of The Treaty of Peace by invitation of the United States. Because of the failure of the United States Senate to ratify the Treaty, this country could not officially participate in the work of the conference, which attempted to draw up world-wide minimum standards for the protection of labor. Its "draft conventions and recommendations" are discussed under the heading of INDUSTRIAL RECONSTRUCTION.

In addition to the summary given below, certain topics which belong under the heading of Labor Legislation have been handled separately and may be found under their specific headings in this volume. See CHILD LABOR, MINIMUM WAGE, OLD AGE PENSIONS, SOCIAL INSURANCE, WOMEN IN INDUSTRY, and WORKMEN'S COMPENSATION. A complete summary of labor legislation passed in the United States during 1919, is given in *The American Labor Legislation Review*, vol. ix, No. 4, December, 1919, and it is from this report that the present article, in-so-far as it treats of United States legislation, has been adapted.

The United States:

The most important congressional action of the year affecting labor, was the passage by both Houses of Congress of bills providing for the vocational rehabilitation of industrial cripples. This legislation, when finally enacted after technical differences between the two Houses have been adjusted, will open the way to co-operative action by all States. Eight of these, in addition to Massachusetts where beginnings were made a year earlier, authorized aid in re-educating and finding employment for industrial cripples. Congress also reenacted, under the federal taxing power, the child labor regulations which had been declared unconstitutional as an exercise of authority over interstate commerce.

Miscellaneous Legislation:

Congress authorized the President to convene the International Labor Conference provided for in the Treaty of Peace with Germany. Eight States provided for special State commissions to investigate or deal with industrial matters. These include reconstruction commissions (Delaware, North Carolina, Wisconsin, Wyoming), an industrial code commission (Washington), a negro industrial commission (Missouri), and an industrial relations commission (Michigan). Massachusetts enacted legislation making it permissible for corporations to provide for the election of employee representatives to their boards of directors.

Individual Bargaining:

More than a dozen states amended or enacted laws dealing with wage payments, including provisions for the payment of wages weekly (Connecticut), semi-monthly (Colorado, Georgia, Missouri, Montana, Nevada, South Dakota, Wyoming), monthly (California), or on discharge (California, Kansas, Minnesota, Nevada, Oregon, South Carolina, Utah); payment in a negotiable medium (Georgia, Montana, Nevada, New Jersey, Utah); and the collection by law of unpaid wages (California, Oregon, Wyoming). Assignment of wages was regulated by Arizona and Connecticut, and garnishment further regu-

lated by New York and Porto Rico. Washington dealt with seasonal labor contracts, laying down rules as to their form and enforcement. Arizona, Nevada, and Oregon discriminated against employment of aliens on public work. Montana provided for periodical reports on alien employees, while Minnesota recommended to Congress a character test for immigrants, and Tennessee urged Congress to pass the Burnett immigration bill. Illinois required weighmen in coal mines to be citizens. Porto Rico took steps to protect emigrant laborers. Statutes protecting wages by lien, bond, or the like, were passed or modified in nine States. Legislation tending to enforce the performance of labor contracted for was adopted in four States—California, Florida, North Carolina, and Oregon—while Colorado took steps to enforce the act against securing labor under false pretenses.

Collective Bargaining:

Trade Unions were legalized, and the use of injunctions limited in Iowa, North Dakota, Oregon, Washington, and Wisconsin. Michigan provided for the incorporation of labor unions, and North Dakota required the union label on all State printing. Mediation and investigation of trade disputes were dealt with in Nebraska, Oregon, and Porto Rico, while Montana asked that copper strike leaders be brought to justice. About a dozen States joined those which define and penalize "criminal syndicalism." Money appropriated for the United States Department of Justice, Congress declared, should not be used to prosecute trade unions for any legitimate activities.

Hours of Labor:

Seven States enacted or amended laws establishing the eight-hour day for various public employees, and three States regulated periods of duty for fire fighters. Annual vacations for public employees were established or extended in two States. In a number of States the hours of employment for women and children were regulated. (See WOMEN IN INDUSTRY and CHILD LABOR.) North Dakota joined the 14 States and Alaska which have adopted an eight hour day for mine workers. Wisconsin adopted a one day-rest-in-seven law for factories and mercantile establishments, while Michigan is the first State to attempt a similar standard for transportation, prohibiting employment for more than six days out of any seven for interurban motor-men and conductors. Holidays for day laborers in the District of Columbia were safeguarded by Congress, and Porto Rico regulated the length of working spells. Michigan submits to the people a constitutional amendment allowing the legislature to regulate hours and working conditions for men, women, and children.

Employment:

Private employment agencies were regulated in four western States. California extended its law to cover private schools which charge fees for placing their students, and North Carolina levied a heavy tax on persons engaging labor for use outside the State. Wisconsin authorized its industrial commission to withhold the license for a private agency if the public office in the city was sufficient. Public employment office systems were reorganized or extended in half a dozen States, including the

establishment in Indiana of a commission not only to operate the offices, but to study the whole question of unemployment. Wisconsin requires cities to cooperate with the industrial commission by furnishing quarters, light, janitor service, and other necessities for State employment bureaus. Special provisions for replacing discharged soldiers and sailors were made in half a dozen States. New York empowered cities to open industrial aid bureaus of their own and to provide shelter, food, and clothing to residents while employment is being found for them. Continued cooperation with the Federal Employment Service was acted on in seven States, including petitions to Congress from Montana, Oregon and Utah to continue the service. Congress made appropriations totaling \$672,000 for maintaining the service. Certain States provided for the starting of public work to meet the unemployment crisis (q.v.). Oregon proposing a special issue of "reconstruction bonds" for the purpose, and urging Congress to create a Federal Board to encourage public works in times of industrial slackness. "Job selling" was prohibited in Michigan and Utah. California created a commission to study unemployment and recommend legislation against it, and Oregon asked Congress for action to relieve the situation caused by the return of war veterans. The latter State also petitions Congress on developing the Pacific shipbuilding industry to prevent lack of work.

Safety and Health:

California empowered the industrial accident commission to forbid the use of unguarded machinery or unsafe workplaces. Provisions for shower baths, wash rooms, drinking fountains, and the like, were adopted or amended in six States, and likewise rules for fire protection in four States. Connecticut required employers to furnish devices for threading shuttles to avoid use of the operative's lips or mouth (a practice which has played a great part in the spread of tuberculosis), and Indiana required gas masks in workplaces where dangerous fumes are present. Removal of coke fumes was ordered in Ohio, which also adopted a factory lighting code. Existing factory and mercantile establishment inspection statutes were extended in half a dozen States, and Nevada enacted a general shop safety law. Minnesota and Missouri strengthened their accident reporting laws. About a dozen States amended their mine inspection statutes or provided for mine rescue work. Michigan and Ohio dealt with warming vestibules and the height of cuplers on interurban lines, while North Dakota enacted a railroad full crew law and required shelters for repair work. Bunks, baths, and other conveniences were provided for labor camps in California, six States provided for safe construction, maintenance and operation of boilers, and five States established safety standards for building construction. Electrical installation was regulated in Oregon.

Administration:

A score of States markedly increased the appropriations for their labor departments, workmen's compensation commissions, and other bodies administering labor laws. In more than a dozen States salaries of labor commissioners, deputies, or inspectors were raised, and some

modifications in the civil service rules were adopted. Four States, notably New York, enlarged their factory or mine inspection staffs, while three States established mine inspection bureaus, and Massachusetts, Nebraska, Rhode Island, and Tennessee reorganized their labor departments. Alaska established the office of labor commissioner. Women's bureaus were added to the labor departments of New York and Texas. California empowered its industrial welfare commission to issue subpoenas and administer oaths, and Minnesota authorized inspectors to enter factory offices as well as work rooms. Utah transferred the administration of child labor laws from the courts to the Industrial Commission, and in Wisconsin the industrial commission was directed to codify the labor law and its general orders.

In all, 43 States and territories held regular, and some 20 held special legislative sessions in 1919, while the Sixty-sixth Congress was also in session.

Court Decisions:

Of chief interest among decisions handed down by the courts during the year that bear directly on labor matters, was the verdict published by Circuit Court of Appeals, Eighth Circuit, on April 28th. The decision established the liability of the United Mine Workers of America for destructive acts committed by members of that union in 1914, in the Prairie Creek district of Arkansas. The case was known as *United Mine Workers of America et al. v. Coronado Coal Company et al.* and was the continuation of a case entitled *Dowd v. United Mine Workers of America* which was before the court in 1916.

The court decided that the union and its branches were responsible for damages to the extent of \$200,000, and since the proceedings were brought under the Sherman Anti-trust Law this judgment was trebled. The decision had been appealed to the Supreme Court. The case carries peculiar interest in view of the fact that the United Mine Workers of America and the 28 local unions connected with it are all unincorporated, and because it establishes the opposite point to that made in the well known *Danbury Hatters* case, where individuals were held liable for acts of the union.

Foreign. The Eight-Hour Day Abroad:

By far the most important and interesting of the labor legislation of foreign countries for 1919, is the remarkable progress attained in the establishment of the eight-hour day and the 48-hour week. In some countries it has been established by statute and in others through trade agreements, but the growth of the movement leaves no doubt that it will soon be a recognized part of labor programmes in all industrial countries. From Belgium come reports of trade agreements adopting the eight-hour day, 48-hour week in the iron and steel industries, and a 44-hour week in the Antwerp diamond industries. A provision of the French Labor Code of April 23d reads: "The effective working time of workpeople or employees of either sex and of any age, shall not exceed eight hours per day nor 48 hours per week, or an equivalent limitation based upon a period of time other than a week, in industrial or commercial establishments, or in business premises of any kind connected with them, whatever their na-

ture, whether public or private, secular or religious, even when they are of a technical or philanthropic nature. . . . In no case shall the reduction of the hours of labor serve as a determining reason for a reduction of wages. . . ." A second law, dated August 2d, extended the eight-hour day, 48-hour week principle to all persons of either sex employed on French sea-going vessels, public or private. Denmark, by a law dated February 12th, limited the working day to eight hours in factories where work is carried on night and day; and the same limit was established by trade agreements for all industrial workers, effective Jan. 1, 1920. An eight-hour working day was ordered for all industrial workers in Germany by the German Demobilization Department on Nov. 23, 1918. In Italy trade agreements were signed in February, establishing the 48-hour week in the metal, engineering, shipbuilding, and allied trades (representing some 500,000 workers); on April 4th the same agreement was reached for workers of both sexes in agricultural trades, with provision for overtime at certain seasons of the year to be paid for at higher rates: the eight-hour day and 48-hour week were agreed upon in the sugar-refining and spirits industries on May 2d, in the Milan clothing trades and for gas-works employees on May 1st, and on June 15th a government decree similarly limited the hours of employees on State railroads. An official decree of May 14th in Portugal, established the eight hour day and 48-hour week for all work-people and employees of State and administrative bodies (agriculture workers, domestic servants, waiters, and hotel and restaurant workers excluded). It provided that dangerous and unhealthy trades might be still further limited by special decree; thus for clerks in banks, exchanges, and offices the maximum working day is fixed at seven hours. The *Canadian Labor Gazette* of April 19th, reports that the Government of Peru has decreed that the eight-hour day shall be standard in all trades and industrial organizations. Spain, by Royal Decree of April 3d, declared the maximum legal working day throughout Spain to be eight hours (48-hour week) for all laborers effective Oct. 1, 1919. A second decree was issued on August 21st, strengthening the former order. Sweden adopted the eight-hour day, 48-hour week as effective on Jan. 1, 1920: the law provided that the limit might be extended to eight and one-half hours for the first five days of the week if the weekly limit was not exceeded, and applied to every establishment, industrial or otherwise, in which more than four work-people are usually employed, and to all establishments in towns of over 1500 population (number of exceptions listed in commercial field). This law remains in effect until 1923. Switzerland established the 48-hour week for factory workers by law of June 27th; it provides that the limit may be extended to 52 hours per week in certain industries that are most affected by foreign competition, and that it may be reduced in dangerous and unhealthy trades.

Miscellaneous:

FRANCE. The subject of collective bargaining receives full and definitive treatment in a codification of rules and principles published by the French government on Mar. 25, 1919. A collective labor agreement is defined as a contract

relative to conditions of labor, made between the representatives of a trade union or any group of employees, on the one side, and the representatives of a trade organization or of any other group of employers, or several employers contracting under a single title, or a single employer, on the other side. This agreement sets forth the obligations assumed by either party toward the other or toward third parties. Agreements are held to be valid for a period not exceeding five years. When agreements are for an indefinite period, either party may withdraw upon one month's notice. Provisions for public registration of all agreements and the withdrawal of an individual from either party are carefully defined. Suits for violation of agreement may be brought by any party or group (legally capable of bringing suit) against any other party or group in the agreement, and all interested parties may participate in such suits. Collective agreements in force before promulgation of the law remain in force.

GERMANY. According to "Soziale Praxis," Herr Landsberg, the German Minister of Justice, on March 1st, announced to the National Assembly that the government was to prepare a German Labor Code which would fulfill all demands on which organized workers had come to an agreement. Certain provisions were enumerated: 1. Right of combination secured to workers; 2. The legal competence of trade unions established; 3. Improvement of laws on conciliation and arbitration guaranteed, with the establishment of shop councils, which are to have an important voice in problems concerning production. Workers and employers associations, the Minister stated, would be consulted before definite action was taken.

CANADA. The Industrial Conditions Act of Manitoba, in effect March 29th, establishes a joint council—subject to statutory control—for settlement of industrial disputes. The council, consisting of two representatives each for employers and employees, and a chairman representing the public, is empowered to investigate and report on disputes at the request of either party or voluntarily, and to hold public hearings on all cases, it may also report on cost of living, profiteering, and make general studies of labor problems. The council has the power of court, with authority to call witnesses and punish for contempt. The *Canadian Official Record* for July 17th gives a summary of the principal acts passed at the session of the Dominion Legislature which adjourned July 7, 1919. Briefly they provide: 1. The Soldiers' Settlement Act extends to soldiers financial benefits up to \$7500 each; provides for loans, medical service for disabled men, and procuring of employment; 2. A Board of Commerce is created to cope with the high cost of living and to administer the Combines and Fair Prices Act of 1919. The *Canadian Labour Gazette* for June gives the provincial laws for Alberta, British Columbia and Ontario: all three provinces amended their workmen's compensation laws, regulated private employment agencies, and established public employment services. Alberta established minimum wage boards in towns over 5000; British Columbia applied minimum wage law to miners; Ontario provided for a department of labor, established minimum wage for minors under 18 years of age, passed a law prohibiting employment for women and girls under-

ground, legislated against sweat-shops, and provided for compulsory school attendance for full or part time to 16 years, and part time (with special exceptions) to 18 years.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. This branch of the International Association for Labor Legislation maintains offices at 131 East 23d Street, New York City. Mr. John B. Andrews is its secretary. This organization collects data on labor legislation, conducts propaganda for the passage of desirable legislation, and issues a quarterly, *The American Labor Legislation Review*. See OCCUPATIONAL DISEASES.

LABRADOR. The peninsula in British America between the Atlantic and Hudson Bay. It lies within the province of Quebec with the exception of a strip along the northeast coast which is a dependent of Newfoundland.

LABUAN. A small island off the northwest coast of Borneo under the administration of Singapore in the Straits Settlement (q.v.).

LAFAYETTE COLLEGE. An institution for the education of men, at Easton, Pa. Conducted under the auspices of the Presbyterian Church. The enrollment in the fall of 1919 was as follows: Graduates, 11; undergraduates, 695. The faculty numbers 48. The permanent endowment amounts to \$961,988, and the income for the year was \$173,990. The library contains 60,000 volumes. Lafayette was founded in 1826. President, John Henry MacCracken, Ph.D., LL.D.

LAKING, Sir GUY FRANCIS. Art expert, died in London, England, November 22. He was born Oct. 21, 1875, and studied drawing at the Architectural Museum, Westminster, but soon joined a well-known firm of art dealers and became an authority on art subjects. Besides many articles for magazines, he wrote books on the armory and furniture at Windsor Castle and the porcelains of Buckingham Palace.

LAMB, EDWIN TRAVIS. Railway president, died at Birmingham, Ala., November 10. He was born at Richmond, Va., June 29, 1863, and began his business career as receiving clerk on the Chesapeake & Ohio Railway. He rose rapidly in the service of several Southern railways and steamship companies in succession and was president and general manager of the Norfolk & Southern, 1910-12. In the latter year he became general manager of the Atlanta, Birmingham & Atlantic Railway and was afterwards its president.

LAMY, ETIENNE. French publicist and historian, died January 9. He was born at Cize in Jura in 1845 and studied in a college of the Dominicans. In 1870 he became a doctor of law. During the early part of his life he was actively interested in politics and was a member of the National Assembly in 1871. He was an ardent Republican and voted with the Left, but being a strong Catholic he was opposed to the policy of the Ferry ministry in the higher education, and became a clerical reactionary. In the election of 1881 he was defeated and from that time on devoted himself mainly to literary work. In 1892 he was elected president of the League for Public Liberty and he was regarded by the Republican Catholics as their leading representative. In 1905 he was elected to the Academy and a few years later became its perpetual secretary. He took for his motto, "For the service of ideas and letters," and his writings were marked by great industry and by a spirit of sincerity. They covered history in its widest

scope including political, civil, religious, military, and naval institutions; the development of literature and art, etc. Among his writings may be mentioned: *Le tiers parti* (1868); *L'Armée et la démocratie* (1889); *La France du Levant*, (1898); *Etudes sur le second empire* (1895); *La femme de demain* (1899); an edition of the memoirs of *Aimée de Coigny* (1900); *Témoins de jours passés* (1909, 1913); *Au service des idées et des lettres* (1909); *Quelques œuvres et quelques ouvriers* (1910, 1913).

LAND RECLAMATION. See AGRICULTURE, and RECLAMATION.

LANDS, PUBLIC. According to a statement made in the annual report of Secretary of the Interior Lane, the total area of public and Indian lands originally entered and allowed during the fiscal year ending June 30, 1919, was 11,863,672.28 acres, not including 137,403.27 acres embraced in finals not previously counted as original dispositions of land. The latter area was constituted as follows: Public auction, 104,721.15 acres; abandoned military reservations, 7509.29 acres; cash and private sales, individual claimants, and small-holding claims, 14,090.26 acres; preemption entries, 86.26 acres; and soldiers' additional homesteads, 10,996.31 acres. The area of 11,863,672.28 acres signified an increase of 1,889,340.67 acres, as compared with the area originally entered and allowed during the fiscal year 1918. This increase in allowed entries was attributed to the stock-raising homestead act of Dec. 29, 1916, 5,559,235.11 acres having been allowed under that act.

The area patented during the fiscal year was 10,777,001.349 acres, an increase of 1,224,519.132 acres, as compared with the fiscal year 1918. Of that area, 8,312,318.888 acres were patented under the homestead laws, an increase of 1,819,521.072 acres, not including as homesteads 13,334.12 acres patented as soldiers' additional entries.

The total cash receipts from the sales of public lands, including fees and commissions, \$1,194,472.10, sales of reclamation town sites, \$43,863.86, and sales of lands in the Oregon & California Railroad grant, \$114,008.32, for the fiscal year 1919 were \$2,817,063.27. The total receipts from the sales of Indian lands were \$1,387,781.74. Other receipts aggregated \$98,829.19. The total receipts of the Land Office Bureau during the fiscal year 1919 were \$4,303,674.20.

LANESSAN, JEAN MARIE ANTOINE DE. French naturalist and politician, died November 9. He was born in the Gironde on July 13, 1843, and studied medicine and natural sciences. He served as a physician in the navy during several years, and visited most of the French colonial possessions. After that he devoted himself to medical investigation and to the study of natural sciences, and published a number of works in those fields that were highly regarded. In 1879 he entered upon a political career first becoming a member of the municipal council in Paris, and later (1881) being elected to the Chamber of Deputies. He was a specialist in colonial questions, having brought to them a vast amount of personal experience. He was governor of Indo-China, 1891-94, and Minister of the Navy in the cabinet of Waldeck-Rousseau, 1899-1902. He was editor of *Le Reveil*, 1881-82, and the political director of the *Siccle*. His writings include: *Du protoplasme végétal* (1876); *Manuel d'histoire naturelle médicale* (1879-81); *Etudes sur*

la doctrine de Darwin (1881); *Traité de zoologie and Protozoaires* (1882); *La botanique* (1882); *Le transformisme* (1883); *Flore de Paris* (1884); *Introduction à la botanique and Le sapin* (1885); *La Tunisie* (1887); *L'Expansion coloniale de la France* (1888); *L'Indo-Chine française* (1889); *La colonisation française en Indo-Chine* (1895); *Principes de colonisation* (1897); *La lutte pour l'existence et l'évolution des sociétés* (1903); *La morale des religions* (1905); *L'Etat et les églises en France depuis les origines jusqu'à la séparation* (1906); *Les missions et leur protectorat* (1907); *La morale naturelle* (1908; new ed., 1912); *Le bilan de notre marine* (1909); *La lutte contre le crime* (1910); *Nos forces navales* (1911); *Nos forces militaires* (1913).

LANSING, ROBERT. American representative at the Paris Peace Conference. He was Secretary of State in President Wilson's cabinet. Before he was prominent in politics he was well known as a lawyer, his specialty being international affairs. He often represented the government in international disputes, as for example, in the Behring Sea arbitration, and on Behring Sea claims' commission, and in the North Atlantic fisheries' arbitration. He was the United States agent in the Anglo American Claims' Arbitration, 1912-14. In the spring of 1915 he succeeded Mr. Bryan as Secretary of State. It was generally understood that President Wilson initiated his own policy in foreign affairs, but the Peace Conference threw much responsibility upon Mr. Lansing whose long experience and intimate knowledge of American diplomacy were invaluable.

LANSING, MICHIGAN. See GARBAGE.

LAOS. See FRENCH INDO-CHINA.

LAURIER, Sir WILFRID. Canadian statesman, died at Ottawa, February 17. He was perhaps the best known Canadian leader of the day. He was born at Saint Lin in the province of Quebec, Nov. 20, 1841; was educated in the parish school and at McGill University, studied law and was admitted to the bar in 1864. In 1871 he was elected to the Legislature of Quebec and from the first urged the native population to rouse themselves and enter into active industrial competition with the English element. He resigned his seat in 1874 and was returned to the federal Parliament where he supported the MacKenzie administration. At this time he was in favor of moderate protection for the purpose of stimulating the industries of the country. In 1877 he became a member of Parliament as Minister of Inland Revenue, but the government was defeated in the following year, and from that time he did not hold a cabinet position until he became Prime Minister in 1896. During the long period of Conservative success he was recognized as leader of the Liberal party in opposition. The party under his leadership declared for unrestricted reciprocity with the

United States and in some of his speeches in the 1880's Laurier went so far as to suggest separation from Great Britain. In the general election of 1896 the Liberal party had a large majority. The tariff was thereupon modified, and the feature of British preference was introduced. In 1897 he visited England where he was received with high distinction. In 1898 the negotiations with Washington over the Alaskan boundary took place, and his government loyally accepted the result. During the South African war, though at first hesitating to send contingents, he finally decided to do so, and supported the British cause with energy. In the subsequent election his government was defeated in Ontario, but not in Quebec. The main measures of his administration were the National Transcontinental Railway, the creation of the Dominion Railway Commission, the introduction of the competitive system in Civil Service, and several progressive labor measures. In recent years his controversy over the naval programme and reciprocity with the United States brought him into especial prominence, and he was defeated on these issues. During the great war he supported loyally the generous policy of the government in the matter of contingents for the Allies, and did his best to conciliate the French-Canadian element.

LAW, A. BONAR. Representative of Great Britain at the Paris Peace Conference. He was born in Canada in 1859, went to Glasgow, Scotland, where he became a successful iron merchant, and gained a reputation for first hand knowledge of commercial affairs. He distinguished himself by his ability in debate and within 11 years after entering Parliament he came leader of the opposition, and five years after that leader of the House, when Mr. Balfour retired. He observed the party truce which was declared when the war broke out, and in the coalition government he was appointed Colonial Secretary. In Lloyd George's ministry he became at the end of 1916 Chancellor of the Exchequer. As such he was a member of the war cabinet, and at the same time he remained leader of the House of Commons. He secured the passage of the two largest budgets in the history of the country. After the general election of 1918 he ceased to be Chancellor of the Exchequer, and became Lord Privy Seal.

LAWN TENNIS. See TENNIS.

LEAD. The statistics of lead production in the United States for 1919, according to refinery statistics given below, as reported in the annual review of the *Engineering and Mining Journal* (New York), showed extraordinary decreases in all directions. The general depression in the business in the early part of the year and the intentional curtailment of production to adjust the latter to the demand and prevent stocks from accumulating were in large measure responsible for the decrease.

PRODUCTION OF LEAD (REFINERY STATISTICS) (a)
(In tons of 2000 lbs)

Domestic:	1915	1916	1917	1918	1919
Desilverized	305,160	330,189	319,015	284,733	226,085
Antimonial	24,601	22,819	16,265	18,658	14,861
S. E. Missouri	185,849	206,105	205,861	189,207	158,182
S. W. Missouri	20,312	33,128	40,575	63,635	55,790
Totals	535,922	592,241	581,716	556,283	454,921

Foreign:	1915	1916	1917	1918	1919
Desilverized	43,301	17,832	50,962	98,596	61,380
Antimonial	2,883	3,304	2,991	2,083	1,547
Totals	46,184	21,136	53,953	100,679	62,927
Grand totals	582,106	613,377	635,669	656,912	517,848

(a) These figures include the lead derived from scrap and junk by primary smelters.

The output of soft lead by mines of the Mississippi Valley and Eastern States was about 217,000 short tons, and that of argentiferous lead by mines of the Western States was about 208,000 tons, a total of 425,000 tons, compared to 267,184 tons and 314,470 tons, respectively, a total of 581,654 tons, in 1918 and to 273,095 tons and 377,854 tons, respectively, and a total of 650,949 tons in 1917, a decrease of over 156,000 tons in 1919, as compared with a decrease of 69,295 tons in 1918. The southeastern Missouri district made the largest production, 153,500 tons, and the Coeur d'Alene district of Idaho was next, with 86,000 tons. The imports of lead in ore and bullion were about 63,000 tons, as compared with 93,367 tons in 1918.

The average price of lead at New York in 1919 was 5.8 cents a pound, as compared with an average of 7.1 cents in 1918. At the beginning of 1919 lead was quoted at 5.75 cents, but it went slightly below 5 cents in April and May, after which it steadily climbed until the close of the year, when it was quoted at about 7.5 cents. This advance in price, despite the falling off of exports and the cessation of shipments to the American forces abroad would seem to indicate that the production has been nicely adjusted to the needs of the domestic building programme.

LEAGUE OF NATIONS. See WAR OF THE NATIONS and INTERNATIONAL PEACE AND ARBITRATION.

LEATHER. During 1919 the hide and leather industry throughout the world had by no means adjusted itself to what before the war would have been termed normal. In the United States the year was a profitable one in the various branches of the industry. There was an increase in imports of hides and skins as well as in manufactures of leather over 1918, the amount being almost that of 1917. In 1919 the exports of hides and skins from the United States exhibited large gains, as did that of manufactures of leather. In particular there was a demand from Europe for fancy leathers, which at one time were imported in considerable quantity.

One condition that affected the leather industry was the demand for high grade products such as boots and shoes, traveling bags, and like articles where the prices reached figures hitherto unheard of. In the United States, and to a less extent in Great Britain and other countries which had not been directly ravaged by the war the general public—that is the wage earning classes—experienced great prosperity with unusual purchasing power and as a result unusual markets were afforded for high grade and fancy wares which led to unprecedented demands for finer grades of leather. America became an exporter where once much of this material came from overseas.

The demand for leather in the shoe industry continued, due to the fact that the factories were

busily engaged and their product even at the end of the year was well sold ahead.

The United States Tariff Commission in its annual report devoted considerable attention to hides, skin, leather, etc., studying with great care the changes in conditions of production that had resulted since 1913, especially in regard to finished goods, the manufacture of which was greatly stimulated by the shutting off of European imports due to the war. In particular the fancy leather trade of continental Europe was reduced or eliminated on account of the war so the United States not only had to meet the domestic demand but also that of such foreign markets as South America.

Hides and leather in Europe presented many strange conditions in 1919 aside from the difficulties of exchange which made foreign commerce extremely difficult even where possible Russia, which in the past had been a tremendous reservoir for hides and skins and a source of supply for America, ceased to be a factor in the markets of the world and at some places exports were forbidden entirely. In Norway also there was an embargo on the export of hides and skins with the purpose of holding them for domestic tanneries and leather industries. An important action was taken by British India when an export duty of 15 per cent was put on all shipments of hides and skins, but with a 10 per cent rebate to Great Britain and the countries of the British Empire, thus affording a 10 per cent advantage to them over America.

The Federation of Leather Belting Manufacturers of the United Kingdom decided during the year that after September 1st, no leather belting should be sold except on the basis of the new National Price List, which quotes for all widths of belting per foot with thicknesses specified according to the customer's requirements and the purpose for which the belting is intended. This was an innovation from the previous British practice of selling leather belting chiefly by weight, or by measurement without any specified thicknesses. See BOOTS AND SHOES; LIVE STOCK.

LEE, JAMES WIDEMAN. Clergyman and author, died at St. Louis, Mo., October 4. He was born at Rockbridge, Ga., Nov. 28, 1849, educated at Emory College, Ga., and ordained to the Methodist Episcopal ministry in 1876. After successively holding several pastorates in Georgia he went to Palestine in 1894 in search of material for a book on the footsteps of Christ. He held among other important positions in the church that of presiding elder of the St. Louis District and chaplain of Barnes Hospital, St. Louis. His list of writings includes a wide and varied range of subjects of which may be mentioned among the later ones the following: *Religion of Science* (1912); *Magnetizing the Commonplace* (1914); *Geography of Genius* (1915); *Climate and Unity* (1916). In 1917 to 1918 he delivered addresses on the Bible and Life, the Making of the Flag, and Gen. Robert E. Lee.

LEFROY, GEORGE ALFRED. Bishop of Calcutta after 1913, died January 1. He was born

in County Down, Ireland, in August, 1854, and educated at Trinity College, Cambridge. He was ordained in 1879 and in the same year joined the Cambridge Mission in Delhi of which he became the head in 1891. From 1891 to 1912 he was bishop of Lahore.

LEGISLATION, STATE. See CITY PLANNING and MUNICIPAL GOVERNMENT.

LEHIGH UNIVERSITY. A non-sectarian institution for the education of men, at Bethlehem, Pa. During 1919 the university was reorganized into three departments, the college of engineering, the college of arts and science, and the college of business administration. The enrollment in the fall was 1100. There are 90 members of the teaching staff. The library contains 140,000 volumes. Productive funds total \$3,000,000, and the income for the year was about \$450,000. Lehigh was founded in 1866. President, Henry Sturgis Drinker, LL.D.

LELAND STANFORD JUNIOR UNIVERSITY. A non-sectarian co-educational institution at Palo Alto, Cal., (post office, Stanford University, Cal.). The university was founded in 1891 by Leland Stanford and his wife, in memory of their son. The enrollment for the summer term, 1919, was 520; that for the autumn quarter, was 2441. The faculty number 345. The productive funds amounted in 1917-18 to \$24,663,000; the income was \$1,409,000. The library contains 298,856 volumes. During the year a new library building was completed, at a cost of \$700,000. It forms the central building in the new Quadrangle group, has space for about 700,000 volumes, and is proving invaluable to the institution. Military training has been continued, with the addition of an artillery section of the R. O. T. C. President, Ray Lyman Wilbur, M.D.

LEONCAVALLO, RUGGIERO. Italian composer, died in Rome, August 9. He was one of the best known and most admired of the Italian composers of the day. He was born at Naples in 1858 and devoted himself with Mascagni to the promotion of the newer music. He was a great admirer of Wagner and began a historical trilogy under his influence but discontinued it upon the extraordinary success of his opera *Pagliacci* in 1892. This scored triumphs all over the world and became one of the familiar operas in the United States. It was followed by *La Bohème*, *Zaza*, *Figaro*, *Mai ra*, *Malbruk*, and others. He wrote his own librettos.

LEOPOLD, RALPH. See MUSIC, Artists, Instrumentalists.

LEROUX, XAVIER HENRI NAPOLEON. French composer, died in Paris, February 30. He was born at Velletri, Italy, in 1863, the son of a musician of some note, and studied at the Conservatory of Paris, where he was a pupil of Dubois and Massenet. He carried off the prize of Rome in 1885 and entered upon a brilliant career, publishing as his first important work, the cantata *Endymion*, (1890). He was devoted to dramatic composition, but composed also several motets, a mass with orchestra, and the overture *Harald*. At Brussels in 1895 he produced for the first time the opera *Evangeline* which was followed by the brilliantly successful *Astarté* (1900), and *La Reine Piamette*, the two last being produced at the Opera Comique. Other scores were: *Venus and Adonis* (1905); *William Ratchiffe* (1906); *Theodora* (1906); and *Le Chemineau* (1907); the last-named being

rendered in New Orleans in 1911. His work is unequal, but everywhere shows the qualities of a masterly musician. It holds a place somewhat apart in French music, having no direct relation with any of the schools at that time in vogue.

LEVY, ALFRED. Chief rabbi of France, died July 22 at Pau where he had been for two years under treatment for ill health. He was born Dec. 14, 1840, at Lunéville, France, studied there in the Lycée, and was appointed rabbi at Dijon in 1866, and later chief rabbi at Lyons where his piety and tact won him the esteem of his fellow citizens. On February 5, 1908, he was elected chief rabbi of France by the secretarial council. He was chevalier of the Legion of Honor.

LEVY, LOUIS EDWARD. Photo-chemist and inventor, died at Philadelphia, Pa., February 17. He was born in Stenowitz, Bohemia, Oct. 12, 1846. He was brought to the United States in childhood and was educated in the schools of Detroit, Mich., and in the University of Michigan. He made special studies in optics and he lectured and wrote successfully on subjects in applied science. Experiments which he made in 1873-74 resulted in his invention of the so-called "Levytype." Along with his brother, Max L., he received a medal for the invention of the "Levy line screen" and in 1900 received a medal for his invention of the "Levy acid blast," both medals being given by the Franklin Institute. He made other important inventions for which he received honors. He was author of the *Russian Jewish Refugees in America* (1895); *Business, Money, and Credit* (1896); and (with H. Bilgran) *Cause of Business Depressions* (1914).

LHEVINNE, JOSEF. See MUSIC, Artists, Instrumentalists.

LIBERIA. An African negro republic on the western coast, extending from the French Ivory Coast on the east to the British colony of Sierra Leone on the west, and including that portion of the North Guinea coast which lies between the rivers Mano and Cavally, a distance of about 350 miles. Area, variously estimated at from 35,000 to 41,000 square miles and population at 1,500,000 to 2,100,000 all of the African race, but including about 12,000 Americo-Liberians. The natives belong chiefly to the Kru stock and its allies. They are a pure negro race and few of them have been Christianized. Other stocks are Mandingos (Mohammedan), the Gola, the Kisi and the Kpwesii. The number of civilized negroes has been placed at about 50,000 and they are found chiefly in the coast region. They use English as their daily language and they are for the most part Christian. Capital, Monrovia, with an estimated population, including Krutown, of 6000. It is a port of entry. Other ports are Robertsport, Marshall, Grand Bassa, Buchanan, River Cess, Liberian Gene, Greenville, Sajavlin, Mana Cru, Grand Cess, Sasstown, Harper, Kublake, Half Cavalla and Webo.

Agriculture, mining, and industrial resources have been scarcely developed. The staple product is the native coffee. The chief exports are coffee, cacao, palm kernels, palm oil, rubber, ivory, piassava fibre, and camwood. Exports in 1917 amounted to \$618,536; revenue in 1917-18, \$273,016; expenditures, \$255,767; public debt, Sept. 30, 1918, \$2,131,700. President at the beginning of 1919, Daniel Howard, for the term

expiring in 1920; president-elect for the term, 1920-24, C. B. King.

LIBERTY LOANS. See FINANCIAL REVIEW.

LIBRARY ASSOCIATION, AMERICAN.

Founded in 1876 at Philadelphia, this is an organization of American librarians whose purposes are to promote library interest in general, and in particular to bring about needed reformation and improvements; to lessen cost and labor of administration by coöperation; to interchange advice and by frequent meetings to promote *esprit du corps*. At the end of 1919 the Association had a membership of about 4000. During the war it devoted most of its energy and resources to supplying books and periodicals to men in the service of the government, especially those who were overseas, and this work continued into 1919. The sum of over \$5,500,000 was raised to carry on this work by two campaigns in 1917 and 1918. The total personnel of the Library War Service, as it was called, in April, 1919, was 525, many of the workers being trained librarians released by their home libraries for the duration of the war emergency. Overseas shipments to May, 1919, amounted to 2,473,219 books, of which almost 1,000,000 were technical books for study. From a central library in Paris, through 15 regional libraries, the books were sent to 1200 points, reaching American troops everywhere in France. A central library in Coblenz provided for soldiers in Germany. Library service was also provided for American troops in Siberia and Russia, and for naval and marine corps stations in Panama, Alaska, and the outlying island possessions of the United States. There were 1322 branches and station libraries in the large training camps in America in April, 1919, while in January there were 1886. Library stations along the Mexican border numbered 150 for the service of troops on patrol duty. In May, 1919, library service was being given in 228 military hospitals, which number had materially increased at the end of 1919. There were 264 naval stations and 54 marine corps stations served by the Association, while over a thousand ships' libraries were overhauled, and in many cases materially added to. On Nov. 1, 1919, control of all these activities was turned over to the government.

The Executive Board of the Association, at its meeting at Richfield Springs, N. Y., on Sept. 9, 1919, accepted and approved a tentative report of the Committee on an enlarged programme for American library service. This programme included coöperation with the army and navy for the continuation of library service to men in military service; continuation of the work in the Public Health Service Hospitals; the publication of books in the Braille grade 1½ type for blinded soldiers, sailors, and marines; the institution of a new department to supply library service to U. S. Coast Guards and government lighthouse keepers; the extension of libraries on merchant ships owned in this country; the assisting of cities to organize public libraries; the making of a survey of the needs of libraries in the United States; a campaign for \$2,000,000; and "that the American Library Association do all within its power to encourage and assist our Canadian colleagues and fellow-members in the furtherance of the project to establish a National Library for the Dominion of Canada."

The 41st conference of the Association was held at Asbury Park on June 23, 1919. The

principal speeches were "The A. L. A. at the Crossroads," by Wm. W. Bishop; "Interpreting the Library Movement," by Guy E. Marion; "Our Library Resources as Shown by Some Governmental Needs in the War," by Andrew Keogh. The following officers were elected for the coming year: President, Chalmers Hadley, librarian Denver Public Library; first vice-president, George H. Locke, librarian Toronto Public Library; second vice-president, Cornelia Marvin, librarian Oregon State Library; executive board (for term of three years), Carl H. Milam, director Birmingham Public Library; Edith Tobitt, librarian Omaha Public Library; trustees of the Endowment Fund (for term of three years), E. W. Sheldon, trustee New York Public Library; members of Council (for term of five years), Miriam E. Carey, field representative Library War Service; Bessie S. Smith, supervisor of smaller branches and high school libraries, Cleveland Public Library; Phineas L. Windsor, librarian University of Illinois; Lloyd W. Josselyn, librarian Jacksonville Public Library; C. C. Williamson, chief division of economics, New York Public Library. *The Library Journal* is the official organ of the Association, but it brings out many other bulletins and pamphlets concerning its work. Headquarters are at the Library of Congress in the city of Washington, D. C.

LIBYA. An Italian colony on the north coast of Africa, comprising the two provinces of Tripolitana and Cyrenaica, and lying between Tunis on the west and Egypt on the east, that is from about 9° to 23° east longitude, and running south into the unmapped Sahara to a point not definitely fixed. It had been held by Turkey from the sixteenth century but was acquired by Italy as a result of the Turco-Italian war and proclaimed an Italian possession, Nov. 5, 1911. During the War of the Nations it was overrun by Arabs, Turks, and Germans, and after the Germans and Turks gave way, the Arabs continued to defy the Italian government, but on April 24, 1919, they signed a final armistice whereby Italy regained full possession. Area, estimated at 405,800 square miles; population Aug. 3, 1911, 523,176 natives. Later estimates of population run much higher. One places it in 1919 at about 6,000,000 but is merely conjectural. Capital of Tripolitana, Tripoli, with 73,000 inhabitants; capital of Cyrenaica, Benghazi with 35,000; both Mediterranean ports. In respect to race it has been estimated that about 40 per cent of the inhabitants are negro, 30 per cent Arab, 20 per cent Jewish, and less than 10 per cent European (Italians, Greeks, and Maltese). The original Berbers have been merged with Arabs and negroes. The dominant element is Arab. The following information in regard to commercial conditions, etc., is supplied by the United States Bureau of Foreign and Domestic Commerce: Commerce is almost entirely in the hands of the Italians at present, though Maltese and Jews act generally as their agents in trade with the natives. The commercial language and currency are Italian. English, however, may be used in correspondence, though Italian is naturally to be preferred. Commerce of late years has greatly declined owing to the deflection of the caravan trade from Tripoli. In Cyrenaica a few small caravans still arrive. In Tripolitana the arrival of a single unimportant caravan of 20 camels in June, 1919, was considered remark-

able. This deflection of the caravans from the direct Tehad-Tripoli route to the much longer Tehad-Egypt and Tehad-Tunis routes has been effected in the last 12 years by the intelligent work of the British and French, who have dispatched numerous emissaries, residents and traders into the interior to gain the confidence and friendship of the natives. Outside of the caravan trade the chief exports of Libya are: Sponges, woolen cloth, henna, hides (chiefly of sheep and goat), and esparto grass, which is used in the manufacture of fine paper. All these articles are still exported in some quantity. The values of these exports for the year 1917 for Tripolitania alone were as follows: Sponges, \$27,531; woolen cloth, \$82,990, henna, \$69,887; hides, sheep, \$102,549; hides, goat, \$92,553; esparto, figures not given as, owing to great bulk of such material, shipment was suspended during the war. These figures are by no means indicative of the real possibilities for future export, as all Italian commerce was seriously crippled during the war. The exports of sponges, for example, in the year 1913 had a value of \$179,810 for Tripolitania alone. In Cyrenaica for 1917 the exports of woolen cloth, valued at \$165,721, and goatskins, worth \$72,028, were the only ones of real importance. During the war the three most valuable products of Cyrenaica, which are barley, esparto grass, and sponges, were entirely neglected. The barley crop is good, however, in only about one year in three, owing to scant rainfall. Other valuable products of Libya in the prewar period were: Sheep, goats, camels, oxen, horses, skins, Sudanese leather cushions, wool, ivory, salt, cereals, ostrich feathers, butter, and dyewood. There is no doubt that the exports of sponges, esparto grass, barley, hides, wool, and live sheep and cattle may again assume considerable proportions. To sum up the commercial situation in Libya a comparison of the import and export figures of the best year and the worst year during the period of Italian occupation is given, the official statistics for Tripolitania and Cyrenaica being combined: Exports were valued at \$942,033 in 1913, and \$1,007,420 in 1917; imports in 1913 amounted to \$6,745,079, and in 1917 to \$11,661,854. Libya was, therefore, in the unenviable position of having to import goods to almost 12 times the value of its exports. The import situation may be briefly summarized by the statement that Libya required all staple necessities to life save meat and leather.

LIEBKNECHT, KARL. German Socialist, leader of the Spartacus group, killed in Berlin on January 15th. His death followed several stormy months in which he opposed the new government of Germany as a leader of the revolutionary extremists. He was born at Leipzig in 1871, the son of Wilhelm Liebknecht, the celebrated leader of the German Socialist Democratic party. He was educated in the universities, studied law, and served in the Prussian guard. He was an ardent Socialist and secured an election in 1908 to the lower house of the Prussian Diet, despite the restrictions on the franchise, and in 1912 became a member of the Reichstag. During the war he was the great outstanding figure of revolt against the war policy of his country, showing a degree of courage that made him the object of admiration throughout the world. He voted the war credits at the beginning, but went into opposition soon afterwards.

His course resulted in his being thrown into prison. Long before this he had served a term of imprisonment when he published an anti-militarist pamphlet in 1907, and he had for many years been a member of the extreme Left of his party, bringing on himself the condemnation of the leaders. In 1915 he was called to the colors and served in a labor battalion on the western front. Whenever he returned to Berlin he tried to obstruct the course of business in the Reichstag by interruptions and other tactics. In 1916 action was taken against him by the Socialist party, amounting practically to expulsion. In April, 1916, he attacked the government in a speech on the subject of finance and as a result was expelled from the House. A few weeks later he was arrested for taking part in the organization of a Mayday celebration in Berlin, convicted of attempts at high treason and other crimes and in the autumn of that year sentenced to four years penal servitude, expulsion from the army, and loss of civil rights for six years (see YEAR BOOK for 1916). He was in prison until the downfall of Germany was certain. At the end of October, 1918, he was released under an amnesty to political prisoners during the brief chancellorship of Prince Max of Baden.

LIFE INSURANCE. See INSURANCE
LIGHTHOUSES. It would be hardly reasonable to look for any extended lighthouse design and construction in the first year following the great war, and the U. S. Bureau of Lighthouses was in large part concerned with the resumption of peace conditions. On July 1, 1919, all lighthouse vessels and stations which had been operated under the jurisdiction of the Navy Department during the war were returned to the jurisdiction of the Lighthouse Service. In all 46 tenders, 4 light vessels, and 21 light stations with their personnel had been transferred to the navy during the war and had been used not only in special work involving aids to navigation but in mine planting, laying submarine defense nets, etc., during the war and later in effecting the removal of such defenses.

The new construction during the fiscal year ended June 30, 1919, involved three important new light and fog-signal stations at Lorain Harbor, Ohio, Sand Hills, Lake Superior, Mich., and Lime Kiln, San Juan Island, Wash. The light and fog signal at Lorain Harbor was placed in commission in the spring of 1919 at the end of the west breakwater to mark the harbor entrance, and consisted of a fourth order revolving lens mounted in a tower with focal plane 58 feet above mean lake level. The light is furnished by incandescent oil vapor and is occulting white every 10 seconds, light 5 seconds, eclipse 5 seconds. It has 7300 candle power and is visible 15 miles. The Sand Hills light marking a dangerous locality on the South Shore of Lake Superior, was mounted on a brick tower 70 feet high with the focal plane of the lens 91 feet above lake level and visible approximately 18 miles in clear weather. It is a fourth order, ball bearing mounted flashing lens, revolved by a weight operated clock producing one flash of 24,000 candle power every 10 seconds. An incandescent oil vapor lamp is employed. The San Juan Island Light marking an important point on the route from Puget Sound to British Columbia and Alaska has a lens of the fourth order giving a 30,000 candlepower flash every 10 seconds and

visible approximately 13 miles being mounted about 50 feet above high water.

In addition three unwatched lights were placed on dangerous shoals in the Caribbean Sea along the traffic lane from the Gulf Coast of the United States to the Panama Canal through Yucatan Passage. In Alaska 36 additional aids to navigation were established, making a total of 475, of which 180 were lights and 8 were gas buoys. In 1918 there were 439 aids to navigation.

The total number of aids to navigation maintained by the U. S. Bureau of Lighthouses on June 30, 1919, was 16,075 as specified in the accompanying tabulation. It will be seen that there was a net increase of 400, embracing 36 lights, 4 float lights, 86 minor lights, and 283 unlighted aids. There were 5665 lights of all classes in service and 583 fog-signals (not including 79 whistle and 245 bell buoys) of which 49 were submarine signals.

The accompanying table gives a summary of the aids to navigation, under each class, established and discontinued during the fiscal year, and also the net increase, and the number in commission at the end of the fiscal years 1918 and 1919.

Class	Estab- lished	1919 Discon- tinued	In- crease	Total, June 30— 1918 a	1919
Lighted aids:					
Lights (other than minor lights) . . .	51	15	36	1,732	1,768
Minor lights . . .	136	50	86	3,046	3,132
Light-vessel stations . .	1	3	b 2	52	50
Gas buoys . .	73	80	b 7	560	553
Float lights .	6	2	4	158	162
Total . . .	267	150	117	5,548	5,665
Unlighted aids:					
Fog signals .	6	9	b 3	537	534
Submarine signals . . .		2	b 2	51	49
Whistling buoys, unlighted . . .		2	b 2	81	79
Bell buoys, unlighted . .	94	7	2	243	245
Other buoys .	301	142	159	6,896	7,055
Day beacons .	154	25	129	2,919	2,448
Total . . .	469	186	283	10,127	10,410
Grand total .	736	336	400	15,675	16,075

a Differences from statistics published in 1918 report are due to minor discrepancies in previous count
b Decrease.

Improvements in aids to navigation in the Service generally were made during the year, as follows: Twenty fixed lights were changed to flashing or occulting (including 2 light vessels); the illuminant of 4 lights was changed to incandescent oil vapor; the illuminant of 27 lights (including 5 light vessels and 2 buoys) was changed to acetylene; the illuminant of 9 lights was changed to electric incandescent.

The fog signals at seven important stations were improved by the installation of air diaphragms in place of less efficient apparatus.

The first compressed acetylene light established on the Hawaiian Islands, at Molokini Island, an unwatched light on March 18, 1919, completed eight years of service without having been extinguished.

During the year there was a deficiency of both

tenders and light vessels in the service due to an unusual number of casualties in 1918 and 1919. Since January, 1918, Diamond Shoal Light Vessel had been sunk on station by a German submarine; Cornfield Point Light Vessel had been run into by a barge and sunk on station; Cross Rip Light Vessel had been destroyed by the ice; Thirty-five Foot Channel Light Vessel had been destroyed by fire at a contractor's dock; and Bush Bluff Light Vessel and the tender *Gardenia* were condemned as worn out and not worth repair.

Accordingly considerable new construction was recommended in the Commission's report for 1919.

The increased use of radio equipment was found most advantageous for ordinary as well as war purposes and outfits were installed on 32 light vessels and on 16 tenders during the fiscal year. At the end of the fiscal year 40 light vessels and 23 tenders in all had been equipped with radio installations.

Likewise the installation of telephones at light stations was continued during the year. This work was done by the United States Coast Guard under an appropriation made by act of June 12, 1917, to develop coastal communications, including connections with important light stations. On June 30, 1919, there were 139 light stations so connected.

Among the improvements developed during the year of a technical nature may be mentioned in particular those for the fog signals known as diaphragm installations, resulting in simplicity of operation, reduced space required for machinery, and lowered initial cost. A new type of metal buoy was developed for use in defining shoal-water channels, being an improvement over wooden spar buoys which are less conspicuous as aids and more expensive to maintain under ice conditions. The stability of the type L gas and bell buoy, where moored in the exposed waters of Alaska and likely to be weighted with ice, was improved.

Another experiment carried out was to determine whether a bell buoy can be arranged to give a definite characteristic and this was successfully accomplished by the installation on a gas buoy of a bell operated by compressed carbon-dioxide gas in storage tanks. The tanks were located in one of the pockets of the buoy, and the bell sounds continuously one stroke every 15 seconds. The buoys successfully replaced a light vessel.

On June 30, 1919, there were 5964 persons employed in the U. S. Lighthouse Service, including 125 technical, 156 clerical, and 5683 employees connected with light stations, vessels, and depots. The service was charged with the maintenance of aids to navigation along 47,300 statute miles of general coast line and river channel. The appropriations for the maintenance of the Lighthouse Service for the fiscal year 1920 were \$6,690,430, being \$255,568 in excess of those for the preceding fiscal year and include \$45,000 for retired pay. These appropriations were \$1,054,600 less than the estimates submitted. The appropriations for special works made for the fiscal year 1920 amounted to \$354,400.

LIMA. Sir BERTRAM. Newspaper proprietor, died in London, February 24. He was born in 1884, went into newspaper work, became private secretary of Lord Rothermere, and while still a very young man controlled several important papers including the *Leeds Mercury* and the

Glasgow Daily Record. His chief success was in the organization of the *Daily Mirror*.

LINDAU, PAUL. German novelist and playwright, died January 31. He was born at Magdeburg, Germany, June 30, 1839, studied French literature for five years in Paris, and became on his return a newspaper editor and writer. As a journalist he was a successful writer of satire and parody, and his pieces for the theatre were marked by these same elements. He became prominent with the production of *Marion*; and among his other plays may be mentioned *Maria*; *Magdalene*; *Ein Erfolg*; and *Varschumte Arbeit*. He became first dramatist in the Berlin Royal Theatre in 1908.

LIQUORS. For this year is recorded the final chapter on the above heading as far as residents of the United States are concerned. On January 29, 1919, Acting Secretary of State Polk issued a Proclamation that, as 36 States had ratified the Constitutional Amendment prohibiting the manufacture and sale of intoxicating beverages, it would become a law on Jan. 16, 1920. Ohio was the 36th State included by the Secretary of State. At the November election the people repudiated the Act of the Legislature. This has led to a discussion as to whether or not the proclamation was not "previous," but, as several other States had in the meantime ratified the amendment, the point practically has no weight.

Under the Act of Nov. 21, 1918, the manufacture of intoxicating liquors was prohibited after May 1, 1919, and the sale after June 30, 1919. Therefore, a legal drink has not been obtainable since the latter date. This is the War Time Prohibition Act, which was to continue in force until demobilization of the army had been effected. During the early spring the President suggested to Congress that it declare such a fact accomplished. This Congress refused to do. In October, Congress passed the National Prohibition Act, which included provision for War Time Prohibition, Enforcement Act, and Industrial Alcohol. On Oct. 27, 1919, the President vetoed the measure because he considered that the necessity for War Time Prohibition no longer existed. Within four hours of the receipt of the message, the House of Representatives passed the bill over his veto, and the next day the Senate did likewise. Action was then commenced in the courts to defeat the War Time Prohibition Act. On Dec. 15, 1919, the Supreme Court declared War Time Prohibition constitutional. This practically ended the hopes of the "Wets" that the stocks of liquors could be disposed of before Jan. 16, 1920. At this writing, even if the President should declare demobilization at an end, the time is too short to save the situation. Financial disaster confronts those with large stocks. On Dec. 30, 1919, there was in bond approximately 60,000,000 gallons of spirits and approximately 15,000,000 gallons of wine. Congress has shown no disposition to reimburse the owners, and export for beverage purposes must cease Jan. 16, 1920. A case is pending in the United States Supreme Court as to whether beer containing 2.75 per cent alcohol by volume is intoxicating. Congress has said that any liquor containing in excess of 0.5 per cent alcohol is intoxicating. This case will not be decided until January, 1920; as well as the actions brought by the States of Rhode Island and New Jersey, which are to the effect that Congress could not interfere with the

police power of the State. On Dec. 22, 1919, the Court called on the government to show cause why the action should not be heard.

The year has been one of adjustment, delay, litigation, etc. Seventy-four distilleries were operating as against 234 the preceding year (13 grain, 23 molasses, and 38 fruit). In addition to these, there were 208 so-called industrial distilleries producing alcohol for denaturation. The large number was occasioned by many breweries making a wort containing more than 0.5 per cent of alcohol and distilling the excess, so that the finished product, or "near beer" contained only the legal amount. No spirits were produced for beverage purposes.

WINE. The production of wines was 55,756, 171 gallons, of which 48,000,000 contained less than 14 per cent of alcohol.

BEER. After May 1, 1919, no beer could legally be manufactured, although after June 30th the sale was permitted in certain States by reason of favorable United States District Court decisions, which were reversed in December by the United States Supreme Court. The production was 33,524,748 barrels; number of breweries 669. (This production was for 10 months of the fiscal year). The consumption per capita was

Wines	0 28 gallons, wine
Malt liquors	14 59 gallons, wine
Distilled spirits	1 12 gallons, proof

ADJUSTMENT. Several large whisky distilleries have been turned into alcohol plants. The consumption of non-beverage alcohol in the manufacture of medicines, flavoring extracts, toilet goods (all of which is tax-paid), and in the arts and sciences (tax free or denatured) is a large amount. Alcohol is as necessary a raw material to a great industrial nation as is sulphuric acid.

One important event of the year was the development of a motor fuel with alcohol as the major constituent. The other ingredients are ether (sulphuric) and benzol (obtained from coal tar). This product has been extensively tried out and is giving wonderful satisfaction wherever used. The aeroplanes of the mail service are using it exclusively. If the problem of distribution and price can be overcome, the question of nature's stores of available gasoline oils is of no moment to even this generation. The price at present is five cents more per gallon than gasoline. If successful, the present distilling equipment will hardly be able to supply the needs of the motor cars of New York City alone. Many breweries have been converted into ice cream plants and ice factories. Others are making near beer. Many of the wineries will continue to operate, as it is legal to produce wine for sacramental and medicinal purposes, and a fairly large amount is used in the manufacture of medicinal tonics.

HOME PRODUCTION. Illicit distilling has increased to an alarming extent. The Commissioner of Internal Revenue has refused to publish the figures of illicit stills seized during the last year. The home production of wine and "beer," or rather ale, seems to be widespread. At least five breweries have been devoting their attention to the manufacture of an extract ostensibly for baking and medicinal purposes, but recipes by which it can be used in the manufacture of home brews are numerous and widespread.

PROHIBITION
Quantities of Liquor Seized in Boston Raids

Many vineyards have sold their crops for the next year. During the late summer, advertisements appeared in the newspapers of the large cities that one or more carloads of grapes were being shipped to town and were for sale for use in the manufacture of "jellies and other household purposes." The "other purposes" can be imagined.

Bay Rum, which was never thought to be potable, has been used for such purposes to so large an extent that the Prohibition Commissioner has ruled that it must have added to it some ingredient to render its use for beverage purposes impossible. Hardly a week goes by without the newspaper statement that some one has died from the effects of drinking denatured alcohol, *which is a deadly poison* when taken continuously. Flavoring extracts and medicinal preparations are all being used by the degenerate for beverage purposes, regardless of the after-effects, except that due to the alcohol.

The taxes collected from beverages were as follows:

Wines	\$10,521,609
Beers	117,503,896
Distilled spirits	302,965,466

The total taxes, including dealers', were \$483,050,854. The taxes derived from the sale of soft drinks, including ice cream, were \$975,378. In this connection, it is interesting to note that, to a certain extent, the sugar shortage was laid to the increased demand for soft drinks and candy.

The production of denatured alcohol was:

	Wine gallons
Specially denatured for factory use only	9,976,720
Completely denatured	28,291,218

Well satisfied with the results of its victory in the United States, the Anti-Saloon League has decided to carry the "War" into all the countries of the earth. During the spring a conference was held in Paris looking to this end, representatives of 11 nationalities attending the meetings. At present the United States is the only nation (except Turkey) which is "dry." The restrictions placed on the manufacture and sale in the warring countries have been gradually lifted as the stocks of material increased.

In Greece, the wine crop of 1918 was twice that of 1917. Sweden developed a process to produce alcohol from a white moss which grows prolifically in that country. Mexico is to take up on a large scale the manufacture of wine.

LITERATURE. See articles on French, German, Scandinavian, and Spanish literatures, and LITERATURE, ENGLISH AND AMERICAN.

LITERATURE, ENGLISH AND AMERICAN. English and American literature for the first full year after the war shows a shifting of values consequent upon the great struggle. It is obvious that there would be hurried into print many discussions of reorganization in international relationships, both political and commercial. To these must be added an unusual number of historical and economic studies of European and Asiatic nations and an unprecedented mass of discussion relative to industrial reconstruction, in which the relatively new note of industrial democracy is unmistakably sounded. Expressions of the personal religious fervor in-

spired by the war have decreased coincidentally with an increase of books upon the place of the church in and after the war world. Philosophy and psychology have been relatively unproductive while discussions of the psychic world have multiplied exceedingly. The essay, biography, and literary criticism show a vitality indicative of a larger body of serious readers. Poetry appears to have lost the first flush of its new vision but to have settled down into a steady productivity. Fiction both in England and America has manifested a remarkable activity. Significant is the large number of translations of foreign novels: Spanish, French, Dutch, Danish, Russian, Polish, Rumanian, Brazilian, and even Japanese. If this indicates a permanent catholic interest in the fiction of all nations it is a hopeful sign for the future of our literature as well as for the peace of the world. Significant of contemporary interest is the extent to which novelists have undertaken to handle spiritualistic phenomena in their stories. Even more significant is the frank fashion in which they assume the continuance of those unsettled moral and social relationships which the war brought suddenly about. Significant also is the relish of the reading public for those books and stories which bear the unmistakable mark of reality in observation and handling. This new reality and the new directness of style induced, perhaps, by the simplicity of war narratives are yet to have their full effect upon our literature.

Although there are probably no novels of the first rank for the year 1919, there are a number peculiarly interesting for certain marked qualities. May Sinclair in *Mary Olivier* has done a brilliant piece of writing and produced an unusually convincing psychological study; Sir Harry Hamilton Johnston has in *The Gay-Dombey* followed Dickens' *Dombey* to the third generation and drawn a singularly first-hand picture of life in England's governing class in the last quarter century; Hugh Walpole has contributed a voluminous study of Russian life in *The Secret City* and another delightful child study in *Jeremy*; Frank A. Swinnerton has depicted village gossip and snobbishness in *Shops and Houses* and analyzed the rivalry of two women in *September*; John Galsworthy has indicated the shifting standards of English life in *Saints' Progress*; and Joseph Conrad has told the story of a persistent but futile love in *The Arrow of Gold*. Joseph Hergesheimer brings a curious aloofness to *Java Head* and *Linda Condon*; J. C. Snaith a fine simplicity to *The Undeclared*; Stacy Aumonier a humorous insight to *The Querrils*; and H. G. Wells a deal of religio-scientific eloquence to his tract *The Undying Fire*. Compton Mackenzie writes a disappointing *Sylvia and Michael* and an ironically humorous *Poor Relations*; Dorothy Richardson continues Miriam's inner life in *The Tunnel* and *Interim*, fourth and fifth of the *Pilgrimage* series; Israel Zangwill reappears with quaint character work in *Jinny the Carrier*; Arnold Bennett describes Hilda's son in pre-war London in *The Roll Call*; Sheila Kay-Smith deals with character against a picturesque background of country and town in *The Four Roads* and *Tamarisk Town*; and William Somerset Maugham writes the vigorous but morbid *The Moon and Sixpence*. William De Morgan's last and uncompleted novel *The Old Madhouse* is published with a note of its projected ending by Mrs. De Morgan; there is

careful character work in Mary Watts' *From Father to Son* and in Corinne Lowe's *Saul* and in Alexander Black's *The Great Desire*, and there is the most delightful *Young Visitors* (sic) written, we are told, by Daisy Ashford at the age of nine.

Of distinct importance also are J. D. Beresford's *The Jervaise Comedy*, W. L. George's *Blind Alley*, Archibald Marshall's *Sir Harry*, Maurice Hewlett's *The Outlaw*, Maurice Weyl's *The Choice*, George Woden's *Little Houses*, Stephen McKenna's *Midas and Son* and *Sonia Married*, Mrs. Bernie Babcock's *The Soul of Ann Rutledge*, Mrs. W. K. Clifford's *Miss Fingal*, Alfred Oliviant's *Two Men*, James Branch Cabell's *Jurgen*, Robert Hichens' *Mrs. Marden*, Alice Brown's *Black Drop*, Jerome K. Jerome's *All Roads Lead to Calvary*, Romer Wilson's *Martin Schuler*, R. A. Foster-Melhar's *Panther*, Eden Phillpotts' *Storm in a Tea Cup* and *Evander*, George Birmingham's *Up, the Rebels!*, Gilbert Cannan's *Mummery*, *Pink Roses*, and *Time and Eternity*, and E. Temple Thurston's *The World of Wonderful Reality* and *David and Jonathan*. Significant also are: *The Promises of Alice* by Margaret Deland, *Heritage* by Victoria Mary Sackville-West, *Deadham Hard* by Lucas Malet, *Banked Fires* by E. W. Savi, *The Star of India* by Alice Perrin, *Abbotscount* by John Ayseough, *Legend* by Clemence Dane, *Cathy Rossiter* and *The House of Courage* by Miss Victor Rickard, *The Eve of Pasqua* by Richard Dehan, *Pirates of the Spring* by Forrest Reid, *The Quietness of Dick* by R. E. Vernède, *Fate Unseen* by Jean Talbot, *Marriage While You Wait* and *The Tale of Mr. Tabbs* by Mrs. J. E. Buckrose, *Across the Stream* by E. F. Benson, as also his *David Blaize* and *The Blue Door* and *Robin Linnet*, both boy stories; *A Cup of Fury* by Rupert Hughes, *Victorious* by Reginald Wright Kauffman, *Christopher* and *Columbus* by the Countess von Arnim, *The Tin Soldier* by Temple Bailey, *A Man for the Ages* by Irving Bacheller, *The City of Comrades* by Basil King, *Dangerous Days* by Mary Roberts Rinehart, *Nurse Benson* by Justin Huntley McCarthy, *Lady Larkspur* by Meredith Nicholson, *Jimmie Haggins* by Upton Sinclair, *The Starling* by Juliet Wilbor Tompkins, *If All These Young Men* by Romer Wilson, *The Secret Battle* by A. D. Herbert, *The Forbidden Trail* by Honoré Willkie, *Strong Hours* by Maud Diver, *Simonetta* by Edwin Lefevre, *The Gods Decide* by Richard Bagot, *The Carringtons of High Hill* by Marion Harland, *Helena* by Mrs. Humphry Ward, *Living Alone* by Stella Benson, *The Purple Jar* by Mrs. Alfred Sidgwick, *The Crescent Moon* by Francis Brett Young, as also his *The Young Physician*; and *Our House* by Henry S. Canby.

Studies of character and environment are represented in part by E. M. Delafield's *The Pelicans*, Brinsley MacNamara's caustic *The Valley of the Squinting Windows*, Ida Tarbell's *The Rising Tide*, Henry G. Aikman's *The Groper*, Philip Camborne's *Circuits*, Constance Holme's *The Splendid Fairing*, Mary Gaunt's *The Surrender*, Gilbert Frankau's *Peter Jackson*, *Cigar Merchant*, M. H. Hedges' *The Iron City*, Henry B. Fuller's *Bertram Cope's Year*, Josephine Dodge Daskam Bacon's *On Our Hill*, Eleanor Kelly's *Why Joan*, Albert B. Cunningham's *The Chronicle of an Old Town*, Arnold Mulder's *The Outbound Road*, and Mary Hallock Foote's *The Ground-Swell*. The stress is principally on some

phase of sex life in Phyllis Bottome's *A Servant of Reality*, Kathleen Norris' *The Sisters*, Oscar Graeve's *Youth Goes Seeking*, Clarence B. Keland's *The Little Moment of Happiness*, F. A. Kummer and Mary Christian's *Peggy-Elise*, the anonymous *The Lover*, Louis Wilkinson's *Brute Gods*, John Walter Byrd's *The Born Fool*, Gilbert Parker's *Wild Youth*, Cosmo Hamilton's *Who Carcs?*, Gouverneur Morris' *The Wild Goose*, Bohun Lynch's *The Tender Conscience*, and W. B. Maxwell's *A Man and His Lesson*, while adolescence plays a principal part in *The Passionate Pilgrim* by Samuel Merwin, *Ramsey Mitholland* by Booth Tarkington, *The Sleeping Partner* by M. P. Willcocks, *The Burning Secret* by Stephen Branch. Studies of women's character and problems are: *The Builders* by Ellen Glasgow, *Hearts of Women* by Morley Roberts, *A Woman's Woman* by Nalbro Bartley, *Consequences* by E. M. Delafield, *The Bells of San Juan* by Jackson Gregory, *The Immortal Flame* by Marie B. Petersen, *The Harbor Road* by Sara Ware Bassett, *The Revolt of Youth* by Corali Hobson, Wilbur Finley Fauley's *Jenny Be Good*, Cecil H. Bulivant's *The Woman Wins*, Sarah Comstock's *The Valley of Vision*, Corra Harris' *From Sunup to Sundown*, Rose Wilder Lane's *Driving Roads*, Rachel Swete MacNamara's *The Beloved Sinner*, Zephine Humphrey's *Homestead*, and Inez Haynes Irwin's *The Happy Years*.

Romance and adventure are represented by Rachel Swete MacNamara's *The Green Shoes of April*, Miss Oliver Ormon's *The Disturbing Charm* and *The Land-Girl's Story*, A Safroni-Middleton's *Gabriele of the Lagoons*, Henry de Vere Stacpoole's *The Brach of Dreams*, Henry C. Rowland's *Pearl Island*, James Lane Allen's *Emblems of Fidelity*, Albert B. Cunningham's *The Singing Mountains*, Ben Ames Williams' *All the Brothers Were Valiant* and *The Sea Bride*, Albert Bigelow Paine's *Dwellers in Arcady*, Reginald Wright Kauffman's *The Azure Rose*, Zane Grey's *The Desert of Wheat*, Eleanor H. Porter's *Dawn*, E. Temple Thurston's *Sheepskins and Grey Russet*, W. J. Locke's *The House of Balthazar*, J. E. Patterson's *The Passage of the Barque Sapho*, and Wilfred R. Child's *Dream English*. Africa appears in *The City of Palms* by Kathryn Rhodes, F. E. Mills Young's *The Dominant Race*, Gertrude Puge's *The Veldt Trail*, and Talbot Mundy's *The Ivory Trail*; India in C. R. Milton's *The Eyes of Understanding*, and the Far East in Will Levington Comfort's *The Shielding Wing* and *The Yellow Lord*.

Of stories of adventure, mystery and crime detected 1919 has produced an unusual number. The more noteworthy are: Anthony Hope's *The Secret of the Tower*, Rider Haggard's *When the World Shook*, Joseph S. Clouston's *Simon*, John Buchan's *Mr. Steadfast*, Camilla Kenyon's *Spanish Doubloons*, Sax Rohmer's *Dope* and *The Quest of the Golden Shipper*, Gertrude Atherton's *Avalanche*, Isabel Ostrander's *Twenty-Six Clues*, Lee Thayer's *The Mystery of the Thirteenth Floor*, Carolyn Wells' *The Diamond Pin* and *The Man Who Fell through the Earth*, Katharine N. Burt's *The Branding Iron*, Henry M. Rideout's *The Siamese Cat*, Elizabeth Robbins' *The Messenger*, Harold MacGrath's *The Yellow Typhoon* and *The Private Wire to Washington*, Rafael Sabatini's *Historical Nights' Entertainment*, E. P. Oppenheim's *The Wicked Marquis* and *The Box with Broken Seals*, Oswald Wild-

ridge's *The Luck Penny*, Sacha Gregory's *Yellowleaf*, George Barr McCutcheon's *Sherry*, and Robert W. Chambers' *The Moonlit Way*, *In Secret*, and *The Crimson Tide*. Historical novels are represented by: *Flower o' the Lily* by the Baroness Orczy, *The Exiled Lover* by Theodore G. Roberts, *The Great House* by Stanley Weyman, *Gamesters* by Henry C. Bailey, *The Geste of Duke Jocelyn* by Jeffrey Farnol, *Michael Fourth* by Mary Johnston, and *Love Laughs Last* by G. S. Tallentyre.

Volumes of short stories for the year are many and excellent. Of special merit are: *Humoresque* by Fanny Hurst, *From the Life* by Harvey O'Higgins, *Twelve Men* by Theodore Dreiser, *Deep Waters* by W. W. Jacobs, *Winesburg, Ohio* by Sherwood Anderson, *Blue Aloes* by Cynthia Stockley, *Traveling Companions* a collection of early stories by Henry James, *Waifs and Strays*, a final volume of O. Henry's stories, *The Happy End* by Joseph Hergesheimer, *The Clintons and Others* by Archibald Marshall, *On the Wakaloa Mat* by Jack London, another posthumous volume, *Dust of New York* by Konrad Bercovice, *Tales of Three Hemispheres* by Lord Dunsany, *Far Away Stories* by W. J. Locke, *The Gray Dream* by Laura Wolcott, *The Sailor's Home* by Richard Dehan, *Our Casualty*, by George Birmingham, *The Day of Glory* by Dorothy Canfield Fisher, *Lo, and Behold Ye* by Seumas MacManus, *Tumblefold* by Joseph Whittaker, *Short Stories* by R. E. Vernède, *Aftermath* by H. B. Marriott Watson, *All Sorts* by I. A. R. Wylie, and *Believe You Me* by Nina Wilcox Putnam. Others of importance are: *The Doms of Raffles Haw and Danger and other Stories* by Sir A. Conan Doyle, *The Night Operator and Further Adventures of Jimmie Dale* by Frank L. Packard, *They Who Smiled* by Percival Gibbon, Ethel Dell's *The Tidal Wave*, Kate Douglas Wiggin's *Ladies in Waiting*, Mary Roberts Rinchard's *Love Stories*, Charles E. Van Loan's *Taking the Count*, Temple Scott's *The Silver Age*, Josephine Dodge Daskam Bacon's *Square Peggy*, Baroness Orczy's *The League of the Scarlet Pimpernel*, Anna Katharine Green's *Room Number Three*, Ellen N. LaMotte's *Civilization*, Edward Lucas White's *The Song of the Sirens*, and Mary Raymond Shipman Andrews' *Joy in the Morning*. Octavius Roy Cohen's *Polished Ebony* and E. K. Means' *More E. K. Means* are stories of negroes. Humorous stories are: *The Life of the Party and Eating in Two or Three Languages* by Irvin Cobb, *Own Your Own Home* and *The Real Dope* by Ring W. Lardner, *Mr. Dooley on Making a Will* by Peter Dunne, *The Hohenzollerns in America* by Stephen Leacock, *Ma Pettengill* by Harry Leon Wilson, and *Potash and Perlmutter Settle Things* by Montague Glass. Anthologies include Edward J. O'Brien's *The Best Short Stories of 1918* and his *The Great Modern English Short Stories*, and R. J. Holmes and A. Starbuck's *War Stories*. The best book on short stories is Blanche Colton Williams' *How to Study the Best Short Stories*.

POETRY. Of special importance in the field of poetry are: John Masefield's *Reynard the Fox*, or *Ghost Heath Run*, Richard Aldington's *War and Love*, Rudyard Kipling's *The Years Between*, Siegfried Sassoon's *Counter Attack*, Amy Lowell's *Pictures of the Floating World*, John Gould Fletcher's *The Tree of Life*, John Hall Wheelock's *Dust and Light*, James Oppenheim's *The Solitary*, John McCrae's *In Flanders Field*

and *Other Poems*, Aline Kilmer's *Candles That Burn*, J. C. Squire's *Poems, First Series*, John Drinkwater's *Poems, 1908-1919*, Edgar Lee Masters' *Starred Rock*, William Rose Benét's *Perpetual Light*, Mary Carolyn Davies' *Youth Riding*, Vachel Lindsay's *The Golden Whales of California*, Ezra Pound's *Qua Pauper Amavi*, William Watson's *Superman Antagonists*, Thomas Hardy's *Collected Poems*, Benjamin G. Brooks' *Camelot*, Maurice Hewlett's *Flowers in the Grass*, Herbert Tremaine's *The Wide Garden*, John Oxenham's *Hearts Courageous*, Laurence Binyon's *The Four Years*, Babette Deutsch's *Banners*, Corinne Robinson's *Service and Sacrifice*, Eunice Tietjens' *Body and Raiment* and her renderings, *Prologues from China*, George Edward Woodbury's *The Roamer*, and Cicely Fox Smith's *Sailor Town and Small Craft*.

There are also: *The Beloved Stranger* by Witter Bynner, *Songs and Poems* by John Jay Chapman, *The Heart of Peace* by Laurence Housman, *The Song of Three Friends* by John G. Neihardt, *Poems About God* by John Crowe Ransom, *Wild Swans at Coole* by William Butler Yeats, *Shadowy Thresholds* by Cale Young Rice, *A World of Windows* by Charles Hanson Towne, *Poems of London* by John Presland, *The Death of Man* by R. C. Trevelyan, *The Happy Bride* by F. Tennyson Jesse, *A Volume of Satirical Lyrics* by G. K. Chesterton, *Songs in Cities and Gardens* by Helen Granville Barker, *Poems* by Theodore Maynard, and *McAoni Ballads* by T. A. Daly. Mention must also be made of Rose Fyleman's *Fairy Queen*, William K. Seymour's *Swords and Flutes*, Archibald Strong's *Poems*, Roy Anderson Helton's *Outcasts in Beulah Land*, Howard M. Jones' *Gargoyles*, Scudder Middleton's *The New Day*, Alfred Noyes' *The New Morning*, Clement Wood's *The Earth Turns South*, Elizabeth Forman's *The King of the Air*, Gretchen Warren's *The Sword*, James Brookes More's *A Lover's Rosary*, Albert Frederick Wilson's *The Township Lane*, John Bunker's *Shining Fields and Dark Towns*, Robert Bridges's *Britannia Victor*, and Samuel McCoy's *Merchants of the Morning*.

Anthologies, selections, and translations are represented by: *Selections from Swinburne* by Edmund Gosse and J. J. Wise, *Echoes from the Greek Anthology* by J. G. Legge, *Japanese Poetry—The I ta, and A Hundred and Seventy Chinese Poems and More Translations from the Chinese* by Arthur Waley, *Ulster Folk Songs and Ballads* by Padric Gregory, *The Keltarian Poetry Book* by Lady Gregory, *The Second Book of Modern Verse* by Jessie B. Rittenhouse, a second *Treasury of War Poetry* by G. H. Clarke, *The Oxford Book of Australian Verse* by Walter Murdoch, vol. v of T. H. Ward's *English Poets*, *Modern American Poetry* compiled by Louis Untermeyer, *Others—An Anthology* by Alfred Kreyenborg, *German Poetry* by E. M., *A Treasury of 17th Century English Verse* by H. J. Massingham, *The St. Andrew's Treasury of Scottish Verse* by Alexander Lawson, *Victory*, an anthology compiled by William Stanley Braithwaite, and the same editor's *An Anthology of Magazine Verse for 1918*.

DRAMA. Among the notable publications in the drama for 1919 are James M. Barrie's *Alice Sit by the Fire*, Philip Moeller's *Molière*, John Drinkwater's *Abraham Lincoln*, Arnold Bennett's *Judith*, Bernard Shaw's *Heartbreak House*, including beside the title play, *Great Catherine* and

Playlets of the War, Eugene Gladstone O'Neill's *Moon of the Caribbees and other plays*, Herbert Trench's *Napoleon*, Gilbert Cannan's *Everybody's Husband*, Eden Phillpotts' *St. George and the Dragon*, Geoffrey Whitworth's *Father Noah*, a morality play, D. H. Lawrence's *Touch and Go*, Gordon Bottomley's *King Lear's Wife*, Laurence Housman's *The Wheel*, Stuart Walker's *More Portmanteau Plays*, Herbert Tremaine's *The Handmaidens of Death*, and Percy MacKaye's *Washington*, a ballad play, and his *Will of Song*, a community festival song-play written in collaboration with Harry Barnhart. There were also: Katherine Brégy's *The Little Crusaders*, Rita Wellman's *The Gentle Wife*, Felton B. Elkins' *Three Tremendous Trifles*, *The Gibson Upright* by Booth Tarkington and Harry Leon Wilson, *Without the Walls* by Katrina Trask, *The Hand of the Potter* by Theodore Dreiser, *The Marsh Maiden* by Felix Gould, *Reconstruction* by Gordon Lea, *The Man of Kerioth* by Robert Norwood, *First Plays* by A. A. Milne, and *The Immortal Hour*, an opera, by Rutland Broughton. There is a collection of *Representative One Act Plays by American Authors* edited by Margaret G. Mayorga, and a volume of four *Harvard Plays*.

Books on the drama include: Brander Matthews' *The Principles of Playmaking*, George Pierce Baker's *Dramatic Technique*, David Belasco's *The Theatre through the Stage Door*, William Winter's *Life of David Belasco*, Arthur Hornblow's *History of the Theatre in America*, Louis Calvert's *Problems of the Actor*, Agnes Platt's *Practical Hints on Playwriting*; *Dunsany the Dramatist* by Edward Hale Bierstadt, *Ibsen in England* by Miriam Franc, *Ibsen in Germany* by William H. Eller, *Old Saws and Modern Instances* by W. L. Courtney, and *Comedians All* by George Jean Nathan.

LITERARY CRITICISM. Among the important books in this field are: G. Gregory Smith's *Scottish Literature and Ben Jonson*, J. M. Robertson's *The Problem of Hamlet*, Herbert Henry Asquith's *Sir Henry Wotton*, Lady Gregory's *Visions and Beliefs in the West of Ireland*, Walter de la Mare's *Rupert Brooke and the Intellectual Imagination*, Robert Lynd's *Old and New Masters*, Wilbur L. Cross's *The History of Henry Fielding*, John W. Cunliffe's *English Literature during the Last Half Century*, Walter Pater's collection of fugitive essays entitled *Sketches and Reviews*, Arthur Symonds' *Studies in the Elizabethan Drama*, James W. T. Ley's *The Dickens' Circle*, Walter C. Phillips' *Dickens, Reade and Collins, Sensation Novelists*, John Livingston Lowes' *Convention and Revolt in Poetry*, Louis Untermeyer's *The New Era in American Poetry*, Marguerite Wilkinson's *New Voices*, J. W. MacKail's *Pope*, A. H. Cruickshank's *Philip Massenger*, Irving Babbitt's *Rousseau and Romanticism*, E. A. Peers and Margery Finch's *The Origins of French Romanticism*; and *New Paths*, a discussion of art, fiction and poetry, edited by C. W. Beaumont and M. T. H. Sadler. Mention must also be made of: *Anatole France* by Lewis P. Shanks, *Some Modern French Writers* by G. Turquet Milne, *Main Currents in Spanish Literature* by J. D. M. Ford, *The Art of the Novelist* by Henry B. Lathrop, *Modern English Writers* by Harold Williams, *Emerson and his Philosophy* by J. Arthur Hill, *A Book of R. L. S.* by George E. Brown, *Greek Tragedy* by Gilbert Norwood, *Cervantes* by Rudolph Scheyll, *Dante*

by Henry Dwight Sedgwick, *The Life of Dante Alighieri* by Charles A. Dinsmore, *Tolstoy* by G. R. Noyes, *Currents and Eddies in the English Romantic Generation* by Frederick E. Pierce, *Books and Things* by Philip Littell, *The Erotic Motive in Literature* by Albert Mordell, *The Golden Age of Authors* by William W. Ellsworth, *Tradition and Change* by Arthur Waugh, *Ireland in Fiction* by Stephen J. Brown, and *Lewis Theobald* by Richard F. Jones.

Of philological studies there are: *On English Homophones* by Robert Bridges, *A History of Modern Colloquial English* by Henry Cecil Wyld, *On the Relations between Spoken and Written Language* by Henry Bradley, *The Pronunciation of Standard English in America* by George Philip Krapp, *The American Language* by Henry Louis Mencken, *Chapters on English* by Otto Jespersen, and further issues of *Murray's New English Dictionary* which brings that monumental work near its end.

ESSAYS. The war appears to have quickened the essayist as it has enlarged his matter. There is a struggle for new intellectual and moral footholds. Notable among the contributions of the year are: Havelock Ellis's *The Philosophy of Conflict and Other Essays in War Time*, Dixon Scott's posthumous *A Number of Things*, Max Beerhohn's *Seven Men*, G. K. Chesterton's *Irish Impressions* and *A New Volume of Essays*, Stephen Graham's *A Private in the Guards*, George Birmingham's *An Irishman Looks at His World*, Austin Harrison's *Before and Now*, Frederic Harrison's *Obiter Dicta*, Alfred Ollivant's *The Next Step*, *Uncensored Celebrities and More Uncensored Celebrities* by E. T. Raymond, *Ploughshare and Pruning-Hook* by Laurence Housman, *Echoes Old and New* by Ralph Nevill, Edith Wharton's *French Ways and Their Meaning*, "Saki's" *The Toys of Peace*, Henry Arthur Jones' *Patriotism and Popular Education*, John Middleton Murry's *The Evolution of an Intellectual*, John Galsworthy's *Another Sheaf and Lectures and Addresses*, James Branch Cabell's *Beyond Life*, Gilbert Cannan's *The Anatomy of Society*, Katherine Fullerton Gerould's *Modes and Morals*, Mrs. A. Burnett-Smith's *As Others See Her*, an analysis of the American woman, and Henry S. Canby's *Education by Violence*. Important also are: Henry Louis Mencken's *Prejudices*, Thomas Burke's *Out and About London*, Lord Dunsany's *Nowadays*, Ellwood Hendrick's *Percolator Papers*, Charles S. Brooks' *Chamney Pot Papers*, Laura Spencer Porter's *Adventures in Indigence*, William Butler Yeats' *Essays Irish and American*, Ralph Adams Cram's *The Sins of the Fathers*, Gerald Cumberland's *Set Down in Malice*, Henry Van Dyke's *The Valley of Vision*, Israel Zangwill's *Chosen Peoples: The Hebraic Ideal versus the Teutonic*, Paul Elmer More's *With the Wits*, Solomon Eagle's *Books in General*, Theodore Maynard's *Carven from the Laurel Tree*, Robert Cortez Holliday's *Broome Street Straws and Peeps at People*, E. V. Lucas' *The Phantom Journal*, Stephen Gwynn's *Irish Books and Irish People*, Edmund Gosse's *Some Diversions of a Man of Letters*, Edward Cook's *More Literary Recreations*, *Quoth the Raven* by E. V. L. and G. M., *Men and Manners in Parliament* by Henry Lucy, *The Lady* by Emily James Putnam, *Drake, Nelson and Napoleon* by Walter Runciman, and the posthumous collections *The Curious Republic of Gondour* by Mark Twain, *The Functions of the Poet*

and *Other Essays* by James Russell Lowell, *A Critic in Pall Mall*, a collection of reviews, by Oscar Wilde, and *Contemporaries of Shakespeare* by Charles Algernon Swinburne, edited by Edmund Gosse and J. J. Wise.

FINE ARTS. Painting and design are represented for the year in such volumes as: *Art and the Great War*, an important book of reproductions and critical comment, by A. E. Gallatin; *War Posters Issued by all the Belligerent Powers*, edited by Martin Hardie and Arthur K. Sabin; *Etchings and Engraving* by Joseph Pennell, *American Painting and its Traditions* by John C. Van Dyke, *Essays on Art* by A. Clutton-Brock, *Great Artists and their Work by Great Authors* compiled by Alfred M. Brooks, *Essentials in Art* by Oswald Sirén, *Art Principles* by Ernest Govert, *The Theory and Practice of Color* by Bonnie E. Snow and Hugo B. Froehlich, *Prints and Drawings by Frank Brangwyn, with some other phases of his Art* by Walter Shaw Sparrow. Architecture and decoration by: *Westminster Cathedral and its Architect* by W. De L'Hopital, *English Church Monuments of the Gothic Period* by F. H. Crossley, *Hellenic Architecture* by Edward Bell, *Old New England Doorways* by Albert G. Robinson, *The English Interior* by Arthur Stratton, *Color Schemes for the Home and Model Interiors* by H. W. Frohne and A. F. and B. Jackson, *The Practical Book of Interior Decoration* by H. D. Eberlein, Abbott McClure and E. S. Holloway, *Italian Furniture and Interiors* by George L. Hunter, and *Interior Paintings* by Patrick W. Adam. There are also: *A Musical Motley* by Ernest Newman, *English Madrigals* by E. H. Fellowes, and *The Complete Opera Book* by Gustave Kobbe.

BIOGRAPHY AND AUTOBIOGRAPHY. The year 1919 shows a considerable number of interesting biographical studies, among which are: *Samuel Butler; a Memoir* by Henry Festing Jones, a *Supplement to the Letters of Horace Walpole* edited by Mrs. Paget Toynbee, *Bolingbroke and Walpole* by J. M. Robertson, *My Generation* by William Jewett Tucker, *An American Idyll* by Cornelia Stratton Parker, *Labrador Days* by Dr. Grenfell, *The Letters of Charles Algernon Swinburne* edited by Edmund Gosse, *The Letters of Henry James* edited by Percy Lubbock, *Memories Grave and Gay* by Florence H. Hale, *The Life and Complete Works of George Herbert* by G. H. Clarke, *Frederick Locker Lampson* by Augustine Birrell, *Memories of George Meredith* by Lady Butler, *Memoirs by Lord Fisher, Henry Fox* by the Earl of Ilchester, *Fifty Years in the Royal Navy* by Admiral Sir Percy Scott, *The Life Pilgrimage of Charles Hargrove* by L. P. Jacks, *Enjoying Life and the Journal of a Disappointed Man* by W. N. P. Barbellion, *The Letters of Susan Hale* edited by Caroline P. Atkinson, *Richard Cobden* by John A. Hobson, *Clemenceau, the Man and His Time* by Henry M. Hyndman, *The Letters of Washington Irving to Henry Brevoort* and *The Letters of Henry Brevoort to Washington Irving*, both edited by George S. Hellman, *John Redmond's Last Year* by Stephen Gwynn, *Colonel John Scott of Long Island* by Wilbur C. Abbott, *Canon Barnett* by Henrietta O. Barnett, *Impressions of Theodore Roosevelt* by Lawrence F. Abbott, *Theodore Roosevelt* by William Roscoe Thayer, *The Life of Theodore Roosevelt* by William Draper Lewis and the delightful *Theodore Roosevelt's Letters to his Children* edited by Joseph Bucklin Bishop. Val-

uable also are *From Midshipman to Rear Admiral* by Rear Admiral Bradley A. Fiske, *Fernando, an Autobiographical Study* by John Ayscough, *Joyce Kilmer, Poems, Essays, and Letters* by Robert C. Holliday, *Artemus Ward* by Don Carlos Seitz, *Years of the Shadow* by Katharine Tynan Hinkson, *The Life of Mrs. Robert Louis Stevenson* by Mrs. Nellie Van de Grift Sanchez, *Marshal Ferdinand Foch, His Life and his Theory of Modern War* by Andrew H. Atteridge; four lives of *Abraham Lincoln* by Luther L. Robinson, J. Alfred Sharp, Francis Grierson, and Ralph Shirley, respectively, *Prime Ministers and Some Others* by George W. E. Russell, *Edward Wyndham Tennant* by Lady Glenconner, *The Man Called Pearce* by Desmond Ryan, *Mid-Victorian Memories* by Matilda Betham-Edwards, *Some Winchester Letters of Lionel Johnson*, *Arthur Hugh Clough* by James I. Osborne, Mrs. Gladstone, *A Memoir*, by her daughter, Mrs. Drew, *From Friend to Friend* by Lady Ritchie, *John Brown, Soldier of Fortune*, by Hill Peebles Wilson, and *Marse Henry* by Henry Watterson.

PHILOSOPHY, PSYCHOLOGY, RELIGION AND EDUCATION. The philosophical output for the year is small, including chiefly. *Morale and Its Enemies* by William Ernest Hocking, *Idealism and the Modern Age* by George Plimpton Adams, *Altruism, Its Nature and Varieties* by George Herbert Palmer, *The Present Conflict of Ideals* by Ralph Barton Perry, *Truth, an Essay in Moral Reconstruction* by Charles Walston, *Cultural Reality* by Florian Znaniecki, *A Primer of Ethics* by John M. Robertson, *The Reign of Religion in Modern Philosophy* by S. Radhakrishnan, *Life and Evolution* by J. A. Thomson, *An Examination of William James' Philosophy* by J. E. Turner, *The Relation of John Locke to English Deism* by Samuel G. Hefelbower, *The Faith of an Agnostic* by G. G. Greenwood, and *Modern Science and Materialism* by Hugh Elliott. Psychic phenomena come in for an unusual amount of attention in such books as *Life after Death and Contact with the Other World* by James H. Hyslop, *Christopher* by Sir Oliver Lodge, *The New Revelation and The Vital Message* by Sir A. Conan Doyle, *Reunion in Eternity* by Sir W. Robertson Nicoll, *Spiritism in the Light of Faith* by T. J. Hardy, *Modern Psychological Phenomena* by Hubert Lavington, and *Spiritualism: Its History, Phenomena and Doctrine* by J. Arthur Hill.

Of books on psychology there are: *The Psychology of Courage* by Herbert Gardner Lord, *Psychological Principles* by James Ward, *The Origin of Consciousness* by Charles A. Strong, *Adolescence* by Stephen Paget, *The Natural History of a Child* by Courtenay Dunn, *The Mind of a Woman* by A. P. Schofield, *The Philosophy of Speech* by George Willis, *A Fragment of the Human Mind* by Theodore Meiz, *Mind and Conduct* by Henry Rutgers Marshall, *Animism* by George W. Gilmore, *Instincts in Industry* by Ordway Tead, and *Thoughts of a Psychiatrist on the War and After* by William A. White.

Writers on religion, theological and applied, have published the following: *Edward Washburn Hopkins' The History of Religions*, A. B. D. Alexander's *A History of Religious Thought*, Hastings Rashdall's *The Idea of Atonement in Christian Theology*, A. T. Robertson's *The Divinity of Christ, The Idea of Immortality* by George Galloway, Horatio W. Dresser's *On the Threshold of the Spiritual World*, E. G. Georg

Wobbermin's *Christian Belief in God*, the second volume of George Foot Moore's *History of Religions*, the third volume of Sir James George Frazer's *Folk-Lore in the Old Testament*, the second volume of the *Dictionary of the Apostolic Church* and the tenth volume of *The Encyclopedia of Religion and Ethics*, both under the editorship of James Hastings, Frederick Schleier's *Religion and Culture*, David A. Murray's *The Supernatural*, Morris Jastrow's *The Gentle Cupic*, Alexander R. Gordon's *The Faith of Isaiah*, and Arthur Hirtzel's *The Church, the Empire and the World*. There are to be mentioned also Francis J. McConnell's *Democratic Christianity*, Bishop W. R. Inge's *Outspoken Essays*, *The Spirit: God and His Relation to Man considered from the Standpoint of Philosophy, Psychology, and Art*, edited by Canon B. H. Streeter, *Social Disorders and Social Progress in the Light of Jesus Christ* by Frederick C. Spurr, *A Conflict of Opinion* by Arthur Ponsonby, *Social Evolution and the Development of Religion* by Carl K. Mahoney, *Christian Internationalism* by William P. Merrill, *Religion and the War* edited by E. H. Smith, *Social Christianity in the New Era* by Thomas Tiplady, *Why We Fail as Christians* by Robert Hunter, and *The Spread of Christianity in the Modern World* by Edward C. Moore.

The new problems of education are discussed in *Comparative Education: Studies of the Educational System of Six Modern Nations*, edited by Peter Sandiford, Archibald E. Dobbs' *Education and Social Movements*, Ellwood P. Cubberley's *Public Education in the United States*, Andrew Fleming West's *War and Education*, Evelyn Dewey's *New Schools for Old*, Parke R. Kolbe's *Colleges in War Time and After*, Francis B. Pearson's *The Reconstructed School*, Thorstein B. Veblen's *Higher Learning in America*, J. W. Adamson's *A Short History of Education*, T. Percy Nunn's *Education*, Stewart Paton's *Education in War and Peace*, and *Problems of National Education* by twelve Scottish Educators, edited by John Clarke, also A. W. Newton's *The English Elementary School*, and C. H. Gray's *The Future and the Public Schools* (English).

HISTORY. Noteworthy among the historical publications of the year are: the eighth volume of James Ford Rhodes' *History of the United States*, *The War with Mexico* by Justin H. Smith; *Ireland and England* by Edward R. Turner, *A History of France from the Earliest Times to the Treaty of Versailles* by William Stearns Davis, *Fifty Years of Europe* by Charles D. Hazen, *The New Map of Asia* by Herbert Adams Gibbons, *The Congress of Vienna* by Charles Kingsley Webster, and *A Survey of the Ancient World* by James Henry Breasted. Important also are: E. A. Hughes's *Britain and Greater Britain in the Nineteenth Century*, *Anglo American Relations, 1861-5*, by Brougham Villiers and W. H. Chesson, J. L. Morrison's *British Supremacy and Canadian Self-Government*, William C. Braithwaite's *The Second Period of Quakerism*, Arthur R. D. Elliot's *Traditions of British Statesmanship*, W. M. Flinders Petrie's *Some Sources of Human History*, W. E. D. Allen's *The Turks in Europe*, John F. Badderley's *Russia, Mongolia, China, 1658-1796*, Morris Jastrow's *Zionism and the Future of Palestine*, Nahum Sokolow's *The History of Zionism*, vol. 2, H. B. Cotterill's *Italy from Dante*

to Tasso, H. W. V. Temperley's *A History of Serbia*, A. Bruce Boswell's *Poland and the Poles*, Norwood Young's *Life of Frederick the Great*, Nesta H. Webster's *The French Revolution*, J. Arthur Brown's *The Mastery of the Far East*, G. Wyman Bury's *Pan Islam*, Gordon C. Davidson's *The Northwest Company*, R. J. Purcell's *Connecticut in Transition, 1775-1818*, Frederick Turner's *The Frontier in American History*, Edward T. C. Werner's *China of the Chinese*, and Edward D. Trowbridge's *Mexico To-day and Tomorrow*, Palmerston and the Hungarian Revolution by C. Sproston, and the major portion of the Yale University Press' fifty Volume *Chronicles of America* series.

POLITICAL SCIENCE AND SOCIOLOGY. Reconstruction incident to the war has inspired an unusual number and variety of discussions. It is possible only to suggest those which deal with the more general problems. Harold J. Laski contributes *English Political Thought from Locke to Bentham and Authority in the Modern State*, Norman Foerster and W. W. Pierson edit *American Ideals*, and Joseph Schaffer and F. A. Cleveland edit *Democracy in Reconstruction*. Viscount Bryce publishes *Democracy*, D. P. Heatley *Diplomacy and the Study of International Relations*, Ralph Butler *The New Eastern Europe*, Edward Jenks *The State and the Nation*, Shaw Desmond *Democracy and The State of Denmark*, Bertrand Russell discusses *The Proposed Roads to Freedom: Socialism, Anarchism, and Syndicalism*, Thorstein Veblen *Vested Interests and the State of Industrial Arts*. William Franklin Willoughby writes an *Introduction to the Study of the Government of Modern States and Government Organization in War Time and After*, Oscar Terry Crosby *International War Its Cause and Its Cure*, William Roscoe Thayer *Democracy: Discipline*, Peace, S. G. Chang *Modern China: A Political Study*, Henry Chung *The Oriental Policy of the United States*, Amos S. Hershey and Susanne W. Hershey *Modern Japan: Social, Industrial, Political*, Thomas F. F. Milard *Democracy and the Eastern Question*. Of distinct importance also are: Sir Thomas Barclay's *Collapse and Reconstruction: European Conditions and American Principles*, Frederick A. Ogg and Charles A. Beard's *National Governments and the World War*, James Brown Scott's *Armed Neutralities of 1780 and 1800*, George Burton Adams' *The British Empire and a League of Peace*, David J. Hill's *Present Problems in Foreign Policy: Problems of International Settlement* by various writers, with an introduction by G. Lowes Dickinson, *How the War Came* by Robert Threshie Reid and Lord Loreburn, *Peace-Making at Paris* by Sisley Huddleston, *Documents and Statements relating to Peace Proposals and War Aims—December, 1916-1918*, edited by G. Lowes Dickinson, Woodrow Wilson's *Guarantees of Peace, International Ideas, The Triumph of Ideals, Selected Addresses and Public Papers*, and President Wilson's *Great Speeches and other History Making Documents*; William H. Dawson's *The German Empire, 1867-1914*, and the *Unity Movement; Armed Peace: A Political History of Europe from 1870 to 1914* by W. S. Davis and others, *Powers and Aims of Western Democracy* by William M. Sloane, *Prussianism and Pacifism* by Poultney Bigelow, *Experiments in International Administration* by Francis Bowes Sayre, and *The Peo-*

ple's Part in Peace: an Inquiry in the Basis for a Sound Internationalism by Ordway Tead.

More concerned with industrial reorganization are, *British Labor and the War* by Paul V. Kellogg and Arthur Gleason, *Our Social Inheritance* and also *The Coming Polity* by Victor Branford and Patrick Geddes, *The I. W. W.: A Study of American Syndicalism* by Paul F. Brissenden, *Industry and Trade* by Alfred Marshall, *Bolshevism* by John Spaigo, *The Industrial Future* by John Clifford, Lord Leverhulme and A. Maude Royden, *Bolshevism and the United States* and *After the Whirlwind* by Charles Edward Russell, *The British Revolution and the American Democracy* by Norman Angell, *Labor and Reconstruction in Europe* by Elisha M. Friedman, *The Politics of Industry* by Frank Glenn, *Social Reconstruction in Germany* by Meyrick Booth, *The Meaning of Reconstruction* by "Demos," *A History of British Socialism* by M. Beer, *The Irish Labor Movement* by W. P. Ryan, *Cooperation and the Future of Industry* by Leonard S. Woolf, and *American Labor Policy* by Julius Henry Cohen.

Of more purely sociological interest are: *The Social History of the American Family from Colonial Times to the Present* by Arthur Wallace Calhoun—third and last volume, *What is America?* by Edward A. Ross, *Rural Reconstruction in Ireland* by Sir Lionel Smith-Gordon, *Women and World Federation* by Florence G. Tuttle, *American Marriage Laws in their Social Aspects* by Fred S. Hall and Elizabeth W. Brooke and *Applied Eugenics* by Paul B. Popenoe and Roswell H. Johnson.

THE WAR The year 1919 has seen the publication of a number of attempts to present the history of the great war as a whole as well as a beginning of memoirs and narratives by military officials. Of the latter the outstanding are: 1914 by Field-Marshal Viscount John Denton Pinkstone French, *Forty Days in 1914* and *The Last Four Months: the End of the War in the West* by Major-General Sir Frederick Maurice; *The Grand Fleet, 1914-1916* by Admiral John Rushworth Jellicoe, *The History of the World War* by Francis A. March and Richard J. Beamish, with an introduction by General Peyton C. March, *Field-Marshal Haig's Despatches* edited by Lieut.-Col. J. H. Boraston, *The Battle of Jutland* by Commander Carlyon Bellaire, *The Dover Patrol, 1915-1917* by Admiral Sir Reginald Bacon, *The Dardanelles* by Maj.-Gen. Sir C. E. Caldwell, and (in translation) *My War Memories* by General Ludendorff, *Memoirs* by Admiral von Tirpitz, and *In the World War* by Count Czernin. Other histories of the war are: vols. 21 to 24, which complete *Nelson's History of the War* edited by John Buchan, vol. 6 of Sir A. Conan Doyle's *The British Campaign in France and Flanders*, Edmund Dane's *The British Campaign in Africa and the Pacific and The British Campaign in the Nearer East*, J. W. Fortescue's *Official History of the War to December, 1914*, John Buchan's *History of the South African Forces in France*, Sir Julian Corbett's *Official History of the War: Naval Operations*, vol. 1, A. E. Pollard's *A Short History of the Great War*, Roland Usher's *The Story of the Great War*, Capt. E. R. G. R. Evans' *Keeping the Seas*, Major M. H. Donohoe's *With the Persian Expedition*, Major Charles C. Turner's *The Struggle in the Air*, Douglas G. Browne's *The Tank in Action*, Solomon A. Solomon's *Strategic Camou-*

flage, V. J. Seligman's *The Salonica Side-Show*, Major H. O. Lock's *With the British Army in the Holy Land*, Arthur J. H. Pollen's *The British Navy in Battle*, and W. T. Massey's *How Jerusalem Was Won*. Also the fourth volume of Frank H. Simonds' *History of the World War*, Arthur W. Page's *Our 110 Days' Fighting*, the second volume of John Bach McMaster's *The United States in the World War*, Lieut.-Col. Jennings C. Wise's *The Turn of the Tide*, and *The Rejection History of the Great War*.

The contemporary story of Russia is told in: Arthur Ransome's *Six Weeks in Russia in 1919*, John Reed's *Ten Days that Shook the World*, E. H. Wilcox's *Russia's Ruin*, Robert E. C. Long's *Russian Revolution Aspects*, Anadna Tykova-Williams' *From Liberty to Brest-Litovsk*, General C. R. Ballard's *Russia in Rule and Misrule*, Judah L. Magnes' *Russia and Germany at Brest-Litovsk*, Capt. F. F. Moore's *Siberia Today*, and Albert Rhys Williams' *Lenin the Man and His Work*.

First among the narratives of personal experience in the war comes Brand Whitlock's *Belgium*. Important are: Philip Gibbs' *The Way to Victory*, being the last volume of his war correspondence, and *Realities of War*, Edmund Candler's *The Long Road to Baghdad*, G. M. Trevelyan's *Scenes from Italy's War*, Capt. James Norman Hall's and Lieut. Charles Bernard Nordhoff's *The Lafayette Flying Corps*, Sir Henry Newbolt's *The Book of the Long Trail*, Coningsby Dawson's *Living Bayonets*, Beatrice C. Baskerville's *The Playground of Satan*, Lewis R. Freeman's *Sea Hounds*, Ernest W. Hornung's *Notes of a Camp-Follower on the Western Front* and Robert Keable's *Standing By: War Time Reflections in France and Flanders*. There are also: *Yuska: My Life as a Peasant, Eric, and Soldier* by Maria Botchkareva, *The American Spirit* by Briggs Kilburn Adams, *Small Things* by Margaret Deland, *Fighting the Flying Circus* by Edward V. Rickenbacker, *The Command is Forward* by Alexander Woolcott, *My Italian Year* by Joseph Collins, *Fields of Victory* by Mrs. Humphry Ward, *Across the Blockade* by H. N. Brailsford, *How I Filmed the War* by Geoffrey H. Malins, *Our First Ten Thousand* by Chester W. Jenks, *The Story of the First Gas Regiment* by James T. Addison, *Gun Fodder: the Diary of Four Years of War* by A. Hamilton Gibbs, *War in the Garden of Eden* by Kermit Roosevelt, *The History of the Yankee Division* by Harry A. Benwell, *The Story of the Rainbow Division* by Raymond S. Tompkins, and *The Sword of Deborah* by F. Tennyson Jesse.

Humor is introduced into the account in Mr. Punch's *History of the Great War: A Last Diary of the Great War* by Samuel Pepys, Jr., *Sniper Jackson* by Frederick Sleath, *Mud-Larks* by Crosbie Gaistin, *Full Speed Ahead* by Henry P. Beston, and *The Exploits of Bilge and Ma* by Peter Clark Macfarlane.

TRAVEL AND OUT-OF-DOORS. Especially to be noted under this head are: W. H. Hudson's *The Book of a Naturalist* and *Buds in Town and Village*, Sir Ernest Shackleton's *South: the Story of Shackleton's Last Expedition, 1914-1917*, Rosita Forbes' *Unconducted Wanderers*, R. N. Rudmose Brown's *Spitzbergen*, John Burroughs' *Field and Study*, A. Safroni-Middleton's *Wine-Dark Seas and Tropic Skies*, Frederick O'Brien's *White Shadows in the South Seas*, Edith Wharton's *In Morocco*, Mary Gaunt's *A*

Broken Journey, Vilhjalmur Stefansson's *The Friendly Arctic*, George Trumbull Ladd's *Intimate Glances of Life in India*, and John H. Finley's *A Pilgrim in Palestine*. Worthy of mention also are: *Unexplored New Guinea* by W. H. Beaver, *Round the World in Any Number of Days* by Maurice Baring, *Among Italian Peasants* by Tony Cyriax, *Indo-China and Its Primitive People* by Capt. Henry Bandesson, *Through Deserts and Oases of Central Asia* by Ella Sykes and Brigadier-General Sir Percy Sykes, *Byways in Southern Tuscany* by Katherine Hooker, *The Romantic Roussillon, in the French Pyrenees* by Isable Savory, *Adventures in Alaska* by Samuel Hall Young, *Green Timber Trails* by William G. Chapman, *Houseboat Days in China* by John O. P. Bland, *California Desert Trails* by Joseph S. Chase, *The Land of To-morrow* by William B. Stephenson, *On Alpine Heights and Bitten Crags* by George D. Abraham, *Pekin Dust* by Ellen N. La Motte, *A Louterer in New England* by Helen W. Henderson, *The France I Know* by Winifred Stephens, *The Martyred Towns of France* by Clara E. Laughlin, *The Paris of the Novelists* by Bartlett Maurice, *The Cathedral Cities of France* by Herbert and Hester Marshall, *Holland of To-day* by George Wharton Edwards, and *Through Egypt in War Times* by Martin S. Biggs.

LITHUANIA. A part of the former Russian empire including chiefly parts of the Russian government of Vilna, Grodno, Mohilev, Vitebsk, and Minsk; formerly a grand duchy. The area has been estimated at about 100,000 square miles. According to the last Russian census the Lithuanians in Europe and Russia were placed at 2,766,805 and in addition there were 310,631 in Poland. See RUSSIA.

LIVE STOCK. MEAT PRODUCTION IN THE UNITED STATES. The following table shows the production of meat in the United States according to estimates of the United States Department of Agriculture for the calendar years 1917 and 1918. Figures are shown in millions of pounds.

	1917	1918
Beef	6,653	7,650
Veal	731	815
Pork	8,450	11,248
Lamb and mutton	473	522
Goat	18	15
Total	16,325	20,250

During 1919 production has been maintained at about the same scale as in 1918 except in the case of beef. For the first six months of 1919 the production of meat was 10,012,000 pounds as compared with 9,586,000 pounds during the same period of 1918. Beef production during the first six months of 1919 was 2,830,000 pounds compared with 3,295,000 pounds for the same period of 1918. The exports of meat products from the United States for the last two fiscal years ending on June 30th were as follows:

	1918 Lbs.	1919 Lbs.
Beef	600,100,000	591,200,000
Pork	1,706,500,000	2,724,900,000
Mutton and lamb	2,100,000	2,200,000
	2,308,700,000	3,318,300,000

The slaughter of animals under Federal inspection in the United States was as follows for the fiscal years ended June 30th:

	1918	1919
Cattle	10,938,415	11,241,991
Calves	3,322,891	3,674,227
Sheep	8,769,497	11,268,370
Goats	149,503	125,660
Hogs	35,448,848	44,398,389

The proportion of Federal slaughter to total slaughter in the United States is estimated at 60 per cent in the case of hogs and sheep, 45 per cent in the case of calves, and 75 per cent in the case of cattle.

THE WORLD'S SUPPLY OF MEAT ANIMALS. The following table gives the number of cattle, hogs, and sheep before the war and in either 1918 or 1919 in 14 of the most important countries engaged in the international trade in meat and meat products prior to the war. (From Circular 142, Office of the U. S. Secretary of Agriculture.) This table does not take into consideration the number of animals in what constituted the former Empires of Austria-Hungary and Russia or in the Balkan States, for it has not been possible to obtain recent figures as to the number in those territories.

Perusal of this table will indicate that the world's stocks of cattle have increased during the war. It is to be noted, however, that the European stocks will not for some time be available either for dairy or meat production in normal capacity on account of the still prevailing shortage of feed supplies. The widespread prevalence of foot and mouth disease on the continent of Europe can not but have a serious effect on animal production in that part of the world. In Italy it has been largely responsible for the falling off in the number of cattle, and recurring outbreaks in Great Britain have been a matter of much concern to people in that country, the disease having appeared in sections which had not recorded it in many years. Losses from foot and mouth disease in the River Platte country in South America have been heavy, the disease having assumed a virulent form.

THE HORSE SUPPLY. All authorities agree that the war has left Europe decidedly short of horses, the estimates of the number short of the needs varying materially. All over the Continent cattle have replaced horses for work purposes to a large extent, and tractors have been used wherever possible in farming operations, and mechanical traction in cities. Necessity has compelled these expedients regardless of the time consumed in performing a given operation or its cost. Estimates of the number of horses which Europe is actually short vary from slightly less than 1,000,000 head to as much as 5,000,000 head. Some horses have been exported from the United States and Canada during the last year, including Percheron horses sent to England for breeding purposes.

FACTORS AFFECTING THE INTERNATIONAL TRADE. The signing of the Armistice was followed within a few months in the United States by the removal of government control over the prices of hogs, resulting in a rapid rise in quotations, and prices on the hoof reached a higher figure than ever in the history of the industry. All meat animals were similarly affected. Lamb averages were \$17.75 per hundred pounds for the week of July 19th, hog prices reached an average of \$21.95 per hundred pounds during the week of July 12th, and beef cattle averaged \$17.30 per hundred pounds during the week of August 16th. Extreme top Chicago prices were \$18.25 during the week of July 19th on lambs and \$23.60 during the week of August 2d on hogs. From this high point on hogs the market reacted sharply, and quotations at the end of the

year were more than \$9 a hundred less than in August. Various reasons have been attributed for this extreme slump in hog prices. The statement has been made that Europe's storage capacity was crowded to the limit with meat from all over the world which was piled up after the signing of the Armistice in order to be ready for the demand from the Central Powers as soon as they were in a position to make purchases. As far as credits were available, these purchases seem to have been made, but the constant decline in the rate of exchange and the failure of continental Europe to obtain credits for its purchases has shut off orders for food products in America as well as for other supplies.

A curious feature of the situation is found in the beef cattle market, on which higher quotations on prime steers are being made than ever before. The spread on the cattle market is extraordinary, ranging from 8 or 9 cents for common butcher stock, to more than 20 cents for prime steers. The beef cattle market reached during December even higher prices than were quoted during the summer, the price of \$21.50 having been quoted on the Chicago market on December 10th.

THE NORTHWESTERN DROUGHT. The extreme drought in Texas and other parts of the Southwest was broken in the fall of 1918, and that section of the country has never had more abundant feed supplies than during the past year. The Texas drought has been duplicated to a large extent in Montana and adjoining States, in parts of which territory adequate rainfall has not been registered in three years. The drought became particularly severe in Montana and the northern two-thirds of Wyoming during 1919. It extended over western North Dakota, northwestern South Dakota, northern Colorado, Utah, Nevada, Idaho, and up into Alberta and southwestern Saskatchewan. So far as the condition of the ranges is concerned it was not so disastrous as the Texas drought. Grass had not been destroyed, and the turf remained. The condition of live stock was therefore much better than in Texas, and practically no animals had to be moved to save them from immediate starvation. Cattle were still being moved out of Wyoming and Montana in the middle of December to find feed and pasture on the more open ranges of the Southwest.

The most serious phase of the situation is the feed problem during the winter. Stockmen who were forehanded and either reduced the number of animals to be carried through the winter on

the range or brought in adequate supplies of feed, will have no serious difficulty during the winter. However, the winter was extremely early, in some sections the earliest on record, and many ranchmen had done as much feeding by the 1st of December as ordinarily is needed during an entire normal winter. The winter set in with heavy snow, high winds, and low temperatures. Large numbers of cattle and sheep were moved out of the Northwest, inferior ones being sent to market, and the better class of feeders and breeders placed on feed elsewhere. Nearby sources of feed naturally received the first shipments, and pastures in the Dakotas, Nebraska, and Oregon were soon filled up. Later shipments were sent into the Corn Belt, northern Wisconsin, Minnesota, and Michigan, and still later herds were sent to Texas and New Mexico where pasture was found in abundance and a mild winter is to be expected.

The government assisted materially in this movement, the Department of Agriculture organizing an emergency campaign, the extension divisions of agricultural colleges and county agents providing machinery through which the programme could be carried out. The Railroad Administration materially assisted in putting into effect rates on live stock shipped out to be returned, and on feed to be shipped into the drought areas.

PROGRESS OF ANIMAL INDUSTRY IN THE SOUTH. Predictions that the next great development of the animal industry in the United States would come in the Southern States are being verified. The development of the past 15 years has been noteworthy and has been accentuated by the spread of the boll weevil over the Cotton Belt which has compelled the adoption of diversified farming. The constantly growing area of cut-over pine lands is now directing attention to another possible Southern field for the development of the live-stock industry. Constantly increasing taxes without a corresponding return are necessitating the economical use of these lands, for which cattle and sheep ranching and live-stock farming offer the most promising opportunities. Most of the Southern States are attacking this problem vigorously. Landowners' associations have been organized in North Carolina, South Carolina, Georgia, and Mississippi, and the nucleus of such an organization exists in Florida. Semi-public organizations, backed by banking, lumber, and railroad interests, are fostering this movement.

TICK ERADICATION. The success of tick eradication in the South is now so well demonstrated that the end of this struggle is definitely forecast within a few years. Seventy per cent (totaling 509,085 square miles) of the area originally quarantined when the work began in 1906 had been released by Dec. 1, 1919. All of the originally quarantined area in California, Kentucky, Missouri, and Tennessee, the entire States of Mississippi and South Carolina, and over 90 per cent of Alabama and Louisiana, have been released from quarantine. Texas and Florida now remain the great strongholds of the tick, the former having cleared 40 per cent of the originally quarantined area and the latter only 18 per cent. These two States are the only ones in which less than half of the area originally quarantined has been released.

LEGISLATIVE PROGRESS. The tick eradication work is made possible by State legislation which

gives counties and States authority and funds whereby they may meet the cooperation of the federal government. This legislation ranges all the way from "local option" laws (giving the counties authority to begin independently systematic compulsory dipping of cattle), to State laws placing the entire State on a quarantine basis and compelling the systematic dipping of cattle over the entire State as the live-stock sanitary officials direct.

During the year legislation of another character made its appearance with results which promise much for the advance of the Southern live-stock industry. That is the revision of the legislation in Southern States which affects live-stock loans. Live-stock credit has been handled almost entirely through local sources, Southern live-stock paper having no market in Northern banking circles, except that originating in Texas and Oklahoma. The objections to most Southern chattel mortgage laws is that the foreclosure provisions are unduly cumbersome and that the penalties are extremely light for fraudulent removal of mortgaged property. The 1919 session of the Florida Legislature passed a live-stock loan law making foreclosure possible within 15 days, and classing fraudulent removal of mortgaged live stock as a felony when the chattels are worth more than \$100, the punishment being a fine of not more than \$5000 or imprisonment for not more than five years in States prison or both. A similar law was introduced into the Georgia Legislature, and the desirability of legislation of a like character is being considered in other States. Considerable agitation is also noticed for legislation providing State registration of live-stock marks and brands in those Southern States where live stock are handled under range conditions.

THE SOUTH AT THE INTERNATIONAL LIVE STOCK EXPOSITION. When the Hereford bull, Point Comfort XIV, won for the South the grand championship for the breed at the International Live Stock Exposition of 1913, many Northern people felt that the occurrence was a "fluke," which was not likely to be repeated often. But the record of the 1919 International Live Stock Exposition, held at Chicago during the first week in December, demonstrated the possibilities of the South as a live-stock producing section in a remarkable way. Nine grand championships were won by breeders south of the Ohio River, as follows. Shorthorn bull and cow, Hereford bull, Aberdeen-Angus bull, Percheron mare, Duroc-Jersey boar, Poland-China sow, and Hampshire ram and ewe.

Not all of these animals were actually bred on Southern farms, but the fact that they were shown from Southern herds is an illustration of the progressive spirit of Southern breeders, and those which were bred and raised on Southern farms show clearly that the South can produce as fine breeding stock as any other section of the country.

In addition to the winnings in the live-stock judging, the college judging team from the Texas A. and M. College won first in the students' judging contest, and the team representing the Texas agricultural clubs won second by one point only in the non collegiate judging contest.

LIVE STOCK DISEASES. See VETERINARY MEDICINE.

LIVING, COST OF. See FOOD AND NUTRITION.

LIVONIA. One of the Baltic Provinces

(q.v.) of Russia and a province of the former Russian empire; situated on the Gulf of Riga between Esthonia and Courland. Area, variously estimated at from 16,930 square miles to 18,158 square miles; population estimated Jan. 1, 1915, at 1,778,500. About 43 per cent of the inhabitants are Letts and nearly as many are Esthonians. About four-fifths of the population belong to the Lutheran Church. Capital and largest city, Riga, with a population estimated before the war at 569,000, of whom about 47 per cent were of German descent, 23 per cent Letts, and 25 per cent Russians. Dorpat, the seat of the celebrated university of Dorpat, and the meeting place in 1919 of the Bolshevik and Esthonian peace delegates, had a population before the war of 44,100. Livonia comprises the large island of Oesel (1010 square miles) with a population of about 65,000, chiefly Esthonians. See WAR OF THE NATIONS.

LLOYD, CHARLES HARFORD. An eminent English organist, died at Slough, Buckingham, October 16. He was born at Thornbury, Oct. 16, 1849. He served as organist at Gloucester Cathedral and later at Christ Church Cathedral, Oxford. He also conducted a number of important English festivals. He was the founder and first president of the Oxford University Musical Club.

LLOYD, Sir WILLIAM FREDERICK. Newfoundland representative at the Paris Peace Conference in 1919. He was born in England where he taught school. He became Prime Minister of Newfoundland in 1918. He had no permanent seat at the Peace Conference.

LOAN AND TRUST COMPANIES. See STATE BANKS.

LOCKS. See CANALS; DAMS.

LONDONDERRY, THERESA SUSY HELEN, Marchioness of. Widow of the late Marquis of Londonderry, died in London, March 16. She was married in 1875 to Viscount Castlereagh, who was afterwards Marquis of Londonderry, and who after the victory of the Unionist party in 1886 became Lord-Lieutenant of Ireland. During this time and later Lady Londonderry, who was celebrated for her beauty and social charm, had many friends among the most important political personages of the time, and she was prominent in leading circles.

LONGSHOREMEN'S STRIKE. See STRIKES AND LOCKOUTS.

LOS ANGELES. See MUNICIPAL OWNERSHIP.

LOUISIANA. POPULATION. The population of the State in 1910 was 1,658,388, and on July 1, 1919, it was estimated to be 1,912,603, a gain during the twelvemonth of 27,000.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu	Value
Corn	1919	1,850,000	32,375,000	\$48,562,000
	1918	1,800,000	28,800,000	46,368,000
Oats	1919	75,000	1,650,000	1,650,000
	1918	80,000	2,000,000	1,980,000
Hay	1919	250,000	a 450,000	10,350,000
	1918	225,000	a 292,000	6,190,000
Potatoes	1919	25,000	1,600,000	3,520,000
	1918	55,000	4,345,000	6,518,000
Cotton	1919	1,532,000	b 300,000	52,500,000
	1918	1,683,000	b 588,000	80,811,000
Rice	1919	560,000	19,712,000	53,420,000
	1918	580,000	16,704,000	32,573,000

a Tons. b Bales.

TRANSPORTATION. The railway mileage of the State on June 30, 1917, was 5316, including main track and branches. Since then 42 miles of first track, and several additional miles of second track, were built. The Texas and Pacific is the longest road in the State.

OFFICERS. Governor, Ruffin G. Pleasant; Lieutenant-Governor, Fernand Mouton; Secretary of State, James J. Bailey; Treasurer, Henry Hunsicker; Auditor, Paul Capdevielle; Attorney-General, A. V. Coco.

LOWER AUSTRIA. Before the downfall of the Austro-Hungarian empire, a crownland of Austria. Area, 7654 square miles; population, Dec. 31, 1910, 3,531,814. The Austrian subjects were placed at 3,264,110, of whom 3,130,536 were German speaking. Capital, Vienna. See AUSTRIA-HUNGARY.

LUBIN, DAVID. American agricultural specialist and merchant, died at Rome, Italy, January 1; best known as founder of the International Institute of Agriculture at Rome. He was born in 1840. For many years in business at Sacramento, California, but interested himself in improving the system of marketing agricultural products, promotion of complete and systematic statistical information, and development of rural credits, national marketing, etc. He succeeded in bringing before Congress a proposal for an international convention for the establishment of an International Commerce Commission on merchant marine (the measure passed Sept. 1, 1914), and he also secured the introduction of a measure for improving the parcel post service, facilitating direct dealing between producers and consumers (1916). His proposals for the International Institute of Agriculture were embodied in that institution, which has since supplied world crop, import and export reports, etc., and of which he was the American delegate. The treaty ratifying this project was signed by 53 nations. The King of Italy gave a building to the institution and the annual income of \$60,000.

LUDINGTON, MARSHALL INDEPENDENCE. Major general in the United States army, died at Skaneateles, N. Y., July 28. He was born at Smithfield, Pa., July 4, 1839, and served with distinction in the Civil War, being raised in rank for faithful and meritorious service. He was in the quartermaster's department after the war and became the quartermaster-general in 1898, and major general in 1903, when he was retired at his own request after 40 years of service.

LUMBERING. See FORESTRY.

LUTHERANS. The Evangelical Lutheran Church in America is the third largest church in the United States. Only general statistics for 1919 are available, and these show slight decreases over 1918. There were, in 1919, in the United States and Canada 3,652,010 baptized members and 2,451,997 confirmed members with 9829 ministers and 15,638 congregations. Figures for Canada for 1918 show that there were 64,490 members with 237 ministers and 827 congregations. In Canada a vast majority of the members are foreigners, largely Scandinavian, and the doctrines are taught them in 13 different languages. The following statistics are for 1918 and are the latest available.

General Council, founded in 1867, is the largest of the 14 branches of the church. There are 782,032 baptized members and 538,728 confirmed members, with 1814 ministers and 2637 congre-

gations Their property is valued at \$36,578,422.

General Synod, founded in 1820, is the next largest with 490,900 baptized members and 374,747 confirmed members, with 1452 ministers and 1834 congregations. Property is valued at \$28,166,112.

United Synod, founded in 1886, is much smaller. There were 76,196 baptized members and 55,473 confirmed members, with 262 ministers, and 494 congregations. Church property was valued at \$3,270,949.

Synodical Conference, founded in 1872, is strongest in the Middle West. It had 1,274,142 baptized members and 823,529 confirmed members with 3278 ministers and 3843 congregations. Church property was valued at \$23,972,073.

Independent Synods. The largest of these is the Norwegian Lutheran Church in America which had 443,563 baptized members and 275,996 confirmed members, with 1240 ministers and 2811 congregations. Church property was valued at \$9,843,655. There are 16 other branches of the church, among which are the Danish Lutheran Church, Icelandic Synod, United Danish Lutheran Church, Lutheran Free Church, and many State synods.

The report of the \$500,000 Reconstruction Service Campaign to Nov. 1, 1919, shows that the campaign was over subscribed by about \$57,000. Much service is expected to be made possible by this money, and already active steps are being taken to use it for the greatest possible good.

The various branches maintain a large number of educational institutions in all parts of the country. In 1919 there were 24 theological seminaries, 39 colleges, 7 ladies' colleges and seminaries, 52 academies, 62 orphans' homes, 48 homes for the aged. Also there were 9 deaconess motherhouses, 47 hospitals, 13 hospices, 8 immigrant and seamen's missions, and 11 miscellaneous institutions.

Both foreign and home missions are maintained. The home missions include 14 Inner Mission Societies and City Missions. There are 12 American societies for missionary work in India, Burma, Japan, Liberia, British Guiana, Argentine, Teluguland, Australia, Porto Rico, China, Madagascar, Persia, and among the American Indians. In 1919 there were 394 missionaries, 2648 native helpers, 123,927 native Christians, 14,214 candidates for baptism, 42,415 pupils in mission schools, and a total income of \$696,362. Total contributions for missionary work in this country for 1918 were \$6,380,153. There are 36 European missionary societies operating in many more fields. In 1919 there were 2355 missionaries, 12,014 native helpers, 964,580 native Christians, 68,190 candidates for baptism, 230,550 pupils in mission schools, and a total income of \$3,308,500. Contributions for this work ran into very large figures. The church maintains 19 publishing houses in various parts of the country, which publish 234 periodicals, a large number being in foreign languages. The *Lutheran Year Book* is published by the United Lutheran Publication House with headquarters in Philadelphia, Pa.

LUXEMBURG. A small state of central Europe bounded by Germany, Belgium, and France; neutralized by the Treaty of London in 1867; occupied by Germany during the war; restored to independence after the armistice in 1918. See *WAR OF THE NATIONS*. Area, 998

square miles; population, Dec. 1, 1910, 259,891. Capital, Luxembourg, with a population of 20,848 in 1910.

HISTORY

ABDICATION OF THE GRAND DUCHESS. On the eve of the war, Luxembourg was a neutral state politically, and autonomous, but economically incorporated in the German customs union. The victory of the Allies relieved Luxembourg from its ties with Germany, and was received with rejoicing in the country. Owing to its limited extent, the duchy could not exist by its own resources, and was obliged to apply to its liberators for aid and support. There soon appeared a party of "Autonomists" who opposed the plans of the relatively small number of "Annexationists," but it was realized that the destiny of the country must be united either with that of France or Belgium. Those who favored aggressively a close alliance with France prepared a movement against the dynasty. The reigning Grand Duchess, Marie Adelaide, had given the Entente nations some grounds of complaint as showing too much favor to the German generals and their staff, and even to the Kaiser himself, and her representatives who went to Paris after the armistice were received with some coldness. A republican committee, interpreting this attitude of the Allies as directed against the House of Nassau-Braganza, organized a debate on January 9th in the Chamber on the question of government, and held a large meeting as a demonstration in favor of a republic. There was some disorder in the streets, and a committee of safety was established which organized demonstrations, and which proclaimed the advent of a new era. A considerable number of the citizens declared their adherence to this revolution. Meanwhile, French troops had occupied the country under orders to suppress any disorder, and the movement went no further than these demonstrations. This military intervention which prevented the republicans from forcing their will upon the country was made the subject of an investigation, and led to an interpellation in the French Chamber. On January 12th, the Luxembourg Parliament received the abdication of the Duchess, and named as successor, the Princess Charlotte, the next in age of the six princesses of the grand ducal family. Plans had been made for a plebiscite to be held on May 4th to decide upon the future form of government and the question of economic union with France, but it was postponed by the decision of the Chamber. A dispatch in the press of September 29th announced that the plebiscite had pronounced by four to one in favor of the existing government.

THE COUNTRY'S FUTURE. The problem of Luxembourg's future has been discussed elsewhere, and at the close of the year 1919 it was not yet decided whether it was to remain independent or form a part of France. For an understanding of the situation a brief resumé of the historical antecedents is desirable. To the French the all-important matter was a strong frontier which would guarantee the country against future invasion from Germany, and from that point of view the destiny of Luxembourg was of the greatest moment, and every point was seized upon that would justify its annexation to France. The French pointed to the historical basis of a union with France. Twice in the past, that is, from 1684 to 1697, and from 1793 to

1814 it had been under French dominion and it had barely escaped being so the third time 50 years ago, that is, in 1867. They said that its own interests should lead it to give up its independence and break with the German dynasty, the House of Nassau, whose last representative, the present Duchess, was said to have shown undue complaisance toward the foreigners who violated the territory of Luxemburg. The government had already freed itself from the Zollverein, which had made it dependent upon the German Emperor, and it had also denounced the treaty by which its railways were maintained in the German railway system. Thus it showed a disposition to rid itself of German entanglements. Its history during the last century was briefly as follows: After it was taken from France by the Holy Alliance it was given to the King of the Netherlands, then comprising Holland and Belgium, but after the separation of these two countries in 1830 the former grand duchy was divided and the House of Orange Nassau kept only a part as defined by the Treaty of London in 1839, and while France kept certain cities acquired under Louis XIV, namely: Damvillers, Mariville, Thionville, Evoy, and Montmédy: all the rest of the country remained under the old Salic law with the result that when the present Queen of Holland came to the throne, the Duke of Nassau who had been deposed by the Prussians in 1866 became the grand duke. The Salic law excluding women did not operate permanently, however, and the granddaughter of this duke was on the throne in 1919. The status of Luxemburg under the treaties of 1815 was that of an integral part of the German Confederation. The capital which had been since the beginning of the eighteenth century one of the strongest fortresses in the world, having been equipped by the genius of the great engineer Vauban, became a stronghold under the Confederation with a garrison composed of Prussians and Austrians and though the Confederation was dissolved after the battle of Sadowa, Prussia decided on its own account to maintain this fortress, claiming it by virtue of special treaties. At this time the French government was negotiating a cession of the grand duchy, which was on the point of completion, when suddenly the secret became known, the King of Holland, before signing, having had scruples on the subject and disclosed the affair to the Prussian minister at the Hague. This news caused much excitement in Germany. Although they had seen the forcible annexation of Hanover, Nassau, and electoral Hesse, they protested against this arbitrary seizure by France of a member of the Zollverein. Benningsen, supported by Bismarck, exhibited the affair in dark colors in the Reichstag. A wave of indignation passed over Germany and war for the moment threatened, but France whose best troops were at that time in Mexico, and who had only a small army without any system of reserves, was not ready for a trial of strength. She accepted therefore an intervention of the Powers which procured for her a partial satisfaction at least in the second treaty of London, which was signed May 31, 1867, and which declared Luxemburg a neutral state and required Prussia to withdraw the garrison, and provided for the dismantling of the fortress. Germany who no more regarded the neutrality of Luxemburg than she had that of Belgium, invaded the country in 1914. The

French contended that this would be repeated in the future if the only thing that stood in its way was a written agreement. Luxemburg, they said, represented a defensive line of the first importance. For the Germans, on the other hand, it was invaluable as a military base in the event of war. Under the empire and the revolutionary republic it had been called the department of forests—a name amply justified, for it was well-wooded and rugged. There were however good roads and three lines of railway, so it had been a point of advantage in German hands against the Belgian flank of Ardennes and Alsace Lorraine. The French contended that it ought not on any account to remain in the hands of a German dynasty—the only state that retained such a relation after the overthrow of so many German thrones. The French claimed more than the limits before 1870. They pointed out that this frontier had been the result of hostile interests which wished to avenge all defeats that had been undergone by Germans from the time of Louis XIV to the time of Napoleon. It was a frontier that opened the most direct ways to Paris and aside from Alsace-Lorraine it obliged France to carry on war on her own territory. It was an artificial, unnatural, and compromising frontier, and the first duty of France was to change it. Thus the French claim in Luxemburg as well as in the Rhine provinces formed a part of the programme, supported especially by the military element, which looked to complete guarantees of France for the future, and which went so far as to arouse distrust in many quarters, both in France and in the countries of the Allies, lest there should be over-reaching in the matter, and France should acquire territory by a doubtful title and thus lead to future disputes, dangerous to herself as well as to the world.

LUXEMBURG, ROSA. German Socialist, killed in Berlin on January 15th. She was associated with Karl Liebknecht as leader of the extremists or Spartacides. She early distinguished herself for her fearless and eloquent speech and radical views. At the Jena Congress in 1906 she upheld the doctrine of the general strike against Bebel, and she consistently contended for "direct action" and the seizure of power. A sentence of two months' imprisonment on the charge of inciting to violence was the result of this speech, and from that time she frequently served terms in prison. At the outbreak of the war she was serving a long sentence on the charge of defaming military officers, and though released for a short time early in 1916 was again placed under preventive arrest. Released from prison on the outbreak of the revolution, she developed views more violent even than the general run of the Spartacus group, being practically a Bolshevik in doctrine. She was described as a woman of extraordinary personality, a cripple, and less than 5 feet tall, but filled with a fiery vigor that often swept her audience away. Though reputed to have sprung from a bourgeois family, she hated the bourgeoisie with an intense fanaticism. At the Socialist congresses she was almost invariably a storm centre, and apparently took delight in stirring up scenes of excitement.

LYNCHING. The following report was compiled by Monroe N. Work, of the Department of Records and Research of the Tuskegee Institute: There were 82 lynchings in 1919, of which

77 were in the South and 5 in the North and West. This is 18 more than the number 64 for the year 1918. Of those lynched 75 were Negroes and 7 were whites. One of those put to death was a Negro woman. Nineteen, or less than one-fourth of those put to death, were charged with rape or attempted rape. Seven of the victims were burned to death. Nine were put to death and then their bodies were burned. The charges against those burned to death were: Rape, 3; murder, 2; killing sheriff, 1; no charge given, 1. The charges against those first killed and then their bodies burned were: Attempted rape, 3; shooting officers of the law, 3; rape, 1; murder, 1; incendiary talk, 1.

The offense of murder was charged against all the whites lynched. The offenses charged against the Negroes were: Murder, 13; attempted rape, 10; rape, 9; abetting riots, 4; shooting officers of the law, 4; insulting a woman, 4; killing officer of the law, 4; alleged incendiary talk, 2; writing improper letter, 2; charge not reported, 6; shooting a woman, 1; robbery, 1; murder sentence changed to life imprisonment, 1; shooting night watchman, 1; shooting and wounding a man, 1; alleged complicity in killing officer of the law, 1; killing man in self-defense, 1; killing landlord in dispute over crop settlement, 1; no charge made, 1; for being acquitted of shooting an officer of the law, 1; remarks about Chicago race riot, 1; for keeping company with a white woman, 1; for being found under bed, 1; for making boastful remarks, 1; for alleged misleading of mobs searching for another, 1; because appeal was taken from 10 years' sentence for attempting life of another, 1; for discussing a lynching, 1.

The States in which lynchings occurred and the number in each State are as follows: Alabama, 7; Arkansas, 12; Colorado, 2; Florida, 5; Georgia, 21; Louisiana, 7; Mississippi, 12; Missouri, 2; Nebraska, 1; North Carolina, 3; South Carolina, 1; Tennessee, 1; Texas, 4; Washington, 1; West Virginia, 2; Kansas, 1.

MACAO. A Portuguese dependency in China consisting of the island of the same name at the mouth of the Canton River and the two small adjacent islands of Coloane and Taipa. Area, 4 square miles. Population (Dec. 31, 1910), 74,866. The Portuguese numbered 2171 in 1910. The city of Macao is divided into two districts, each under its own administrator, inhabited respectively by Chinese and non-Chinese.

McCAUGHEY, Sir SAMUEL. Australian sheep raider, died in Sydney, Australia, July 26. He was born at Ballymena, Ireland, 1835, and went to Australia in 1876. During the war he presented 20 battle planes to the government. After 1899 he was a member of the Legislative Council of New South Wales.

McCORMICK, ROBERT SANDERSON. A member of the well-known reaper firm and former ambassador, died April 16th; born in Rockridge Co., Va., July 6, 1849. In 1889 he was appointed secretary of the American legation at London and was afterwards representative at the World Columbian Exposition. He was appointed minister to Austria-Hungary in 1901 and on July, 1902, became the first ambassador. He was afterwards ambassador to Russia, 1902-05, and to France, 1905-07.

MacDONALD, Sir JOHN HAY ATHOLE. A British lawyer and soldier, died at Edinburgh, Scotland, May 9. He was born on Dec. 27, 1836,

of a distinguished Highland family, and studied at Basel and Edinburgh universities. He entered politics at an early age and was made Solicitor General for Scotland when the Conservatives came into power in the 70's. In 1885 he was returned to Parliament for the universities of Edinburgh and St. Andrews and was appointed Lord Advocate. While in this office he carried through the important criminal procedure act which profoundly altered Scotch criminal administration. In 1888 he became Lord Justice Clerk of Scotland under the title of Lord Kingsburgh. He had been prominent as an officer in the volunteer service, and in the last decade of the nineteenth century did important work for the improvement of military drill. In addition to these activities he was an inventor of note, especially in the field of electrical appliances. Among his numerous writings may be mentioned his reminiscences as a volunteer, published in 1919 under the title of *Fifty Years of It*.

MACEDONIA. A part of southeastern Europe corresponding nearly to the former vilayet of Saloniki in the Turkish Empire and lying west and south of the Rhodope Mountains, with its southeastern part bordering the Aegean; but after the Balkan wars partitioned among Greece, Serbia, and Bulgaria, Greece receiving the largest part. The departments controlled by Greece are Saloniki, Seres, Drama, Kozani, and Florina, with a population in 1913 of 1,194,902. See WAR OF THE NATIONS.

MACKENSITE. See MINERALOGY.

MACKENZIE, JOHN EDWARD NUTT. British journalist, died in London, February 25. He distinguished himself as the Berlin correspondent of the *London Times*. He was educated at Oxford where he graduated with honors. After serving on provincial journals he studied in Germany and France and became an assistant to the correspondent of the *London Times*, later succeeding him as correspondent (1908). Before his death he was engaged on the staff of the *Times* in London.

MACKENZIE, MONTAGUE MUIR. British jurist, died at London, England, April 18. He was born in 1847, educated at Charterhouse and at Oxford, and was called to the bar in 1873. He soon acquired a large practice especially in bankruptcy cases and was for many years counsel to the Board of Trade. He was appointed Official Referee in 1905 and his decisions were much respected.

MACLAY, EDGAR STANTON. American naval historian, died at Washington, D. C., November 2. He was born in Foochow, China, in 1863, and passed his boyhood in Japan and China; then returned to the United States and studied at Syracuse University. After graduating in 1885 he applied himself to the study of foreign navies, traveling in Europe for that purpose. Finally, he produced his chief work, *The History of the Navy of the United States*, which was adopted as a text-book by the United States Naval Academy at Annapolis. Besides this he wrote many pamphlets and articles on naval subjects.

MACLAY, JAMES. Professor of Mathematics at Columbia University, New York City, died at Glen Ridge, N. J., November 28. He was born at Troy, N. Y., Nov. 6, 1864, graduated at the Columbia School of Mines in 1888, studied at Berlin for two years, and became tutor in mathematics at Columbia in 1891, and professor in

1905, holding that chair till the time of his death.

McLEAN, THOMAS CHALMERS. Rear-admiral, United States navy, died at Utica, N. Y., August 29. He was born at New Hartford, N. Y., Oct. 25, 1847, and graduated at the Naval Academy in 1868. He became lieutenant in 1872, and lieutenant-commander in 1894. He was the executive officer of the *Detroit*, 1893-96, commanded the *Don Juan de Austria*, 1899-1901, was captain of the Navy Yard at League Island, 1903-05; commanded the *Pennsylvania*, 1905-07, and was president of the Board of Inspection and Survey from 1907 to 1909, when he retired.

MADAGASCAR. The large island off the southeastern coast of Africa, from which it is separated by the Mozambique Channel. Along with its small island dependencies (Diego-Suarez, Nossi Bé, Sainte Marie islands, and Mayotte and Comoro Archipelago), it constitutes a French colony. Capital, Antananarivo, whose population is 63,115. Area, estimated at 228,000 square miles; population, Jan. 1, 1918, 3,545,264, of whom 15,157 were French, and 3101 other Europeans. The chief tribe is the Hova, numbering 1,097,458, whose language prevails on the island. The chief port is Tamatave (population, 8617). Official schools (Jan. 1, 1918) numbered 745 with 76,243 pupils and private schools 432 with 43,994. Agriculture and stock-raising are the chief industries, and rice is the principal crop. Imports (1917). £5,470,823; exports, £3,448,318. Leading imports, cottons and clothing, leading exports, hides, wax, raffia fibre, and gold dust. Far the greater part of the trade is with France and the French colonies. The local budget estimates for 1919 balanced at 45,270,700 francs. The economic development of the colony in recent years, especially during the course of the war, is indicated by the following: The general commerce of Madagascar which in 1896 was only 17,500,000 francs, and just before the war varied slightly from a total of 100,000,000, progressed steadily from 1915, and in 1917 attained a figure of 222,000,000 francs. Figures for the years of the war were as follows: 1914, 94,039,918 francs; 1915, 109,833,460; 1916, 186,970,841; 1917, 222,978,558. Among the commodities that increased especially may be mentioned certain textiles, graphite, dry vegetables, coffee, beans, and frozen meat. Governor-general at the beginning of 1919, M. Schrameck.

During the year railway lines were under construction from Antsirabe to Tamatave on the east coast, and from the famous lake of Alaotra to Manina.

MADISON, WIS. See SEWERAGE.

MAGHALAES, OLYNTHO DE Brazilian representative at the Paris Peace Conference. He was the minister of Brazil in Paris. His diplomatic career had been long and successful. He figured prominently in the negotiations with Bolivia, arising from certain Bolivian concessions contested by Brazil. Here he was successful and as the result Brazil secured compensation. He also brought about an understanding between Brazil and Argentina and secured the treaty of general arbitration with Chile.

MAHAFFY, Sir JOHN. Irish scholar, died at Dublin, April 30. For more than 30 years he had been the foremost figure at Trinity College, Dublin. He was born in Switzerland, Feb. 8, 1839, and privately educated there up to the age of 10; entered Trinity College, Dublin, in

1856, and graduated with high honors in 1859. In 1871 he was appointed professor of ancient history in the University of Dublin and held that chair for 28 years. In pursuing the study of Greek he visited Greece and the result of his personal observations may be seen in his writings. His *Classical Greek Literature*, published in 1880, has long been regarded as a standard work. His main interest was history and he returned to that subject with the publication of *The Silver Age of the Greek World* (1906), which was originally published in 1890 under the title of *The Greek World under Roman Sway*. He devoted himself to the study of texts through the influence of his friend, Professor Savce, who submitted to him the papyri of Prof. Flinders Petrie. Mahaffy showed extraordinary ability in deciphering, and his work along this line led to his publication of *The Empire of the Ptolemies*. In the latter part of his life he gave much time to the study of the history of Ireland. In 1914 he succeeded as Provost of the university. At the time of the rebellion in 1916 he gave valuable advice to the military authorities, which together with the active service of the men of Trinity College saved property from destruction. In recognition of his aid he received the Grand Cross from the government in 1918. The list of his other writings is as follows: A translation of Kuno Fischer's *Commentary on Kant* (1866); *Twelve Lectures on Primitive Civilization* (1868); *Prolegomena to Ancient History* (1871); *Kant's Critical Philosophy for English Readers* (1871); *Greek Social Life from Homer to Menander* (1874); *Greek Antiquities* (1876) used as a school-book in France, Russia, and Hungary); *Rambles and Studies in Greece* (1876); *Greek Education* (1879); *A History of Classical Greek Literature* (1880); *Report on the Irish Grammar Schools* (1880-81); *The Decay of Modern Preaching* (1882); *The Story of Alexander's Empire* (1890); *Greek Life and Thought from Alexander to the Roman Conquest* (1887); *The Art of Conversation* (1889); *Greek Pictures* (1890); *Problems in Greek History* (1892); *Sketch of the Life and Teaching of Descartes*. He edited Duruy's *Roman History* (1883-86). Other writings and compilations are: *Alexander's Empire* (1887); *The Petrie Papyri Deciphered and Explained*; 3 vols. (viii, ix, xi) of the *Cunningham Memoirs*, published by the Royal Irish Academy (1891-1905); Petrie's *History of Egypt*, vol. iv.; *An Epoch in Irish History* (1904); *What Have the Greeks Done for Modern Civilization?* (Lowell Lectures, 1909).

MAIL BY AIRPLANE. See AERONAUTICS.

MAINE. POPULATION. The population of the State in 1910 was 742,371 and on July 1, 1919, it was estimated to be 787,042, a gain during the twelvemonth of about 5000.

OFFICERS. Governor, Carle E. Milliken; Secretary of State, Frank W. Ball; Treasurer, Joseph W. Simpson; Auditor, Roy L. Wardwell; Adjutant-General, George McL. Presson; Attorney-General, Guy H. Sturgis; Superintendent of Public Schools, Augustus O. Thomas; Insurance Commissioner, G. Waldron Smith.

JUDICIARY. Supreme Judicial Court: Chief Justice, Leslie C. Cornish; Associate Justices, Warren C. Philbrook, Albert M. Spear, Charles J. Dunn, John A. Morrill, George M. Hanson, Scott Wilson, Luere B. Deasy.

AGRICULTURE. The following table is taken

from a report of the federal Department of Agriculture.

<i>Crop</i>	<i>Year</i>	<i>Acreage</i>	<i>Prod. Bu.</i>	<i>Value</i>
Corn . . .	1919	20,000	1,100,000	\$2,145,000
	1918	23,000	1,085,000	1,728,000
Oats . . .	1919	169,000	5,746,000	5,286,000
	1918	169,000	6,760,000	6,084,000
Wheat .	1919	12,000	228,000	502,000
	1918	22,000	484,000	1,147,000
Hay . . .	1919	1,120,000	a 1,456,000	27,227,000
	1918	1,108,000	a 1,274,000	17,709,000
Potatoes .	1919	102,000	24,480,000	34,272,000
	1918	112,000	22,400,000	26,880,000

a Tons.

FINANCE. The balance on hand Jan. 1, 1918, was \$1,862,208, and on Dec. 31, 1918, it was \$1,986,494. The total expenditures during this period amounted to \$8,199,235, and the total receipts were \$8,323,521. The trust funds of the State amount to \$1,553,840.

CHARITIES AND CORRECTIONS. The State Board of Charities and Corrections has general supervision of the following institutions: State Hospital at Augusta; State Hospital at Bangor; School for the Feeble Minded, at West Pownal; Central Sanatorium for Tuberculosis Patients, at Fairfield; Western Sanatorium for Tuberculosis Patients, at Green Mountain; Military and Naval Orphan Asylum, at Bath; School for Girls, at Hallowell; School for Boys, at South Portland; Reformatory for Women, at Skowhegan; Prison, at Thomaston. See OLD AGE PENSIONS.

TRANSPORTATION. The total railway mileage in the State in 1919 was 2304. The Maine Central, and the Bangor & Aroostook are the longest roads in the State.

EDUCATION. The school age in the State is from five to 21 years. In 1919 the school population was 228,489. The following table gives additional data on education in Maine in 1919.

	<i>Elementary</i>	<i>Secondary</i>
Average daily attendance . . .	97,638	15,247
School enrollment	131,313	17,956
Number of teachers	4,848	849
Average salary of teachers . .	\$462.46	\$857.73
Total expenditure	\$3,892,279	\$1,257,114

MAINE, UNIVERSITY OF. A co-educational non-sectarian State institution, founded in 1862 at Orono, Me. Enrollment in the fall of 1919 was 1212; there were 162 members in the faculty. Funds from the State for the year amounted to \$199,986; from the federal government, \$99,901; from trust funds, \$4000. The library contains 66,000 volumes. President, Robert Judson Aley, LL.D.

MAIZE. See CORN.

MAKINO, Baron. Japanese representative at the Paris Peace Conference. He was born in 1861; was minister to Italy in 1899, and to Vienna during the Russo-Japanese War. After that he held the portfolios of Education, 1906-08, Agriculture and Commerce, 1911-12, and Foreign Affairs, 1913-14. In 1916 he was appointed a member of the diplomatic advisory council.

MALACCA. One of the Straits Settlements (q.v.).

MALARIA. The Great War has brought malaria back to England and France, countries in which it had practically become extinct. The same possibility hardly concerns the United States, in which malaria is still endemic over large areas. To such an extent is this the case

that the Rockefeller Foundation has recently reported on the ultimate likelihood of eradicating the disease from its old strongholds in the South. The problem is stated to be purely one of economics. While in urban neighborhoods it may be approached in the double way—by warfare against the mosquitos and protection of dwellings—in rural, sparsely settled and waste lands the expense of eradicating the insect would be prohibitive in the amount of ditching, draining, and other tasks of sanitary engineering required. In such neighborhoods the only practical measures are directed to the individual and involve the abundant use of netting and window screens, with house disinfection. It is largely a matter of education and of supplying the required articles by the responsible authorities. Studies in Great Britain have already shown that the infected mosquito shuns the sanitary dwelling and settles about the old fashioned domicile with its insufficient arrangements for ventilation and light and its surplussage of hangings, closets, and needless furniture. At a session of the American Therapeutic Society last June it was pointed out that the medical men were not thorough in the use of quinine. Only enough was administered to relieve the most urgent symptoms and it did not seem to be known that it is possible to eradicate the affection by persistent systematic use of the drug. It is not generally known that malaria is really a disease of childhood and youth, few contracting it after the age of 20 years. If these young persons would take 10 grains of the drug every night for eight weeks 90 per cent of them would be disinfected, while the balance would have to continue the medication for a longer or shorter interval. It was a problem to get some small children to take quinine and many disguises were suggested for this purpose.

MALAY STATES. See FEDERATED MALAY STATES.

MALTA. An island in the Mediterranean Sea, constituting along with the islands of Gozo and Comino a British crown colony; important as containing one of the finest harbors of the world, as a port of call, and as the headquarters of the British Mediterranean fleet; strongly fortified and garrisoned. The total civil population was estimated March 31, 1918, at 224,323. Valetta is the chief town and port. In 1917-18 there were 139 public schools, with 20,149 pupils, a university with 184 students, a lyceum, two secondary and seven technical manual schools. Acreage under cultivation, 1917-18, 42,849; chief products, potatoes, onions, fruits, and grain. Imports and exports (1917-18), £2,874,420 and £610,212, respectively. Tonnage (exclusive of transports) entered, 1917-19, 563,301 (318,274 British); cleared, 590,110. Railway mileage, 8½. Governor in 1919, Gen. Sir H. C. O. Plumer.

MANCHURIA. The region belonging to China between the province of Chihli and the Amur River, which separates it from Siberia, extending eastward from the Hingan Mountains to Korea. Estimated area, 363,310 square miles. estimates of population vary from about 6,000,000 to 29,400,000. For history of difficulties with Japan over Manchuria in recent years, see preceding YEAR BOOK. See also WAR OF THE NATIONS.

MANITOBA. The most easterly of the Prairie Provinces of Canada, east of Saskatchewan

and west of Ontario and Hudson Bay, and extending from the American border northward to latitude 60°. Estimated area, 251,832 square miles; population (1916), 553,860. Chief cities with population in 1916: Winnipeg (capital), 163,000; Brandon, 15,225; Portage la Prairie, 5892; St. Boniface, 10,022. Lieutenant-governor at the beginning of 1919, Sir J. A. M. Aikins; prime minister, T. C. Norris. See CANADA.

MANURES. See FERTILIZERS.

MAP CONSTRUCTION. See ENGINEERING.

MARATHONS. See CROSS COUNTRY RUNNING.

MARIETTA COLLEGE. A non-sectarian institution of learning, located in 1835 at Marietta, Ohio. The enrollment for the fall of 1919 was 238, and there were 16 members of the faculty. A new department of geology has been established with one professor. Productive funds amount to \$591,183, and the income for 1919 was \$65,513. The library contains 82,000 volumes. There is now in progress a campaign for additional endowment of \$500,000, the income from which is to be used exclusively for increasing salaries; this drive is to finish at Commencement, June, 1920. On Oct. 17, 1919, Edward Smith Parsons was inaugurated president of the college.

MARINE DISASTERS. See SAFETY AT SEA.

MARINE INSURANCE. See INSURANCE.

MARITIME PROVINCES. The name applied to the Canadian provinces of Nova Scotia, New Brunswick, and Prince Edward Island.

MARIX, ADOLPH. Rear-admiral, United States navy, died at East Gloucester, Mass., July 11. He was born at Dresden, Saxony, May 10, 1848, graduated at Annapolis in 1868, and rose through the various grades to captain, 1903, and rear-admiral, 1908. He was judge advocate of the Maine court of inquiry. During the Spanish-American war he commanded the *Scorpion* and was promoted for bravery. From 1901 to 1903 he was captain of the port of Manila and he was chairman of the Lighthouse Board from 1907 to 1910, when he retired.

MARQUETTE UNIVERSITY. An institution of learning conducted under the auspices of the Catholic Church, at Milwaukee, Wis. The summer school contained 136 students, while the enrollment for the fall was 3044. The faculty numbers 250. The library contains 30,000 volumes. Productive funds of Marquette amount to \$80,000, and the income for the year was \$300,000. During the year the University received \$333,333 from the Carnegie Foundation, and also shared in the campaign of the Wisconsin Christian Colleges, Associated. Marquette was founded in 1864. President, Rev. Herbert C. Noonan, S.J.

MARTIN, THOMAS STAPLES. United States Senator, died at Charlottesville, Va., November 12. His death was followed immediately by an adjournment of the Senate and by a eulogy by one of his former colleagues. He was born at Scottsville, Va., July 29, 1847, and educated in the schools of Virginia, but at an early age joined the Confederate army. After the war he was for two years at the University of Virginia and then studied law, being admitted to the bar in 1869. Although not well known to the general public, so late as 1893, he ran against the popular favorite, Maj.-Gen. Fitzhugh Lee, as candidate for the United States Senate, and

defeated him. He took his seat in the Senate in 1895 and was reelected successively for three terms. In Washington he showed himself a conscientious and industrious worker and was much respected by his colleagues. In the spring of 1918 he became floor leader of the minority. In politics he was described as a progressive Democrat of the old school. He served as chairman of the Appropriations Committee during the War of the Nations.

MARTINIQUE. An island in the Lesser Antilles; a French colony. Area, 385 square miles; population (1916), 193,087. Capital, Fort de France, with a population of 26,399. Imports (1917), 56,569,283 francs; exports, 81,392,263, rum and sugar being the chief exports. It is under a governor and a general council.

Foreign trade, 1918, \$20,375,247, a decrease of \$6,258,356, compared with 1917. Imports, \$10,570,794, exports, \$9,804,453. The commerce consists mainly of agricultural products, the chief ones being sugar, rum, cacao, and pineapples. In 1918 the United States contributed 50 per cent of the imports. The import trade with France (1918) declined to only 11 per cent, though before the war France had supplied more than 50 per cent of the imports.

MARYLAND. POPULATION. The population of the State in 1910 was 1,295,246, and on July 1, 1919, it was estimated to be 1,395,405, a gain during the twelvemonth of about 11,000.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu	Value
Corn	1919	693,000	28,413,000	\$39,778,000
	1918	686,000	24,010,000	32,411,000
Oats	1919	65,000	1,820,000	1,492,000
	1918	60,000	1,980,000	1,703,000
Wheat	1919	790,000	10,665,000	22,930,000
	1918	732,000	11,346,000	24,848,000
Tobacco	1919	29,000	a 19,575,000	5,872,000
	1918	32,000	a 26,560,000	7,968,000
Hay	1919	450,000	b 630,000	15,120,000
	1918	455,000	b 614,000	16,455,000

CHARITIES AND CORRECTIONS. The Board of State Aid and Charities has general supervision of all public charitable institutions, and regulates the State aid to many private institutions. The following is a list of the public institutions of the State with situation, amount of State aid, and date of establishment:

Workshop for the Blind; Baltimore; \$3 per man; 1908. School for the Deaf; Frederick; \$45,965; 1867. Rosewood State Training School; Owings Mills; \$150,200; 1888. Home and Infirmary of Western Maryland; Cumberland; 1892. Hospital for Consumptives; Towson; \$25,000; 1906. House of Correction; * Jessups; \$85,917. House of Reformation; Cheltenham; \$15,000. Industrial Training School for Girls; Baltimore; 1918. Industrial Home for Colored Girls; Melvale. Spring Grove State Hospital; Catonsville; \$128,500. Springfield Hospital for the Insane; Sykesville; \$180,000. Hospital For Negroes; Crownsville; \$65,000. Training School for Boys; Loch Raven. St. Mary's Industrial School for Boys; Baltimore; \$30,000; 1908. Tuberculosis Sanitarium; Sanitarium; \$164,200. Eastern Shore State Hospital; Cambridge;

* Under the control of the State Board of Prison Control, created in 1916.

\$40,644. Penitentiary; * Baltimore; \$45,000. Pine Bluff Sanitarium; Salisbury; \$8245.

FINANCE The balance in the treasury, on Oct. 1, 1918, was \$2,414,237 and on Sept. 30, 1919, it was \$3,018,617. The total receipts during this period were \$13,128,211 and the disbursements amounted to \$12,537,881. Quoting from the report of the Comptroller, for the year ending Sept. 30, 1919: "The fiscal year 1919 is unique in the fiscal affairs of this State, inasmuch as it marks the establishment of the Budget System. . . . I take this occasion to call your attention to what I believe is the most necessary thing in public life to-day, viz: Economy. The cost of government to the citizens of the United States is so enormous that, from my viewpoint, the present high cost of living is, to a great extent, caused by this condition." The Comptroller then goes on to estimate this cost as follows: for the Federal government, \$50 per capita; for the support of the State government, \$7 per capita; county government, \$6; cities, from \$5 to \$12 per capita. As the average family in Maryland is 4.5 he estimates the cost per family, of more than \$300 for governmental purposes in 1920.

TRANSPORTATION The total mileage of first line track in 1919 was 1409. The Baltimore & Ohio and the Philadelphia, Baltimore & Washington are the longest roads.

OFFICERS. Governor, Emerson C. Harrington; Secretary of State, Thomas W. Simmons; Comptroller, Hugh A. McMullen; Treasurer, William P. Jackson; Adjutant-General, Henry M. Warfield; Attorney-General, Albert C. Ritchie; Superintendent of Public Schools, M. Bates Stephens; Auditor, J. Enos Ray, Jr; Bank Commissioner, J. Dukes Downes.

JUDICIARY Court of Appeals: Chief Judge, Andrew H. Boyd; Associate Judges, John R. Pattison, Albert Constable, Nicholas C. Burke, William H. Thomas, Hammond Urner, John P. Briscoe, Henry Stockbridge, Clerk, C. C. Magruder.

MARYLAND, UNIVERSITY OF. A non-sectarian co-educational institution, founded in 1874 at Annapolis and Baltimore, Md. St. John's College, at Annapolis, is the liberal arts branch of the university. The other schools are law, medicine, pharmacy, and dentistry.

MASCAGNI, PIETRO See *MUSIC, Italy*.

MASON, JOHN. Actor, died at Stamford, Conn., January 12. For many years he was among the leading actors in successful plays, especially in comedy. He was born at Orange, N. J., Oct. 28, 1858, and made his first appearance at the age of 20 years at Philadelphia. The plays in which he appeared are too numerous to mention, but among those in which he was especially successful was *The Watching Hour*, 1907-08, in which he played the principal part. In 1911-12 he starred in *As a Man Thinks*. Though his acting did not indicate wide range or versatility, it was thoughtful and sympathetic and always maintained a high level.

MASSACHUSETTS. POPULATION. The population of the Commonwealth in 1910 was 3,344,516 and on July 1, 1919, it was estimated to be 3,889,607, a gain during the twelvemonth of about 57,000. By the State census of 1915 the population was 3,693,310.

AGRICULTURE. The following table is compiled

* Under the control of the State Board of Prison Control, created in 1916.

from a report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu	Value
Corn	1919	44,000	2,640,000	\$4,541,000
	1918	45,000	2,340,000	3,978,000
Tobacco	1919	10,000	a 15,400,000	7,130,000
	1918	10,000	a 15,000,000	6,000,000
Hay . .	1919	410,000	b 656,000	17,712,000
	1918	410,000	b 492,000	12,792,000
Potatoes	1919	33,000	2,970,000	5,643,000
	1918	34,000	4,522,000	7,687,000

a Pounds

TRANSPORTATION. The total railway mileage in 1919 was about 4976 miles; of this approximately 2141 was main line track. The longest roads were the Boston and Albany, the Boston and Maine, and the New York, New Haven, and Hartford.

LEGISLATION. The general and special acts and resolves passed by the Legislature during the session of 1919 made over 250 pages. Included are the following laws. Absentee voting is made possible, both for those in military or naval service, and others who make the proper arrangements with the election officers. Early in the session an act was passed declaring that all acts approved by the executive, shall, unless subject to referendum or declared to be emergency measures, take effect 30 days after formal enactment. Emergency laws take effect upon passage, and many of these were passed during the session. The maximum amount of deposit in savings banks was raised to \$4000. An act was passed enabling manufacturing corporations to provide for representation of their employees upon the board of directors, by means of a vote of more than half of those employees eligible, and by secret ballot. The hours of labor of women and children under 18 was fixed at nine per diem, or 48 per week, except in seasonal employments, where the average for the year cannot exceed 48 per week. The time of employment and other exceptions to the general rule are strictly controlled by the State Board of Labor and Industries. The amount of light in public dance halls, when dancing is under way, is henceforth to be determined by the chief of the district police. Provision is made for distribution by the Secretary of the Commonwealth of arguments pro and con measures to be submitted to the electorate under the referendum.

Massachusetts now has the following "Red Flag" law: "Any person who shall by speech or by exhibition, distribution or promulgation of any written or printed document, paper or pictorial representation, advocate, advise, counsel or incite assault upon any public official or the killing of any person or the unlawful destruction of real or personal property or the overthrow by force or violence of the government of the commonwealth, shall be punished. . . . Any person apprehended by a sheriff, deputy, . . . or police officer in violation . . . may be arrested without a warrant."

Industrial accident compensation was increased. The powers of cities and towns relative to public provision of recreation and playground facilities, were enlarged. The Legislature, over the veto of Governor Coolidge, raised their salaries from \$1000 per session to \$1500, at the same time increasing the traveling expenses of \$2.50 per mile from their homes to Boston, which had until now been law, to \$3 per mile, and including employees of the Legislature. Preference in employment of mechanics, teamsters and laborers

in the construction of public works is made as follows: first, citizens of Massachusetts veterans in the War; second, citizens of Massachusetts; third, citizens of the United States. Registration for primaries, caucuses and elections was further controlled.

The following law relates to the present H.C.L. "Maintaining or increasing unreasonably the price of any necessary of life is hereby declared to be unlawful. Whoever . . . enters into any agreement . . . to maintain or cause to be maintained or increased unreasonably the price of any necessary of life shall be deemed guilty of criminal conspiracy. . . ." To oversee the execution of this act there was established a Commission of the Necessaries of Life.

A law was enacted regulating the use of aircraft. The income tax was revised, as was that concerning corporations; also general changes were made in the tax laws, and a proposed amendment to the State Constitution enlarging the powers of taxation was referred to the Legislature of 1920, to be placed before the people if agreed to by that Legislature.

The most interesting act was that reorganizing the executive and administrative functions of the State government. Under this new law, approved July 23, 1919, there are established in addition to the Governor and his council, the secretary, the treasurer, the auditor, and the attorney-general, the following departments: agriculture, conservation, banking and insurance, corporations and taxation, education, civil service and registration, industrial accidents, labor and industries, mental diseases, correction, public welfare, public health, public safety, public works, and public utilities. A Metropolitan District Commission was also authorized, to have general supervision over the metropolitan area. The law is elaborate in its provisions concerning the organization and powers of all these departments.

Commissions were established of Foreign and Domestic Commerce, on Judicature, on Soldiers and Sailors, and on uniform State laws.

OFFICERS. Governor, Calvin Coolidge; Lieutenant-Governor, Channing H. Cox; Secretary of the Commonwealth, Albert P. Langtry; Treasurer, Charles L. Burrill; Attorney-General, Henry C. Atwell; Auditor, Alonzo B. Cook.

JUDICIARY. Superior Court of Judicature: Chief Justice, Arthur Prentice Rugg; Justices, Charles F. Jenney, Henry K. Braley, Charles A. DeCourcy, John C. Crosby, Edward P. Pierce, James B. Carroll; Clerk, Clarence H. Cooper. See MINIMUM WAGE; OLD AGE PENSIONS.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. A non-sectarian technological institution of learning located at Cambridge, Mass. The enrollment for the summer of 1919 was 981 and for the fall, 3073. There are 125 members in the faculty. The productive funds amount to \$9,500,000, and the income was \$430,000. The library contains 132,921 volumes and 49,551 pamphlets. The institute was founded at Boston in 1861 and in 1916 moved to the Charles River. President, Richard Cockburn Maclaurin, LL.D.

MASSEY, WILLIAM FERGUSON. New Zealand representative at the Paris Peace Conference. He was at that time serving as Prime Minister of New Zealand. He was born in Ulster, Ireland, and became a successful farmer in New Zealand, where he was leader of the Con-

servative party before the war. When the war broke out he was Prime Minister, and immediately showed his loyalty by offering a division of New Zealand troops to the imperial government. In 1915 a coalition with the Liberal party under Sir Joseph Ward was formed, known as the National Ministry. Mr. Massey attended the imperial War Cabinets in England in 1917 and 1918.

MATCHET, CHARLES H. American Socialist, died at Allston, Mass., October 23. He had been Socialist candidate for President in 1896, and before that had been the candidate for Vice-President on the first ticket ever put up by a Socialist party in a national campaign. He was born at Needham, Mass., May 15, 1843, was four years a sailor in the United States navy, and was afterwards engaged in various mercantile employments, finally becoming an electrician. Besides his candidacy for the presidency and vice-presidency, he had been the nominee for Mayor of Brooklyn, for Governor of New York, and for the New York Court of Appeals in 1903-04.

MATERNITY INSURANCE. See SOCIAL INSURANCE.

MATSUI, MR. Japanese representative at the Peace Conference. He was at that time Japanese ambassador to France. He was born in 1868, entered the diplomatic service in 1890, and served in the legations at Washington, London, and Pekin. In 1912 he was the vice-minister for foreign affairs and in 1915 appointed ambassador in Paris.

MAURITANIA. A special "Civilian" territory of French West Africa under a commissioner of the government-general of French West Africa. Area, 344,967 square miles; population, about 256,000, mostly Moorish Mohammedans.

MAURITIUS. An island in the Indian Ocean, about 500 miles east of Madagascar; a British crown colony. Area, about 720 square miles; population, estimated Jan. 1, 1918, 384,951. Capital, Port Louis, with a population in 1911 (with suburbs) of 50,060, mainly Indian and Chinese. Sugar cultivation is the staple industry. The 1919-20 sugar crop was estimated at 242,000 metric tons, compared with 252,770 tons in 1918. Export of sugar, 1917, £3,635,949. Total imports (1917), £2,813,280; exports, £4,128,381. Revenue, 1916-17, 1922, 937; expenditures, 1874,551. Tonnage entered, 1917, 288,320; cleared, 304,534. Governor at the beginning of 1919, Sir H. Hesketh Bell.

MAYFLOWER, TRICENTENARY OF. See CELEBRATIONS.

MAYOTTE AND THE COMORO ISLANDS. An archipelago belonging to France and administered by the governor-general of Madagascar. Area, 837 square miles; population estimated at 97,900.

MEAT. See LIVE STOCK.

MEAT, PRESERVATION OF. See CHEMISTRY, INDUSTRIAL.

MECHLENBURG-SCHWERIN. Formerly a grand duchy and constituent state of the German Empire. The throne was vacated in November, 1918. For statistics, see preceding YEAR BOOKS.

MECHLENBURG-STRELITZ. Formerly a grand duchy of the German Empire; proclaimed a republic in November, 1918. For statistics, see preceding YEAR BOOKS.

MEDICAL PROGRESS. The year 1919 saw

the aftermath of the great pandemic of *influenza* which prevailed with its original deadliness in a few countries but was chiefly replaced by the ordinary endemic winter gripple. In regard to recrudescences there have been rumors of new outbreaks in remote countries during the past Fall but nothing official as yet. The year has seen the stamping out of the last case of *yellow fever* (in Guatemala and Ecuador) but the malady may reappear at any time and strenuous preventive efforts are being made in some of the countries where its reappearance might ordinarily be anticipated. A study of *bubonic plague* during the past two years has shown conclusively that it is absolutely distinct from *influenza* and that aside from a similarity in the fatal pneumonias which complicate or constitute the two disease processes the two plagues are radically distinct, *influenza* constituting by far the greater menace even in countries ravaged by the *bubonic* disease. The menace of *typhus* as a result of the war has been slight outside of a certain zone and should the disease ever reach us it would doubtless be in a mild form. As a matter of fact under the name "Brill's Disease" it has probably been with us for a quarter century without constituting a menace at all. The white plagues of *cancer* and *tuberculosis* continue to destroy many thousands of lives annually—about 250,000 in the United States alone—and as social diseases not much headway has been made against them. Radioactivity holds out some promise for the former while as for *tuberculosis* we now know that it is very common and almost universal in mild and masked, or recovered forms and that to this fact we owe the immunity of the great bulk of the populace who have received a protection similar to that afforded by vaccination. The hardships of the war have made the subject of *nutritional* and *deficiency* diseases of great importance so that affections like *beri beri*, *scurvy*, *pellagra*, etc., on the one hand and *diabetes* and *corpulence* on the other have taken on new interest. The privations of the war have reduced the number and severity of *diabetic* cases and while in theory the group of *deficiency* diseases should have been aggravated this has not been strikingly the case. The most active subject now before the profession is the knowledge of the *internal secretions* and the part they play in both causing and curing disease. The effects of *alcohol* and *drugs* under the restrictive legislation is being watched with interest. See SOCIAL HYGIENE.

It is still much too early to sum up succinctly the degree of medical progress expected to accrue to civil practice from military experience. The expected mobilization of contagious diseases as a result of returning troops and repatriation of civilians has not yet materialized nor has our knowledge of the sum of morbidity due to underfeeding been made available. The subject of MEDICAL PROGRESS will be found under the following heads: ALCOHOL AND MEDICAL PRACTICE; APPENDICITIS; AUTOTHERAPY; BUBONIC PLAGUE; BRIGHT'S DISEASE; CANCER; DEFICIENCY DISEASES; DISEASES OF NUTRITION; DRUG ADDICTION; FOOD POISONING; INFLUENZA; INSANITY; MALARIA; ORGANOETHERAPY; PSYCHOTHERAPY; RHEUMATISM; SHOCK; SLEEPING SICKNESS; TUBERCULOSIS; TYPHUS AND TYPHOID FEVERS; and YELLOW FEVER.

MEMORIAL BUILDINGS. See ARCHITECTURE.

MERCIER, CARDINAL, Primate of Belgium, distinguished for his services to his countrymen during the war, visited the United States in September, arriving at New York September 9th. The circumstances of his sacrificing career, widely reported in the press throughout the war, may be briefly resumed here. Soon after the German invasion the Cardinal in the course of an address to his congregation said that every one should have regard for the general interest in dealing with the persons who held the country under their military power, and should respect the regulations that they imposed upon them so long as they did not interfere with their freedom of conscience as Christians, and their dignity as patriots. In October, 1914, the Belgian army, driven back from Antwerp, was stationed on the Yser and the King was separated from his people. It was at this time that the Germans deported M. Max, the Burgomaster of Brussels, and Cardinal Mercier was left alone as the spokesman for the Belgian people. In his Christmas address of 1914, he said that the duty of Belgians might be summed up in two words, patriotism and endurance; that he fully appreciated the sufferings of the country and the feelings of wounded patriotism. He declared that a country was not a mere collection of individuals inhabiting the same region, but was an association of souls, and that Belgium was bound to defend its independence. Germany had broken her oath. The rights of conscience were sovereign and it would have been unworthy of the Belgians if they had not resisted. Belgians were proud of their glorious attempt to hold back the Germans. In 1916, in the presence of the enemy, who were listening, the Cardinal declared that the hope of final victory was more than ever fixed in his mind, and that Belgians would certainly gain it in the end. They must prepare for it, he said, by patience and sacrifice, and he reminded his hearers of the overthrow of great forces in the past by means that seemed almost supernatural, when they had violated right. In all his addresses he maintained this courageous and devoted attitude, and more than that he intervened on behalf of his people, and on numberless occasions prevented the commission of crimes by the Germans. His moral authority was everywhere felt. He visited the devastated cities and called upon the humblest subjects, restoring confidence to those in despair. His vigorous words on many occasions struck home to the Germans and yet they did not dare to arrest him. In his famous pastoral letter he dared to say in plain words that Germany had violated her word and he declared to the members of his diocese that they must not renounce any of their patriotic hopes, and that he felt it his duty to explain to them the obligations of conscience in the presence of the power that had invaded their soil; that this power had no legitimate authority and that they did not owe it in their inmost soul any obedience. He declared plainly that the only legitimate power in Belgium was that which belonged to their King and government as representatives of the nation, and that the acts of the invaders would be without authority in the long run, while the legitimate authority tacitly ratified the cause of those whom public interest justified. He made the boldest possible use of his ecclesiastical authority to maintain the independent spirit of the Belgians throughout the period of the German occupation

and contributed more than any one to their firmness and courage under German tyranny.

MESOPOTAMIA. See **TURKEY** and **WAR OF THE NATIONS**.

METALLURGY. When the financial and economic conditions of 1919 and the position of the various metals in the world's commerce are considered, it is not difficult to appreciate the fact that the year was marked by comparatively few important metallurgical developments. Increasing costs of labor and materials were experienced universally, and as a result much metallurgical work aimed at reducing operating expenses. Gold mining in particular felt the increased costs and there were few if any mines in 1919 working to capacity. In South Africa mining conditions were affected by reduced hours of labor and this too was leading to the consideration of mine and metallurgical economies. The *YEAR BOOK* as usual presents herewith some of the more significant features of metallurgical progress during the year based in large measure on the authoritative reviews in the valuable annual numbers of the *Engineering and Mining Journal* (New York), and the *Iron Age* (New York).

FLOTATION. Comparatively little progress was made during the year in the development or the improvement of the flotation process which continued in wide use, extending its range in many directions. The progress in establishing the legal status of the various patents advanced further, and one of the important decisions was that of the U. S. Supreme Court that the use of more than 20 pounds of oil even in connection with violent agitation did not infringe the U. S. patent of Nov. 6, 1906, owned by the corporation which held the American patents of Minerals Separation, Ltd., although the use of a smaller quantity did constitute such a violation. The controversy regarding the air machines without mechanical agitation continued without final settlement though a decision had been rendered in favor of the Mineral Separation interests on May 25, 1917, by the U. S. Circuit Court of Appeals at Philadelphia. Certain modifications were made in the machinery about which there was a difference of opinion as to whether it did away with the infringement or not. Mechanical agitation in one form or other was being increasingly employed either by the payment of royalties or by the use of modified machines. There were two general types of machines in use; the air machines with bottoms of various types and the impeller machines; the latter being used generally where the process was practiced without the aid of concentrating tables or vanners.

As flotation was apt to fail with oxidized copper ores leaching was resorted to and flotation was used for the flotation of the sulphides after fine grinding of the leached tailings. Improved concentrators for use in connection with flotation processes were made or designed, while attempts also were made to reduce the air consumption and thus the power consumption of the flotation machine. Various experiments involving the use of alkali were also under way during the year, while preferential and differential methods were being tried. New flotation agents still were under investigation and development and in some cases these had passed from the laboratory into experimental practice.

GOLD AND SILVER. The cost of supplies and labor together with the increased value of silver

led to modifications in the metallurgy of gold and silver. With such chemicals as cyanide and quicksilver doubled or trebled in value, there was need of economy, while with silver at \$1.35 an ounce there was distinctly an object in treating silver tailings that once were neglected and wasted. Along with these considerations there was increased cost of fuel and of iron and steel for machinery or replacements. In the case of some high grade silver ores at Cobalt the high cost of mercury led to the abandonment of amalgamation for cyaniding after a preliminary treatment with bleaching powder in the tube mill. This process showed a substantial saving over amalgamation with the cost of mercury reaching \$130 per flask of 75 pounds.

For coarse crushing a gyratory crusher with receiving openings 60 x 190 inches was constructed during the year and said to be the largest in the world. A high speed gyratory crusher was placed on sale during the year but for intermediate crushing rolls were being employed and these were employed to furnish the product for the ball mills which did not seem so suitable for all crushing and grinding as some engineers had imagined.

COPPER. With a slack condition in copper production during the year in the United States attention was directed to South America where there was considerable new smelter construction in progress and it was thought by many that the Andes Mountains would experience a boom similar to that witnessed in Arizona. Four of the world's leading copper companies were engaged in the design or construction of new mills, and it was apparent that in them the most modern methods would be introduced. In the United States the modernization of plants in the Lake Superior district was under discussion with the aim among other objects of improving smelting processes.

In the United States, Mexico, and Canada, there were 11 smelters in 1919 having a capacity of 1,000,000 tons per year or more. Of these, eight had an annual capacity of at least 1,500,000 tons and ranked in order as follows: Anaconda Copper Mining Co., at Anaconda, Mont.; American Smelting and Refining Co., at Garfield, Utah; Copper Queen, at Douglas, Arizona; Calumet and Arizona Mining Co., at Douglas, Ariz.; Granby Consolidated M. S. & P. Co., at Anyox, B. C.; International Nickel Co., at Copper Cliff, Ont.; Cananea Consolidate Copper Co., at Cananea, Mex.; United Verde Copper Co., at Clarkdale, Ariz.

Special consideration was given during the year to the fact that Lake copper costs more to produce and refine than that from the deep mines of the West, and therefore metallurgists were called upon to install labor saving devices and improve processes. Smelting in small furnaces had been attended by high labor costs and loss of copper in the slag and improvements were called for. In Alaska at the Kennecott Copper Corporation and at the Calumet & Hecla in the Lake Superior District the use of an ammoniacal solution for leaching copper ore was established on a commercial basis, but while the sand could be treated with success the slime was not so readily handled and the Calumet & Hecla Co. was using a flotation process in a newly erected plant. With the combined leaching and flotation plants a daily capacity of 5000 tons of normal tailings and 3000 tons of accumulated

tailings could be handled. Both these processes were under experiment at other plants in the Lake Superior District and from their use it was hoped to reduce losses to a low point. At the West Norfolk plant of the Virginia Smelting Co where scrubbing plants had been installed to treat waste gases it was found possible to produce on a commercial basis liquid sulphur dioxide and this has become an important by-product. A similar method was employed at the Tacoma Smelter of the American Smelting and Refining Co and the liquid sulphur dioxide was readily disposed of to paper mills and sulphuric acid plants using the contact method. Thus not only is vegetation preserved in the neighborhood of smelters where ores containing considerable sulphur are treated, but a useful by-product is secured.

In blast furnace operation powdered coal was used increasingly during the year and experimental work to secure increased efficiency was under way using mixture of coal and coke. In copper reverberatory furnaces oil was being used for fuel in several large plants.

At Anaconda a new Cottrell plant for catching fumes and dust was started during the summer of 1919, while in a small installation with a plate treater at Tooele, Utah, it was possible to catch 90 per cent of the dust passing a dust chamber.

LEAD. There was decreased production of lead in 1919 and limited working of the various plants, with concentration of refining at the larger central works. Some plants sought to repair their equipment overworked during the war but there were few new installations involving departures in apparatus or methods of operation. In lead blast furnaces as in those for copper ores fuel dust was being used to replace part of the coke and blown in through the tuyères along with the air and successful results of the experiments were reported.

ZINC. Where favorable conditions existed electrolytic extraction of zinc was accepted as desirable practice though it was not found universally applicable and certain war plants were unable to continue under peace conditions. At the Risdon, Tasmania, plant of the Electrolytic Zinc Company Proprietary of Australasia, Limited, where 3822 tons of slab zinc had been produced in the year 1918 the decision was made to abandon the existing plant for one to be constructed in 1920 10 times as large. In British Columbia at Trail and in the United States at Great Falls, electrolytic capacity had been well established. In Scandinavia the electrothermic smelting of zinc was possible by the low cost of electric energy. In Belgium zinc smelting has been resumed while in Germany the extensive war production was seriously curtailed. In Great Britain attempts to establish zinc smelting were abandoned, but plans for important plants in India were under discussion. There was considerable development in metallurgical practice during the war, and metallurgists were anxious to study what was done in Germany. Naturally the zinc-lead ores and the low grade ores were receiving attention from American metallurgists and various combined or coordinated methods often to be operated on a large scale were proposed. In some cases these methods might be related in a way to electrolytic extraction, but in any case there was a tendency

to seek to increase the production of zinc through the less valuable ores.

IRON AND STEEL. There were few new or striking developments in the metallurgy of iron and steel in 1919, and these for the most part represented advances in individual plants designed to secure better practice and more efficient working according to the best modern methods. By modifying the design of the blast furnace so as to secure steeper bosh angles and a wider hearth it was found that greater tonnages could be handled and better operation secured. The steepest angle used was 82 degrees 10 minutes, and while there was a difficulty with some of the wider hearths to restore a furnace to temperature in case the hearth got cold, yet there were evidences of a tendency towards a further increase in the bosh angle until the bosh and even the shaft itself might be straight.

The use of tar and coke oven gas combined as fuel in the open hearth process was a development of the year, due to the fact that the extraction of benzol from the coke oven gas required its enrichment by hydro-carbons in order to restore its illuminating power. This is necessary as the heat transmitted to the bath of molten steel depends upon radiation and the high caloric power of the coke oven gas is not of itself sufficient once the benzol is extracted. Combined with the tar however there is secured both caloric value and radiating power and the heavy gas is readily deflected downward over the bath. This was being accomplished with facility by a special combination burner which properly distributed the combined gas to the furnaces.

The duplex process where acid-Bessemer converters were employed with tilting or stationary open-hearth furnaces continued in increased use and possessed the important advantage in 1919 of being distinctly economical of labor, the production per man being more than twice that of the straight open hearth process. Where there was sufficient blast furnace capacity and iron costs were low especially the scrap iron employed in mixture with the pig, the duplex process was most advantageous and in several American plants in 1919 it was the only way in which production could be maintained.

The manufacture on a large scale of ordnance during the war led to an increased production of acid open-hearth steel inasmuch as it was considered to afford better gun forgings than the basic steel, but other advantages were not so apparent that it was likely to retain this temporary position in the American steel industry generally.

The electric steel furnace in 1919 was in large measure replacing the older crucible process as it could produce a quality of steel equal to crucible steel, and for steel for automobiles and fine tools it was supplementing the open hearth process in the production of high quality steel. The electric furnace promised to play an important part in the reconstruction of destroyed French and Belgian plants where the pig-iron from local ores contained a high percentage of sulphur. In as much as the steel produced in pre-war days by the basic Bessemer process was not of the best quality on account of the ore, it was being considered in the redesign and rebuilding of the plants whether it would not be desirable to employ electric furnaces of large capacity to which the product of a basic Bessemer converter could be duplexed.

The shortage of coal in Europe naturally led to the extension of electro-metallurgical processes wherever power was available and while in Scandinavia the electric reduction of iron ores to pig iron not only was on a firm commercial basis but considerable extension of such electrical plants was under way. At Lulea six 2500 k.w. furnaces were in course of erection in 1919 and this was but an example of similar activity. In fact it was considered quite probable that no more iron blast furnaces would be built in Sweden.

An interesting development of the war was the production of "Synthetic Cast Iron" made from steel turnings by melting in an electric furnace in contact with coke. Over 150,000 tons of this product were produced in France by a single company operating three works, and the process was considered remarkably useful. To reduce the conductivity of the mixed charge of steel turnings and coke, and at the same time to desulphurize the metal, basic slag is mixed with the charge. Carburization of the iron begins well before fusion, but increases much more rapidly as the melting temperature is approached, and complete carburization is obtained upon melting. In case the raw material used is too high in phosphorus, dephosphorization must be carried on in an electric furnace with partial carburization, and the remaining carburization then is accomplished in an open furnace. By this process power consumption is more than doubled, and iron of a very high degree of purity is obtained. This process was discussed at considerable length by C. A. Keller at a meeting of the Iron and Steel Institute of Great Britain in September, 1919.

The electrolytic refining of iron on a commercial scale was under way in France in 1919. A new process for the electro-deposition of iron in the form of bars and boiler tubes was developed in France and Switzerland, and employed a ferrous chloride electrolyte, a rotating cathode, and a special depolarizing agent. It used a current of about 1000 amperes per square meter and to produce one ton of finished tubes there was required an electric power consumption of $\frac{1}{2}$ horse power per year. Any kind of scrap iron or steel can be used, and while tubes as they come from the mandrels are brittle, the hydrogen can be removed by annealing and a pure and ductile product secured.

Electric furnaces also figure to an increased degree in various processes for automatically heating, hardening, and tempering steel. Here exact temperature control was an important consideration and more accurate regulation of heat was possible than with other types of furnaces.

The electric furnace also made progress during the year in the treatment of the non-ferrous metals. An added reason was the increased cost of crucibles and the further fact that even at twice the expense they were not as lasting as those built a few years previously. In Bridgeport, Conn., alone 50 or more electric brass furnaces had been installed and America was developing extensively this new field of metallurgy.

METALS. See CHEMISTRY, INDUSTRIAL.

METEOROLOGY. The activities of meteorologists throughout the world have undergone remarkable developments and readjustments during the last two or three years. These changes were hastened by the war, but some of them would in any case have come to pass in the

course of time. Meteorology, as an applied science, has necessarily enlarged its outlook to take account of the rapid expansion of aeronautics. The weather reports and forecasts that serve the needs of agriculture, marine navigation and other pursuits upon the surface of the globe are not fully adapted to the requirements of aeronauts. The development of appropriate aeronautical weather services is now in course of realization in nearly all civilized countries. A notable consequence of the war was the addition of meteorological work to the routine activities of armies and navies. Military establishments will henceforth include meteorological units, in peace as well as in war. Apart from the results of the war, rapid progress has been made in the applications of meteorology to agriculture, commerce, industry and other interests. Hence this science, which was formerly a somewhat narrow specialty, now appeals to a wide circle of workers and students.

Two illustrative facts may be cited in this connection. 1. In February, 1919, the U. S. Bureau of Education, at the suggestion of the Weather Bureau, addressed a questionnaire to American universities and colleges in order to ascertain the amount of instruction in meteorology given in such institutions. Replies received from 433 institutions show that 70 of them offer distinct courses in meteorology or climatology, while 83 teach these subjects in connection with more general courses. A few years ago collegiate instruction in meteorology was a rare exception in this country, and, indeed, in every country except Germany. 2. The American Meteorological Society, projected by Dr. C. F. Brooks, was organized in December, 1919, and at the close of the year about 600 applications for membership were pending. Until recently it has been believed that a national meteorological society in the United States would be little more than a replica of the staff of the Weather Bureau, and that therefore such an organization was superfluous.

Space is not available here to record all the changes that have lately taken place in weather services, with respect to their duties and their affiliations, but the following may be mentioned as especially significant.

Under the auspices of the International Research Council there was established at Brussels, in July, 1919, an International Union of Geodesy and Geophysics, one section of which is to be devoted to meteorology. Side by side with this new body, the old international organization of official and quasi-official meteorological services has decided to perpetuate its existence. After a preliminary meeting of certain members of the old International Committee, held in London in July, a larger conference was convoked in Paris, Sept. 30-Oct. 6, 1919, at the invitation of the French government. At the latter meeting it was decided to hold conferences of directors every six years, and to renew the International Meteorological Committee and its Commissions almost on a pre-war basis, except that the maximum membership of the Committee is increased from 17 to 20, and the Central Powers, are not, at present, represented.

In Great Britain, the Meteorological Office has been attached to the air ministry, and its forecast service has been transferred to the headquarters of that ministry. The office has materially enlarged its responsibilities by absorbing

the British Rainfall Organization, hitherto an independent and unofficial concern, comprising a corps of about 5000 rainfall observers in the British Isles.

Before the war the exchange of weather reports between the countries of Europe was seriously hampered by the slowness of telegraphic transmission. Some progress had, however, been made in the issue of meteorological bulletins from high-power radiotelegraphic stations, such as the Eiffel Tower; chiefly for the benefit of mariners. During the war the urgent necessity of keeping the air service, artillery, etc., supplied with the latest weather information led to the general use of radiotelegraphy for this purpose, and the same system has now been extensively adopted for ordinary peacetime uses. In France, for example, reports of the surface weather conditions at about 25 French stations, together with Brussels and Mainz, and also the results of upper-air soundings at certain stations, are issued four times a day by radio from the Eiffel Tower for the information of all countries within range. Within France itself more frequent reports from a greater number of points are exchanged by a network of smaller radio stations. Several other European countries have adopted more or less similar systems, or are about to do so. The new-style weather reports, transmitted by radio, are more elaborate than those exchanged by wire before the war, and include data of special value to aeronauts, such as the degree of "visibility" and the force and direction of the winds at different levels. The British Admiralty is organizing a world-wide system of collecting wireless weather reports from ships at sea three times daily, and of supplying comprehensive weather bulletins and forecasts to ships in all parts of the ocean. These reports will also be of great value to aeronauts. The British Meteorological Office has added an "upper-air supplement" to its daily weather report, and detailed information in regard to flying conditions is now published in the British newspapers.

In the United States upper-air soundings are now made daily at upwards of 20 stations, maintained by the Weather Bureau, the army, and the navy. The results are telegraphed to the headquarters of the Weather Bureau, in Washington, where daily aviation weather bulletins and forecasts have been issued regularly since December, 1918. This Bureau has also made special arrangements for furnishing appropriate weather data in connection with important flights, such as those recently accomplished across the Atlantic, and in connection with balloon races and other aeronautical events.

Several proposals have been put forth looking to the regular use of aeroplanes for making upper-air observations. Military aviators took such observations to some extent during the war. New acoustic methods of pilot-balloon sounding were developed by both the French and the German armies during the war, and the details have recently been made public. The sounds produced by a series of explosions of "crackers," carried by the balloon, are registered by suitable apparatus, and the course of the balloon can thus be followed when optical observations are impracticable on account of fog or clouds. The Smithsonian Institution has announced that Prof. R. H. Goddard, of Clark College, has invented a new form of rocket capable of carry-

ing self-registering meteorological instruments to the extreme limits of the earth's atmosphere. The U. S. Weather Bureau has introduced an ingenious method of plotting the winds above the earth, in which the problem of charting in three dimensions is satisfactorily solved. A base-map carries little metal posts, one above the position of each aerological station, and the direction and force of the winds at various levels over these places are shown by means of a series of adjustable arrows, attached to the posts. When the telegraphic reports from the balloon and kite stations have thus been charted, the completed map is photographed with a stereoscopic camera, the pair of pictures obtained being finally mounted for inspection with a stereoscope.

During the year 1919 the Weather Bureau took over the Hawaiian Volcano Observatory, at the crater of Kilauea, and, to this extent, added volcanology to the programme of its activities. Another new departure in Weather Bureau work is the Highway Weather Service, the duties of which are to assemble and distribute information concerning the state of important roads, for the benefit of motorists and others. In response to a widespread demand on the part of heating and ventilating engineers and various industries, the Bureau has considerably enlarged its observations of atmospheric humidity.

A new edition of the Smithsonian Meteorological Tables (dated 1918 but published in 1919) embraces a number of novel features, such as tables for converting millibars (the new unit of atmospheric pressure) to millimeters and inches, and a material revision of the vapor pressure tables, in accordance with a formula devised by Professor Marvin.

Dr. W. J. Humphreys, of the U. S. Weather Bureau, has added memoirs on the optics of the air and the factors of climatic control to the series of papers on the physics of the air which he has been contributing to the *Journal of the Franklin Institute* since August, 1917. This series, which embodies a critical revision of existing knowledge on the subject of meteorological physics, will probably be reprinted in book form. A summary of available information concerning the characteristics of the free atmosphere, by W. H. Dines, has been issued as a *Geophysical Memoir* of the British Meteorological Office. C. F. Marvin has made a mathematical analysis of the daily temperature values at several long-record stations in the United States, from which he concludes that such alleged recurrent irregularities as the "January thaw," the "ice saints" of May, etc., have no real existence. The Prussian Meteorological Institute has published a monumental work by C. Dorno, of Davos, Switzerland, dealing with the illumination of the sky, atmospheric polarization, and kindred phenomena, as studied at the author's unique Alpine observatory. Several tentative applications of cinematography to the study of series of daily weather maps have recently been reported. A. E. Douglass has published an elaborate study of the annual rings of trees in relation to climate and solar activity.

New meteorological instruments include an improved pole-star recorder (for registering nocturnal cloudiness) and an improved snow-sampler, both devised by B. C. Kadel; and a new continuous recorder of atmospheric pollution, in-

troduced by the British Advisory Committee on Atmospheric Pollution.

In commemoration of the 80th birthday of the distinguished Austrian meteorologist Dr. J. von Hann, Mar. 23, 1919, a large sum of money raised among his friends and admirers in many countries was placed under the charge of the Vienna Academy of Sciences for the purpose of providing a periodical *Hann Prize* for achievements in meteorology.

The necrology of the year includes the names of Dr. John Aitken, Walter G. Davis, Capt. M. W. Campbell Hepworth, William Allingham, W. L. Dallas, R. H. Curtis, and Father W. Sidgreaves.

Among the meteorological books published during 1919, in addition to those already mentioned, are Sir Napier Shaw, *Manual of Meteorology*, part 4; J. Rouch, *Manuel Pratique de Météorologie*; C. Dorno, *Physik der Sonnen- und Himmelsstrahlung*; E. H. Chapman, *The Study of the Weather*; and D. W. Mead, *Hydrology*.

See HURRICANES.

METHODIST EPISCOPAL CHURCH.

Statistics for 1919 for this denomination show that there were 3,793,618 full members and 381,884 probationers with 18,000 ministers with full connection and 1693 on trial, besides 14,291 local preachers. The 29,849 church buildings had an aggregate value of \$236,786,939, and the 15,342 parsonages were valued at \$41,600,739. Sunday schools numbered 35,475 with 4,324,458 pupils and 393,122 teachers and officers. Besides the United States, the denomination has churches affiliated with the Methodist Episcopal Church in the United States, in Denmark, Finland, Korea, North China, Norway, Sweden, and Switzerland, and missions among the Pacific Swedish, Pacific Chinese, Pacific Japanese, in Alaska, Arizona, Russia, and Utah.

This denomination with all its branches is the second largest in the United States. Statistics for many of the branches will be found under their separate headings. Reports for the Methodist Episcopal Church, the original denomination, show 3,574,386 full members and 125,184 probationers, in 1919. There were 17,044 full ministers, 1405 on trial, and 9912 local preachers, using 27,469 church buildings with an estimated value of \$230,326,863, and 13,626 parsonages with a value of \$21,349,826. The 27,170 Sunday schools in this country had an enrollment of 3,951,350 pupils with 374,220 officers and teachers.

The Epworth League, which is the largest church society, had an enrollment for the entire denomination of 504,923 senior members and 207,144 junior members. In the United States alone there were 282,501 senior members and 90,997 junior members. The above figures show a slight decrease from the corresponding figures for 1918.

During the war, the National War Council of the Methodist Episcopal Church did valuable work in raising money to help parishes near army camps that the men in service might have all the opportunities desired to continue their religious devotions, and to spend some of their free time with the local members of the church. With the help of the Board of Foreign Missions, aid was given to some of the orphans in France, left destitute by the war. In Italy much refugee work was accomplished and many

preachers in that country were aided. During 1919 the work was continued on a modified scale. In the United States much work was done in protecting girls and women in large cities, in improving conditions surrounding industrial plants, and other general protective work. Most of the 220 chaplains in the army during the war returned to civil life during the year.

Missionary work is carried on in Africa, China, Japan, Korea, Malaysia, Philippine Islands, India, South America, and Mexico. Missionaries, including regularly appointed men and women of the Board of Foreign Missions and of the Woman's Foreign Missionary Society totaled 1589. The complete enrollment in 1919 of members of the churches in missionary lands was 484,937, to which must be added 125,705 baptized children, and 60,076 unbaptized adherents, making a total of church members and adherents of 670,718. The total contributions of the church for foreign mission work were \$1,035,653, an increase of \$207,565 over 1918. The Board of Foreign Missions maintains 18 colleges and universities with an enrollment of 2662; 64 theological and Bible Training Schools with 1464 students; 105 high schools with 13,602 pupils in attendance; 2723 elementary schools with 81,393 pupils in attendance, or a total of students in all schools of 99,121, a gain over the previous year of 877. Much work is done among the negroes by the Freedmen's Aid Society. The society is endeavoring to educate the negro to be self-supporting, to compete for a living against the white man, and to help him improve the conditions under which he lives. Twenty-one institutions are maintained in which, in 1919, there were about 6000 students, taught by about 350 teachers. The courses cover every phase of literary and industrial education.

The Board of Education stands in a supervisory relation to 42 universities and colleges, seven professional and graduate schools, 34 secondary schools and 18 institutions for negroes. The total endowment of these institutions in 1919 was \$40,617,170, the total amount of annual income was about \$6,500,000. Among the universities the most important are: De Pauw University, Indiana; Northwestern University, Illinois; University of South California; Ohio Wesleyan University; Boston University, and Wesleyan University. The board maintains a Student Loan Fund to help students to complete their courses at the various institutions. During 1919 this fund was used by a large number of students. The church also maintains 89 deaconess homes, 24 deaconess hospitals, and 10 deaconess training schools. Besides these there are 51 regular hospitals, 39 children's welfare institutions, and 39 homes for the aged. The Methodist Book Concern publishes many periodicals which are sent to all parts of the country. Its headquarters are in New York with branch offices in Boston, Pittsburgh, Detroit, Cincinnati, Chicago, Kansas City, and San Francisco.

METHODIST EPISCOPAL CHURCH, SOUTH. Statistics for 1919 show in this denomination 2,178,414 members; 7390 traveling preachers, not including supplies; 4879 local preachers, including supplies; 1,737,383 Sunday school pupils, with 139,791 officers and teachers, and 112,764 members of the Epworth League.

Churches numbered 17,376 with a value of \$63,823,880, and there were 5627 parsonages with a value of \$12,833,138. The above figures are approximately the same as in 1918. Missions are maintained in Brazil, Central Mexico, China, Cuba, Korea, Mexican Border, and Pacific Mexico. For purposes of administration, the denomination is divided into 50 conferences and 330 districts. The College of Bishops, composed of 19 ministers from all parts of the South and Southwest, comprises the executive body of the church. The principal periodicals are the *Methodist Review*, and the *Christian Advocate*. Educational, missionary, and relief work is carried on by committees appointed by the College of Bishops.

METHODISTS, CANADIAN. In 1883 the Methodist Episcopal Church, the Wesleyan Methodist Church, the Primitive Methodist Church, the Methodist New Connection Church, and the Bible Christian Church united to form the Methodist Episcopal Church in Canada as the beliefs of the five were very similar, and much better work could be done by coöperation. Besides the Dominion of Canada and Newfoundland, there are churches in Bermuda that are affiliated with this denomination. Canada is divided into 12 conferences which are further subdivided into many districts, for the purpose of administration and organization. The conferences are as follows: Toronto, London, Hamilton, Bay of Quinte, Montreal, Nova Scotia, New Brunswick, Prince Edward Island, Newfoundland, Manitoba, Saskatchewan, Alberta, and British Columbia.

Statistics for 1919 show there was a total membership of 388,210 including probationers; 2759 regularly ordained ministers; 2138 lay preachers, and 3745 churches. Sunday schools numbered 3600, with 413,421 pupils, and 41,382 officers and teachers. In the Young Peoples' Societies there were 2300 active organizations. The above figures show a slight decrease from 1918. A board of education has supervision over 17 colleges and universities, the most important of which are: Victorian University, in Toronto; Mt Allison University in Sackville, N. B.; Wesleyan Theological College in Montreal, and Wesley College in Winnipeg. The *Christian Guardian* is the principal periodical published by the denomination.

METHODISTS, COLORED. Statistics for 1919 for this denomination show that there were 267,361 members and probationers; 3402 ordained ministers; 2786 lay preachers; 3485 church buildings, 4007 Sunday schools with 79,876 pupils and 7098 officers and teachers. This denomination was originally a part of the Methodist Episcopal Church, South.

AFRICAN METHODIST EPISCOPAL. Figures for 1919 for this denomination, show that there were 551,766 members and probationers; 5100 ordained ministers; 6302 lay preachers; 6879 church buildings; 5695 Sunday schools with about 310,000 pupils and 39,301 officers and teachers. This denomination resulted from the dissatisfaction of some negroes with the Methodist Episcopal Church and the new church was formed in 1815.

AFRICAN METHODIST EPISCOPAL ZION CHURCH. In 1919 there were in this denomination 455,873 members and probationers; 3241 ordained ministers, 649 lay preachers; 3180 church buildings; 5694 Sunday schools with 119,150 pupils,

and 14,404 officers and teachers. The church maintains 12 schools and publishes four periodicals, the principal one being the *Star of Zion* (weekly).

AFRICAN UNION METHODIST PROTESTANT CHURCH. Statistics for 1919 show that in this denomination there were 15,000 members and probationers; 250 ordained ministers; 750 lay preachers; 200 church buildings; 66 Sunday schools; 5266 pupils, and 441 officers and teachers. This denomination was founded in Delaware in 1813, and in 1865 united with the First Colored Methodist Protestant Church. The only periodical is the *Union Star*.

REFORMED METHODIST UNION EPISCOPAL CHURCH. Statistics for 1919 show that there were in this denomination 2000 members and probationers; 35 ministers, and 28 churches. These figures show a loss of about 60 per cent over the previous year. Originally a part of the African Methodist Episcopal Church, the Independent Methodist Church was founded in 1884. Later the name was changed to the Reformed Methodist Union Episcopal Church.

UNION AMERICAN METHODIST EPISCOPAL CHURCH. Statistics for 1919 for this denomination show that there were 3625 members and probationers; 205 ministers, 67 churches, 78 Sunday schools with 3372 pupils and 481 officers and teachers. The Union Church of Africans was organized in 1813 because the negroes objected to white control of the churches. In 1850 there was a split in the church, and the Union American Methodist Episcopal Church was formed. A school is maintained in Camden, N. J. The principal periodical is the *Union Messenger* published in Media, Pa.

REFORMED ZION UNION APOSTOLIC CHURCH. Statistics for 1919 for this denomination show that it had 9000 members, 44 ministers, and 51 churches. The church was reorganized in 1882 from the Zion Union Apostolic Church which was split up in 1869. A school is maintained in La Crosse, Va.

METHODISTS, WESLEYAN. In Great Britain and Ireland, this is the principal Methodist denomination. Statistics for 1919 show a slight decrease in the size of the church. In Great Britain there were 485,533 members and probationers; 2594 ordained ministers, 18,618 lay preachers; 8528 churches; 7364 Sunday schools with 869,334 pupils and 125,663 officers and teachers. In Ireland there were 27,226 members and probationers, 258 ordained ministers; 622 lay preachers; 488 churches; 329 Sunday schools with 21,930 pupils and 2149 officers and teachers. Foreign missions had 204,719 members and probationers; 632 ordained ministers, 8107 lay preachers; 3707 churches; 2351 Sunday schools with 142,403 pupils and 9168 officers and teachers. The French Conference reported 1433 members, 31 ministers, and 62 churches. The South African Conference reported 143,897 members and probationers; 294 ordained ministers; 4627 lay preachers; 1280 churches; 904 Sunday schools with 42,582 pupils and 3106 officers and teachers. These latter figures show marked progress during the year.

PRIMITIVE METHODIST CHURCH. There were in 1919 in this denomination 206,035 members and probationers; 1093 ordained ministers; 14,602 lay preachers; 4798 churches; 4019 Sunday

schools with 416,937 pupils, and 56,124 officers and teachers.

UNITED METHODIST CHURCH. There were in 1919 in this denomination 182,344 members and probationers; 734 ordained ministers; 5919 lay preachers; 3090 churches; 2239 Sunday schools with 271,245 pupils and 37,611 officers and teachers.

WESLEYAN REFORM UNION CHURCH. There were in 1919 in this denomination 8671 members and probationers; 26 ordained ministers; 423 lay preachers; 213 churches; 190 Sunday schools with 13,950 pupils and 2475 officers and teachers. The above figures show a marked loss over the corresponding figures for 1918.

INDEPENDENT METHODIST CHURCH. There were in 1919 in this denomination 9621 members and probationers; 378 ministers; 146 churches; 159 Sunday schools with 25,432 pupils and 2945 officers and teachers.

AUSTRALASIAN METHODIST CHURCH. There were in 1919 in this denomination 179,215 members and probationers; 1102 ordained ministers; 9074 lay preachers; 4450 churches; 4000 Sunday schools with 210,000 pupils and 25,578 officers and teachers.

NEW ZEALAND METHODIST CHURCH. There were in 1919 in this denomination 25,180 members and probationers; 181 ordained ministers; 925 lay preachers; 468 churches; 422 Sunday schools with 29,035 pupils and 3162 officers and teachers.

JAPAN METHODIST CHURCH. According to the latest available statistics (1918) there were in this denomination 15,364 members and probationers; 241 ministers; 245 churches; 340 Sunday schools with 28,438 pupils and teachers.

Methodism is also represented in the following countries, the figures being the latest available membership: Austria-Hungary, 955; Bulgaria, 691; Denmark, 4092; Finland, 1611; France, 507; Italy, 4132; North Germany, 14,760; Norway, 6132; Russia Mission, 452; South Germany, 14,005; Sweden, 16,454; Switzerland, 10,597. See also **WESLEYAN METHODIST CONNECTION IN AMERICA.**

METROPOLITAN OPERA HOUSE. See **MUSIC, OPERA.**

MEXICO. A federal republic lying to the south of the United States and to the north of Central America. Capital, Mexico, which is in the Federal district.

AREA AND POPULATION. The country is divided for administrative purposes into 28 states, one Federal district, and two territories. Area, estimated at 767,198 square miles or 25.25 per cent of the area of the United States. This area includes islands with an area of 4042 kilometers which are not included in any of the states or territories. The population according to the census of 1910, 15,115,612; estimated, 1912, 15,501,684. Chief cities with their populations of 1910 are: Mexico, 571,066; Guadalajara, 119,468; Puebla, 96,121; San Luis Potosi, 68,022; Monterey, 73,528; Merida, 62,447; Leone, 57,722. Complete figures for emigration and immigration could not be obtained but from September, 1918, to June, 1919, the emigrants numbered 47,978, and the immigrants 60,068. The prevailing religion is Roman Catholicism, but there is complete religious toleration under the constitution and the church is separate from the state. Education is free and compulsory and with the exception of the Federal district and territories,

it is under state control. There is a national university at the capital organized in 1910.

PRODUCTION. There is an abundance of fertile soil and the products of temperate, tropical, and semi-tropical zones are found within a comparatively small radius on account of the varying altitude. The chief products are corn, cotton, wheat, henequin, coffee, and beans, and there is a considerable production of sugar and molasses and spirits. The oil resources are very extensive and of late years have been exploited by foreign capital. The changed policy of the government in regard to oil and other concessions has given rise to much friction in relation of the United States and other powers (see below).

In 1918 the total production of cotton amounted to 79,293 tons, of which 20,603 were raised in Lower California, 35,101 in the state of Coahuila, 12,566 in Tepic, 8250 in Durango, 410 in Jalisco, 912 in Oaxaca, 618 in Sinaloa, 605 in Sonora, and 588 in Veracruz. The corn production of 1918 totaled 1,128,570,535 kilograms, according to reports made by the governors and chambers of commerce of the various states to the department of agriculture. Indications for 1919 promised an equally large crop with the probability that there would not only be a sufficient amount for home consumption but a margin for exportation. One of the most valuable products of Mexico is henequin or sisal fibre. This comes from the state of Yucatan and is its only product and export of any consequence. A large part of the material for binder twine throughout the world is supplied by Yucatan. The annual exports, most of which go to the United States, through the ports of New York and New Orleans amount on the average to 140,000 tons, valued at \$50,000,000.

No complete figures could be obtained for the mineral production, but during the first nine months of 1918 the metals produced in Mexico were valued at 185,064,982 pesos distributed as follows: Silver, 65,654,571; copper, 66,096,344; lead, 23,800,689; zinc, 9,036,233; gold, 3,244,781, antimony, 2,471,147; and the rest in tin, mercury, tungsten, graphite, manganese, and molybdenum.

The following information in regard to the production of petroleum is supplied by the *Pan-American Union*:

In 1918 the production of petroleum amounted to 10,147,588 cubic meters, or 63,820,836 barrels, and the indications for 1919 were that it would reach 15,875,000 cubic meters, or 80,000,000 barrels—an increase of 20 per cent over the production of the previous year.

The government was making a special effort to increase the number of petroleum refineries. In 1919 there were only four refineries but measures were taken for the installation of new ones at an early date. There was also an increase in the number of tanks for the storage of petroleum. According to press reports in 1919 rich deposits of petroleum were found in the state of Coahuila. It was said that geological investigations had shown that in the north of Coahuila there were petroleum resources which compared favorably with those in the state of Vera Cruz. Down to that time the latter were regarded as among the best and richest in the world. The deposits in Coahuila were pronounced by geologists to be a continuation of the petroleum vein which had been discovered in the State of Texas. In 1918 the coal mined in the republic amounted to, in

round numbers, 600,000 tons. In 1919 the national government decided to operate all silver mines of the country in order to check the high prices and bring the country back to its position of the greatest silver-producing nation in the world.

An industrial census was in progress during 1918 and 1919 and was approaching completion in the latter year. Down to September of that year the number of industrial establishments registered was 3805 distributed as follows: Food industries, 693; metal, 614; textile, 213; electrical 40; sundry, 2245. The establishments represented a capitalization of about 240,000,000 pesos employing 35,000 workers.

At the close of the year, a bill was proposed for an appropriation not to exceed \$25,000,000 for the purchase or appropriation under indemnity all properties held by foreigners within a zone of 62 miles from the frontiers and of 31 miles from the seacoast. This measure was intended to regulate the execution of the section of the Federal constitution of 1917 which provided that within a zone of 100 kilometers from the frontiers and of 50 kilometers from the seacoast no foreigners shall under any conditions acquire ownership of lands or waters. It was not known whether the law would be passed or not, but it indicated clearly the continued adherence of the government to its principle of Mexican control over Mexican resources.

FOREIGN TRADE. In 1918 the foreign trade totaled 531,775,487 pesos of which 367,305,451 were exports and 164,470,036 imports. Reduced to United States currency the figures would be, total, \$265,887,744; exports, \$183,652,725; and the imports, \$82,235,019. The imports and exports by principal countries of origin and destination for 1913 and 1918 were as follows:

	<i>Imports</i>	
	1913	1918
United States	\$48,643,778	\$70,576,314
United Kingdom	12,950,046	4,787,725
France	9,168,987	1,635,928
Cuba	92,333	1,377,351
Spain	5,265,320	994,577
India	1,430,519	652,533
Guatemala	11,825	510,052
Italy	942,080	332,323
Switzerland	946,083	233,923
Japan	488,684	166,335
China	194,969	164,744
Nicaragua	129,603
Honduras	9,100	94,112
Argentina	611,244	93,665
Peru	8,705	86,935
Salvador	6,598	69,063
Java	9,712	58,243
Ecuador	60,403	47,917
Dominican Republic	28,951	42,969
Venezuela	80,253	29,249
Colombia	14,835	26,157
Costa Rica	2,143	25,863
Netherlands	334,746	13,455
Sweden	375,712	6,599
Chile	168,827	2,175
Canada	151,722	2,609
Norway	254,525	651
Germany	12,610,384	292
Belgium	1,401,718	100
Other countries	671,397	73,557
Total	\$97,886,169	\$82,235,019

Imports by Classification

	1913	1918
Animal products	\$9,025,709	\$9,990,936
Vegetable products	15,784,772	18,992,998
Mineral products	23,723,453	14,404,460
Textiles	12,943,176	14,326,997
Chemical products	6,808,513	5,319,312

	1913	1918
Alcoholic beverages	3,425,892	618,616
Paper, all kinds	2,643,876	1,535,236
Machinery and accessories	12,249,341	5,625,905
Vehicles	2,553,314	3,299,730
Arms and explosives	3,868,784	1,111,098
Miscellaneous	5,359,839	7,009,731
Total	\$97,886,169	\$82,235,019

The exports by principal countries of destination in 1913 and 1918 were:

	<i>Exports</i>	
	1913	1918
United States	\$116,017,854	\$175,037,172
Chile	81,491	2,342,058
United Kingdom	15,573,551	2,186,313
Cuba	863,938	1,514,585

a Includes petroleum, \$70,250,000.

The following information in regard to the oil production and export is supplied by the *Pan-American Union*.

Figures published by the oil companies of Mexico show the increase which oil production has made in the country and the increased export in the last 10 years. The exportation of oil in 1910 amounted to 3,332,807 barrels, and in 1911 increased to 14,051,643 barrels; in 1912 it was 16,558,215 barrels; 1913, 25,696,291 barrels; 1914, 26,235,403 barrels; 1915, 32,910,508 barrels; 1916, 40,440,468 barrels; 1917, 55,292,770 barrels; 1918, 63,828,836 barrels; and is estimated at 79,758,403 barrels for 1919. As the total of the first eight months of the present year was 53,159,203 barrels, there was a monthly average production of 6,644,900 barrels. These figures showed that the exportation of oil for the year would amount approximately to 80,000,000 barrels, a figure never before reached in Mexico. Since 1910 about 358,105,444 barrels of Mexican oil were exported.

There was evidence in 1919 that the trade between Mexico and the United States had developed to a marked degree and had established a better record than the year before, but full statistics were lacking.

COMMUNICATIONS. The merchant marine in 1919 had a tonnage of 40,257 and the vessels engaged in river navigation had a tonnage of 366,726. Press reports stated that the railway between the city of Durango and the port of

Mazatlán would be completed by the end of the year, as construction had already progressed beyond the city of Llano Grande and is being pushed rapidly. The line will undoubtedly be a prominent factor in the development of commerce, mining, and agriculture in the country, not only because of the wealthy character of the region it traverses but more especially because it will connect the interior directly with the port. The storms in the autumn of 1919 did severe damage to Mexican national railways, and more than 50 bridges were destroyed in the division from Jimenez to Chihuahua. The large Otiz bridge in the state of Chihuahua was so damaged as to require complete rebuilding, and it was planned to construct a new bridge entirely of concrete in order to restore the repeated overflows of the Concha River. The national system of telegraphs was extended in 1918 by 83,229 kilometers. The telegraph offices numbered 528.

FINANCE. The national revenue for 1919 was estimated at 149,384,000 pesos and for 1920 at 162,000,000. In 1919 the foreign debt exclusive of interest, amounted to 286,944,251 pesos (peso equals 50c U. S. gold) and the internal debt to 138,795,550 pesos. The total interest on both found on June 30, 1919, was 103,832,284 pesos, making a grand total for the debt of the country of 529,572,085 pesos. There was a crisis in the monetary situation at the close of the year resulting from the lack of small currency and a number of factories throughout the country were obliged to close for want of currency with which to pay their employees. The circulation of a considerable issue of paper money was authorized by decree. It provided for 25,000,000 pesos in paper money of which 15,000,000 were to be issued in bills of 50 centavos and the remainder in bills of one peso. At the close of the year a decree was issued empowering the central government to indemnify owners of lands which had been or might be taken for distribution among the inhabitants of towns and villages under the law of Jan. 6, 1915, and under the provisions of the constitution, and for this purpose a federal debt was created known as the Agrarian Public Debt represented by the issue of bonds to the limit of about \$25,000,000 in United States currency. The income received from payment for lands allotted to the people and to communities was to be applied to the payment of interest and principal of this debt. Government officials disapproved at the close of the year the circulation of American currency in the north of Mexico and along the coast on the ground that it drove out the Mexican fractional currency. American bills and silver money were circulating freely in many parts of the country, especially around Tampico and frequently the government was obliged to accept them in payment of taxes, etc.

HISTORY

There was complaint during 1919 in the United States of the policy of the Carranza government toward foreign investors. For the account of these difficulties and especially the trouble in the oil fields see preceding YEAR BOOK. A National Committee of 20 bankers, 10 Americans, five French, and five British was formed early in 1919 for the safeguarding of the holders of Mexican securities and at the same time an organization was formed, called the National Association, for the protection of American rights

in Mexico. Through the activity of persons interested instances of Mexican injuries to American citizens were collected and published. Between August, 1917, and March, 1919, a statement addressed to the State department declared that in the Tampico oil fields 12 men, of whom eight were American citizens, were killed; 31 persons, including nine women were wounded, and more than \$200,000 worth of American property was stolen or destroyed. The outrages were attributed to bandits who were said to have made 115 raids, attacks, or hold-ups upon the property or personnel of the 14 oil companies. Frequent reports of the killing or capture of American citizens near the border were published. Villa bands were reported to be active in the north, and in March the American representatives in Mexico were instructed by the State department to request the Mexican government to take measures for the protection of American citizens in that region. In the state of Morelos it was reported on March 15th that the commander of the government forces had regained control in that State, having subdued the followers of Zapata, who had been for several years active there, and that the government would introduce radical measures of reform including the division of the larger estates among the people, and the establishment of schools. Nevertheless throughout the country generally conditions were reported to be highly disorganized, and the government seemed to be entirely unable to enforce law and order. In reprisal for Mexican outrages a body of United States troops on March 23d entered Mexico in pursuit of bandits and killed or wounded several Mexicans in a skirmish. This raid was attributed to the stealing of cattle and horses from an American ranch in Texas near the border. Early in the year there were reports that the Mexican government had granted concessions to Japanese companies for the exploitation of lands in Lower California; on March 31st an investigation was ordered by the State department, and on April 1st the Japanese minister to Mexico declared there was no truth in this report. On June 15th another American raid took place when a body of 3600 American troops advanced into Mexico to protect El Paso and in the course of a battle between the Carranza and Villa forces, the Americans were said to have cooperated with the Carranza forces in pursuit of the Villistas. On returning to Texas on the following day they reported that they had killed 45 Mexican bandits, having lost two of their own men. Meanwhile reports of other conflicts between the government and rebel troops in various parts of the country had been published. On April 17th, for example, General Blanquet, former minister of war under the Huerta government, the organizer of the forces led by General Felix Diaz for the overthrow of the government, was killed in an engagement near Vera Cruz. Efforts on the part of the United States government to secure from Mexico adequate protection of American citizens brought forth on June 19th the assurance of the Carranza government that steps had been taken to protect Americans in Chihuahua. Not long afterwards, however (on July 5th), sailors from the United States gunboat *Cheyenne* numbering 13, and all unarmed, were reported to have been attacked and robbed by Mexican bandits, near Tampico, and at the same time a station of an American

oil company was reported to be plundered. The American ambassador to Mexico, Mr. Henry P. Fletcher, gave Congress in July a list of 217 Americans who were officially known to have been killed in Mexico after 1911, of whom more than half had been killed since the accession of Carranza. It was declared that arrests had been made in only a few of these cases, and that reparation had been made in only one. The ambassador declared that he could not recall a single instance of prosecution or conviction of a Mexican for the murder of an American citizen. In many quarters comparatively slight attention was paid to these reported conditions as they were supposed to be in part the result of propaganda in the interest of persons desiring intervention in Mexico. The Mexican government sought to conciliate the United States through its ambassador at Washington, who in July issued an appeal to the American people saying that Mexico had a stable government and would discharge all its obligations, and deploring the efforts to bring about an armed intervention. About this time (July 25th) the President had again recourse to the embargo of arms and ammunition, issuing a proclamation prohibiting their shipment into Mexico on the ground that it accentuated the disorders. All through the year these reports of Mexican atrocities and of the discrimination of the government against Americans, or at least its indifference to their safety and interest, continued steadily to appear in the press.

According to information supplied to the Senate Committee on Foreign Relations investigating the Mexican situation, there were 317 serious outbreaks of disorder reported in the Mexican press from April 10th to July 31, 1919, and these disorders were all attributed to rebel factions, bandits, military and police organizations, and political partisans. Almost every state and territory of Mexico was represented. The majority of the outbreaks, that is to say, 272 were attributed by the Mexican press to rebellion against the Carranza government. Some of the newspaper editors, whose policy in publishing these reports was displeasing to the government, were arrested and deported by the government to the State of Chihuahua. The special object of attack was the transport system of the country. During the period mentioned 72 instances of dynamiting, looting trains, attacks on railway stations, and tearing up of railway tracks, were reported in 18 States. During the same interval attacks were made upon 31 of the more populous towns on the railway lines. Serious interruptions of traffic occurred in the States of Vera Cruz and Puebla, where important lines connecting the Mexican capital with the coast were seized. It was reported that in the State of Puebla alone 34 outbreaks of violence had occurred and that more than half of them had occurred in the neighborhood of Puebla City. It was in Puebla that the attack on William Jenkins, a United States consular agent, was reported. He was subsequently captured in October and held for ransom. (See UNITED STATES.) About 50 outbreaks were reported in the State of Vera Cruz, and all attributed to rebels. During the period Villa and his forces were reported to be constantly active in the States of Chihuahua and Durango, and on April 20th the railway traffic across the southern part of Chihuahua was reported to be indefinitely held

up. Villa at this time was said to have stolen a large quantity of silver bullion. Several battles were fought between his followers and the Carranza troops. In June the Villistas were reported to be holding the important town Parral and on July 9th to have captured San Andres. This led to the formation of concentration camps at Jimenez by the Carranza commander. In some instances disloyal Carranza officers were said to be responsible for outbreaks as for example, in raids at Aguascalientes reported on July 1st, and in the mountains of Guerrero, reported on May 12th. In the State of Mexico there were 15 outbreaks reported and in some instances they occurred at a short distance from the capital.

On November 26th General Angeles, the rebel leader, was executed by the government authorities at Chihuahua City. With four companions he had been captured in a cave at San Tomé, several of the others who had been with them having escaped. Two of his companions were killed by the Carranza troops. The two others were tried with him by court-martial, but were sentenced to imprisonment. Angeles was sentenced to death after a sensational trial in the course of which many pleas for clemency were presented. On the morning of November 26th he was shot by a firing squad in the barracks. During both the trial and execution he did not betray the slightest sign of fear, and showed entire indifference to his fate. It was generally recognized that the government was within its right in this course, but its wisdom was questioned as General Angeles was highly estimated for his character, both in certain quarters in Mexico, and abroad. See ANGELES, FELIPE. According to a dispatch from El Paso, Texas, on December 1st, which, however, did not mention the sources of its information, it was announced that on November 28th, 24 hours after the execution, 1000 soldiers under the command of Villa attacked the 80th regiment of the Federal army near Santa Rosalia, Chihuahua, and out of the 676 men killed all but two. See CHILD LABOR; UNITED STATES.

MEYER, KUNO. German professor of Celtic language and literature at the University of Berlin, died in the second week of October, his death being announced on October 14th. He was born in Hamburg and was well known in the United States and England as one of the leading authorities on Celtic philology. He was to have been exchange professor in 1915 at Harvard University, but the invitation was withdrawn on account of his efforts to arouse the Irish against Great Britain.

MICHELHAM, Lord (HERBERT STERN). British financier, died in London, January 7. He was rated among the wealthiest men of his time. He belonged to the family who had long conducted a banking business in Paris, London, and Belgium under the name of Stern Brothers, and he inherited from his father, Baron Herman de Stern, a considerable fortune which he greatly augmented. He separated from the rest of his family in business and started independently the firm of Herbert Stern and Company, which, however, did not concern itself with general business. He was celebrated for his liberal contributions to charities, and his name was well

known on the turf. During the war he contributed to and took part in important relief measures. He was a collector of paintings and other works of art.

MICHELIN PRIZE. See **AËRONAUTICS.**

MICHIGAN. POPULATION. The population of the State in 1910 was 2,810,173 and on July 1, 1919 it was estimated to be 3,173,089, a gain during the last 12 months of almost 40,000.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture, for December, 1919.

Crop	Year	Acreage	Prod. Bu	Value
Corn	1919	1,650,000	64,350,000	\$88,803,000
	1918	1,610,000	48,800,000	62,790,000
Oats	1919	1,475,000	36,875,000	26,181,000
	1918	1,658,000	66,320,000	45,761,000
Rye	1919	900,000	13,500,000	17,280,000
	1918	515,000	7,364,000	11,046,000
Hay	1919	2,650,000	a 3,180,000	74,412,000
	1918	2,598,000	a 2,676,000	62,886,000
Potatoes	1919	326,000	28,688,000	38,729,000
	1918	340,000	28,560,000	25,418,000
Barley	1919	280,000	5,320,000	6,278,000
	1918	300,000	9,000,000	9,000,000
Wheat	1919	1,035,000	20,237,000	42,497,000
	1918	762,000	10,856,000	22,689,000

a Tons

FINANCE. According to the report of the State Treasurer, for the year ending June 30, 1919, the total receipts were \$26,152,138 and the disbursements were \$26,551,763. The balance at the beginning of the year was \$13,559,367 and at the end of the year it was \$13,159,742.

EDUCATION. The latest available statistics are for the year ending July 9, 1917. For this period, the census enumerated 892,888 children of school age, an increase of 26,318 over the previous year. The enrollment was 662,453, an increase of 14,499 over 1916. Thus the percentage of attendance for 1917 was 86, a decline of 2 per cent from 1916. There were employed 3084 men and 18,908 women teachers; the average salary of the former was \$103 per month, and of the latter, \$64 per month, making the average monthly salary of teachers in all schools, \$70.09, an increase over 1916 of \$3.19 per month. The receipts and balance on hand for the year amounted to \$36,286,571, while the expenditures amounted to \$27,549,985. The total school indebtedness was \$449,277, an increase over 1916 of \$31,482.

TRANSPORTATION. The railway mileage for the State in 1919 was about 8907. There has been practically no construction for the last few years.

CHARITIES AND CORRECTIONS. The institutions of the State are governed by separate boards appointed by the Governor and Senate. They comprise the following: Hospital, at Kalamazoo; Hospital, at Pontiac; Hospital, at Traverse City; Hospital, at Newberry; Hospital, at Ionia; Psychopathic Hospital, at Ann Arbor; Home and Training School, at Lapeer; Farm Colony for Epileptics, at Wahjamega; Prison, at Jackson; Branch Prison, at Marquette; Reformatory, at Ionia; Industrial School for Boys, at Lansing; Industrial Home for Girls, at Adrian; School for the Blind, at Lansing; Employment Institution for the Blind, at Saginaw; School for the Deaf, at Flint; Soldiers' Home, at Grand Rapids; and the Sanatorium, at Howell. See **MINIMUM WAGE.**

LEGISLATION. The Michigan legislature convened in biennial session January 1st and adjourned May 15th. The legislature ratified the Federal Prohibition Amendment January 28th. During the session there were passed 421 bills. The principal acts were as follows: Permitting religious societies to receive gifts; amending the compulsory school law; authorizing the formation of women's clubs; absent voter's registration; regulating the disposition of moneys belonging to non-residents or unknown heirs; requiring all farm tractors to be equipped with fenders; providing for the construction of trunk line highways; creating the Michigan State Police; establishing a county road system; regulating the practice of embalming; creating a Department of Labor and extending the term of the Commissioner of Labor; repeal of act granting women the right to vote for presidential electors, and in certain other cases; providing for a uniform system of accounting in all the administrative departments of the State; prohibiting molestation of game and insectivorous birds by the operations of aircraft; limiting the tax levy of towns; providing county cream testers; establishing a budget system; prohibiting the display of the red flag in certain cases; authorizing certain cities to take title in fee to any public utility; providing for the appointment of State Health Commissioner; creating State Board of Control for Vocational Education; releasing legally married minors from parental control; prohibiting division of fees by physicians and surgeons; creating the Department of Animal Husbandry, prohibiting the grant of teachers licenses to other than citizens of the United States; prohibiting sex discrimination in the payment of wages; defining the crime of criminal syndicalism; penalizing the giving of checks, etc., when person so giving has insufficient funds or credit; creating Michigan Industrial Relations Commission; creating office of State Purchasing Agent; uniform fraudulent conveyance act; creating Michigan State Athletic Board of Control; creating Board of Examiners of Architects, Engineers, and Surveyors; prohibiting the employment of persons affected with infectious or venereal diseases in cigar factories; providing a primary election system for township officers; fixing rate of passenger fares; regulating the business of canning and preserving; creating a Public Utilities Commission.

Other acts passed at the special session were: Modification of the penalty of the prohibitive liquor act; new regulations for the opening and closing of the polls; an act creating a commission to investigate, etc., the disputed boundary between Michigan and Wisconsin; an act to promote the establishing of deep-water connections between the Great Lakes and the Atlantic Ocean, and an act providing for consolidation of school districts within certain cities.

Governor Sleeper convened the legislature in special session June 3d to vote an immediate issue of \$5,000,000 of the \$50,000,000 State Highway Improvement bonds authorized by the constitutional amendment ratified at the April election. At the special session, and on June 10th, both houses, without a dissenting vote, ratified the Federal Woman's Suffrage Amendment. A Woman's Suffrage Amendment to the State Constitution had been ratified at the general election, in November, 1919, by a majority of 34,052.

POLITICS AND GOVERNMENT. At the State election, April 6, 1919, the eight candidates on the Republican State ticket were elected by an average plurality of 285,750 in a total vote of 781,156. This average plurality exceeded by 80,867 the highest that any candidate before received in Michigan, the next highest being 204,887 for Theodore Roosevelt for President in 1904, and it exceeded by 166,984 the average pluralities of the six candidates on the Republican State ticket in November, 1918.

The election in April this year was the first in Michigan at which women exercised full suffrage rights, these rights having been given them by an amendment to the State Constitution ratified at the November election in 1918. These unprecedented pluralities followed a campaign in which not a single national or state issue was raised. Neither the Republican nor the Democrat State Committees conducted anything like a systematic campaign, and the expenditures of each of these two party organizations was less than \$5,000.

At both the Republican and Democrat conventions that nominated the state tickets, many women were delegates for the first time, and for the first time women were nominated for places on the tickets. The Republicans nominated for one of the two new members of the Board of Agriculture—the administrative board of the Michigan Agricultural College—Mrs. Dora H. Stockman, who is an officer of the State Grange. The Democrats nominated two women for Regents of the University of Michigan, a woman for Superintendent of Public Instruction, and a woman for member of the State Board of Education. The eight Republican candidates elected and their pluralities were:

Justices of the Supreme Court—Russell C. Ostrander, 290,924; John E. Bird, 283,024. Both reelected.

Regents of the University of Michigan—Benjamin S. Hanchett, 289,067; Lucius L. Hubbard, 282,336. Both reelected.

Members of the Board of Agriculture—Mrs. Dora H. Stockman, 288,147; L. Whitney Watkins, 292,653.

Superintendent of Public Instruction—Thomas E. Johnson, 267,696.

Member of the State Board of Education—Frank Cody, 294,150. Reelected.

Justice Ostrander, reelected to the Supreme Court bench for the full term of eight years beginning Jan. 1, 1920, died September 12th. Governor Sleeper appointed to succeed him Nelson Sharpe, Judge of the 34th Circuit, who will serve until the vacancy is filled by election in November, 1920.

At the April election a proposition for the State to issue bonds to the amount of \$50,000,000 for improving the highways of the State was ratified by an affirmative vote of 558,572 to 225,239 against, the majority for the proposition being 333,333. There was also submitted to the electors in April a proposed amendment to the State Constitution, initiated by petition, to legalize the manufacture, transportation and sale of cider, wines, beer, ale and porter. It was initiated by anti-prohibitionists to remove the ban on these kinds of beverages which had been outlawed along with spirituous beverages, when an amendment to the State Constitution was ratified in November, 1916, by a majority of 68,624, prohibiting the manufacture and traf-

ficking in all kinds of intoxicating beverages. This wine and beer amendment, so-called, was rejected by a majority of 105,239.

On December 19th, Justice Franz C. Kuhn, of the Michigan Supreme Court, resigned because of the low salary—\$7000 a year. Governor Sleeper, December 24th, appointed George M. Clark of Huron County, temporarily to the vacancy, which will be permanently filled at the general election in November, 1920.

A grand jury in the Federal Court for the Western District of Michigan, sitting at Grand Rapids, the resident judge, Clarence W. Sessions presiding, began on October 21st an investigation of reports that Federal election laws had been violated in the campaign of 1918 to nominate and elect Truman H. Newberry, Republican United States Senator. Shortly after the primaries in August, 1918, a statement, required by law, was filed with the Secretary of the United States Senate that there had been expended in the Newberry primary campaign \$176,568.08. This statement was signed and sworn to by officials of the Newberry campaign committee. Mr Newberry during both the primary and general election campaigns held a Lieutenant-Commander's commission in the navy and was on duty in New York. He was not in Michigan during either of the campaigns. He too filed a sworn statement that he contributed no money for the campaign, and was without knowledge of who contributed money or how much. The sworn statement of the committee officials mentions near relatives of Senator Newberry as having contributed nearly \$150,000 of the \$176,568.08.

Following filing of the statement of expenditures in the primary campaign a grand jury investigation was started in a Federal Court in New York City of allegations that Federal election laws had been violated. Officials of the Newberry campaign committee, subpoenaed to New York refused, on advice of counsel, to answer questions in the grand jury room on the ground that a Federal Court in New York was without jurisdiction in the case, and that if there was an investigation it should be by a court in Michigan. The government counsel appealed to the United States Supreme Court and the Supreme Court held that a Federal District Court has jurisdiction everywhere in the United States. Before the decision was handed down, however, the grand jury had been discharged.

The case then rested until the Federal Department of Justice initiated grand jury proceedings in Michigan in October, this year. The department designated as chief counsel in the proceedings Frank C. Dailey, of Indianapolis, who had successfully prosecuted Federal election law violators in five Indiana and Ohio cities, assisted by H. Dale Souter, of the United States District Attorney's Staff for the Western District of Michigan.

The grand jury was in session five weeks and examined more than 400 witnesses. On November 29th the jury returned indictments against 135 men on charge of violating Federal laws in the Newberry campaign. The indicted persons include Senator Newberry, his brother, John S. Newberry, Allan A. Templeton, President of the Detroit Board of Commerce and Detroit manufacturer; Frank W. Blair, President of the Union Trust Co., Detroit; Paul H. King, Fed-

eral Referee in Bankruptcy at Detroit and a former Receiver of the Pere Marquette Railroad; Richard H. Fletcher, Michigan Commissioner of Labor; Samuel Odell, member of the Michigan Public Utilities Commission and former State Treasurer; Dr. James B. Bradley, a former Auditor General of Michigan; Frank L. Covert, a judge of the Sixth Michigan Judicial Circuit; Milton Oakman, a former sheriff of Detroit; Guy L. Ingalls, City Treasurer of Detroit; Judd Yelland, Probate Judge of Delta County; John W. Dunn, Probate Judge of Arenac County; George S. Ladd, of Massachusetts, a former master of the Massachusetts State Grange, and Frederick Cody, of New York City. Others indicted include nine present and past county prosecutors, four bankers, three State Senators, three Labor Union officials, the publisher of the official organ of the Michigan State Grange, and one clergyman.

Senator Newberry was held on \$10,000 bail and the others in like amount and down to \$1,000. All furnished bail. Judge Sessions designated Jan. 27, 1920, as the date for the trials to begin. A motion by counsel for the defendants that they be furnished with a list of all the government's witnesses was denied by Judge Sessions December 15th. On December 17th W. H. Eichorn of Bluffton, Ind., a former county judge of that State, was appointed by the Department of Justice an additional government counsel for the trials.

On May 12th was begun the trial at Mt. Clemens, Mich., on a change of venue from Detroit, of Henry Ford's libel suit for \$1,000,000 against the *Chicago Tribune*. The suit was on account of an editorial in the *Tribune*, June 23, 1916, with the headline: "Ford is an anarchist." The *Tribune* had sought to encourage enlistments in the National Guard for services on the Mexican border by obtaining assurances from employers that they would hold jobs open for men in the service, and would either continue their wages while away or care for their dependants. The *Tribune* wired its Detroit correspondent for a statement from the Ford Motor Company as to what the company would do in the situation. According to testimony the correspondent interviewed by telephone Frank J. Klingersmith, vice president and secretary of the Ford Company, and received a reply that the company would do nothing either for its employees or their dependants, and that on their return the men would be considered as new applicants for employment. The accuracy of the interview was disputed at the trial. The editorial was based on the correspondent's dispatch.

Judge James G. Tucker of the Macomb County Circuit presided at the trial, which was one of the longest on record for a libel suit. Several hundred witnesses testified, and the transcript of testimony approximated 2,000,000 words. Seventeen attorneys were engaged on both sides in the court room. Henry Ford himself was on the stand seven days. On August 14th the jury, comprising 11 farmers and one road builder, after deliberating 10 hours, returned a verdict for Mr. Ford, fixing damages at six cents. Counsel for both sides assured the court that they were satisfied with the verdict.

OFFICERS. Governor, Albert E. Sleeper; Lieutenant-Governor, Luren D. Dickinson; Secretary of State, Coleman C. Vaughan; Treasurer, Frank

E. Gorman; Auditor-General, Oramel B. Fuller; Attorney-General, Alex. J. Groesbeck; Superintendent of Public Instruction, Thomas E. Johnson; Commissioner of Insurance, F. H. Ellsworth; Commissioner of Labor, R. H. Fletcher; Commissioner of Banking, F. W. Merrick; Librarian, Mary C. Spencer.

JUDICIARY. Supreme Court: Chief Justice, John E. Bird; Associate Justices, Nelson Sharpe, Joseph B. Moore, Joseph H. Steere, Falvius L. Brooke, Grant Fellows, Franz C. Kuhn, John W. Stone, Clerk, Jay Mertz.

MIDDLEBURY COLLEGE. A non-sectarian co-educational institution at Middlebury, Vt. In the fall of 1919 there were 389 students, 201 men and 188 women. The enrollment for the summer session was 298. There were 43 members in the faculty. During the year there have been added to the faculty teachers in bacteriology, forest management, Spanish, chemistry, Greek, and singing. The endowment is \$1,497,331, the expenses for 1918-19 were \$120,284. The library contains 46,000 volumes. The college was founded in 1800. President, John Martin Thomas, D.D., LL.D.

MILITARY ACADEMY, UNITED STATES. See UNITED STATES MILITARY ACADEMY.

MILITARY BRIDGES. See BRIDGES.

MILITARY PROGRESS. The year 1919 was distinguished in a military way by the effort made by all nations, to "clean up" as it were, after the world war. As was logical, this effort was conditioned by the abnormal situation that followed on the heels of the armistice. No real peace was established; many questions, some of them of the deepest importance, were left unsettled. The treatment of these questions belongs elsewhere: we may however mention Fiume, the Balkans, Russia and Shantung, first to show how widespread was the unsettled state of the question and next, to point out that unless the problems involved in these questions are correctly solved, the world had best lay its account to face future wars, some of them probably not remote in point of time.

I. THE UNITED STATES

DEMobilIZATION AND HEALTH. In the United States, the great military event of the year was the repatriation of our men, with demobilization of the huge army we had raised. The task was successfully accomplished. We naturally cannot attempt here to go into all of the details of the process. After the signing of the armistice, it was of course necessary to reverse the machinery used in dispatching men to France. This reversal had to do not only with the repatriation of our men, but also with the closing of all our accounts, the settlement of contracts, the disposition of vast stores accumulated in France and in the States. The general plan of demobilization of the Emergency Army was to transfer the men before discharge to the demobilization camp in or nearest the state of origin and then discharge them. In all thirty-two (32) camps were used; these had been mobilization camps. Simultaneously with the return of our men overseas, began the demobilization of the temporary forces in the United States. These left the service by complete organizations as their services could be spared. In respect to the men from overseas, the greatest care was taken to protect the country against the impor-

tation of contagious or infectious diseases. Men so affected were held by the government until cured, or until their condition ceased to be a menace to public health. To the careful examination made abroad, was added, on the arrival in the United States of the troops, an equally careful examination (disinfection, etc.). *Pari passu* with this matter of health, the most important of all to the public, went as already stated questions of an administrative nature involving pay, records, closing of accounts, liquidation of responsibilities, in respect of all of which it may be asserted, that as the numbers involved were vastly greater than any before recorded in our military history, so were the dispatch and accuracy with which the business was done.

The following table, taken from the report of the Secretary of War for 1919, shows the number of officers and enlisted men discharged, by months, from the date of the signing of the armistice.

Month	Officers		Enlisted men	
	Number	Cumulative	Number	Cumulative
1918				
Nov. 11-30....	593	593	43,000	43,000
December ..	37,043	37,636	609,000	652,000
1919				
January ..	23,563	61,199	358,000	1,010,000
February ..	14,913	76,112	263,000	1,273,000
March ..	11,479	87,591	263,000	1,536,000
April ..	12,185	99,776	298,000	1,834,000
May	14,622	114,398	383,000	2,217,000
June	13,588	127,986	391,000	2,608,000
July	16,404	144,390	361,000	2,969,000
August	15,986	160,376	151,000	3,120,000
September ..	8,716	169,092	75,000	3,193,000
October	8,690	177,782	33,000	3,226,000
Nov. 1-10...	2,018	179,800	10,266	3,236,266

Inasmuch as the health of our men, both those returning from overseas and those who never had left the United States was properly an object of concern, it is logical here to set forth in tables the results achieved by our medical corps in maintaining the health of our forces as compared with similar efforts in preceding wars. Properly speaking, these results chronologically

belong to 1918, but as they have only recently been published (Report of the Surgeon General, U. S. A. to the Secretary of War, 1919), they of necessity fall within the compass of the present paper. And apart from this local relation, they present statistics of permanent historic value, and afford food for thought in respect of the future. Table I is from the Report of the Secretary of War for 1919; the others, from the Report of the Surgeon General for the same year. Table V, although covering the same ground as Table I, offers some additions, and is therefore included.

"The following table indicates how the enforcement of sanitary measures during the war has reduced the number of deaths as compared with those of the Civil War and the Spanish-American War "

TABLE I

	Number of deaths that occurred in present war, Sept 1, 1917-May 2, 1919—Average strength, approximately 2,121,396	Number of deaths that would have occurred if the Civil War death rate had been obtained	Number of deaths that would have occurred if the Spanish-American War death rate had been obtained
Typhoid fever	213	51,133	68,164
Malaria ..	13	* 13,951	11,317
Dysentery ..	42	† 63,898	† 6,382
Smallpox ..	5	9,536	37
Pneumonia ..	‡ 41,747	‡ 38,962	‡ 6,086
Scarlet fever ..	167	112	222
Diphtheria ..	100	1,188	149
Tuberculosis ..	1,220	9,574	‡ 631
Meningitis ..	2,137	3,859	4,081
Other diseases ..	3,768	34,881	15,587
Total for disease	49,412	227,094	112,656

* Includes malaria and remittent and congestive fevers

† Includes dysentery and diarrhea

‡ Includes deaths listed from measles, influenza, empyema, inflammation of the lungs, and pleurisy, as well as pneumonia.

§ Rate low due to short period of war, that the war was during summer months, and tuberculosis sufferers were discharged as soon as diagnosed

TABLE II

Comparative figures for United States Army, officers and enlisted men, all countries, 1917-18; total United States Army, Civil War, 1861-62; total United States Army, Spanish-American War and Philippine Insurrection, 1898-99.

Diseases	Admissions (did occur)			Ratio per 1000		
	1861-62	1898-99	1917-18	1861-62	1898-99	1917-18

TABLE III

Showing the number of admissions that would have occurred for diseases as listed and for total diseases during 1917-18 if the same rates had prevailed that did prevail during the Civil War and the Spanish-American War as compared with the actual number of admissions that occurred, total Army.

Diseases	Admissions that might have occurred with rates for 1861-62	Admissions that might have occurred with rates for 1898-99	Admissions that occurred, 1917-18
Typhoid and typhus fever	226,001	291,637	1,083
Continued congestive fever (typhoid malarial)	133,765
Yellow fever	2,205	18,063
Malarial fevers (all)	1,526,572	1,906,066	14,087
Fevers, undetermined	86,321	18,945
Diseases of intestines, diarrhea, and dysentery	2,803,134	1,285,577	110,272
Erysipelas	29,413	2,333	2,282
Scurvy	31,427	20
Rheumatism and arthritis	513,738	237,990	49,509
Gastritis	73,532	31,471
Appendicitis	7,864	27,506
Smallpox	10,263	5,530	778
Measles	184,918	127,979	98,606
Scarlet fever	1,215	863	10,352
Diphtheria	4,252	1,470	8,208
Mumps	101,475	49,394	195,490
Influenza	199,401	124,590	729,381
Pneumonia (all)	111,674	20,812	67,542
Pleurisy	54,542	12,276	17,949
Catarrh (rhinitis)	497,465	32,109
Bronchitis (all)	351,582	265,069	208,592
Tonsillitis and pharyngitis	136,834	183,549
Meningitis	6,585	1,374	4,485
Tuberculosis	38,045	12,212	31,106
Total admissions	9,759,847	6,385,683	3,003,253

TABLE V

Showing the number of deaths that would have occurred for the diseases as listed and for total diseases during 1917-18 if the same rates had prevailed that did prevail during the Civil War and the Spanish-American War as compared with the actual number of deaths that occurred; total Army.

Diseases	Deaths that might have occurred with rates for 1861-62	Deaths that might have occurred with rates for 1898-99	Deaths that occurred, 1917-18
Typhoid and typhus fever	62,694	30,916	158
Continued congestive fever (typhoid malarial)	3,005
Yellow fever	543	2,525
Malarial fevers (all)	12,084	5,594	31
Diarrhea, dysentery, and enteritis	33,153	6,170	250
Erysipelas	1,694	63	31
Smallpox	2,845	1,342	8
Measles	6,649	1,342	2,455
Scarlet fever	95	95	817
Diphtheria	639	131	136
Mumps	127	161
Influenza	95	63	28,021
Pneumonia	20,077	2,973	16,732
Pleurisy	735	95	276
Bronchitis (all)	1,374	31	436
Catarrh (rhinitis)	31	6
Tuberculosis	7,800	1,182	1,114
Tonsillitis and pharyngitis	149
Meningitis, epidemic, and infectious	2,291	1,406	1,701
Total deaths	186,037	62,215	50,714

Certain conclusions should be stated. During the World War negro troops from the south had far higher rates of admission for pneumonia and tuberculosis with higher death and discharge rates for both of these diseases, than was the case with white troops. "For venereal diseases

TABLE IV

Comparative figures for United States Army, officers and enlisted men, all countries, 1917-18, total United States Army, Civil War, 1861-62, total United States Army, Spanish-American War and Philippine Insurrection, 1898-99

Diseases	Deaths (did occur)			Ratio per 1000		
	1861-62	1898-99	1917-18	1861-62	1898-99	1917-18

Continued congestive (typhoid malarial)	54694
Yellow fever	100	19917	.79
Malarial fevers (all)	2,950	443	31	3.78	1.75	.01
Diarrhea, dysentery, and enteritis	6,040	487	250	10.37	1.93	.08
Erysipelas	307	5	31	53	.02	.01
Smallpox	517	107	8	89	.42	.00
Measles	1,211	107	2,455	2.08	.42	.77
Scarlet fever	15	7	317	.03	.03	.10
Diphtheria	119	9	136	.20	.04	.04
Mumps	24	161	.0405
Influenza	15	5	23,021	.03	.02	7.20
Pneumonia	3,658	235	16,782	6.28	.93	5.28
Pleurisy	136	8	276	.23	.01	.09
Bronchitis (all)	252	2	436	.43	.00	.14
Catarrh (rhinitis)	6	6	.0100
Tuberculosis	1,420	95	1,114	2.44	.37	.85
Meningitis, epidemic and infectious	422	112	1,701	.73	.44	.53
Total deaths	33,894	4,931	50,714	58.19	19.46	15.86

the rate for the negro troops was out of all proportion to that for the whites." For troops stationed in the United States, this rate was seven times as great for negroes as for whites. In general, even after excluding negroes, admission rates for infectious diseases were higher for white troops from the south than for white troops from any other part of the country.

Typhoid fever was of no importance in the World War. Had the admission rates of 1898-1899 prevailed in 1917-1918, admissions would have been 291,637 instead of the actual number, 1083. Similarly for deaths, there would have been 30,196 instead of 158. Measles was much better controlled: on the other hand admission rates for scarlet fever, diphtheria and mumps were all higher during the late war than during either the Civil or the Spanish-American. In general, the so-called "Camp diseases" (typhoid fever, malaria, and dysentery) were practically eliminated. Other diseases present equally interesting comparisons, but we cannot reproduce them here. To sum up: "If the rates for admissions and deaths had prevailed during the late war as during the Civil War, there would have been 9,759,847 admissions and 186,037 deaths; and if the same as for the Spanish-American War, 6,385,083 admissions and 62,215 deaths. As it was there were 3,003,253 admissions and 50,714 deaths. It may then be said with all assurance that preventive medicine resulted in the saving of 6,756,594 cases of sickness and 135,323 deaths, as compared with the Civil War days, and 338,243 cases of sickness and 11,501 deaths, as compared with the Spanish-American days. Had it not been for influenza and pneumonia the total rates for the late war would have, indeed, been very small for admissions and more so for deaths." (Surgeon General's Report, 1919.)

Demobilization implies reduction. Accordingly, many officers promoted during the emergency to higher grades found themselves on their return home reduced to their original grades, while other officers who had never gone abroad were still left in the higher grades to which they also had been advanced. There was no denying the fact that this difference produced a feeling in the service that injustice had been done. The fact is mentioned here simply because such feeling, by producing discontent, unquestionably affects the morale of the service.

Demotions since Nov. 11, 1918, were as follows:

PERMANENT GRADE

	Brig. Gen.	Col.	Lieut. Col.	Maj.	Capt.	1st Lt.	2d Lt.	Total
Maj.-Gen.	5	27	1					33
Brig.-Gen.		104	77	48	3			232
Colonel			150	260	102		2	514
Lieut.-Col.				70	249	1		320
Major					337	24	2	363
Captain						306	24	330
1st Lieut.							95	95
Totals	5	131	228	378	691	331	123	1,887

Demotions, by permanent grade since Nov. 11, 1918, were as follows:

Permanent grade	Holding advanced rank Nov. 11	Demoted since Nov. 11	De- moted P. C.
Colonel	167	131	78
Lieutenant-Colonel	364	228	63

Permanent grade	Holding advanced rank Nov. 11	Demoted since Nov. 11	De- moted P. C.
Major	898	378	42
Captain	2,560	691	27
Brigadier-General	26	5	20
First Lieutenant	1,868	331	18
Second Lieutenant	1,736	123	7
Major-General	2	0	0
Totals	7,621	1,887	25

Another form of reduction was due to the initiative of officers themselves in resigning by hundreds. Up to December 24th, 2146 officers had resigned, 497 of whom were permanent and 1649 provisional. These numbers broke all records. More officers resigned in one year than had before resigned since the foundation of our government. Various causes were assigned for this extraordinary phenomenon, the chief among them being inadequacy of the officer's pay to meet the ever-rising cost of living. The modest increase of pay granted in 1908, even then inadequate, was simply swamped by the reduced purchasing power of the dollar. In consequence of this reduction, officers practically found their pay halved. Congress gave signs of a desire to correct this situation by the introduction of bills designed to improve it. One of these, the Wadsworth bill, proposed a flat increase of 10 per cent with the addition of an allowance of rations varying with the rank of the officer, and adjustable by presidential order according to the fluctuation of the cost of supplies. But the end of the year came without relief.

POST-WAR LIQUIDATION. No review of the year's progress, even so brief a one as this, can omit the work done by the War Department in the settlement of war contracts, and of other administrative matters suddenly checked by the signing of the armistice. Production of war materials had to be curtailed with the least possible detriment to industrial conditions. Roughly the process followed was to taper off so that the government should not have on its hands enormous quantities of half finished products useful for neither war nor peace. The contracts of the War Department to be tapered off, would, if carried out, have called for an expenditure of over \$6,000,000,000. The manufacturers came to the rescue by accepting the War Department programme in the proper spirit, so that, all things considered, the shift from war industry to peace commercial conditions was effected without especial hardship. Closely related to the question of production was that of the adjustment of relations between the government on the one hand and the contractors on the other. This adjustment is—for of course it is not yet accomplished—in the hands of the War Department Claim Board, assisted by district or zone boards in the business centres of the country. In case of disagreement, an appeal lies to the Board of Contract Adjustment, composed of experienced lawyers. And as the Comptroller of the Treasury had ruled that "the law forbade the payment of any compensation for the uncompleted portion of a terminated agreement" not in writing in the form required by statute, the Act of Mar. 2, 1919, authorized the Secretary of War "to adjust any agreement, express or implied, entered into for the prosecution of the war, prior to Nov. 12, 1918, and not executed in the manner prescribed

by law, provided that expected profits should not exceed a reasonable remuneration for work done and expenses incurred. To the Court of Claims was given jurisdiction of those cases in which the action of the Secretary of War should be rejected by claimants. Some idea of the work involved in the matter in hand may be formed from the following Table,¹ of date Nov. 1, 1919.

Total number of contracts and agreements necessitating settlement	24,988
Contracts and agreements settled and adjusted	22,596
Uncompleted portion of contracts and agreements already settled	\$2,091,435,426.50

UNITED STATES

Amount already approved for payment in partial settlement of contracts and agreements not yet completely adjusted	\$78,912,212.70
Per cent of amount paid or approved for payment in final settlement to uncompleted portions of contracts and agreements settled	12.5

The liquidation of international obligation was entrusted to two agencies, the United States Liquidation Commission—War Department, and the other, a special representative of the Secretary of War. This Commission also undertook the task of disposing of army stores in France, England and occupied German territory. These stores "consisted of fixed works such as docks, warehouses, refrigerating plants, power plants, repair shops, manufacturing establishments, additions to trackage, bridges and other railroad facilities, telegraph and telephone lines and exchanges, and even more extensive forms of movable property, including practically every kind of equipment and supplies used by an army operating at a place remote from its base. These movable supplies included railroad engines, cars, cranes, special appliances built in the United States and adapted to European gauge, motor transport equipment in all stages of preservation and repair, from that practically worn out to the new equipment in storage warehouses not yet assembled; machine tools collected for repairing ordnance, motor transport, airplanes, and Signal Service equipment; cloth-

ing, new and salvaged; and foodstuffs, often in containers of special construction and size, packed for overseas transportation but not in a form for ready retail commercial disposition."¹

Only a small part of this vast amount of material could be returned to the United States. Surplus medical and surgical supplies were turned over to the American Red Cross and some sales made to various European nations on terms of credit; the remainder was sold to the French government for \$400,000,000. The following tables, from the Report of the Secretary of War exhibit the results of the sales of material, at home and abroad.

MILITARY EDUCATION IN THE ARMY. As was to be expected, the great subject of military education, in the light of experience gained by our share in the World War, received the attention of the War Department. Its views are summed up in a general order (G. O. 112, W. D., Sept. 25, 1919). Under this order, the system approved embraces for officers:

- (a) Basic courses at Special Service Schools
- (b) Unit Schools
- (c) Advanced courses at Special Service Schools.

- (d) General Service Schools.

The instruction of cadets will as formerly be given by the United States Military Academy. Enlisted men are to be instructed in

- (a) Post Schools.
- (b) Unit Schools
- (c) Special Service Schools.

Unit Schools include all schools for officers that are under the direct control of territorial or tactical commanders. They have for primary object "The instruction and training of officers of all grades with a view of securing uniform and efficient training of the troops or personnel under their respective commands." Hence the work of these schools will be closely coordinated with the schedules or training of the troops or personnel under the Student officers. Special Service Schools will be maintained for each arm or service: to those in existence before the war were added Signal Corps, Air Service, Tank Corps, Motor Transport Corps, and Ordnance Department Schools. These schools are to be under the supervision and control of the chiefs

¹ Report of Secretary of War, 1919.

¹ Report of Secretary of War, 1919

of the respective arms and services where possible, and otherwise, of the Chief of Staff. These Service Schools offer first a basic course of not more than one year's duration, for officers upon their entry into the army, and next, advanced courses in certain cases.

The General Service Schools, under the Chief of Staff, consist of. (a) The School of the Line, (b) The General Staff School; (c) The General Staff College (formerly the Army War College at Washington). The first two are to be at the same place under the same Commandant. The course at the General Service Schools is of four years, the first at the School of the Line, the second at the General Staff School, the third with troops of arms other than those with which the student has previously served, and finally the fourth at the General Staff College. The School of the Line trains officers (a) in the "Combined use of all arms and services functioning with a division," and (b) in the duties of field officers in respect of Army Education and training. The purpose of the General Staff School is to train selected officers for duty as General Staff Officers with troop units, and for higher tactical command. It offers special courses for General Officers and other selected officers of the technical and administrative services. Finally the General Staff College is to train selected officers for duty with the War Department General Staff, and for high command.

Post Schools are to give general educational and vocational training to men in the ranks, while the Unit Schools will prepare non-commissioned officers, selected privates and enlisted specialists for the training or work in progress. The Special Service Schools are to give training to non-commissioned officers in the duties of junior officers of the respective arms, and special training to selected men in the duties of non-commissioned officers. Vocational training was considered by the Congress sufficiently important to justify an appropriation of \$2,000,000 for the fiscal year ending June 30, 1920. The courses outlined by the War Department (Bulletin No 33, W. D., Sept. 30, 1919) were no fewer than seventeen (17) in number. We can not here mention them all, but they included electricity, building, leather, machinery, agriculture, business. In all cases, the purpose in view was not only to increase the value of the soldier to the army, but to make him a more valuable civilian upon the completion of his military service. The programme thus briefly outlined is most comprehensive: inspired by the weaknesses and defects revealed by our experience in the World War, it will be many years before it can be carried out.

MILITARY POLICY OF THE UNITED STATES. It is undeniable that the World War increased, whether we admit it or not, our responsibilities and obligations as a world power. Hence the sharpened interest in the question of our military policy, a question never really broadly and intelligently discussed either in Congress or out of it. By this we mean that the question has never reached the dignity of a national issue; our people as a whole, take no interest in it. It was hoped of course that the war would bring the matter to a head, that our experience and the price we paid for it would produce a change of heart. But, as a service journal remarks: It is impossible to escape the conviction, after

reading the questions asked and the opinions expressed by our Congressmen during the recent series of hearings on army reorganization legislation that the spectre of the standing army is as firmly fixed in the Congressional mind now as it ever was and that the opposition to the professional soldier is as deeply rooted. It is a pity, a profound pity. But it is true. And the only relief that both the army and navy can have from this lies in the hope that our experience in the World War may have educated the American people in military matters to a greater degree than ever before and a reaction to this will be felt in Congress. Unless this phenomenon occurs any marked improvement in our military policy is out of the question.¹

When the armistice was signed we had but one army, for the Regular Army, the National Guard and so-called National Army had been fused into one service, the Army of the United States. By far the vast majority of the men composing this army were to serve only during the war, and the law required the discharge of all such men four months after the formal promulgation of peace. Demobilization would therefore leave as the military establishment of the country, at a critical time too, a mere handful of men of the Regular Army. Hence Congress authorized the reopening of enlistments in this army as determined by the National Defense Act for either one- or three year periods. The answer to the resulting call for enlistment was gratifying. Congress more over authorized and directed that the Secretary of War maintain until June 30, 1920, "such commissioned personnel in addition to the officers of the permanent establishment and to retain at their temporary grades such officers of the Regular Army as in his judgment may be necessary for the proper performance of the functions of the military establishment. *Provided* that after Oct. 31, 1919, the total number of commissioned officers exclusive of retired officers and disabled emergency officers awaiting discharge upon completion of treatment for physical reconstruction, shall at no time exceed 18,000, *And provided further*, That one thousand two hundred emergency officers shall be assigned to the Air Service, of whom not less than 85 per centum shall be duly qualified fliers."

But obviously such legislation was only a stop gap. The great question of military policy remained untouched. The War Department, therefore, mindful of its responsibility in the premises, submitted a bill calling for a regular establishment of 500,000 men, and providing for the compulsory military training, for three months annually, of the youths of the country.

Another purpose of the bill was to reorganize the War Department by strengthening the General Staff in its control of the entire military establishment. The arguments in favor of the bill were strongly set forth in the Secretary's Report, but the bill nevertheless received but little support in any other quarter. Other bills were likewise submitted, for example one by the Military Training Camps Association. This provided for an army of 225,000 and for six months' military training by the young men of the country. Finally according to press reports, "legislation which would amount to a virtual reorganization of the army, with protection from outside attack as a primary purpose and with

¹ *Army and Navy Journal*, December, 1919.

compulsory military training for boys from 18 to 21 years of age as a leading feature, had been agreed upon tentatively by the Senate military sub-committee considering a permanent military policy for the nation."

This bill called for a standing peace army of 280,000 men, reinforced, so to say, by a "reserve" or "citizens' army." To this "reserve" army would belong the National Guard. Youths between 18 and 21 years of age would be required to take four months' military training either in the Regular Army or in the National Guard. This training completed, these recruits would be placed in a reserve for five years, liable for military service only in case of war, but called out to attend two annual maneuvers of at least two weeks each during this period. Compulsory military training would be required, but not compulsory military service. A departure was the substitution of the word "service" for "corps," to designate departments and corps, such as the quartermaster, the ordnance, and other similar branches. The chemical warfare service was to be separate instead of forming a part of the engineer corps. These announcements were of date December 21st. Later (Jan. 3, 1920) they were amplified. Our general staff was to be modified on the model of the French, and an Under Secretary of War was provided, specially charged with the solution of the industrial and administrative problems connected with the equipment of an army. Army training was to include vocational and agricultural training. The air service was to be a separate branch of the professional army.

To insure promotion of efficient officers and elimination of incompetent ones, the bill provided for annual classification of officers into three classes, Class A being those who have earned promotion to the next higher grade; Class B those not yet ready for promotion, and Class C those who should be eliminated. Class C officers were to be discharged if their service had not been "honest and faithful," otherwise they were to be placed on the retired list.

Simultaneously with these Senate proposals appeared those of the House for an army of 300,000 men with 17,000-18,000 officers. Certain

other provisions are worthy of notice. An elimination system was provided to rid the service of officers whose records, etc., were unsatisfactory. In certain departments, e.g. the signal corps, the Judge Advocate's, etc., officers were to be commissioned permanently above the grade of captain. And whereas heretofore the details of organization had always been rigidly prescribed by the law and in the law, the new bill proposed to leave these details to the discretion of the President. For example, the infantry section of the law provided for a chief of infantry (major general), with an assistant (brigadier general) chief of tank corps; for 3500 officers for all grades from colonel to second lieutenant; and for 100,000 men to be organized into such infantry, tank, and machine gun units as the President might prescribe. Provision would be made for a chief of each arm of the service, and the restrictions placed by the National Defense act on the general staff would be reenacted. The National Guard would be left where this act placed it. The officers of the Philippines would cease to exist as such, and these scouts would be officered by officers of the Regular Establishment.

In respect of promotion, the Senate stood for selection, the House for the "single list" system.

MISCELLANEOUS. We shall conclude this review of the United States by assembling certain statistics, etc., useful for record and for reference, but difficult to classify. The late war was officially designated "The World War" (G. O. 115, W. D., Oct. 7, 1919), and the battles and campaigns of the United States were listed (G. O. 122, W. D., Oct. 30, 1919). This list covers all our campaigns from the Revolution to and including the World War. Of the 20 regular divisions authorized, 7 reached France; at the time of the armistice, the remaining 13 were in process of organization and training in the States. All of the National Guard divisions reached France, as did those of the National Army from the 76th to the 92d. The following table¹ gives the divisions by groups, shows the camps at which they were trained, and the States from which drawn:

The question of proper organization for the air service was much discussed. Some advocated an independent air service, others that each great subdivision of the national defense, the army and the navy, have its own air service, and some even went so far as to propose that the air service be made a new department of the government, with a member of the cabinet as its head. The end of the year brought no decision. At the close of the year the estimated strength of the army was 225,114. Of this number, 169,994 were in the United States and 19,408 in Europe. All our troops had been withdrawn from Russia, but we still maintained an expeditionary force in Siberia.

II. FOREIGN COUNTRIES

FRANCE. Universal military service had not yet come to an end, but its burdens were to be considerably lightened. The army was to be brought down to a strength of 350,000 men, 200,000 to be men doing compulsory service; 50,000 long service men; 50,000 colonial troops; and 50,000 commissioned and non-commissioned officers adopting the army as a career.

The distribution of this army was to be completely changed in order to meet the change in military conditions; 200,000 men were to be kept in Alsace-Lorraine and to guard the Rhine. This meant that the small internal garrisons of pre-war days were to be abolished. The border garrison was further to be supported by some 100,000 troops quartered in "carefully selected strategic centres in easy communication with the Rhine." The forces on the Rhine itself were to be so disposed as at all times to be ready to repel aggression and to interfere with the mobilization and advance of the enemy, i.e. the Germans. And as the first attack would be from the air, so to oppose it would be provided: (a) anti-aircraft batteries; (b) pursuit squadrons; (c) bombing squadrons. Heavy artillery batteries, both fixed and mobile, were to be kept on a war footing, in order to open on all hostile targets within range, and the tank corps would be called into action. (*Army and Navy Journal*, December, 1919)

Some details were given in the bill introduced September 11th, "for a preliminary adaptation of France to the Covenant of the League of Nations." All citizens were to render military service for a period of 28 years, beginning at the age of 20. The period of service with the colors was to be eight months, during which every man was to have 30 days' leave. This eight month service was to be followed by four periods of supplementary training of 15 days each, spread over the first 22 of the 28-year period. On reaching the age of 42, men were to be exempt. Young men of 20 forming each annual class were to be divided into two series each year, so as to furnish 100,000 men with the colors at the same time. Voluntary enlistment was limited to cavalry and colonial army. Youths under 20 were to receive preparatory physical and military education. (*Journal of the R. U. S. I.*, November, 1919)

"On September 19th the Sub-Committee on Armaments and Troops recommended: (a) Conscription annually for 1 year of 200,000 men instead of 600,000 as formerly; (b) enlisting and reënlisting 150,000; (c) 20 divisional districts to be retained, II.Q. 21st moved from Epinal to Strassburg. In north Africa, 2 army corps at Algiers and Rabat, 1 of colonial troops. For home peace establishment, per army corps, 1 native division instead of 2, plus reserve division. On eastern frontier, 2 active divisions, 1 at full strength on the Rhine, plus 1 north African and 1 colonial division. Total on Rhine, 6 divisions. Cavalry reduced to 4 divisions, of which 1 on Rhine; (d) Territorial and reserve forces (2,000,000) for emergencies. (e) Peace footing, 350,000 men; war, 1,300,000"

CASUALTIES. "On July 1st casualties during the war were returned as 1,039,600 killed, 245,900 missing, 2,560,000 wounded; total, 3,845,500. Native troops, 67,000 killed, 140,000 wounded; total, 207,000. 7,935,000 men, 475,000 natives, were mobilized. German killed and missing were estimated at 2,200,000. Germany, with a population of 67,800,000, mobilized 11,200,000 men; France, with 39,600,000, mobilized 8,400,000. The French effort was the greater, losses lower. Amongst native troops, casualties of officers were 17.7 per cent, of men, 6." (*Journal of the R. U. S. I.*, November, 1919.)

GREAT BRITAIN. Since the armistice nearly 3,000,000 men had been demobilized, leaving

1,200,000 in the army, including the 200,000 volunteer regulars. These were distributed as follows. Army of the Rhine, including troops in France and Flanders, 420,000. Army of the Black Sea, 41,000. Army of the Middle East, 105,000. Army of India, including demobilizable men temporarily detained, 76,000. Home army, including Ireland, the volunteer regular army being formed, and about 165,000 sick, wounded, or awaiting demobilization, 534,000. Detachments in Russia, 17,000. Detachments in Italy, 7000.

Assuming peace was ratified by August 1st, the following reductions were proposed. Army of the Rhine, from 10 to 2 divisions by late autumn, 150,000 men. In France and Flanders, 100,000 men now clearing up and guarding prisoners. Army of the Black Sea, 10,000 men liberated by the evacuation in autumn of the Caucasus. Russia, all troops, except those volunteering for the military missions, to be brought home by November 1st: those who served last winter, during September. Home, 200,000 men as German prisoners were repatriated. Total reductions, about 600,000.

The new regular army was 250,000 strong, including 25,000 men reëngaged from the armies of occupation. Unless some unforeseen catastrophe occurred, conscription would pass permanently from the Statute Book at the expiration of the present Military Service Act. "Broadly speaking, we contemplate no army in this country substantially larger than the small army we had when war broke out"

GERMANY. Germany's armed strength was of course limited by the terms of the Treaty of Peace. But some skepticism seemed to exist as to the reduction that Germany would genuinely adopt. Thus "early in September a French estimate placed the number in regular formations at 800,000; composed of six divisions under Gen. von der Goltz in Esthonia, the still undemobilized depôts of the field army, Reichswehr, local troops (Freiwilige), and various reserves. The aim was to use the 100,000 men sanctioned by the Peace Treaty as cadres for a national army, supplemented by the already existing reserves. The Reichswehr contained 50,000 old army N. C. O.s of 7-11 years' service enlisted as privates. The Zeit Freiwilige (temporary volunteers) were veterans with a minimum of six years' service, practiced drill and musketry weekly, kept their arms and equipment at home, and undertook to be available in case of need. The security police was a double of the Reichswehr, strongly organized, and provided with machine-guns, gas, etc.; 200,000 were at Kittowitz, and the same at Hindenburg, recruited from ex-N. C. O.s and men. On mobilization the reserves would be supplied from (a) volunteers, (b) police, (c) veterans and associations classed by regiments as Regimentsvereine and Kriegervereine." More recently still (Jan. 1, 1920,) Germany's armed forces were estimated by the British war office as amounting to nearly 1,000,000 men, divided into 400,000 regulars; 12,000 shore troops of the regular navy; 40,000-50,000 armed constabulary; 150,000-200,000 temporary volunteers or regular army reserves; 300,000-400,000 civic guards.

MILITARY TERRITORY OF THE NIGER. A territory under the government-general of French West Africa (q.v.). Capital, Zinder.

MILITIA. By Nov. 1, 1919, nearly 29 per cent of the national guard units specified in the allotment for the fiscal year 1920, had been extended federal recognition. This allotment was based on the appropriation authorized by Congress. It differed from the original distribution and allotment of different types of tactical units of the various States issued in 1916. Between June 30, 1919, and November 1st, the following States had units recognized: Alabama, 4 units; Florida, 2; Kansas, 4; Missouri, 2; New Jersey, 2; New York, 9; Ohio, 4; Oregon, 4; Rhode Island, 3; Vermont, 1; Virginia, 4; Georgia, 1; Mississippi, 1; Hawaii, 1. The following States utilized the platoon system: Oregon, 1 company; Arkansas, 3; Colorado, 2. Twenty-three States and Porto Rico presented no units for federal recognition.

The enlisted strength of the militia of the States having National Guard units, showing the authorized number and the number present from returns as of Nov. 1, 1919, together with the standing in per cent of authorized strength is stated below.

State	Authorized for fiscal year 1920	Present from latest returns	Per- centage of au- thorized number
Minnesota	3,659	4,284	117
Texas *	11,427	11,796	103

MILK BY-PRODUCTS. See DAIRYING.

MILLER, ANDREW. New York publisher and sportsman, died in New York City, December 31. He was born at Hamilton, Ontario, 1857, and graduated at Harvard where he was a classmate of the late Theodore Roosevelt. He joined the staff of *Life* soon after it was begun and became

a part owner. He was afterwards secretary and treasurer of the Life Publishing Company. He was also widely known in sporting circles, having a large racing establishment which included several famous prize-winners.

MILWAUKEE. See SEWERAGE and WATER WORKS.

MINERALOGY. The number of new minerals described in the last year was evidence of the activity that prevailed among students of this science, as well as indicative of the possibilities that exist for new discoveries. Some of the proposed names, however, will hardly pass for independent species, but rather denote varieties of known forms brought to light by refined methods of chemical and physical analysis. The list of new minerals which follows is supplementary to the former lists presented in earlier volumes of the YEAR BOOK. *Cocinerite* is a copper-silver sulphide in the atomic proportions of 4 of copper, 1 of silver, and 1 of sulphur. It has a silver-gray color, metallic luster, and massive structure, not known to occur in crystals. It comes from the Cocinera mine, San Luis Potosi, Mexico. *Chubuite*, an oxychloride of lead, is a yellow, lamellar, probably tetragonal mineral, from Argentina. *Ferrierte* is a zeolite related to mordenite, but contains magnesium in place of calcium. Chemically it is a hydrated silicate of aluminum, magnesium, and sodium; it is white to vitreous in appearance, and forms orthorhombic crystals. The type locality is the north shore of Kamloops Lake, British Columbia. *Hogbomite* belongs to the corundum-hematite mineral group, containing the oxides of iron, aluminum, magnesium, and titanium; it occurs as a gangue constituent of the iron ores of the Ruotevare district, Lapland. It is a black metallic to adamantine substance of rhombohedral crystallization. *Mackensite*, an iron black, massive mineral, is essentially a ferric orthosilicate with two molecules of water, found in ores from Sternberg and Bennisch on the Moravian-Silesian border. It is associated with the mineral next described. *Viridite* is an orthosilicate of ferrous iron with three molecules of water, leek green in color, from the same vicinity as mackensite. *Oliverite* and *orvillite* are compounds of zirconium, found in the badelyite deposits of Brazil. The former is a hydrated titanate of greenish yellow color; the latter a hydrated silicate. *Racewinit* is a silicate of aluminum and iron with water, found in the Bingham district of Utah. It is brown or yellow in color and coarsely crystalline. *Sobralite* is a member of the pyroxene family, composed of silica in combination with manganese, iron, magnesium and calcium. It is triclinic in form and occurs as a rock ingredient in Södermanland, Sweden. *Zebedassite* is a hydrated orthosilicate of aluminum and magnesium, of white color, that occurs in serpentine at Zebedassi in the Pavese Apennines.

DIAMONDS. Despite the remarkable rise in values which has characterized the recent market, no considerable diamond mining industry has been developed in the United States as a result of the discoveries of the diamondiferous pipes of Arkansas. Practically the whole supply of gem stones still comes from abroad and the trade is under the strict control of the South African syndicate. New discoveries were reported recently in the Belgian Congo, where the occurrences have the same characteristics as

State	The adjutant-general	Address
Alabama	Moon, Hartley A., Brig-Gen.	Montgomery

Porto Rico	Wilson, John A., Major	San Juan

those in the Transvaal and Orange Colony. The output of the Congo Mines, still in the early stages of development, has already reached over 100,000 carats a year, so that their productive capabilities are fairly assured. An unusual find was made last year in the Jagersfontein mine, Orange Colony, in the shape of a lively blue stone of 388½ carats. No similar large stone has been reported since the discovery of the famous Cullinan specimen from the Premier mine, Transvaal.

AMBER. In a study of amber—which is not strictly a mineral although used for gem purposes—G. F. Black (*Amer. Min.*) stated that its important properties by which it may be discriminated from other fossil resins are a superior hardness (2-3 on the mineral scale), inferior brittleness, conchoidal fracture, relative resistance to heat, and electrical activity. When rubbed amber gives off an agreeable odor, and it decomposes only at 300° C. when it yields the oil of amber and a black residue known as amber colophony, which dissolved in turpentine becomes the valuable amber varnish. The presence of small cavities may give a cloudy appearance to the material, characteristic of "bony amber." All of the most valuable amber comes from the Baltic coast, notably from the peninsula of Samland, East Prussia, which constitutes the great store house of the world's supply. It is found in Tertiary beds of glauconite, lignite, marl, and sand, which are contemporaneous with the conifer forests that produced the gum. The

lowermost bed, a glauconite sand, contains a clayey seam called blue-earth; this is the main source of the amber, although smaller amounts occur in all the beds. An area of 10 square meters of the blue-earth may contain several thousand kilograms of the resin. The use of amber for ornamentation dates back to the Bronze Age or earlier, as quantities of beads of the Baltic amber have been found in prehistoric burial sites in Great Britain and in the Mediterranean region. An analysis of the amber beads from Mycenæ identifies the material with the Baltic variety, and the same is true of the prehistoric amber ornaments from Northern and Central Italy.

MINERAL PRODUCTION. The following information in regard to mineral production in the United States in 1917 and 1918 is taken from the preliminary report of the United States Geological Survey: The statistics of mineral production in the United States for 1918 show that in the last 10 months before the armistice the mineral industries of the country had become remarkably well adjusted to the extraordinary economic demands of war. Production increased in nearly all the minerals that were directly or indirectly essential to the war, such as mineral fuels, the major base metals, except zinc, and many of the minor base metals, particularly those which are normally imported from distant parts of the world but for which shipping could no longer be spared. The coinage metals declined

Grand total approximate value of all mineral products	\$5,007,259,000	\$5,526,162,000	+\$518,903,000
								+\$10.4

a Estimated.

b Includes 119,048 tons of stronger acid, reported as oleum, etc., not converted to 60° Baumé.

c Canvass discontinued after 1917.

d Value included under last item ("unspecified").

e Canvass of sulphuric acid from copper and zinc smelters discontinued after 1917.

products would be \$467,887,000 (16.1 per cent); the decrease in non-metallic products, other than mineral fuels, \$16,786,000 (2.5 per cent); and the increase in value of all mineral products, \$535,793,000 (10.7 per cent).

f Includes in 1918 products as follows: Antimony other than content of antimonial lead, valued at \$659,484, metallic arsenic (\$2610), bismuth, cadmium sulphide (\$70,315), chert, diatomaceous earth for special uses, cobalt concentrates, flint lining for tube mills (\$46,634), ilmenite (\$11,100), iron ore sold for paint (\$22,924), lithium minerals (\$111,600), magnesium (\$615,217), marls, molybdenum (\$1,257,000), pebbles for grinding (\$82,851), selenium (\$200,000), silica sand and sandstone, finely ground (\$608,584) slate granules, sodium salts (carbonate, bicarbonate, and sulphate) from natural sources (\$992,788), strontium ore (\$20,000), tellurium, and an estimate of the value of miscellaneous mineral products, statistics for which are not collected annually by the Survey.

greatly in output. Gold was bound legally to a fixed price, while costs of production were soaring: the production of silver was hampered by a great increase in the imports of bullion, chiefly from Mexico, and by other causes. The most notable decrease was in building materials, the output of which declined 20 to 60 per cent, labor and capital being withdrawn from these industries and focused upon those that were more essential in the war economy. The approximate total value of the mineral production of the United States in 1918 is \$5,526,162,000, an amount more than \$500,000,000 in excess of that for 1917, \$2,000,000,000 in excess of that for 1916, and more than double that for any previous year. The increase as compared with 1917 was due to the advance in prices, whereas in total quantity of mineral products 1918 fell short of 1917.

See ALASKA.

ARIZONA. The output of gold, silver, copper, lead, and zinc from mines in Arizona in 1919, according to the estimate of the United States Geological Survey, Department of the Interior, had a total value of about \$108,707,000, a decrease of \$93,427,880. There was a decrease in both the quantity and value of all these metals, but the largest decrease was that in copper. During the first part of the year, there was a marked curtailment of output, and in the Verde district labor troubles closed the mines for nearly four months. During the last three months of the year many of the large companies again curtailed production as a result of market conditions. The mine output of silver decreased from 6,686,152 ounces in 1918 to about 4,927,000 ounces in 1919. In spite of the increase in the price of silver the value of the output decreased from \$6,686,152 to about \$5,479,800. The mine output of copper decreased from 764,855,874 pounds in 1918 to about 522,000,000 in 1919, a decrease of nearly 32 per cent. The value of the output decreased from \$188,919,401 in 1918 to about \$98,296,000 in 1919, and the average price of copper decreased from 24 7 cents to about 18.83 cents a pound. The mine production of lead in Arizona decreased from 12,503,689 pounds in 1918 to about 10,000,000 pounds in 1919. The value of the output decreased from \$887,762 to about \$575,000. The output of recoverable zinc decreased from 2,269,643 pounds in 1918 to about 1,717,000 pounds in 1919. The value decreased from \$206,538 to about \$125,700.

CALIFORNIA. The output of gold, silver, copper, lead, and zinc from metal mines in California in 1919 was valued at \$23,124,045, as compared with \$31,187,807 in 1918, according to preliminary figures of the United States Geological Survey, Department of the Interior. This was a decrease of \$8,063,762, or 26 per cent. The mine output of gold for the State in 1918 was \$16,528,953. The estimate for 1919 indicated a production of \$17,320,250, or about \$791,300 more than in 1918. The principal cause of the unusual reduction in the gold output of the State has been that steady, continuous operation of the properties seemed impossible, owing to war conditions, scarcity of competent men, high costs, and curtailment of freight and power. Some mines were worked only a few months, others were worked with only one shift instead of three, and still others have been compelled to cease work entirely for long periods. Moreover, few of the large companies were willing to push

production under the increased cost and to pay the resultant war income tax. The output of silver from California mines in 1919 was estimated at 1,121,069 fine ounces, valued at \$1,244,386 or 306,642 ounces less in quantity and \$193,325 less in value than in 1918. The silver produced in California is derived mainly from copper and lead ores, although some is obtained with the gold mined at placers and in deep gold mines.

The estimated mine output of copper in California in 1919 was 22,299,656 pounds, valued at \$4,236,934, as compared with 47,674,660 pounds, valued at \$11,775,641 in 1918, a decrease in quantity of 25,375,004 pounds and in value of \$7,538,707. Plumas is the largest copper producing county of the State, but Shasta, Calaveras, Siskiyou, and Trinity are also large producers, and small quantities are produced in most of the other metal-mining counties. The mine output of lead in California in 1918 was 13,372,049 pounds, valued at \$949,415, and the estimated output in 1919 was 4,455,161 pounds, valued at \$253,944, a reduction in quantity of 8,916,888 pounds and in value of \$695,471. The output of lead in California was 8,496,579 pounds less in 1918 than in 1917, and the figures for 1919 showed a decided and continued decrease. The lead is mined mainly in the southern counties of the State—Inyo and San Bernardino. The estimated output of zinc in the State in 1919 was 965,259 pounds, valued at \$68,533, as compared with 5,561,393 pounds, valued at \$506,087, in 1918, a decrease in quantity of 4,596,134 pounds and in value of \$437,554.

MINIMUM WAGE. The principle of the minimum wage, the aim of which is to regulate the amount of the wage directly by fixing the smallest sum which may legally be paid the worker, first found legislative expression in Australia in 1896. In 1909 Great Britain passed a minimum wage law known as the "trade boards act," applying to occupations paying "exceptionally low" wages, under which minimum wages had been fixed for some 400,000 workers representing eight industries up to the time of the War. This act was amended in 1918 so that it might be extended more quickly and to a larger number of industries. Within the past few years Norway and France passed minimum wage laws applying to sweated workers in the garment trades. All of these laws apply alike to both sexes. But in the United States minimum wage legislation has been confined to women and children, on the theory that these classes are in need of special protection. At the end of 1919, 14 States and Territories—Arkansas, Arizona, California, Colorado, Kansas, Massachusetts, Minnesota, North Dakota, Oregon, Porto Rico, Texas, Utah, Washington, Wisconsin—and the District of Columbia had provided minimum wage legislation for women and children workers: of these, two inaugurated the system for the first time during the current year, and one State, Nebraska, repealed its law on July 18th.

While the above summary shows that the minimum wage has gained scanty foothold throughout the world in actual legislation, it fails to give adequate expression to the importance of the movement: for the principle has been established in almost every industrial country where trade unions are prominent, through agreements in the different industries.

A number of States and the federal government increased the minimum rates of pay for various

classes of employees or provided for bonuses to meet the war-time increase in the cost of living. The States enacting such legislation were: Arkansas, California, Hawaii, Massachusetts, Montana, New Jersey, New York, Pennsylvania, South Carolina, and Wisconsin. The year's legislation bearing on genuine minimum wage laws follows:—

ARKANSAS. Telephone companies are exempted from the minimum wage law, but employers of three or less are no longer exempt.

MASSACHUSETTS. The minimum wage commission may require employers to keep, for not more than six months, a record of the hours worked by each employee. Failure is a misdemeanor. Penalty, \$5-\$50 for each offense. The minimum wage commission may require employers to post its notices for employees in such reasonable way and for such time as it may direct. Penalty, \$5-\$50 for each offense. The commission, as well as the State board of labor and industries, is given power to enforce these provisions. The minimum wage commission is given power to fill vacancies on wage boards.

MICHIGAN. It is made unlawful to pay women less than men for equal work; but no woman may be given a task disproportionate to her strength or be employed in any place detrimental to her morals, health, or potential powers of motherhood. Violation is made a misdemeanor. Maximum penalty, \$100, or imprisonment for three months, or both.

MONTANA. It is made unlawful to employ any woman in any occupation for wages or compensation less than that paid to men for equivalent service or for the same amount or class of labor in the same industry, office or place of employment. Violation is a misdemeanor. Penalty, \$25-\$500 for each offense.

NEBRASKA. The articles establishing the board of mediation and investigation, and the minimum wage commission are repealed July 18, 1919.

NORTH DAKOTA. All the usual powers of a minimum wage commission are given to the workmen's compensation bureau. It is declared unlawful to employ women and minors for unreasonably long hours, or under conditions detrimental to health and morals, or for wages which in the case of women are inadequate, and in the case of minors are unreasonably low. The bureau is given the powers necessary to investigate and ascertain wages, hours, and conditions of labor of women and minors and to establish standards. The bureau may submit its findings for further consideration and recommendation to a conference composed of three representatives each of employers, employees, and the public, and one or more commissioners. If the bureau approves of the recommendations of the conference it may, after public hearing, issue the orders necessary to carry them into effect. Questions of law may be appealed to the district and supreme courts, but on questions of fact the bureau's decision is final. Special licenses for employment at a lower wage may be issued to women who are physically defective and to apprentices. Violation is made a misdemeanor. Penalty \$25-\$100, or imprisonment for from 10 days to three months, or both. Penalty for discharging an employee who gives testimony, \$25-\$100. Women who are paid less than the minimum wage established may recover the difference with attorney's fees. The bureau must report to the legislature biennially. To

carry out the act \$6000 a year is appropriated.

PORRICO. It is made unlawful for employers in industrial or commercial occupations or public service undertakings to pay women after the first three weeks of apprenticeship less than \$4 a week if under 18, and less than \$6 a week if over 18. The act is to be enforced by the bureau of labor, and does not apply to agricultural pursuits.

TEXAS. An industrial welfare commission has been established, composed of the head of the bureau of labor statistics, as chairman, the representative of the employers on the industrial accident board, and the state superintendent of public instruction. The commission may employ a secretary and two investigators at a salary of not more than \$1800 and expenses. The commission is to investigate wages, hours, and conditions of labor where women and minors are employed. Provision is made for obtaining the necessary information, and for access to places of employment. Minors are defined as persons of either sex under 16. As so defined all minors and women are subject to the act except nurses, servants, farm laborers and students. This commission is to hold public hearings, after which it may determine a minimum wage and standard conditions for health and welfare of working women and minors. Such orders will go into effect 60 days after they are made by the commission, but not before Nov. 1, 1919, and copies must be posted in all places of employment affected. Orders may be rescinded or amended after public hearing. . . . Employees who are paid less than the minimum wage may recover the unpaid balance together with the costs of the suit regardless of agreement to work for less. To carry out the act \$5000 is appropriated.

UNITED STATES. A minimum wage board is established for the District of Columbia, selected by the commissioners of the district, and made up of one representative of the employers, one representative of employees, and a third person representing the public. The term of office is three years, one member's term expiring each year. They are allowed \$5000 for expenses, including \$2500 for the salary of a secretary. Employers must keep registers showing the hours and wages of their women employees. The board is given the necessary powers to compel production of testimony concerning wages, and to examine employers' payrolls. If investigation shows wages to be inadequate, the board is to call a conference of not more than three representatives each of employers and employees in that industry and of the public. After considering testimony, the conference is to make recommendations to the board as to wages for that industry. If the board approves the recommendations it shall issue an order with which all employers in the industry must comply. Violation is a misdemeanor. Penalty, \$25-\$100, or imprisonment of from 10 days to three months, or both. Discharging an employee who gives testimony is a misdemeanor. Penalty, \$25-\$100. Women who are paid less than the minimum wage may recover the difference with costs through a civil action.

CANADA. During the year, Quebec and Saskatchewan followed Manitoba in the establishment of boards for fixing wages of female employees. Alberta also, has limited statutory determination of wage rates in factories, shops,

and offices, while the Minimum Wage Act created a minimum wage board for British Columbia on Apr. 23d, 1918. The Quebec law, effective Mar. 17, 1919, establishes a commission with power to investigate women's wages, and to call conferences of employers and employees to fix a minimum wage for any industry where wages are inadequate. The Saskatchewan law, effective May 1st, provides for the appointment of a board by the Lieutenant-Governor; this board is to consist of five members, two of whom are women, and has the power to fix wages without calling a conference. During the current year, important awards were made by the minimum wage boards in British Columbia and Saskatchewan, and minimums were set for the industries in which most female labor is employed.

GREAT BRITAIN. Numerous wage agreements have been reached in Great Britain in the past year, and in addition minimum wage orders have been issued for several new industries under the British Trade Boards Act. Among these agreements one of the most important affects about 65,000 men employed in various capacities on the British railroads, wages have been increased and new minimums set by various arbitration boards in the laundry, wholesale clothing, and shirt and collar trades, the 44-hour week and new minimums were established in the Nottingham building trades; the wage minimum has been increased for agricultural workers in the Perth and Forfar districts in Scotland, and for mechanics in the linen industry in Ireland; the court of arbitration at Westminster (London), recently handed down a decision which sets the wage standard for the shipbuilding and engineering trades throughout the United Kingdom.

GERMANY. According to *Sociale Praxis und Archiv für Volkswohlfahrt*, Berlin, Apr. 24, 1919, a Prussian Wages Department is to be formed to function under the general supervision of the German Wages Department. The November *Monthly Labor Review* translates a paragraph outlining the purpose of the proposed Board.

"In order to insure the possibility of competition by German manufacturers in foreign markets after the conclusion of peace, it is necessary to scrutinize carefully and without delay the efforts made to obtain progressive increments of wages, and to deal with such efforts in a rational manner. Consequently the functions of the Prussian Wages Department will be as follows: Intervention in wages disputes; investigation of the necessity of the demands put forward and of the explanations of employers; elucidation of the interdependence of economic life and of preliminary arrangements for a general and proportionate decrease in wages. On the other hand, consideration will be given to a control of the prices of the most important foodstuffs and of other articles necessary for existence, as soon as circumstances make such control feasible, in order to check extortion."

MINNESOTA. **POPULATION.** The population of the State in 1910 was 2,075,708, and on July 1, 1919, it was estimated to be 2,378,128, a gain during the twelvemonth of about 33,000.

AGRICULTURE. The following table is compiled from a report of the Federal Department of Agriculture, for December, 1919.

Crop	Year	Acreage	Prod Bu	Value
Corn . . .	1919	2,950,000	118,000,000	\$141,600,000
	1918	2,780,000	111,200,000	123,482,000
Oats . . .	1919	3,220,000	90,160,000	57,702,000
	1918	3,282,000	134,562,000	84,774,000
Barley . . .	1919	910,000	18,200,000	21,112,000
	1918	1,300,000	40,300,000	32,240,000
Wheat . .	1919	4,015,000	37,710,000	94,276,000
	1918	3,619,000	75,792,000	154,616,000
Rye . .	1919	522,000	7,830,000	10,179,000
	1918	435,000	8,700,000	13,050,000
Hay . . .	1919	2,000,000	a 3,800,000	55,100,000
	1918	1,950,000	a 2,730,000	38,493,000
Potatoes . .	1919	300,000	26,100,000	39,933,000
	1918	312,000	32,760,000	24,570,000

a Tons

EDUCATION. The reports of the Inspectors of High and Grade Schools for the year ending July 31, 1919, yield the following figures. In 1919 there were 236 high schools, with an enrollment of 45,457 and an average daily attendance of 37,422. There were 1827 high school instructors, who received a total of \$2,142,373 in 1918-19. Enrolled under the high schools there were 179,637 graded pupils, with an average daily attendance of 149,913 and 5260 teachers, receiving a total salary of \$4,639,665. The grand total of salaries in the State high school system was \$8,561,416, while the total State aid was \$1,014,482. There were also 260 graded schools, with 1599 teachers, a total enrollment of 40,038 and an average attendance of 30,024. The average salary of grade teachers was in 1918-19, \$594, while the principals received \$1215.

FINANCE. The balance in the treasury on Aug. 1, 1918 was \$8,153,000, and on June 30, 1919 it was \$6,986,513. The total revenue for this period was \$32,493,164, while the total disbursements were \$32,493,164. The State has no bonded debt.

TRANSPORTATION. The total mileage in the State in 1919 was about 9060. The longest line were the Great Northern, the Chicago, Milwaukee & St. Paul, and the Minnesota, St. Paul, and Sault Ste. Marie.

CHARITIES AND CORRECTIONS. Minnesota was among the first of the States to adopt a system of centralized control of its State institutions; the State Board of Control now has complete financial and general control over 13 institutions, and various powers over several others. The following list gives name, situation, date of establishment, number on staff and population of the institutions: St. Peter State Hospital, St. Peter; 1866; 225; 1242. State Hospital, Rochester; 1874; 210; 1284. State Hospital, Fergus Falls; 1885; 250; 1558. State Asylum, Anoka; 1900; 85; 887. State Asylum, Hastings; 1899; 80. School for Feeble-Minded and Epileptic Colony; Faribault; 1882; 260; 1543. School for the Deaf; Faribault; 1863; 80; 250. School for the Blind; Faribault; 1866; 42; 80. State Prison; Stillwater; 190. State Reformatory, St. Cloud; 1889; 70; 615. Training School for Boys; Red Wing; 58; 220. Home School for Girls; Sauk Centre. Hospital for Crippled and Deformed Children; St. Paul; 1910; 40; 123. Public School for Dependent Children; Owatonna; 1885; 74; 319. According to the State Legislative *Manual* for 1919, the State Prison is "the greatest revenue producing public institution in the world." Since 1890, over \$20,000,000 worth of binding twine has been here manufactured and sold. The machinery department has turned out nearly \$1,500,000

of mowers, binders, and other farm machinery.

OFFICERS. Governor, J. A. A. Burnquist; Lieutenant-Governor, Thomas Frankson; Secretary of State, Julius A. Schmahl; Auditor, J. A. O. Preus; Treasurer, Henry Rines; Adjutant-General, W. F. Rhinow; Attorney-General, C. L. Hilton; Commissioner of Insurance, J. B. Sanborn; Superintendent of Education, J. M. McConnell; Commissioner of Labor and Industries, J. P. Gardiner.

JUDICIARY. Supreme Court: Chief Justice, Calvin L. Brown; Associate Justices, Homer B. Dibell, Andrew Holt, Oscar Hallam, James H. Quinn; Clerk, Herman Mueller. See OLD AGE PENSIONS.

MINNESOTA, UNIVERSITY OF. A co-educational State institution at Minneapolis, Minn. The enrollment for the summer session of 1919 was 1510, while that for the fall was 7451; of these 5062 were men and 2389 women. The total number of members in the faculty in the fall was 976, of these 255 were new; the number in the faculty with the rank of instructor or above was 775, and of these 131 were new in 1919. The income for the year was \$4,337,094. The library contains 280,000 volumes. In 1919 there were several changes in instruction; the most noteworthy being the change from the semester to the quarter system, the establishment of a new School of Business, a new course in Americanization Training Work, Training for Diplomatic and Consular Service, for State and Federal Administration, for Municipal Administration and Engineering, and for teachers and supervisors of Physical Education. The course in the College of Dentistry was changed from four to five years, the additional year being pre-dental work in the College of Science, Literature, and the Arts. In the 1919 session of the State Legislature, a 10-year building programme was made possible by an annual appropriation of \$560,000 for 10 years, beginning July 1, 1920. The University was founded in 1868. In December, 1919, announcement was made of the resignation of President Marion LeRoy Burton, to take effect in July, 1920, when President Burton accepts the presidency of the University of Michigan. In 1919 the university received a bequest under the will of W. J. Murphy, owner of the *Minneapolis Tribune* for the purpose of establishing a School of Journalism. The university was named residuary legatee by the late Dr. James E. Moore, long a member of the Medical School, such legacy to be used for that school.

MISSISSIPPI. POPULATION. The population of the State in 1910 was 1,797,114, and on July 1, 1919, it was estimated to be 2,026,361, a gain during the twelvemonth of about 25,000.

AGRICULTURE. The following table is compiled from a report of the Federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu	Value
Corn	1919	3,980,000	59,700,000	\$95,520,000
	1918	3,900,000	66,300,000	100,113,000
Oats	1919	2,700,000	5,282,000	5,546,000
	1918	322,000	6,440,000	6,891,000
Hay	1919	405,000	a 648,000	13,284,000
	1918	347,000	a 416,000	7,696,000
Potatoes	1919	18,000	1,530,000	2,830,000
	1918	20,000	1,600,000	2,640,000
Sweet potatoes	1919	98,000	10,290,000	11,525,000
	1918	89,000	8,455,000	8,793,000
Cotton	1919	2,950,000	b 946,000	177,375,000
	1918	3,138,000	b 1,226,000	170,421,000

TRANSPORTATION. The railway mileage of the State in 1919 was 4480; of this 62.5 miles of first track were built in the year.

OFFICERS. Governor, Theo. G. Bilbo; Lieutenant-Governor, Lee M. Russell; Secretary of State, Joseph W. Power; Treasurer, J. P. Taylor; Auditor, Robert F. Wilson; Attorney-General, Ross A. Collins.

MISSISSIPPI, UNIVERSITY OF. A co-educational State institution, located at Oxford, Miss., (post office, University, Miss.). The enrollment for the fall of 1919 was 607, and there were 34 members in the faculty, exclusive of instructors and assistants. The endowment fund is approximately \$700,000, held by the State, which pays the university 6 per cent interest. During 1919 a new department of hygiene was added. The library contains 31,000 volumes. The university was founded in 1844. Chancellor, Joseph Neely Powers, LL.D.

MISSOURI. POPULATION. The population of the State in 1910 was 3,294,335, and on July 1, 1919, it was estimated to be 3,467,401, a gain of 19,000 during the twelvemonth.

AGRICULTURE. The following table is compiled from a report of the Federal Department of Agriculture

Crop	Year	Acreage	Prod Bu	Value
Corn	1919	5,756,000	155,412,000	\$214,469,000
	1918	6,693,000	133,860,000	191,420,000
Oats	1919	1,417,000	38,259,000	27,164,000
	1918	1,524,000	44,196,000	30,937,000
Wheat	1919	4,296,000	57,886,000	120,982,000
	1918	3,092,000	53,154,000	108,966,000
Hay	1919	2,810,000	a 3,794,000	73,983,000
	1918	2,989,000	a 2,960,000	55,145,000

EDUCATION. As the result of agitation in the summer of 1917 the office of the Superintendent of Public Schools conducted in 1917 and 1918 a detailed investigation of the educational system of the State, from which a very interesting report was presented to the State government in 1918. This report gives Missouri a rank of 32d among the States in 1916. This means that Missouri has been progressing less rapidly than the nation as a whole, for in 1910 Missouri ranked 28th. Upon the basis of this report the Superintendent made several recommendations for revision of the School Code. For the year ending June 30, 1918, the total expenditure was \$22,815,610 and the total receipts amounted to \$28,593,554. The average levy in the State for school purposes was \$0.655. School property was valued at \$137,349,927. Elaborate arrangements have been made relative to the administration by the State of the provisions of the Federal Smith-Hughes Act, which was accepted by Missouri in March, 1917.

FINANCE. The balance on hand Jan. 1, 1919 was \$3,963,412, and on Dec. 31, 1919 it was \$5,791,823. The receipts for this period were \$25,062,337 and the disbursements amounted to \$23,233,925. The amount of the State debt on Dec. 31, 1919 was \$6,498,839.

TRANSPORTATION. The railway mileage of the State for 1919 was about 9382. The longest roads were the St. Louis & San Francisco, and the Chicago, Burlington & Quincy.

OFFICERS. Governor, F. D. Gardner; Lieutenant-Governor, Wallace Crossley; Secretary of State, John L. Sullivan; Treasurer, G. H. Middekamp; Auditor, G. E. Hackmann; Attorney-General, F. M. McAllister. See **WORKMEN'S COMPENSATION.**

MISU, NICHOLAS. Rumanian representative at the Paris Peace Conference. He was regarded as the most able of the Rumanian diplomats, having a wide experience and being familiar with a large number of European and Balkan languages. He was by birth a Macedonian. He served as minister to Bulgaria, Austria, and England.

MOSEIWITSCH, BENNO. See **MUSIC, Artists, Instrumentalists.**

MOLDAVIA. The northern division of Rumania. Area estimated before the war at 14,759 square miles; population (1913), 2,145,464. Chief towns with their population before the war: Jassy, 76,120; Galatz, 72,512; Botushani, 32,874; Barlad, 25,367; Foc Sani, 25,287.

MOLYBDENUM. See **CHEMISTRY, INDUSTRIAL.**

MONACO. A principality on the Mediterranean surrounded by the territory of France except at the coast, celebrated for the gambling resort, Monte Carlo. Area, 8 square miles. Population of La Condamina, 11,082; Monte Carlo, 9627; Monaco, 2247.

MONEY. TOTAL STOCK. The total stock of money in the United States on Oct. 1, 1919, was \$7,662,898,238, an increase of almost \$250,000,000 since that time last year, and \$2,020,000,000 more than on Oct. 1, 1917. The total for 1919 included \$616,213,318 held in the United States Treasury as assets of the government and \$2,087,709,369 held by and for the federal reserve banks and agents. Of this total amount of money held either by the government or the federal reserve banks \$2,273,565,233 is in gold and silver coin and bullion. The total money in circulation was \$4,958,975,551 including \$468,778,150 of gold and silver certificates and treasury notes of 1890 offset by either gold coin or bullion in the total monetary stock. In circulation was \$397,076,567 of gold making the total gold holdings of the country \$2,905,726,555. Gold was thus 37.9 per cent of the total stock of money as compared with 45.6 per cent one year earlier, and 55.8 per cent on June 30, 1917. The total stock of metallic money included \$308,145,759 of standard silver dollars and \$243,380,383 in subsidiary silver. The total stock of notes was \$4,185,645,541 divided as follows: United States notes, \$346,681,016; federal reserve notes, \$2,866,288,513; federal reserve bank notes \$251,190,800; national bank notes \$721,485,210. This shows an increase in the amount of federal reserve notes of \$1,018,708,545 since July 1, 1918, and at the same time in 1917 there were only \$547,408,000 outstanding.

CIRCULATION. The money in circulation included besides the gold above mentioned \$81,784,880 in silver dollars and \$230,766,444 in subsidiary silver. In addition there were in circulation nearly all of the above mentioned notes, the total of notes in circulation being \$3,780,570,510 as compared to \$4,185,645,541 of notes issued. The remainder of the money in circulation was the gold and silver certificates and treasury notes above mentioned of which \$313,250,681 was in gold certificates and \$153,809,165 in silver certificates. These figures accentuate

the prominent position that the federal reserve notes are assuming in this country's circulating money, in as much as there is a reduction of \$505,102,319 in gold certificates and \$225,401,835 in silver certificates since June 30, 1918 and an increase of \$958,222,785 in federal reserve notes. The percentage of gold coin and certificates in the total circulation has dropped from 50.97 in 1917 to 35.92 for 1918, to 14.82 for 1919. The per capita circulation on Oct. 1, 1919, was \$46.61, almost the same as that of the previous year which was \$46.34, while that of 1917 was \$37.97.

PAPER MONEY. The total paper money outstanding Oct. 1, 1919, was \$5,018,756,212, including both certificates and notes, from which however is to be deducted the amounts held in the treasury and the federal reserve banks and federal reserve agents bringing the net total down to \$4,249,248,660. The grand total of paper money outstanding included besides the federal reserve notes and United States notes and national bank notes mentioned in the preceding paragraphs, \$673,301,781 of gold certificates (including \$5,281,421 held in the reserve banks) and \$159,090,586 of silver certificates (including \$5,281,421 held in the reserve banks). The cost of issue and redemption for each \$4000 notes or pieces of paper currency was \$61.04 and the aggregate cost was \$5,412,000 of which nearly seven-eighths was caused by the expenses of issue and the remainder by redemption. The average length of life of paper money is approximately 2.5 years. The stock of standard silver dollars aggregated \$308,145,759. The total amount of subsidiary silver coin was \$12,613,939 not in circulation.

MONGOLIA. A large territory dependent on China, with incompletely defined limits, lying to the west of Manchuria. Area, about 1,367,000 square miles; population, about 2,600,000. Since 1912 it had been placed by treaty under the protection of Russia. After the overthrow of the Czar and the rise of Bolshevism the treaty was ineffective. On November 20th the Mongolian government at Urga called this fact to the attention of the Chinese government and expressed the hope that the Mongolian people might retain their rights and privileges so that they could attach themselves to the republic of China. On November 23d the Chinese government declared that the agreement with the former Russian government in respect to Mongolia would no longer be in force and that it accepted the Mongolian proposal.

MONIZ, EGAS. Portuguese representative at the Paris Peace Conference. He was Portuguese Minister for Foreign Affairs. He was by profession a physician but entered politics at an early age, and was a friend of Sidonio Paes, the former President. Though portfolios in several governments were offered him, he did not accept a ministry until 1918, when he became Minister of Foreign Affairs under the late Paes. Before that he had represented his country at Madrid.

MONTAGU, EDWIN SAMUEL. Representative of British India at the Paris Peace Conference. For two years he had been prominent in connection with the proposed scheme of Indian reforms. He was appointed under-secretary for India in 1910 and entered the cabinet in 1915, where in the first coalition government he was Minister of Munitions. He retired with the Asquith group and later was chosen secretary

for India (1917). He spoke on behalf of the reform programme in August, 1917, and was later sent to India to investigate political conditions. The result was the important report on Indian Constitutional Reforms, which was issued in July, 1918, (see preceding YEAR BOOK). Investigations along the same lines were still in progress in 1919.

MONTANA. POPULATION. The population of the State in 1910 was 376,053, and on July 1, 1919, it was estimated to be 499,816, a gain during the twelvemonth of 13,000.

AGRICULTURE. The following is compiled from an annual report of the Federal Department of Agriculture, for December, 1919.

Crop	Year	Acreage	Prod Bu	Value
Corn	1919	128,000	1,728,000	\$2,851,000
	1918	100,000	2,100,000	2,835,000
Oats	1919	612,000	6,120,000	5,569,000
	1918	680,000	20,400,000	16,320,000
Wheat	1919	2,221,000	10,729,000	25,214,000
	1918	2,386,000	29,961,000	58,124,000
Hay ..	1919	752,000	a 827,000	19,021,000
	1918	767,000	a 1,227,000	24,049,000

a Tons.

EDUCATION. The total school population as of September, 1918, was 158,674. The enrollment was 122,000. The average daily attendance for a school year of 148 days was 87,666. There were 616 male teachers and 4978 female teachers. The average salary for 1918-19 for village and elementary schools is \$91.25; high school teachers receive on an average of \$114 per month. The Superintendent of Public Instruction, in the report for the biennium ending 1918, gives a very interesting table showing the percentage by counties of teachers receiving less than \$700 annually, a figure taken as a minimum living wage. This chart shows that in some counties the percentage is as high as 90 per cent, while the average for the counties is 44 per cent. The cost of schools in 1917-18 was \$1.54 per \$100 of wealth in the State. The State apportionment for educational purposes is only 12.8 per cent of the total.

TRANSPORTATION. According to the report of the State Railroad Commission for the biennium ending 1918, there were 4913 miles of main line, 205 miles of double track main line, and 1594 miles of branches, etc. The total mileage operated was 6987. The longest roads were the Chicago, Milwaukee & St. Paul, the Great Northern, and the Northern Pacific. In the year ending June 30, 1918, there originated at Montana stations a total of 348,119 carloads of commodities; 99,663 of these contained ore.

OFFICERS. Governor, Samuel V. Stewart, Lieutenant-Governor, W. W. McDowell; Secretary of State, Charles T. Stewart; Attorney-General, Samuel C. Ford; Adjutant-General, Phil Greenan; Treasurer, H. L. Hart; Auditor, George P. Porter; Superintendent of Public Instruction, May Trumper.

JUDICIARY. Supreme Court: Chief Justice, Theodore Brantly; Associate Justices, W. L. Holloway, Chas. H. Cooper, John S. Hurley, J. A. Matthews, Clerk, J. T. Carroll.

SEE MINIMUM WAGE.

MONTANA, UNIVERSITY OF. Co-educational university at Missoula, Mont. The enrollment for the summer session of 1919 was 389, in the fall, 796. The faculty numbers 64. The income from the State for the year was \$280,000, \$60,000

being appropriated for buildings. A new natural science building, at a cost of \$100,000, was constructed during the year. The library contains 45,000 bound volumes and 19,600 pamphlets. The university was founded in 1895. President, Edward O. Sisson, Ph D

MONTENEGRO. A Balkan state bounded on the east by Serbia, on the south by Albania, on the west by Dalmatia and on the west and north by the Herzegovina; an independent constitutional monarchy until the occupation by the Germans and Austrians at the close of 1915; after Dec. 1, 1918 a part of the newly formed Jugo-Slav state, or unitary kingdom of Serbians, Croats and Slovenes. Area before the Balkan wars, 3474 square miles; area, after the Balkan wars, 5603 square miles; population, estimated Jan. 1, 1917, 436,789. Capital, Cetinje, with an estimated population of 55,000. Other towns with estimated populations are: Podgoritz, 14,000; Duleigno, 5000. The Montenegrins belong to a Serbian branch of the Slavic race. Agriculture is the main pursuit but the methods are primitive. The chief crops are corn, oats, tobacco, potatoes, barley and buckwheat; and wine is produced in certain areas. Nicholas I (born 1841) was king until Nov. 25, 1918, when the National Assembly at Podgoritz voted in favor of his deposition. He removed with his cabinet to France. On November 26th, the Assembly voted for the union of Montenegro with the new state of Jugo-Slavia. The final settlement was subject to the Peace Conference. See WAR OF THE NATIONS and JUGO-SLAVIA.

MONTEUX, PIERRE. See MUSIC, *Orchestras*.

MONTERRAT. A presidency of the Leeward Islands (q.v.).

MOON, REUBEN OSBORNE. Former congressman from Pennsylvania, died at Philadelphia, Pa., October 26. He was born in Burlington County, N. J., 1847, graduated at Philadelphia College in 1875, and was admitted to the bar in 1884, after which he was in practice at Philadelphia. He was a member of Congress from 1903-13, and served as chairman of the joint committee on codifying the federal statutes. He was a Republican in politics.

MORA, FLORA. See MUSIC, *Artists, Instrumentalists*.

MORAVIA. Before the downfall of the Austro-Hungarian Monarchy, a crownland of Austria, bounded by Lower Austria, Silesia, and Hungary; included toward the end of 1918 in the new state of Czecho-Slovakia (q.v.). Area placed before the war at 8584 square miles; population estimated in 1913 at 2,666,613. According to the census of 1910, 1,868,971 or 71.75 per cent, spoke Bohemian. Capital, Brunn, with a population in 1910 of 126,737.

MORAVIANS. There are three branches of this denomination which was founded in Georgia in 1735 by Bohemian and Moravian immigrants, Moravian Church (Unitas Fratrum), Bohemian and Moravian Brethren (Evangelical Union), and Independent Moravian Churches of which there are three. The largest of these branches is the Unitas Fratrum which had, in 1919, 21,984 communicants, 1581 non-communicants, with 155 ministers and about 140 churches. This shows a slight increase over 1918. Sunday school pupils numbered 7722, a slight decrease from 1918. Missionary work is carried on in 20 fields, where to January, 1919, there were 108,580 converts. There are seven

educational institutions, the principal one being the Moravian College and Theological Seminary at Bethlehem, Pa.

The Evangelical Union of Bohemian and Moravian Brethren had about 1000 communicants with 21 churches and 4 ordained ministers. Independent Moravian Churches had about 400 communicants in the three churches.

MOROCCO. The largest of the Barbary states, is a sultanate in Africa, mainly under French protection. It is situated in the north-western part of Africa, lying between 27° and 36° north latitude, and 1° and 11° 40' west longitude. It comprises the kingdom of Fez and Morocco, north of the Atlas, and the territories of Sôns, Drâ, Wadi Tafilet, Tuat, and others to the south, which are further subdivided into 33 districts, each supervised by a "kaid." The chiefs of the semi-independent tribes rule their tribes, scarcely admitting the rule of the Sultan. The protectorate includes an area of 416,800 square kilometers, with a population of not quite 6,000,000, estimated by the French Service des Renseignements (November, 1911). The Spanish concessions occupy about 21,800 square kilometers, with over 404,000 population. Tangier, one of the principal seaports, has 600 square kilometers and a population of at least 60,000. The present seat of government is at Rabat.

It is estimated that there are about 50,000 Christians in Morocco, of which number about 11,000 live in Tangier, and another 20,000 in Casa Blanca.

As regards schools, on Jan. 1, 1918, there were 191 educational establishments open to the public, 668 teachers being employed to instruct 21,520 pupils, of whom 16,706 were in the primary grades, 1689 in the secondary grades, 329 scholars enrolled for superior instruction, 654 following professional courses, and 2142 attending evening classes.

The population belongs chiefly to the Malekite sect of the Sunnite Mohammedans, and are classified for the most part as Berbers, Bedouins, Meud-Arabs, and Tuaregs.

The principal products of the country include cattle, eggs, barley, beeswax, corn, wheat, hides, skins (sheep and goat), seeds, beans, peas, and wool. Hog raising is one of the principal new industries, the total value of the hogs shipped to Europe in 1918 being nearly \$300,000. In addition, 662 metric tons of salt pork were sold to France, for nearly \$500,000. Among the fruits produced may be mentioned figs, almonds, pomegranates, lemons, olives, oranges, and dates. Cotton growing was introduced in Morocco in 1911. Agriculture is in a somewhat primitive state at present, although the soil is capable of extensive cultivation. The lack of security to foreigners in the interior of the country plays an important part in the development of the country's industries. Fishing is a thriving industry, as sardines and tunny-fish are plentiful. There are supposed to be extensive mineral deposits, of which the most important are copper, tin, and lead. Mining by individuals or on behalf of private interests, however, continued in abeyance throughout 1918, and further mining operations must remain at a standstill until the International Arbitral Commission, appointed in 1914, decides the status of the various denouncements that have been filed from time to time by those who carried out prospecting opera-

tions prior to the proposed promulgation of the Moroccan Mining Code in 1914.

The most important ports of Morocco are Tetuan, Tangier, El Araish, Rabat, Casa Blanca, Mazagan, Saffi, and Mogador.

The public debt of the French protectorate totals \$78,200,000, including the French loans of 1904, 1910, and 1914, amounting respectively to \$12,000,000, \$19,500,000, and \$32,800,000. Public confidence in Morocco's economic future and financial stability under French control is evidenced by the fact that the 5 per cent 500-franc bonds issued in 1918 at 445 francs were in 1919 quoted on the Paris Bourse at par.

The estimated income of the French protectorate in 1918 was \$17,000,000, as against an estimated expenditure in that year of \$16,800,000. Of this income, \$3,700,000 was received from the tax on agricultural revenue, based on the annual harvest, the fruit trees, and live stock. The chief income continues to be derived from customs duties on imports and exports, such revenue totaling more than \$5,000,000 in 1918.

The total value of the imports and exports of Morocco in 1917 and 1918 are as follows.

		Imports	Exports
1917	...	\$62,313,014	\$24,048,991
1918	..	73,706,992	24,654,973

The increased value of imports in 1918 is due chiefly to the higher prices. The value of the principal imports and exports in 1918 is as follows:

	Imports	Exports
Flour	\$1,508,055	Breadstuffs . . \$2,546,042
Coal	1,167,711	Eggs .. . 4,466,098
Cotton goods	15,665,783	Fruits and nuts 1,583,631
Silk goods	1,287,059	Hides and skins 2,003,392
Soap	1,200,170	Seeds . . . 2,809,955
Sugar	10,378,930	Vegetables . . 2,044,437
Tea	3,958,450	
Tobacco	1,383,241	
Wine	2,547,823	
Lumber	1,016,883	
Woolen goods	1,031,900	

The French government has spent large sums in recent years on the development of roads in Morocco. At present there are 1287 miles of first-class roads in the protectorate, and 353 miles of secondary roads, over which the products of the rich interior regions are carried to the coast towns, which serve as natural outlets. As both labor and raw materials are readily available, important progress has been achieved in road making in French Morocco. The amount provided for road construction out of the loan of 1914 was about \$7,030,000, later raised to nearly \$14,000,000 by the complementary loan of 1916. Traffic on the Moroccan highways is very large. In addition to the transport of passengers by private or public automobiles, the roads permit an important movement of merchandise by motor truck, carts, camel caravans, mules, etc. Since the establishment of railroads, certain currents of traffic by caravan have materially diminished, and in certain cases almost completely disappeared, while on the other hand, the steady pacification of the country opens up new regions to commerce and develops new movements of produce.

An international convention stipulated that the first commercial railroad to be constructed in Morocco should connect Tangier to Fez, but

the construction of strategic railways was not prohibited. France has thus been able to cover her Moroccan protectorate with a network of military railroads, now 532 miles long, commencing at Oudjda, on the Algerian border, and running east to Taza. The western system is 386 miles long, divided into a northern and a southern section, the former starting at the twin ports of Rabat-Sallee and ending at Fez, after passing by Kenitra, Dar-Bel-Hamri, and Mequinez. Commercial traffic of 1917 on the 386 miles of the western system amounted to 43,424 tons of merchandise, and 205,699 civilian passengers transported. The construction of a connecting line from Taza to Fez is being pushed forward, with a view to linking the eastern and western systems. In addition, standard-gauge railroads are projected from Marrakesh north to Casa Blanca, and along the coast to Rabat and Kenitra, then northwest to connect the Tangier-Fez Railroad at El-Arb du Gharb and at Petitjean.

POSTS, TELEGRAPHS, AND TELEPHONES. In 1917 over 5,000,000 letters were mailed from the French zone and about the same number were received, about one-half of this correspondence being with France. About \$6,000,000 was transferred from Morocco to France by postal order in 1917, and \$2,000,000 from France to Morocco. Domestic transfers of money by this means amounted to \$5,000,000.

There were 2777 miles of telegraph lines in French Morocco, of which 1313 miles were available for the transmission of commercial messages. There were also three wireless stations. Over the telephone system of the protectorate passed 1,372,673 communications in 1917. Telephone exchanges were in operation in the towns of Casablanca, Rabat, Fez, Mequinez, Marrakesh, Fedala, Kenitra, and Sallee. Inter-urban lines between these towns constitute a complete telephone system in western Morocco.

The Sultan in 1919 was Mulai Yussuf, the 17th of the dynasty of the Alides. He was proclaimed at Fez, Aug. 17, 1912, taking the place of his brother, Mulai Abd-el Hafid, who abdicated. The Government of Morocco is an absolute monarchy, and the Sultan is unrestricted by any laws, civil or religious. Since the establishment of the French protectorate, however, the Sultan is obliged to follow the advice of the French resident-general in all matters. The French resident-general in 1919 was General Lyautey, who held office from April 28, 1912, to Dec. 13, 1916, and who was reappointed April 7, 1917. The Spanish high commissioner was Gen. Damaso Berenguer, appointed Jan. 25, 1919.

HISTORY

RECENT PROGRESS. The following brief synopsis of recent changes in Morocco under French administration is reduced from accounts in the French press. Means of communication though still unsatisfactory had greatly improved in recent years. For example, the port of Casablanca had been practically opened though this was at first thought impossible. During the war 4000 workmen were constantly employed on it and the dyke was carried to a length of 700 meters. The port could be used except during about 15 days of the year. As to the European population, while in 1907 there were only 300 Europeans in the country and in 1912 3000, they were

placed in 1919 at about 65,000; European quarters well built and sanitary had sprung up in the neighborhood of many of the cities. In 1900 the traveler, it was said, could completely traverse all the good roads of the country in the course of a few hours. In 1919 there were 1000 kilometers of good roads and 1000 more in the process of construction along with a large number of trails and military routes which were of great service. In 1911 trade was placed at 139,000,000 francs and in 1916 at 310,000,000 francs. In this the share of France increased from 46.13 per cent to 70.67 per cent. The budget previous to 1914 showed a deficit, but in that year there was an excess of 12,000,000 francs; in 1915 an excess of 25,000,000; and still more in 1916. It was estimated that 30 per cent of the 75,000,000 francs of the budget covered the expenses of sovereignty and that all the rest was productive. Education also had made considerable progress. The number of schools in 1912 numbered 37 with 61 teachers and 3000 pupils; and on June 30, 1917, there were 180 schools with 625 teachers and over 20,000 pupils. The number was reported to have increased since then. Still greater progress had been made in the means of sanitation and everywhere hospitals had sprung up and improved methods been introduced with the result that epidemics and plagues were largely diminished. After 1914 there was no smallpox or typhus.

MILITARY OPERATIONS. The revolt of the Tafillet tribesmen in Morocco which broke out in January was soon put down.

A FRENCH REVERSE. It was reported that on March 31st two companies of Moroccan native troops had been attacked by rebels near the border of the Spanish zone and were greatly outnumbered with the result that they were almost completely destroyed. A certain number of them effected their escape and succeeded in defending themselves after reaching Mediouna, where fresh troops soon came to relieve them. See *EXPLORATION, Africa*.

MOUNT HOLYOKE COLLEGE. A non-sectarian institution for the education of women, founded as a seminary by Mary Lyon, and chartered as a college in 1888, situated at South Hadley, Mass. In the fall of 1919 the enrollment was 815; and there were 133 members of the faculty. Productive funds amount to \$1,425,640 and the income for the year was \$70,028. The library contains 72,352 bound volumes and pamphlets. The college has recently started a campaign to increase its endowment, \$3,000,000. President, Mary Emma Woolley, Litt.D., L.H.D., LL.D.

MOUNT WILSON OBSERVATORY. See *ARCHITECTURE*.

MOVING PICTURES. The year's progress in the field of moving pictures was substantial, from a business point of view. Considered as an industry, the scenarios offered and produced attained an ever widening popularity and measure of financial success. In spite of generally higher prices of admission to the theatres the measure of popularity reached by photoplay productions was greater than ever before. Post-war conditions had, it is true, an effect in lessening the construction of new theatres and clos-

ing some small picture houses here and there; but this result, as a whole was beneficial to the industry in general.

There were no new features characterizing the films shown during the year. A tendency to emphasize and amplify the weekly news services that had enjoyed such popularity in previous years was more than ever noticeable during 1919. The usual themes continued to interest the public, just as formerly, and while there were many plays of outstanding merit presented, yet programmes were almost universally interspersed with the well-worn cowboy theme and comedies of only ordinary merit. Artistically, in the treatment of themes, it may be stated that there was no advance accomplished, but it was encouraging to note in many localities an awakened sense of discrimination and appreciation of really good plays on the part of the public, if one may judge from the opinions of newspaper critics and from the spoken opinions heard in any typical crowd after watching an exhibition of films in first-class theatres. The entertainment in such places was enhanced in attractiveness by interspersing excellent orchestral or other musical specialties in addition to the music incidental to a proper presentation of the photoplay itself.

As mentioned in preceding issues of the YEAR BOOK, the question of censorship continued to be an open one. Some states maintained their board of censors, others took no action to create one, while a third group appeared to be awaiting the enactment of a Federal censorship bill, which, while highly desirable, seemed very far from realization at the close of the year.

The possibilities of moving pictures as a medium of instruction were availed of in many ways by educational institutions, industrial establishments and in various branches of the army and navy. Greater skill in photography made it possible to take moving pictures showing processes of manufacture, physiological and biological conditions and other difficult subjects in a manner so clear that their employment was becoming indispensable to a large portion of the civilized world. Cameras were constructed capable of making pictures that, when projected on the screen made a moving object appear to move at a velocity so low that a leisurely analysis of such motion was secured for an observer. Thus a dancer, or a tennis player in action, whose pictures were projected before the onlookers appeared to float slowly in space, every move of legs or arms seeming to occur at about one one-hundredth of its ordinary velocity.

American producers enjoyed almost a monopoly of the trade in some foreign countries, with the possible exception of France and Italy. In the former country the popularity of American films caused the government to restrict their importation by prescribing a definite maximum number that might be brought in for exhibition purposes during one year. In other foreign countries it was noted with almost alarm that the opportunities offered by the United States as shown through the medium of moving pictures was causing unrest and dissatisfaction with the conditions prevailing in industry.

The cost of photoplay production continued to increase, but the business became more centralized and concentrated in the hands of a small number of producers, thus incidentally se-

curing control over the services of the stars and diminishing litigation on account of contracts broken in cases where higher compensation had been offered by a rival producer.

MUNICIPAL GOVERNMENT. Aside from a considerable addition to the list of cities that have adopted the city manager form of government and the notable charter changes at Philadelphia, there was much less change in city government in 1919 than for some years past. This is all the more remarkable because most of the State Legislatures were in session and in many States the cities are still at the will of their Legislatures as regards changes in their form of government. However, the more progressive States have already gone on so rapidly in the adoption of municipal home rule, or at least in general legislation permitting changes in the framework of government, that a lull in charter changes might be expected, especially in view of the strong reactionary tendencies following the end of the war. With more than 500 cities under the commission plan it is not surprising that scarcely any additions to the straight commission plan were reported in 1919. Probably most of the cities that adopted the manager plan voted for commission government as well, since the two generally go together. Complete lists of commission plan cities and yearly accessions to the list have been given in earlier YEAR BOOKS. The table on pages 442-43-44 of manager cities embraces the names of all places known by the National Municipal League to have adopted the city manager plan up to Oct. 20, 1919. The table also includes a few additional cities reported in *The American City*, August, 1919.

CHARTER CHANGES. Following in considerable part the recommendations of a local voluntary charter commission, the State Legislature made sweeping changes in the charter of *Philadelphia*, effective Jan. 1, 1920. A relatively small council of 21 replaces the unwieldy bicameral council of 144 members. Radical changes affecting city contracts were made, model civil service reforms were introduced, including provision for a civil service commission of three members and prohibition of political activities and contributions by policemen and firemen. Dual office holding is forbidden. There will be a city purchasing agent and a city architect. The bureau of health is raised to a city department by dividing the old department of health and charities into departments of health and of welfare, the latter including charities, correction and recreation. A city planning commission with considerable power is authorized. The city solicitor becomes appointive instead of elective. The mayor is to submit a budget. Under the old charter, there was a select council of 48 members, one each from as many wards, and a common council of 96 members, consisting of one representative from each ward for each 4000 names on the list of assessed voters, except that each ward had at least one representative. As a result of the last-named provision, one of the older wards, with a population of 5000 to 6000, was represented in each branch of the council while the largest ward in the city, with 100,000 population, had one select and five common councilmen. The basis for council representation now is one member for each 20,000 assessed voters in each of the eight judicial districts, which gives a total membership of 21.

The members serve for four years and are paid \$5000 a year. An evil and costly provision of the old charter required street cleaning and the collection of garbage, ashes, and rubbish to be done by contract and restricted the length of the contract to a single year. This restriction made competition impossible without great risk, owing to the considerable cost of equipment for cleaning streets and collecting refuse and the very heavy cost of a garbage disposal plant. The result was that these contracts were the footballs—or plums—of factional politics. The new charter compels the city to do all this work itself, unless a majority of the council and the mayor decide to have it done by contract. In that case, contracts may be let for longer terms than a year and if a contract is let for more than four years the city may terminate it at will after the end of the four years, without compensating the contractor for loss of profits. At the November election, the reform candidate for mayor, J. Hampton Moore, was elected at Philadelphia by a plurality of 190,000 and a majority of 174,000, breaking all records, and it was subsequently announced that he would have the support of 11 of the 21 councilmen. *Richmond, Va.*, made a marked change in the administrative branch of its government on Jan. 1, 1919. In place of an administrative board elected by

popular vote, which board appointed the heads of the larger city departments, the mayor appoints the heads of six departments—law, finance, works, welfare, utilities, safety—and the people will elect the city comptroller and city attorney. This change by no means effects a clear-cut separation of powers and simplification of government and centralization of responsibility at Richmond, for the bicameral council is retained and four of the six department heads appointed by the mayor are subject to approval by the council. Moreover, an advisory board was created (of which the mayor, ex-officio, is chairman). This board has the approval of subordinates appointed by department heads and also has the final decision on matters referred to it by any department head. See also CITY PLANNING; GARBAGE; MUNICIPAL OWNERSHIP; ROADS AND PAVEMENTS; SEWERAGE AND SEWAGE TREATMENT; WATER AND WATER PURIFICATION.

Bibliography. Woodruff (Editor), *A New Municipal Programme* (New York), being the model commission-managed city charter with supporting arguments, framed by a committee of the National Municipal League. MUNICIPAL LEAGUE, NATIONAL. An organization, founded in 1894, for the study of municipal problems, and the dissemination of information on the subject. The 25th annual meeting was held in Cleveland, Dec. 29-31, 1919, and took the form of a Moot Constitutional Convention at which sundry questions of constitutional reform were discussed at length. Various propositions were submitted by various organizations like the National Short Ballot Organization, the American Judicature Society, the National Conference of Research Bureaus. These various organizations presented reports which were tentatively debated. An expression of opinion resulted in favor of the single chamber legislature to be elected on the Hare System of Proportional Representation, a governor with full power of appointment and veto and a further power to dissolve a legislature which turned down any of his measures. The vote also favored a budget prepared by the executive which could be reduced but not increased by the legislature, also municipal home rule as provided for in the Model City Charter of the National Municipal League, and various electoral reforms. The Moot Convention was sympathetic with demands of labor and favored shorter hours and social insurance. Other features of the Convention were the discussion of the street railways and the continuance of the five cent fare. The national budget also came in for considerable amount of attention.

Mr. Woodruff retired after 25 years of service. In connection with this a testimonial was presented to him with the following tribute: "As every institution is but the lengthened shadow of a man, so the National Municipal League hereby gratefully acknowledges that it is but another name for Clinton Rogers Woodruff who has been for 25 years its devoted secretary, its organizing genius, its motive force, its guiding spirit. He found the National Municipal League a mere project; he leaves it the central force of American civics. He found municipal reform a feeble aspiration; he leaves it the foremost achievement of modern democracy." His successor has not yet been chosen.

The *National Municipal Review*, first pub-

lished in 1912, in succession to the *Proceedings of the National Municipal League*, was converted during the year into a monthly under the editorial supervision of Clinton R. Woodruff, Charles C. Williamson, and Richard S. Childs, with Russell Ramsey as assistant editor.

During the year two important studies were published: *The Assessment of Real Estate*, by Lawson Purdy, president of the League, and the other on the *Administrative Consolidation in State Governments*, by A. E. Buck, of the New York Bureau of Municipal Research. Two volumes were published during the year in the National Municipal League Series, one on *Experts in City Government*, edited by E. A. Fitzpatrick, and the other *A New Municipal Programme*, edited by Clinton R. Woodruff. Officers for 1920 are: President, Charles E. Hughes; treasurer, Frank A. Vanderlip; and honorary secretary, Clinton R. Woodruff.

MUNICIPAL OWNERSHIP. The greatest gain in municipal ownership for many years was the transfer to the city of *Seattle* on March 1st, by the Puget Sound Traction, Light & Power Co., of 203 miles of street railway track for \$15,000,000. This action was authorized by a popular vote of 4 to 1 in November, 1918, and by a 5 to 2 vote of the city council on December 31st following. The company agreed to sell electric current to the city at 1 cent per kilowatt hour until the city is ready to supply its own power. A \$5,500,000 bond issue has been voted at Seattle for a city hydro-electric plant. Both Detroit and Duluth voted against municipal ownership of street railways on April 7, 1919. At Detroit, where \$31,500,000 was to have been paid for the privately owned street railway, the vote was 63,382 against and 59,497 for the purchase. At Duluth there were 8806 noes and 4902 ayes. On the same day that these adverse votes were cast, Superior, Wis., voted by a large majority to buy the privately owned water, gas, electric light and power plants. Next to Seattle stands San Francisco among American cities as an owner and operator of street railways. Towards the end of the year it owned about 64 miles of single electric street railway track and 195 passenger cars, compared with 286 miles

of track and 700 cars owned by the United Railways and 10 miles of privately owned street cable railways. A \$6,000,000 bond issue for municipal subways to relieve street car congestion in the centre of Pittsburgh was authorized by popular vote during the year and elaborate engineering reports favoring subways were submitted at Cleveland and Detroit. Slight progress was made by the city on the rapid transit subway system previously authorized at Cincinnati. A large number of railway receiverships throughout the United States and prospects of many others, attributed generally to the high cost of labor and materials, led to much talk of municipal ownership. In New York, municipal bus lines were established because of the abandonment of some of the street railway lines, while the persistent refusal of the city authorities to permit increases in fares made the street railway situation there quite uncertain at the close of the year, with some general proposals looking to municipal acquirement. At Minneapolis, under a new service-at-cost street railway franchise settlement, subject to referendum vote in December, the city has the right to buy the property of the Twin City Rapid Transit Co. at stated intervals, at the basic price of \$24,000,000, as of Jan. 1, 1919. In June, Greater Berlin, Germany, acquired the street railways known as the Metropolitan surface lines at a price of 100,000,000 marks, or \$24,300,000 on the pre-war exchange basis. In the *water-works* field, Des Moines acquired the plant of the local water company late in the year at a valuation of \$3,535,000, thus ending a long struggle for municipal ownership. In 1905, a water purchase election in Des Moines was lost by a technicality and another one was lost in 1912 for lack of the majority required by law, although there was an actual majority. In the 1919 election at Des Moines the vote for purchase was 2773 to 1998. Los Angeles voted \$11,000,000 of bonds to buy the electric distributing system of the Southern California Edison Co., and \$2,500,000 for the further development of electric current from the waters of the Los Angeles aqueduct. Although few large American cities yet own their own *electric lighting* systems, yet the number of municipal electric light plants throughout the country is large. The McGraw "Central Station Directory" for 1919 showed that of 5543 electric light systems in the United States and its possessions 1821 were municipally owned. In Canada the corresponding figures were 441 and 251 and in Mexico, 51 and 2. Not all the companies or cities generate the current they sell. That is, of the 5543 systems listed in the United States, 893, regardless of ownership, buy current and of the 1821 municipal systems in the United States current is bought by 304. The distribution of the systems by ownership in the United States is shown by the accompanying table. Allied to municipal ownership is the "Municipal Savings Bank" at St. Paul, Minn., which on July 1, 1919, after several years' operation, had total deposits of \$3,635,000. Operated by a single clerk, this bank accepts deposits and issues 4 per cent certificates redeemable on demand with interest. The deposits are used to buy tax certificates and bonds of the city of St. Paul, particularly when the city would otherwise have to pay high interest rates. *Ice Making* by Kansas City, Mo., would be unconstitutional, according to a ruling

of the State Supreme Court in litigation to prevent a \$400,000 bond issue for that purpose. The court held, 6 to 1, that ice making is a private and not a public enterprise, but the dissenting Judge maintained that ice is a prime necessity in cities and that its manufacture is for the protection of health and therefore an exercise of the police power.

MURRAY, General Sir JAMES WOLFE. British army officer, appointed chief of the imperial general staff in December, 1914, died at Peebles, Scotland, October 18. He was born March 13, 1853, and educated at Harrow and Woolwich, rose to the rank of colonel in 1889, served in Ashantee in 1895, and was in command of the lines of communication in Natal, 1899-1900. He served in India from 1903 to 1911. He was appointed to the general staff on the recommenda-

tion of Lord Kitchener, and remained at that post till 1915. He subsequently held the post of commander-in-chief of the Eastern command.

MUSIC. GENERAL NEWS. More rapidly than any one could have foreseen have the various musical activities been resumed in the war-torn countries of Europe. Scarcely had the armistice been signed, when the managers set to work making plans. The first concerts at the beginning of the year, it must be admitted, were more or less impromptu affairs to celebrate victory and also to satisfy a long pent-up craving. But as demobilization progressed and the artists returned to the posts they had left, little time was lost in bringing order out of chaos. At the opening of the fall season, early in September, the gaps made by the war in the ranks of the executants had been filled, almost all former organizations had returned to their normal schedule, and many new organizations—some on a grand scale—had been formed to meet the unprecedented demand for musical entertainment of the better class. While in all countries the war has helped the cause of the native composer, it is a remarkable fact that, musically at least, it has created no narrow-minded prejudice, as is evidenced by the scope of the programmes, whose arrangers seem to have been guided mainly by artistic considerations. At vastly increased prices of admission the concert-halls have been crowded more than they ever were before the war.

In the United States the opening of many new concert auditoriums in the larger cities, the formation of new organizations, especially in the smaller towns, and the general increase in the number of concerts of existing societies testify to the fact that the higher type of music is ever widening its sphere of influence.—At the instance of the Society of Authors, Playwrights, and Composers Congress amended the copyright-law of 1909, so that now both American and foreign composers are duly protected. The interruption of the transatlantic mail service shortly after the outbreak of hostilities had brought about a condition which practically amounted, for a time, to a suspension of international copyright.—In June 200 concert-managers from all over the country met in New York and formed The National Concert-Managers' Association for the mutual protection of its members and the promotion and development of the musical interests of the country.—By the will of the late Augustus D. Juilliard (died April 25th) the Juilliard Musical Foundation, with an endowment of \$20,000,000, was established for the purpose of aiding talented students in obtaining a complete education either in this country or abroad.—After several months' deliberation concerning the feasibility of the project a number of prominent musicians met in New York on April 29th and organized The Society for the Publication of American Music. Its object is the publication of such works (chiefly chamber-music) by American composers which, because of their lack of commercial value, offer no inducement to the regular publishers. A committee of musicians of established reputation will pass on the merits of the manuscripts submitted, of which three or four are to be pub-

lished every year. Any person interested in this object may become a member (\$100 for life-members, or \$5 annual dues). In May, Georges Longy of Boston organized The Boston Musical Association, whose aims are to be practically identical with those of the famous Société Nationale de Musique of Paris. Of the five annual concerts two are to be devoted to works for large orchestra, two to chamber-music, and one to works for small orchestra. The intention is to produce modern works of all schools, thus forcing the American composer into a healthy competition with the world's best contemporary musicians. The soloists are to be selected from among aspiring young artists whose talent seems to give promise of a successful career.—On November 25th the Maryland Academy of Sciences, at Baltimore, formally created a musical section with J. Norris Herring as chairman. Its object, like that of similar European institutions, is the publication of its proceedings and articles embodying the result of original research.—Prizes offered by the New York *American* for a national anthem were distributed as follows: 1st (\$2000), Herman T. Koerner of Buffalo. 2d (\$1000), Giuseppe Pinsuti of New York; 3d (\$500), Charles W. Cadman of Los Angeles; 4th (\$300), Henry F. Gilbert of Cambridge. Among the judges were Joseph Stanislawski, John Philip Sousa, and John McCormack.—An unusual number of changes in the wood-wind section of some of the leading symphony orchestras led to the discovery of a dearth of good American oboe-players. To stimulate the study of this instrument Walter Damrosch endowed three scholarships at the Institute of Musical Art, in New York, to be awarded as the result of a competitive examination. Each scholarship is for three years, providing free tuition and \$400 annually toward living expenses.

THE UNITED STATES

ARTISTS. *Instrumentalists.* The American début of the Russian pianist Benno Moiseiwitsch (New York, November 29th) fully justified the reputation which had preceded him. Although his tone is not large, it is sympathetic and capable of an infinite variety of gradations. Of the new pianists heard he was the most important. The many excellent qualities of the Dutch pianist Jan Chiapusso (début in New York, March 18th) would undoubtedly have appeared in higher relief if his tonal coloring had shown a little more variety. Flora Mora, esteemed in Cuba as the foremost native pianist, revealed at her American début (New York, October 19th) deep poetic insight and a fine sense of tonal color. A young American, Ralph Leopold (début in New York, October 26th), made a deep impression with his poetic conception and unusually beautiful tone. He recalled memories of De Pachmann, whom he seems to have taken as a model. Like the older artist, he seemed to be afraid of a real fortissimo. Judgment should be reserved in the case of the French pianist Robert Schmitz (début in New York, December 5th), who at his first recital played only works by impressionist composers, which gave him ample opportunity for the display of a flawless technic and an immense variety of tonal coloring. Magdeleine Brard, a 16 year old French girl, who had been heard in 1918 with the Conservatoire orchestra outside of New York, gave

her first recital in the metropolis on February 4th, and was heard again in the fall. Her playing is full of vitality, although her interpretative powers are not yet quite adequate for some of the heaven-storming works of Chopin or Schumann. Special interest was manifested in the reappearance, after an absence of six years, of Joseph Lhevinne (New York, December 1st). Although his former tours had securely established his reputation as one of the giants of the keyboard, he was occasionally guilty of a hard, colorless tone. That one defect seems to have been completely eliminated. His reception was a perfect ovation. Arthur Rubinstein, who had not been heard here since his debut as a child prodigy in 1906, returned as a mature artist (New York, February 20th). He has developed into a very temperamental player with a tendency toward excessive speed in fast movements. Several years' absence had wrought no change in the art of Germaine Smitzer (New York, November 17th). She is still the brilliant executant of almost masculine power, lacking in poetic sentiment and tonal variety. After a long and dangerous illness, which had prevented public appearances for two years, Fannie Bloomfield Zeisler proved to enthusiastic audiences of the Middle West that she is still in full possession of her rare power. On October 10th Richard Buhlig began in New York a unique series of seven piano-recitals. His aim was to present as much as possible of the permanently significant literature for the piano from Bach to the present day. But, instead of following the usual custom of chronological arrangement, he grouped the numbers of each programme according to some psychological relationship. On January 25th Josef Hofmann gave in New York a recital of American works exclusively (repeated later in Boston). On both occasions he played to small, undemonstrative audiences, whereas his regular recitals drew overcrowded houses, as usual. For some time it has been noticeable that futuristic composers usurped more and more space on the programmes of Leo Ornstein. At any rate, he has succeeded in attracting numerous admirers of this new style. His recital in New York, on October 18th, offered for the first part a group of futuristic works, for the second part works of Schumann and Liszt. After the first part the greater number of the audience left, and Ornstein's playing of the second part proved that he had little sympathy for what he was playing, that his excessive devotion to futurism had seriously impaired his former remarkable power in the interpretation of serious music. Two debuts of child prodigies are worthy of record. On December 12th Maria Antonia, a nine year old Brazilian girl, gave a recital in New York to raise funds for further study in Paris. She had wisely chosen such works of Bach, Beethoven, Brahms, Chopin, and Grieg as were fully within her interpretative power. Her exquisite tonal effects, reliable technique, and remarkable feeling for style aroused her hearers to such an extent that a week later she was obliged to give a second recital by request. The day after her first recital eight-year-old Jerome Rappaport was heard in a more ambitious programme, somewhat beyond him, but disclosing talent of a high order. The debut of the sisters Rose and Charlotte Presselle (New York, April 2d) in ensemble-performance of works for two pianos was an emphatic success. The Suro

sisters, Rose and Otilie, long famous in this special field, introduced a novelty by Brahms, a sonata for two pianos, in F minor, op. 34b. In this form the work was originally conceived, but Brahms rewrote it as a piano-quintet, in which form it has become famous. Among the pianists whose art is familiar to the public were Sergei Rachmaninov, Sergei Prokofiev, Leopold Godowsky, John Powell, Ernesto Benveniste, Harold Bauer, Alfred Cortot, Mischa Levitzki, Rudolf Ganz, Ossip Gabrilowitsch, Ernest Hutchinson, Aurelio Gionni, Paolo Martucci, Guiomar Novacs, Fthel Leginska, Olga Samaroff, Eleanor Spencer, Augusta Cottlow, Aurore La Croix, Marguerite Volavry. The most important event in the world of violinists was the reappearance of the Austrian violinist Fritz Kreisler, who had kept himself in strict retirement during the period of the war. His first concert in New York (October 26th) aroused such frenzied enthusiasm that the oldest concert-goers do not recall similar scenes even in the days of Patti. At one of the concerts of the Cincinnati Symphony Orchestra (February 2d) Eugène Ysaÿe played three concertos (Bruch's No. 1, Viotti's No. 22 and Lalo's *Symphonic Espagnole*). Not a single new violinist of importance was heard. The only debut was that of a young American violinist, Rudolf Polk (New York, October 14th), who proved himself a serious artist of solid attainments, but lacked the divine fire. However, lovers of the violin had ample opportunities of hearing such artists as Mischa Elman, Jascha Heifetz, Efrem Zimbalist, Jacques Thibaud, Toscha Siedel, Albert Spalding, Max Rosen, Eddy Brown, Cecil Burleigh, Samuel Gardner, Maud Powell, Emily Gresser, Isolde Menges, Thelma Given. No other year ever brought so few representatives of the violoncello. The list of important artists is exhausted by mentioning Alwin Schroeder, Leo Schulz, Pablo Casals, Maurice Dambois, Cornelius Van Vliet, Vladimir Dubinsky, Willem Willeke, May Mukle.

VOCALISTS. Quantitatively, the year was rich in vocal recitals given by many artists; qualitatively, it was as uninteresting as its predecessor. Only toward the end did a few of the German Lieder (in English translation) appear on some programmes. After an absence of almost 10 years Luisa Tetrazzini received a royal welcome at her first concert (New York, November 30th). Neither her voice nor her style showed any change. Another prime favorite, Emmy Destinnova (having changed her name from Destinn) reappeared after an absence of four years with the Cincinnati Symphony Orchestra (New York, November 30th). Of famous operatic singers Yvonne Gall (March 28th), Rafaelo Diaz (April 6th) and Cyrene Van Gordon (October 5th) made their debut in recital in New York, duplicating their success of the operatic stage. Among the debuts of many younger aspirants to fame that of Otilie Schillig (New York, November 3d) attracted more than ordinary attention by the fine quality of her voice, personal magnetism and interpretative ability. A new Russian singer, Nina Tarasova, gave a number of very successful recitals, in costume, of Russian folk-songs and ballads (debut in New York, April 27th). Among the famous vocalists heard on the concert-stage were Geraldine Farrar, Amelita Galli-Curci, Ernestine Schumann-Heink, Louise Homer, Alma

Gluck, Vera Janacopulos, Rosa Ponselle, Eva Gauthier, Louis Graveure, Paul Reimers, Reinald Werrenrath, Josef Rosenblatt.

ORCHESTRAS. The extensive changes in its personnel and the lax discipline under the new conductor, Henri Rabaud, caused a very noticeable deterioration in the quality of the performances of the Boston Symphony Orchestra. The new conductor, Pierre Monteux, who assumed his duties in the fall, made a favorable impression, but only time will tell whether he can accomplish the difficult task of winning back for the orchestra its former prestige. By the will of Colonel Higginson his musical library and collection of instruments are left in trust to Charles F. Adams, who may allow the use of them to the orchestra free of charge. In not less than three, nor more than five years, they are to be turned over to the orchestra, if it continues to live up to the high ideals of its founder. Otherwise, music and instruments are to be sold. The New York Philharmonic Society (Josef Stransky) adopted a new policy. Instead of repeating the Thursday evening programme on Friday afternoon, different programmes are now presented at both concerts. On April 23d they gave a remarkable demonstration of the progress made in preserving an artist's actual playing by means of mechanical records. After the first movement of Mendelssohn's Concerto in G minor had been played from a record made by Leo Ornstein for the Ampico, the artist personally performed the remaining movements. Many new artists took the places of wood-wind players of the New York Symphony Society, as the majority of the former members had resigned to join the New York Chamber-music Organization; G. Tinot succeeded A. Saslavy as concert-master. The special concerts given the preceding year in New York by the Philadelphia Symphony Orchestra (Leopold Stokovsky) were so successful that the organization instituted a regular annual series of five in New York. On October 23d the Detroit Symphony Orchestra (Ossip Gabrilowitsch) inaugurated Orchestra Hall, their new permanent home. After a temporary retirement, pending his admission to American citizenship, Frederick Stock reappeared on February 28th as regular conductor of the Chicago Symphony Orchestra. For the first time in its history the Minneapolis Symphony Orchestra (Emil Oberhoffer) was directed by guest-conductors (Adolf Weidig and Artur Bodanzky). The St. Louis Symphony Orchestra (Max Zach) was increased to 81 performers. Prominent business men of Seattle subscribed \$70,000 for three years as a guarantee fund for their local Symphony Orchestra (John Spargur). W. A. Clark, Jr., of Los Angeles, gave \$100,000 for establishing the new Philharmonic Orchestra, of which Walter Rothwell was chosen conductor. It is planned to give 12 pairs of symphony concerts on Fridays and Saturdays, a series of five popular Sunday concerts and 10 children's concerts with explanatory lectures. The opening concert took place on October 24th. For the purpose of making propaganda for futurist music the New Symphony Orchestra, with Edgar Varese as conductor, was founded in New York. Of three proposed concerts the first (April 11th) proved such a complete fiasco, that the promoters changed their plans immediately. The incompetent conductor was replaced by Artur Bo-

danzky, who substituted music of recognized standards for the futuristic programmes, and aroused such enthusiasm by the remaining concerts that the orchestra was incorporated as a permanent organization. The opening concert of its first regular season took place on October 9th.

CHAMBER-MUSIC. Jacques Thibaud and Harold Bauer attracted attention by a series of recitals in which they performed all the violin sonatas of Beethoven. Paul Shirley, a member of the Boston Symphony Orchestra, gave recitals of early music written for the viola d'amore. It was the first time that this instrument was heard as a solo instrument in this country. The continued interest in earlier music secured good-sized audiences also for the Société des Instruments Anciens, who made their third consecutive tour of the country. After his discharge from the army Ugo Ara resumed his place as viola-player of the Flonzaley Quartet. A new quartet by Le Guillard, played in New York (November 25th), proved a decided disappointment. Fritz Kreisler's Quartet in A minor, introduced by the Letz Quartet (New York, April 15th), did not fulfill expectations. It was pretty, ingratiating music, but scarcely a valuable contribution to chamber-music. A unique organization was the Zimro Ensemble (G. Misteckin, 1st vl; N. Moldavan, 2d vl; G. Besrodny, vla.; J. Tcherniavsky, vcl; S. Bellison, clar.; L. Beierdichevsky, pf), specially formed for the purpose of raising funds for the erection of a conservatory in Jerusalem in connection with the work of the Central Zionist Committee of Russia. At their début in New York (November 1st) they offered an interesting programme of works by unknown modern Jewish composers. The newly organized Beethoven Association of New York gave its first concert on November 11th, with Harold Bauer, Jacques Thibaud, Louis Svecenski and Willem Willeke. Their object is the production of less-known chamber-music with the most eminent artists. These give their services gratuitously, and the proceeds are applied to the relief of needy musicians. The most important event in the field of chamber-music was the second annual Berkshire Festival at Pittsfield, Mass. (September 25th-27th), with the assistance of the Berkshire and Flonzaley quartets and Harold Bauer. Ernest Bloch's *Suite* for viola and piano, played by Bailly and Bauer, won the \$1000 prize. It is thoroughly original, great music, not readily grasped at a first hearing. The second prize for a work in the same form was awarded to Rebecca Clark, and was played by the same artists. It impressed more by its masterly workmanship than the originality of its thematic material. Elgar's new string-quartet in E minor, op. 83, was exceedingly uninteresting. D. G. Mason's *Pastorale* for clarinet, viola and piano was anything but pastoral in character; it was too long and lacked real inspiration. More interesting was Leo Sowerby's *Trio* for flute, viola and piano, of which the last movement was really fine. Saint-Saëns' new string-quartet in G, op. 153, added nothing to the composer's reputation. Besides these novelties the programme offered two of Beethoven's later quartets (op. 132 and 135), Brahms' horn trio in E, Mozart's Quartet in Bb, Dvorak's Quartet in Eb, and Beethoven's Septet in Eb.

CHORAL SOCIETIES. Unusual interest was

aroused by the American début (New York, September 18th) of the Vatican Choirs, a combination of 70 selected singers from the Sistine Chapel, the basilicas of St. Peter and St. John Lateran, and the Pontifical School of Higher Sacred Music, under the direction of Padre Raffaele Casimiri. During the 16 centuries of their existence these famous choirs had never sung outside of their proper sphere of activity in Rome until, just before embarking for America, early in September, they were heard in the Cathedral of St. Mark, Venice. While their rendition of a cappella music was in all respects the acme of perfection, as was expected, it must be admitted that the extraordinary interest shown was due rather to historical association than to intrinsic artistic superiority over some other choirs lacking the glamor of ancient tradition. It was also admitted that, on the whole, the American ear prefers the quality of women's voices to that of boys. During the year the Harvard Glee Club (Archibald T. Davison, conductor) separated from the Mandolin and Banjo Clubs to devote its entire energy to the cultivation of serious music. The programme of the opening concert, in December, comprised works by Palestrina, Bach, Brahms, Borodin, Bantock and Foote. The Columbia Chorus (William H. Hall, conductor) gave a Victory Commemoration Festival at Columbia University (May 5th-7th), presenting Verdi's *Requiem* as the principal number. A novelty, Percy Fletcher's *Song of Victory*, proved a very dull, bombastic work. In this connection mention may be made of the fact that most choral societies throughout the country produced in the early spring odes or songs to Victory, written especially for the occasion. Of these innumerable compositions scarcely one is likely ever to have a second hearing. In New York a new association, the Euphony Society (70 female voices and orchestra of 40, under Carl Hahn) gave its initial concert on November 21st. After a year's intermission, owing to its conductor's activity in war work, the Musical Art Society of New York (Frank Damrosch) entered upon its 26th season on December 16th.

FESTIVALS. The fifth annual Newark, N. J. Festival (May 16th-19th) under the direction of Mortimer C. Wiske, took the form of a victory celebration, offering little of permanent interest. At the 26th Ann Arbor Festival (May 14th-17th), conducted by Dr. Albert A. Stanley, the conductor's cantata, *Fair Land of Freedom*, rose somewhat above the ordinary level of occasional pieces, without, however, exhibiting real inspiration. The 11th Chicago North Shore Festival at Evanston (May 30th-June 5th), under the direction of Peter A. Lutkin, ended with a "Victory Night," when Lutkin's *A Hymn of Thanksgiving for Victory* and Arne Oldberg's *Festal Rhapsody* had their first performance. The 20th Norfolk, Conn., Festival (Litchfield County Choral Union), directed by Arthur Mees and Henry P. Schmitt, brought out two interesting novelties. Victor Kolar's *Lyric Suite* No. 2 was full of melodic and harmonic charm, heightened by fine orchestra coloring. Edgar Stillman Kelley's *Alice in Wonderland* impressed by skillful, dainty characterization and a certain quaint humor. The second day was devoted to a concert-performance of Saint-Saëns' *Samson and Dalilah*, while the rest of the programmes brought welcome repetitions of

successful novelties produced at former festivals. The 14th Bethlehem Bach Festival (June 6th and 7th), under Frederick J. Wolle, offered a number of cantatas for the first day, while the second day was given to a masterly performance of the Mass in B minor. The programmes of the 61st Worcester Festival (October 6th-11th), conducted by Arthur Mees, consisted exclusively of works by American composers interpreted by American artists. The composers represented were MacDowell, Chadwick, Parker, Herbert, Foote, Goldmark, Kelley, Hadley, Powell, Campbell-Tipton, Mabel Daniels and Mrs. H. H. A. Beach. Strange to say, no novelties were presented. After the festival it was announced that Arthur Mees had resigned the post as conductor, which he had filled with distinction since 1908. His successor will be Nelson P. Coffin, conductor of the Keene Choral Club. Availing themselves of the presence of the Metropolitan Opera Company, the people of Richmond, Va., had arranged a festival (April 28th and 29th), conducted by Richard Hagemann, which roused such enthusiasm that a number of prominent citizens took immediate steps toward the establishment of a permanent symphony orchestra. For Berkshire Festival see *Chamber-Music*.

NOVELTIES. The Boston Symphony Orchestra produced the following novelties. Edward B. Hill, *Stevensoniana*, an orchestral suite after Stevenson's *A Child's Garden of Verses* (April 11th), full of delicate touches and exquisitely orchestrated. Raoul Laparra, *A Basque Sunday*, symphonic poem for piano and orchestra (April 18th); played by the composer poetically conceived, with splendid local color obtained by the employment of real Basque melodies. Vincent d'Indy, *Symphony No. 3, Sinfonia brevis de Bello Gallico* (October 29th), a work of uneven inspiration, containing some fine passages, but decidedly inferior to the composer's preceding symphonies. George W. Chadwick, *The Angel of Death*, symphonic poem (November 21st), an impressive dirge for those fallen in the war. Charles T. Griffes, *The Pleasure Dome of Kubla Khan*, symphonic poem after Coleridge (November 28th), shows rather pronounced influence of modern Russian composers. The New York Philharmonic Society contributed Bernard Rogers' *To the Fallen* (November 13th), not strikingly original, but straightforward, sincere music. A. Dvorak, *Symphony No. 3, op. 76* (November 21st), a work brimful of inspiration and originality. Albert Chiaffarelli, *Prelude to a Merry Play* (December 5th), a work of exuberant spirit, splendidly instrumentated. Florant Schmitt, *Rhapsodie Viennoise* (December 11th), remarkably fine in melodic invention, but too heavily scored. The Chicago Symphony Orchestra brought out Rosseter Cole's concert-overture, *Pioneer, 1818-1918* (March 14th), not distinguished in its thematic material, but effectively scored. Adolph Weidig, *Concert-Overture* (April 11th), rather superficial, but brilliantly orchestrated. To the credit of the Philadelphia Symphony Orchestra are to be placed Samuel Gardner's symphonic poem, *New Russia* (October 24th), pleasing for its ingratiating melody, but hardly characteristic of its title. Henry Hadley's concert-overture, *Othello* (December 26th), a respectable work, but not among the author's best. The New York Symphony Society introduced Charles T. Griffes' *Poem for*

flute and orchestra (November 16th), a very poetic and inspired work. For the production of Sophocles' *Electra* at the University of Kansas (June 5th), Charles S. Skilton wrote appropriate incidental music in free style, with only occasional use of Greek modes. Similar music was furnished by E. G. Strickland for a performance of *Miriam* at the Greek Theatre at Berkeley Oval, Cal. (August 1st). See also *Chamber-Music and Festivals*.

OPERA. At the Metropolitan Opera House in New York 155 performances were given from a repertory of 40 works by 26 composers. According to nationality these were divided as follows: Italian, 22 works by 9 composers totaled 86 performances; French, 9 works by 8 composers totaled 34 performances; German, 3 works by 3 composers totaled 14 performances (given in English, French and Italian); Russian, 3 works by 3 composers totaled 12 performances; American, 3 works by 3 composers totaled 9 performances (3 evenings of triple bills). Puccini, represented by 5 works, had 28 performances; next came Verdi with 5 works and 20 performances. The operas most frequently given were *Aida*, *Carmen* and *Madama Butterfly*, each 7 times. The first novelty was Leroux's *La Reine Fiammette* (January 24th), with Farrar, Lazaro and Rothier in the principal rôles, under the direction of Monteux. Written to a fine libretto by Catulle Mendès, the music was very weak, eclectic and absolutely devoid of inspiration. Neither the gorgeous staging nor the fine singing could save the work from being a complete failure. Two American one-act operas, Joseph C. Breil's *The Legend* and John Adam Hugo's *The Temple Dancer*, had their première on March 12th, both conducted by Moranzoni. The former was sung by Ponselle, Althouse and d'Angelo, the latter by Easton, Schlegel and Kingston. Both suffered from a poor libretto. Breil's music was trivial, even technically unsatisfactory. Hugo's music was exceedingly reminiscent, but unpretentious and pleasing; voices and orchestra were well handled. Albert Wolff's *L'Oiseau Bleu*, with Easton, Gordon, Bérat, Rothier and Ananian, directed by the composer, had its world-première on December 27th. Special lustre was lent to the occasion by the presence of the distinguished librettist, Maurice Maeterlinck, who was making his first tour of the United States, and whose play (in English as *The Blue Bird*) has been familiar here for several seasons. As far as costumes and stage-setting were concerned, it may be said without exaggeration that nothing so elaborate and gorgeous has yet been seen on the American operatic stage. But the music proved a sad disappointment. In the first place, the composer lacks the power of musical characterization. There is no real, sustained melody and not a single climax; the extreme delicacy of the instrumentation soon wearies the listener. How little the huge audience was impressed by the music was proved by the fact that no marked demonstration occurred until the poet appeared before the curtain. Elaborate revivals of three older operas, Gounod's *Mireille* (February 28th), Halévy's *La Juive* (November 22d) and Rossini's *L'Italiana in Algeri* (December 5th), only demonstrated that all those works are hopelessly dead. Worthy of record is the fact that Cadman's *Shanewis*, an American novelty of the preceding year, was the only one of all Ameri-

can operas produced at the Metropolitan that was deemed of sufficient merit to deserve repetition in a later season. Of the new singers the much-heralded Gabriella Besanzoni (début as Amneris in *Aida*, November 17th), disappointed expectations. Her voice was only passable, and as an actress she fell below the average. The same night two basses, Renato Zanelli (Amonasro) and Giovanni Martino (Ramfis) made their début. The former's voice was rather small, while the latter made an excellent impression. Jeanne Gordon (as Azucena in *Trova-tore*, November 22d), disclosed a very beautiful voice and histrionic power of a high order. Frances Ingram (as Suzuki in *Madama Butterfly*, November 29th), and Orville Harold (as Leopold in *La Juive*, November 22d), proved valuable additions. Pierre Monteux, the principal French conductor, was succeeded by Albert Wolff (début with *Faust*, November 21st), a sincere, earnest musician concerned solely with reproducing the composer's intention. The silver anniversary of Caruso's first appearance upon the stage was the occasion of a special gala performance (March 22d), when the idolized artist sang in scenes from various operas.

The Chicago Opera Company gave a world première, distinguished by the presence of the composer. Henri Féviers' *Gismonda* (January 14th), with Garden, Fontaine and Maguenat, directed by Campanini, achieved a pronounced success, due to the excellence of the text and performance rather than to the intrinsic merit of the music. The score, though lacking in originality and somewhat reminiscent, is not without merit, and contains some effective climaxes. Alfredo Catalani's *Loreley* had its American première on January 17th, with Fitziu and Dolci, under Polacco. The music, which shows strong Wagnerian influence, just falls short of being thoroughly convincing. The local première of Xavier Leroux's *Le Chemineau* (January 25th), with Gall, Maguenat and Baklanov, conducted by Hasselmans, made no impression. The fall season opened brilliantly with the American première of Italo Montemezzi's *La Nave* (November 18th), with Raisa, Dolci and Rimini, under the personal direction of the composer. The score offers tremendous climaxes and much sustained melodic beauty, although occasionally the orchestration seemed a trifle too heavy. Felix Borowski's ballet-pantomime, *Boudour* (November 25th), was an emphatic success. The music proved melodious, elegant and most expressive of the situations. For scenic splendor the production surpassed anything seen on the Chicago stage. Scarcely less gorgeous was the spectacle offered by John A. Carpenter's ballet-pantomime, *The Birthday of the Infanta* (December 23d), illustrated by music that betrayed decided futuristic tendencies in its strange harmonies and disjointed rhythms. Perhaps it was the appropriate musical setting for the grotesque plot. Of the new artists two came preceded by great reputations won in Italy. Tito Schipa (début as the Duke in *Rigoletto*, December 4th), and Edward Johnson (as Loris in *Fedora*, November 20th), an American who had won fame abroad as Edoardo di Giovanni, both justified high expectations. The other newcomers, who all were received with marked favor were Evelyn Herbert (as Mimi in *La Bohème*, November 25th), Borghild Langaard (as Amelia in *Un Ballo in Maschera*, November 21st), Carlo Galeffi (as

Renato in *Un Ballo in Maschera*, November 21st), Nina Morgana (as Lucia in *Lucia di Lammermoor*, November 22d), Dorothy Jardon (in the title-rôle of *Fedora*, November 20th). Two new conductors, Teofilo de Angelis (*Fedora*, November 20th), and Gino Marinuzzi (*Rigoletto*, December 4th), were valuable acquisitions. From January 27th March 1st the company gave their second season in New York, which in all respects rivaled the success of the preceding year. The operas new to the metropolis were Février's *Gismonda* (January 27th), Mascagni's *Isabeau* (February 3d), Massenet's *Cléopâtre* (February 11th), Catalani's *Loreley* (February 13th), Gunsbourg's *Le Vaut Aigle* (March 1st). A most serious loss the company suffered by the death of its eminent director, Cleofonte Campanini, who died in Chicago on December 19th. Out of respect performances were suspended from December 19th 22d.

After several years of intermission New Orleans had just inaugurated, under the direction of Louis Verande, a season of French opera on a grander scale than ever attempted before, when the opera house was totally destroyed by fire on December 4th. After only two days of interruption the season was continued at the Athenæum Concert Hall. The San Carlos Opera Company (Fortune Gallo, director), made a phenomenally successful tour of the East, Middle West and Canada. A new company, organized by the same impresario for the production of light opera in English, began its first season in New York (September 8th), with a model performance of *The Mikado*. The revivals of Sullivan's *Iolanthe* and *Patience* by the Society of American Singers (William Hinshaw, director), early in the year, attracted such large audiences that the original programme of opera comique was considerably curtailed to make room for revivals of several other Sullivan operettas, all of which proved great drawing-cards. After the close of the Metropolitan season Antonio Scotti, one of the favorite baritones, organized from among his colleagues an excellent company, with which he made a most successful tour of the principal eastern cities. Another successful venture was the Commonwealth Opera Company, with John Philip Sousa as director, which devoted its energies to the production of the better class of light opera. On April 19th Manuel Noriega began in New York the first season of Spanish opera ever inaugurated in the United States, but was compelled to disband his company on April 30th because of the very poor quality of his artists. During that brief season he produced the American premières of two operas by Amadeo Vives, *Maruxa* (April 19th), and *Los Bohemios* (April 28th). With a number of former German artists of the Metropolitan Company Otto Goritz made an ill-advised attempt to give a season of opera in German in New York, opening with Kreutzer's *Das Nachtlager in Granada* (October 20th). After the second performance, Lortzing's *Zar und Zimmermann*, the project was abandoned owing to disorder in the house and serious rioting in the streets. In the last week of the year announcement was made of the formation of the American Grand Opera Association (Richard G. Herndon, general secretary) for the purpose of producing only works of American composers with American artists exclusively. The prospectus promised the production, early in 1920,

of Cadman's *Shanewis* and Breil's *The Legend* in a tour of 40 cities.

EUROPEAN COUNTRIES

AUSTRIA. The former Hofoper of Vienna changed its name to Operntheatre, and director Hans Gregor was succeeded by Franz Schalk, one of the conductors. The 50th anniversary of the dedication of the present building was celebrated by a grand operatic and symphonic festival in May, beginning with Gluck's *Alceste*, and ending with Mahler's Eighth Symphony. Strauss, Weingartner, Kienzl, Pfitzner and Korngold appeared as conductors of their own works. Among the numerous novelties produced by far the most important was Strauss' *Die Frau ohne Schatten* (October 10th), with Mme Jeritz, Lucy Weidt, Lotte Lehmann and Aagard Oestwig in the principal rôles, under the direction of Franz Schalk. The majority of the critics regarded the work as further proof of the composer's steadily declining inventive power. But such is Strauss' reputation that the première of any work of his is still considered an event of the first magnitude. Musically superior was Hans Pfitzner's *Palestrina* (March 1st), which scored a genuine success. The opera is unique in that it has not a single female character. Judging from the variety of critical comment, Franz Schreker's *Die Gezeichneten* must be a work of considerable importance. Felix Weingartner settled definitely in Vienna, as conductor of the Philharmonic Concerts (which he has conducted since 1908), and director of the Volksoper, where he brought out his latest operas, *Meister Andrea* and *Die Dorfschule*, both with little success. A sensation was created by the pianist Paul Wittgenstein, who had lost his right arm early in the Russian campaign. After his recovery he devoted himself to the development of his left hand with such success that he was able to give a number of recitals of standard works. Only actual sight convinced the listeners that the artist played with only one hand.

GERMANY. With the abolition of the Empire all royal and princely opera houses became nationalized, part of the former subventions being continued by the state. The reduction of income from this source, as well as the enormous cost of production, led managers to inaugurate a system of exchanging artists. The time-honored custom of appointing only noblemen as intendants of subsidized operatic institutions was likewise abolished. The former Berlin Royal Opera has become the Staatsoper, Count von Hülsen-Haeseler being succeeded as intendant by Georg Drüscher, formerly the chief stage-manager. The name of the former Munich Hofoper was changed to Nationaltheatre, Viktor Schwanneke succeeding Baron von Frankenhäusen as intendant. During the war the works of living composers of the allied countries were excluded, but immediately after the signing of the armistice the ban was lifted. The novelties produced at the various opera houses were numerous, but, with very few exceptions, quite insignificant. Innumerable symphony concerts and artists' recitals drew crowded houses, regardless of the high prices of admission. In Munich Lilli Lehmann, who in spite of her 71 years still continues to appear occasionally in recitals, created a furore. The critics were

unanimous that her art of delivery was as marvelous as ever and her voice still beautiful, although it had lost some of its power. Berlin hailed a new violin-prodigy in 14-year old Tossy Spivakovsky (pupil of Willy Hess), who was compared to his compatriot Elman.

FRANCE. At the Opéra the regular schedule was resumed with the usual works, excepting those of Wagner. The Opéra-Comique also returned to normal condition. In June it gave the 1000th performance of *Manon*. The former Théâtre de Vaudeville was reopened in the fall as Théâtre Lyrique, entering frankly into competition with the Opéra-Comique. Director Gheusi, with a guarantee fund of 2,500,000 francs subscribed by private individuals, opened the season brilliantly with such artists as Maurice Renaud, Marthe Chenal, Genevieve Vix and Fanny Heldy, whom he secured from the Grand Opera. He also offered two prizes (10,000 and 2000 francs) for operas filling an entire evening, and two more (2000 and 500 francs) for one-act operas by French composers. G. Trarieux and M. Bravard secured control of the Théâtre Gaité-Lyrique as a home for the better class of French operettas. The season began with a series of revivals of works by Offenbach and Lecocq. A new concert-hall, Salle Marvaux, was inaugurated with the first of a series of weekly symphony concerts by an orchestra of 75 performers under M. Szyfer. During the war the Lamoureux and Colonne orchestras had been combined, but in the fall both resumed their own series of concerts, the former under Camille Chevillard, the latter under Gabriel Pierné. The Padeloup orchestra, which had been disbanded, resumed its concerts under a new conductor, Rhené-Baton. At the first three concerts he had ballots distributed to the audience to determine their attitude regarding the restoration of excerpts from Wagner. After 4983 had voted for, and 213 against, the proposition, the concert of November 8th opened with the Prelude to *Die Meistersinger*. However, the first time that Wagner was heard in Paris since the outbreak of the war was in July, when Frigara produced excerpts from the same work at one of his Concerts Populaires des Tuileries, while Chevillard had played excerpts from *Tristan*. Although in neither case had the audience been consulted, there was no protest. But no stage-performances of Wagner's works were given at any theatre during the year.

ITALY. For almost every Italian opera house the war had been a period of storm and stress, forcing many to close their doors. Even at the end of the past year operatic conditions generally were far from normal. Owing to its financial condition the famous La Scala of Milan remained closed. But a new arrangement was made with the boxholders assuring a larger revenue from that source. The period of enforced idleness was turned to good account by enlarging the stage. A new work by Zandonai had a very successful première at Pesaro (July 27th). *La Via della Finestra* is described as a work of refinement, entirely free from ultra-modern aberrations. On December 13th Mascagni's first operetta, *Si Si*, was received with enthusiasm at the Teatro Quirinale in Rome. It was written with the avowed purpose of counteracting the former intense vogue of the Viennese operettas. Great interest was shown in two performances of Monteverdi's *Orfeo* (written in 1603), given

by the Associazione degli Amici di Musica. Throughout the war Toscanini gave symphony concerts for innumerable charitable and patriotic objects. In June he directed in Milan excerpts from *Parafal* and Beethoven's Ninth Symphony which latter had not been heard there in its entirety since 1902, when it was produced also under his direction. After two years' retirement spent in study that phenomenal boy-conductor, Willy Ferrero (now aged 13), reappeared in Rome and Naples, evoking scenes of frenzied enthusiasm by his wonderful interpretations of Beethoven and Wagner.

ENGLAND. Having been closed throughout the war the Royal Opera at Covent Garden reopened on May 12th. Mme. Melba was the only one of the old favorites. The other singers were all new to London, while quite familiar to Americans. Neil Forsyth, the former director-general, was succeeded by Percy Eales. Novelties were Mascagni's *Iris*, Massenet's *Thérèse*, De Lara's *Nail* and the Puccini triptych, *Il Tabarro*, *Suor Angelica* and *Gunn Schicchi*. An experiment of giving performances on Saturday nights at reduced prices proved highly successful. On September 21st the British Symphony Orchestra, composed exclusively of musicians who served in the army, gave its initial concert under Raymond Roze. After suspension of its activities during the war the Scottish Orchestra of Glasgow was reorganized, and began its season under Landon Ronald (November 26th). Among the many novelties introduced by Sir Henry Wood at his Promenade Concerts a symphonic poem, *Lamu*, by a young English girl, Dorothy Howell, met with such unusual favor that from its first performance (September 10th) until the end of the year it was played by five other orchestras in London, besides being produced also in other cities. Much attention was attracted by a festival of Czecho-Slavic music given in May by the orchestra of the Prague National Theatre and two of the foremost Bohemian male choral societies. From among 64 manuscripts submitted the judges of the Carnegie United Kingdom Trust chose the following for publication: George Dyson, *Three Rhapsodies* for string-quartet; William H. Harris, *The Hound of Heaven* for baritone solo, chorus and orchestra; Gustav T. Holst, *The Hymn of Jesus* for chorus and orchestra; P. H. Miles, *String-scretet* in G minor; Sir C. V. Stanford, *Symphony No. 5, L'Allegro ed il Penseroso*.

Bibliography. REFERENCE. *Baker's Biographical Dictionary of Musicians*. Third edition by Alfred Remy (New York), greatly enlarged, exhaustive and accurate; very valuable for its enormous bibliography and critical estimates of the work of the more important musicians.

BIOGRAPHY. Sir Frederick Bridge, *A Westminster Pilgrim* (London), an interesting combination of autobiography, reminiscences and sidelights on contemporary history of English music; Sir G. Henschel, *Musings and Memories of a Musician* (New York), an autobiography valuable for personal relations with eminent contemporaries; *The Life of Liza Lehmann* by herself (London), very intimate and interesting chiefly because of her detailed account of the genesis of her song-cycles; *John McCormack; His Own Life-Story*, edited by P. V. R. Key (Boston), entertaining and well written; J. Mas-

senet, *My Recollections*, translated by H. V. Barnett (Boston), very superficial and conventional, contains little of permanent value (The original appeared as *Souvenirs d'un Musicien*, Paris, 1912); Clara K. Rogers, *Memories of a Musical Career* (Boston), interesting as an autobiography, but more valuable as a partial record of contemporary musical history; Camille Saint-Saëns, *Musical Memories*, translated by E. G. Rich (Boston), not so much personal recollections as detached essays of permanent value on various phases of art and contemporaries. (The original was published as *Ecole Buissonnière*, Paris, 1913); Ethel Smyth, *Impressions that Remained* (2 vols., London), contains exceptionally vivid descriptions of famous contemporaries.

CRITICISM. F. H. Martens, *Violin Mastery* (New York), personal interviews with famous living masters regarding the technic of their instrument; E. Newman, *A Musical Motley* (London), a collection of essays varying in value.

HISTORY. C. A. Brown, *The Story of our National Ballads* (New York), an authentic account embodying the results of the latest investigations; H. E. Krehbiel, *More Chapters of Opera* (New York), a continuation of the author's earlier book, giving a record from 1905-18 with much valuable inside information.

NATHAN, BEN. British actor and theatrical proprietor, died early in May. He was born in 1857 and began as an actor in 1889. Later he devoted himself to the business side of his profession and became the manager of the London Opera House.

NATIONAL ANTHEM. See **MUSIC, General News**.

NATIONAL BANKS. Inasmuch as the national banks constitute the principal elements of the Federal Reserve System, which is treated in the article **BANKS AND BANKING**, the reader is referred to that article for further material on the subject. An idea of the growth of the national banking system in recent years may be gained from the following facts: The increase in resources for the five and one-half year period from January, 1914, to July, 1919, was greater than the increase which took place in the entire 40 year period prior to January, 1914; this was also true of the increase in net earnings. The total of capital, surplus, and undivided profits in July, 1919, was \$313,000,000 greater than in January 1914. Compared with the national bank failures in the 40-year period prior to 1914, the number of failures since January, 1918, is negligible. The report of the comptroller of the currency shows that on Sept. 12, 1919, there were in all 7821 national banks in the United States, with aggregate resources of \$21,615,000,000. This compares with 7728 banks on Aug. 31, 1918, which showed aggregate resources of \$18,043,000,000.

The principal items of resources were the following: Loans and discounts, \$11,085,000,000; United States Government securities, including Liberty loan bonds, Victory notes, and certificates of indebtedness, \$3,297,000,000; and other bonds and securities, \$1,807,000,000. Liabilities included the following items: Capital stock, \$1,138,000,000; surplus, \$886,000,000; undivided profits, \$415,000,000; demand deposits,

\$9,752,000,000; time deposits, \$2,921,000,000; United States deposits, \$519,000,000.

Banks which were members of the national system were distributed as follows on Sept. 12, 1919: In central reserve cities (New York, Chicago, and St. Louis), 45; in the 63 other reserve cities, 363; country banks, 7413. The distribution of country banks according to geographical divisions was as follows: New England, 395; Eastern, 1535; Southern 1520; Middle, 2035; Western, 1385; Pacific, 538; Alaska (non-member banks), 2; Hawaii (non-member banks), 3. The states having the largest number of national banks were the following: Massachusetts, 159; New York, 480; New Jersey, 202; Pennsylvania, 838; Virginia, 154; West Virginia, 119; Texas, 546; Kentucky, 129; Tennessee, 101; Ohio, 372; Indiana, 255; Illinois, 472; Michigan, 108; Wisconsin, 147; Minnesota, 309; Iowa, 355; Missouri, 134; North Dakota, 173; South Dakota, 126; Nebraska, 189; Kansas, 244; Oklahoma, 346; California, 284; Montana, 138, and Colorado, 127.

NATIONAL CATHOLIC WAR COUNCIL.

See **INDUSTRIAL RECONSTRUCTION**.

NATIONAL CIVIC FEDERATION.

This society is for the promotion of better civic conditions in the United States. It has done much work during 1919 in spreading propaganda against Bolshevism through its official organ, *The National Civic Federation Review*, with Ralph M. Easley, as editor. A commission was sent to England, France and Italy for the purpose of studying industrial conditions in those countries. The personnel of this commission included representatives of employers, wage earners, and the public. A meeting to discuss the report of this commission was held in New York on September 8th and 9th where, among others, the following subjects were discussed: "The Shop Steward Movement," "The Democratization of Industry," "British Labor and Politics," and "Factors for Economic Change in Great Britain." On Apr. 12, 1919, Samuel Gompers addressed the Federation in New York just after his return to this country from studying labor conditions abroad. He spoke on the menace of Bolshevism. Among other speakers at the meeting was Hon. Wm. H. Taft. The Federation has also taken an active part in favoring the League of Nations, several meetings being held in various cities to discuss phases of the subject. The Woman's Department of the Federation conducted a series of weekly conferences on pertinent civic questions, such as, "Public Employment Service," "Housing," "Food Production and Conservation," and "Prison Reform." The Woman's Department has grown considerably during the last two or three years, until it is now becoming an important factor in the Federation. During the year, Mr. V. Everit Macy was forced to retire from the presidency of the Federation on account of ill health. In his place Judge Alton B. Parker was elected president. Officers in 1919 were: President, Alton B. Parker; vice-president, Samuel Gompers; treasurer, Nicholas F. Brady; and chairman executive council, Ralph M. Easley. Headquarters are maintained in the Metropolitan Tower, New York City.

NATIONAL SAFETY COUNCIL. The leading organization in the United States for the prevention of accidents in the industries, the streets and the homes. Founded in 1913 with 40 members, it now includes in its membership more than 15,000 factories, railroads, insurance companies, technical schools, governmental agencies, etc., employing an aggregate of more than 6,000,000 workers. The Council prints weekly news-letters, bulletins, and pamphlets to keep members informed on current events and important matters affecting the safety movement. The eighth annual Safety Congress was held in Cleveland on Oct. 1-4, 1919. Meetings of the 19 sections, representing the various industries in the United States, were held at that time. The programme for 1919 included the expansion of the work into many new fields. Officers of the Council for 1919 were: President, D. Van Schaack; secretary and chief engineer, S. J. Williams; treasurer and business manager, F. W. Pardee. Headquarters are at 168 N. Michigan Ave., Chicago.

NATIONAL WAR LABOR BOARD. The National War Labor Board was created as part of the war machinery of this country. Being purely a war emergency measure, it passed out of existence with the passing of the emergency, after an activity of 15 months. The purpose of the War Labor Board was to bring about the settlement of labor disputes by means of mediation or conciliation in all industries essential to the effective conduct of the war. A definite, clear-cut basis of principles and policies was laid down upon which the Board based all its decisions. (See preceding YEAR BOOK 1918). On Mar. 29, 1918, the Secretary of Labor appointed as members of the National War Labor Board: Messrs. Taft and Walsh, as representatives of the public; Messrs. L. A. Osborne, L. F. Loree, W. H. Vandervoort, C. E. Michael, and B. L. Worden representing the employers, and Messrs. Frank J. Hays, William L. Hutcheson, William H. Johnston, Victor A. Olander, and T. A. Rickert representing employees. These appointments were approved by the President on Apr. 8, 1918. Mr. Walsh resigned in December, and Mr. Basil M. Manley was appointed to take his place.

From Apr. 30, 1918 to May 31, 1919, the War Labor Board received 1270 cases, 25 of which were consolidated with other cases, leaving 1245 separate controversies which had to be passed upon by the board. Of these cases, 706 (57 per cent) have been referred to other agencies having primary jurisdiction or have been dismissed because of voluntary settlement, lack of jurisdiction or other reasons; 77 (6 per cent) were pending on May 31, 1919, remaining on the docket as undisposed of because of divided vote or suspension for further evidence; while in the remaining 462 cases (37 per cent) awards or findings have been handed down by the Board. In addition, 58 supplementary decisions were made in cases where action had already been taken, making a total of 520 formal awards or findings. The exact number of strikes and lock-outs averted or called off as a direct result of the Board's intervention is unknown, but the

records show at least 138 instances of this character.

There was a rapid expansion of the work of the War Labor Board during the period of actual hostilities. After the signing of the armistice, a resolution was passed providing that no new cases other than those jointly submitted would be received by the Board after Dec. 5, 1918. Altogether, there were received in the six months immediately after the armistice 423 new cases, as compared with 847 entered in the docket during the six months prior to the end of hostilities.

The awards and findings of the War Labor Board over the period from Apr. 30, 1918 to May 31, 1919 directly affected 1084 establishments employing 669,494 persons, of whom 80,271 were employees of street railway companies. These figures include only those persons specified directly in the terms of the decision. It is worthy of note that very frequently a decision in regard to one company has been accepted by other companies when in similar situations, e.g., the decision of the Board in the Bridgeport cases, (see preceding YEAR BOOK), was accepted and applied in the plants of the Remington Arms Company in other places, and that the street railway decisions have been the basis of voluntary adjustment in Philadelphia, Washington, and many other cities. Likewise, the industrial service section of the Ordnance and other branches of the War Department, as well as the Labor Adjustment Board and similar divisions and boards of other procurement divisions of the government, have used the War Labor Board principles and precedents as a manual in their own adjustments. Moreover, the conciliators of the Department of Labor, have averted many difficulties by citing the principles and precedents of the War Labor Board to the parties in controversy, and have worked out an adjustment based on these principles.

Cases were brought before the War Labor Board either by appeal from some other board, by reference from the Department of Labor, or by direct complaint. Large groups of cases were excluded from the War Labor Board, except by way of appeal, because of other processes for settlement. The shipbuilding industry set up its own Labor Adjustment Board; the Ordnance Department and other producing departments of the government had special industrial service sections; the Railroad Administration had its own method of conciliation; and the coal mining industry had its labor conditions controlled by agreement of all parties with the Fuel Administration. The cases which came to the War Labor Board on appeal from the decisions of these other boards were very few. The most important of these was the New York Harbor case, which came up on appeal from the New York Harbor Wage Adjustment Board.

A very large number of cases came by way of reference from conciliative agencies such as the Department of Labor, which had been unable to adjust the matters under discussion. Among these are found the St. Louis cases, Bridgeport cases, Worthington Pump case, Smith and Weston case, and the Newark, N. J. machinists' cases. The remaining cases were brought through direct complaint to the Board. Of these, 12 per cent were made by employers or employers' associations; the remainder were

brought by groups of employees or, in the case of the union shops, by the union representative.

The Board was given no legal authority to execute its decisions. But during the period of the war, the powers of the procurement departments of the government—such as the War and Navy Departments—were very great, and these powers, as well as the influence of the President, were constantly used in support of the awards of this Board. The most striking cases of this kind were the Bridgeport and the Smith and Wesson cases. In the former the President told the striking employees that he would use the Federal Employment Service, and other branches of the government even to annulling their occupational claim for exemption from draft, to their disadvantage if they did not accept the Board's award. In the Smith and Wesson case, the War Department immediately took over the plant of that company when it refused to abide by the decision of the War Labor Board. The outstanding fact, however, is that, as long as active war was being prosecuted, the decisions of the War Labor Board were accepted almost without exception.

A large number of awards specifically provided for an administrator to be sent to interpret the award. There were, likewise, many requests for the assistance of such men in the interpretation and application of awards. This demand steadily increased as the number of decisions rendered grew, and it was impossible to provide efficient administrators in sufficient numbers. In total, 180 awards and findings were administered by the Department of Administration of Awards. The maximum number of administrators at the time of greatest activity was 25.

When the armistice was signed, many employees believed that the War Labor Board should be dissolved, but in January, President Wilson telegraphed from Paris, expressing his desire that it continue to function during the period of reconstruction. However, the expenses of this Board were met by a war emergency appropriation. There was no new appropriation and after June 30, 1919, the members of the Board acted without compensation. After correspondence with the Secretary of Labor, in which Secretary Wilson had expressed gratitude for the successful functioning of this board, and his belief that its duties were completed, the War Labor Board passed unanimously, on Aug. 12, 1919, a resolution deciding to dissolve. The resolution states (1) the War Labor Board is to adjourn because the emergency need is terminated, and the government has made no further provision for maintenance; (2) the War Labor Board will be ready for any call until formally dissolved by Executive Proclamation; (3) all controversies still being considered shall be transferred to the Department of Labor; (4) all records and files shall be placed in the Department of Labor and shall be open for inspection by the public.

During its 15 months of existence, the National War Labor Board handled over 1200 cases and expended \$750,000. The Bethlehem Steel employees' case was the only case which was left undecided. This was placed in the hands of an administrator.

NAUMANN, J. F. German Publicist, died at Travemünde, Germany, August 24. He had

distinguished himself during the past 25 years as a writer on blocs, and as a political leader, and during the war wrote a book which became notorious in countries of the Allies under the title of *Mitteluropa*, in which he urged the foundation of a new holy empire, under Austro-German control, comprising not only central Europe, but extending from Antwerp to the Persian Gulf. He was born near Leipzig in 1860, studied at German universities, and was a pastor at Langeberg from 1886 to 1890. A few years later he gave up the ministry and became a leader of the left wing of the Christian Socialists, and subsequently one of the founders, and the first president of the National Socialist party. He was editor of *Die Zeit* (1896-1903), which was subsequently combined with *The Nation* and the political paper, *Hilfe* (1901-1907); he also published the political annual of his party, called *The Patria*. Among his books may be mentioned the following: *Der soziale Progress der evangelischen Kirche*, (1890); *Was heisst Christlichsozial?* (1894-96); *National-sozialer Katechismus*, (1896); *Weltpolitik und Sozialreform*, (1898); *Flotte und Reaktion*, (1899); *Demokratie und Kaiserthum*, (1900); *Kunst und Volk*, (1902); *Briefe über Religion*, (ed. ed., 1904); *Neudeutsche Wirtschaftspolitik*, (1906); *Freiheitskämpfe*, (1911); *Geist und Glaube*, (1911). He was a member of the Reichstag from 1907 to 1912. After the defeat of Germany he entered the new Democratic party and became its president. He was one of those who opposed the most bitterly the signing of the peace. By his country he was regarded as one of the best orators of his day, and was spoken of as a probable successor of Ebert in the presidency.

NAVAL ACADEMY, UNITED STATES. See UNITED STATES NAVAL ACADEMY.

NAVAL PROGRESS. During the past year the naval powers of the world have been chiefly concerned in a reduction of expenses by cutting down the personnel, laying up unnecessary ships, discarding antiquated ones, and stopping or reducing new construction. Those vessels which had become antiquated and those which were only called into service by the exigencies of the war have been relegated to retirement, to the scrap-heap, or (in the case of former merchant craft) returned to their original service. Germany has been reduced to the status of a third rate naval power. Great Britain is completing only such vessels as were very far advanced in construction. France and Italy are simply repairing existing ships—and only the best of these are receiving much attention. The United States and Japan are the only nations that are adding to their fleet; neither was hard hit like Great Britain, France, and Italy by the frightful expenses of the war.

BATTLE OF JUTLAND. The battle of Jutland has attracted new interest during the year through the published statements of Admiral Lord Jellicoe, of Admiral Tirpitz, and of Captain Persius. The really decisive character of the action is now thoroughly understood. The German ships were badly injured and their crews decimated. The ships were saved from sinking only by their heavy armor, by excellent subdivision of the hulls, and the proximity of their home base. The British losses were 6014 killed and drowned and 674 wounded. Of the fatal casualties about 500 were due to gun fire and

5500 to the sinking of 3 battle cruisers, 2 armored cruisers, 2 flotilla leaders, and 6 destroyers. The German losses are stated in Berlin as 3076 of which about 2000 were drowned and the remainder killed or wounded by gunfire. The fleet was *hors de combat*. The battleship *Pommern* was sunk by a torpedo. The *Koenig* was struck about 15 times and so badly damaged that she sank by the head until her bow was only 6½ feet above water, thereby imprisoning the crew of the forward torpedo tube until she was placed in dock on June 5. The *Grosser Kurfurst* was damaged in hull and engines by shells and torpedo. The *Markgraf* was badly damaged by a torpedo. The *Oldenburg* was hit by a shell which killed 11 and wounded about 12, mostly officers on the bridge. The *Ostfriesland* struck a mine which tore a large hole in her starboard side; she was assisted into port by salvaging vessels. The *Schlesien* was injured in a collision with the sinking *Pommern*. The Schleswig-Holstein was so badly hurt that her repairs took several weeks. Of the battle cruisers, the *Luetow* received at least 40 hits by heavy shell and was twice torpedoed during the night attacks. She was abandoned and sunk to prevent her falling into British hands. The *Derfflinger* was so badly torn by shells that she had to be reconstructed, a large quantity of guns and armor designed for the *Hindenburg* being used. The *Moltke* was hit by three large shells and was under repairs until August. The *Von der Tann* had one turret completely put out of action and another rendered virtually useless. Of the light cruisers the *Elbing* was so completely disabled that she was scuttled to avoid capture. The *Rostock*, badly damaged by gunfire, was blown up to avoid capture. The *Wiesbaden* was completely wrecked by gunfire and finally sunk by a torpedo; only one of her crew survived. The *Frauenlob*, wrecked and set on fire by shells, was also torpedoed by an enemy destroyer or cruiser and sunk; only eight of her crew escaped. Five destroyers were sunk and several others so disabled that they had to be towed into port. Aside from the drowned in the *Queen Mary* and *Indefatigable*, Beatty's ships had considerably over 500 killed and wounded in the battle cruisers and fifth battle squadron. No one was killed on any battleship of the main British fleet and only nine were wounded—all on the *Colossus*. Jellicoe's losses were in the *Invincible*, *Defence*, *Black Prince*, and the flotillas. The serious injuries of the German ships and the enforced retreat to Wilhelmshaven, where several months were required to effect repairs, were a terrible setback to the German high commands. The attempt of the Kaiser and his advisers to characterize the battle as a German victory only deceived those at a distance and deceived them but for a time. As far as the personnel of the navy was concerned its spirit was broken and its morale destroyed; from that time onward, hopelessness spread and the attempts at reorganization and strengthening of the fleet only led to discontent that undermined discipline and ended in mutiny. The failure of the submarine campaign which, instead of bringing England to terms, brought the United States into the war, and which was so dangerous that few escaped a third trip to sea, made matters steadily worse, so that at the end of hostilities the German fleet was well-

nigh innocuous no matter what its force in ships.

AIRCRAFT. At sea as on land aircraft have become most important for scouting and other purposes. The seaplane differs from the land machine in having the car shaped like a boat so that it can alight on the water, from which its floats and hydroplanes permit it to rise without difficulty. In the United States and other navies all large ships will hereafter carry at least one seaplane, while special vessels carrying 10 to 25 planes will accompany large naval forces. (See **BATTLESHIPS**, etc.). The airship is also highly regarded as a naval auxiliary but the practicable manner of its use awaits further development.

ORDNANCE. There are no new developments in naval ordnance since the British brought out their short 18-inch for special service and the Germans a short light 6-inch for arming submarines. The British, in 1915, built a short light 12-inch gun which they mounted on *Submarine M-1*. It was intended for use at the Dardanelles.

NAVAL WAR DEVICES, RECENT. The *depth charge*, at first consisting of a fused container holding 25 pounds of high explosive and thrown by hand, has been developed in several ways. It is now enormously larger and fitted with a fuse that explodes it at a predesigned depth by the hydrostatic pressure. Guns and launching apparatus are used to project the bombs, and the largest sizes are of 600 pounds or more. The name *hydrophone* has been applied to any instrument for listening to sounds coming through water. Such instruments, of many different types, were used during the war in the endeavor to define the direction of a moving submarine. No great success attended these efforts until the *Walser Hydrophone* (the invention of a French naval officer) appeared. This instrument, too complicated to describe here, is based upon the refraction of sound waves. In its final form it was first used in service during March, 1918. Thereafter it assisted greatly in the submarine hunt. Among the many important devices developed during the war is the *paravane*. This consists of two "otters" towed by wire ropes, one at each side of the bow, the inner end of each rope being attached to the stem of the ship at the forefoot, a dozen feet or more below water. The "otter" is a torpedo-shaped device fitted with saw-like jaws (for cutting mine-anchor cables) and a depth regulator operating rudders that keep it at a designed depth below the surface. When the ship goes ahead, other rudders on the "otters" make them swing out from the side until they stretch taut their towing ropes at an angle of about 45° with the course. Any mine which does not squarely strike the stem of the ship is caught by one of the towing ropes pressing against the anchor line. The latter slides along the towing rope until it catches in the "otter's" jaws where it is promptly cut. The mine then rises to the surface clear of the ship and is easily destroyed. *Paravanes* saved many ships from being struck during the war and incidentally revealed the location of several new and unknown mine fields. The *S-course* is a later development of zigzag steering which was designed to upset the calculations of a U-boat that wished to launch a torpedo. This form of course is obtained by a continuously

moving lubber's point on the compass, the movement being controlled by a cam that may be changed from time to time to give an *S-course* of different characteristics. As the moving lubber's point follows the law impressed upon it by the cam, the computation of course, distance, and position at any time can be made automatically.

NAVIES OF THE WORLD: RELATIVE STRENGTH IN SHIPS. In the following table, no pre-dreadnought battleships are included and of fast light cruisers only those which are less than 15 years old. On account of the difficulty of determination of figures in connection with submarines and destroyers, the numbers of these vessels and their tonnages are taken from U. S. official reports which appeared in the Spring of 1919. Many that are recorded as building have since been completed and, in the case of Great Britain, a large number have been condemned for ultimate sale as not worth further maintenance, while other nations are reducing their fleets somewhat less drastically. The French and Italians have stopped all work on dreadnoughts under construction: these vessels were projected before the war but have hardly been commenced and none are far advanced. The United States and Japan are the only countries doing much building. When the battle cruisers and battleships now under construction are completed the United States navy will be equal to the present fleet of Great Britain except as regards light cruisers, while Japan will have left France and Italy far behind.

kind is to be retained unless fit to take its place in the first line of its type. This rule eliminates all armored cruisers, all predreadnought battleships (except two which approach the dreadnought type, carrying 4 12-inch and 10 9.2-inch guns), all light cruisers of low speed and ineffective design, all old destroyers which are too small to be fully seaworthy and too slow to be efficient. The rule is also being applied to vessels of auxiliary type where selection is more difficult. The result is that the British navy will become a highly efficient organization per ton of vessels maintained in service. The British naval estimates for 1919-20 were £149,200,000, of which £68,000,000 was for shipbuilding, repairs, and maintenance. A personnel of 280,000 is provided for. When the reductions in material and personnel are complete it is hoped that the cost of maintaining the navy will be less than £100,000,000—possibly as low as £75,000,000. One item, which will always be a large one, is the pay of officers and men. The rate of pay has been enormously increased—more than doubled in some instances—so that the pay of many officers (especially those of the higher grades), is higher than that of similar ranks of our own service. The total losses of the British naval forces in war operations were as follows: Killed (including drowned), 2061 officers and 20,197 men; wounded, 813 officers and 4081 men; missing, 15 officers and eight men.

UNITED STATES NAVY. After the battleships and battle cruisers now under construction are completed, the navy will be equal to the present

a Some not completed. On a few construction work has stopped.

b Nearly one-half are to be condemned and broken up.

c Some are to be condemned and broken up.

d Some are completed, some will not be built at present.

e Construction work stopped.

BRITISH NAVY. No new construction work is in hand for the British navy. A large number of cruisers, destroyers, and submarines were in hand at the end of the war; those very far advanced will be completed; work on the others has been stopped. Four new type battleships of the *Hood* class were contemplated. The *Hood* is completed; the others, which had hardly been commenced, will not be built and the material has been sold. Up to July 1, 1919, about 150 British ships had been condemned for sale and the work is still going on. No vessel of any

naval force of Great Britain except as regards light cruisers in which the U. S. navy is very deficient. The possession of a great navy seems to be regarded as imperative. In the late war, although the British navy was enormously superior to the German it was insufficient to effect all desired results. The political disquiet now prevailing in Europe may engender any result and the United States evidently wishes to be in shape to secure its own peace and safety and by the constant exhibition of adequate force to cause any nation or combination of nations to

think twice before attacking us or interfering with the rights of our people. The naval appropriation bill for 1919-20 is \$616,000,000. No new construction is authorized but \$133,000,000 is provided for continuing work on the vessels authorized in the programme of 1916. After Jan. 1, 1920, the enlisted force of the navy is fixed at 170,000 men, which number may be increased by the President to 191,000 if in his judgment a sufficient emergency exists. The new organization of the active forces afloat consists of an Atlantic battle fleet of 17 battleships and a Pacific battle fleet of 15, each with squadrons of cruisers, destroyers, auxiliaries, etc. The Asiatic fleet consists of cruisers and auxiliary vessels only. Other special squadrons and detachments are formed for special services. All battleships of the predreadnought type, except those of the *Connecticut* and *New Jersey* classes, are to be placed in reserve and it is presumed that the ships of these two classes will follow the others as fast as they are replaced by dreadnoughts. There are now building for the navy: the battleships *Tennessee* and *California* (32,300 tons, 85 and 95 per cent completed), *Colorado*, *Maryland*, *Washington*, and *West Virginia* (32,600 tons, 35 to 70 per cent completed), *South Dakota*, *Indiana*, *Montana*, *North Carolina*, *Iowa*, *Massachusetts* (43,200 tons, 0 to 10 per cent completed); the battle cruisers *Lexington*, *Constitution*, *Saratoga*, *Ranger*, *Constitution*, *United States* (43,500 tons, 0 to 10 per cent completed); 10 light cruisers Nos. 4 to 13 (7100 tons, 5 to 40 per cent completed). On Oct. 1, 1919, there were also under construction 3 fuel ships, 2 gunboats, 1 hospital ship, 2 ammunition ships, 1 repair ship, 1 destroyer tender, 136 destroyers, 58 submarines, 6 mine sweepers, 14 seagoing tugs, 7 harbor tugs, 11 oil tankers, and 8 eagle boats. Many of these have since been completed. There were 197 vessels in the navy at the time of our entry into the war and 2003 at its close. The personnel of the navy on April 6, 1917, was: Navy, 65,777; marine corps, 15,627. The corresponding figures on Nov. 11, 1918, were: Navy, 497,030; marine corps, 78,017. At the close of hostilities there were 373 United States naval vessels operating in European waters, consisting of 8 battleships, 70 destroyers, 120 submarine chasers, 12 submarines, and 63 patrol and mine vessels of various types.

GERMAN NAVY. The German navy has been reduced to a negligible naval force by the results of the war. Not only has she, by the terms of the armistice, been compelled to surrender every ship of serious importance but the organization, morale, and discipline of the fleet has been so completely destroyed that it will take a generation to reconstruct any sort of efficient force. (See note on the battle of Jutland on a preceding page.) On June 21, 1919, by a concerted action, the German crews on the vessels interned at Scapa Flow sank their vessels. This was but a further evidence of the total lack of honor and plighted word which has distinguished the Germans during the war. The terms of the peace treaty require that the armed naval forces of Germany shall not exceed the following:—6 battleships of the *Deutschland* or *Lothringen* types (both predreadnoughts of 13,000 tons, carrying 4 11-inch guns), 6 light cruisers, 12 destroyers, and 12 torpedo boats (or an equal number of similar craft); and the naval forces of Germany shall not contain a single submarine. A list of

the vessels surrendered for internment is given in the *YEAR BOOK* for 1918.

JAPANESE NAVY. As may be seen in the table of ships of great naval powers, the Japanese navy is steadily advancing in power both absolutely and relatively. It is now in third place as regards either ships built, or ships built and building, having far distanced both France and Italy. Financially, Japan has not been injured by the war; indeed, its commerce, industries, and wealth have greatly increased. Of the 4 battleships given in the table as building 2 are launched, and 2 are commenced, while the 2 battle cruisers of 40,000 tons are about to be or have been laid down. Of the new light cruisers of 7200 tons, two are certainly building, and possibly 5 are in hand; 2 others of 3500 tons are nearly ready for service. Of the 14 destroyers of unknown displacement, 10 were recently ordered and were probably laid down in 1919; 5 are first class boats and 5 are second class.

FRENCH NAVY. The financial embarrassments caused by the war have impelled the government to call a halt on practically all shipbuilding. Three light cruisers (*Lamotte-Piquet* class) of about 4500 tons are under construction, whether work on them is to be stopped is uncertain. The great cost of powerful naval vessels has repeatedly caused the French to seek some cheap substitute for the battleship—the torpedoboat, the commerce destroyer, the submarine. When the futility of the substitute was seen, the navy built useless ships like the armored cruisers. Before the war France had laid down 5 battleships of about 25,000 tons and projected the laying down of 4 more. Only one of the latter was laid down and work upon this and upon the first 5 was stopped soon after the outbreak of hostilities and has not been resumed.

ITALIAN NAVY. As in other navies of the European allies, retrenchment is sought in all directions. In 1913-14, Italy expected to lay down 4 battleships of 28,000 to 30,000 tons. It is believed that some work was done on all of them; 1 was launched. Work on all is reported stopped, the 1 which was launched may eventually be completed. The dreadnought battleship *Leonardo da Vinci* (22,340 tons) which was sunk by an internal explosion during the war has been raised and will be repaired.

RUSSIAN NAVY. The break-up of the Russian navy is complete. After murdering most of the officers and a large percentage of the men, the Bolsheviks attempted to operate some of the vessels—others they gave to their German friends. Nearly all have now been captured by the Allies or sunk.

AUSTRIAN NAVY. The breaking up of the Austrian Empire has of course left the remains of its fleet without a flag and without a country. Neither the new Austria nor the new Hungary has any seacoast. The principal vessels of the Austrian fleet are now in Italian hands and may fall to Italy, be destroyed, or be given to the Jugo-Slav state.

NEW MINOR NAVIES. Finland, Poland, and Jugo-Slavia are said to be organizing naval forces but nothing definite of importance has yet been achieved.

NAVY. See NAVAL PROGRESS.

NAYAR. See ANTHROPOLOGY.

NEBRASKA. POPULATION. The population of the State in 1910 was 1,192,214, and July 1,

1919, it was estimated to be 1,309,627, a gain of 12,000 during the twelvemonth.

AGRICULTURE. The following table is compiled from a report of the Federal Department of Agriculture.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1919	7,030,000	184,186,000	\$224,707,000
	1918	6,954,000	123,086,000	157,550,000
Oats	1919	2,133,000	69,962,000	45,475,000
	1918	2,531,000	56,188,000	36,522,000
Wheat	1919	4,384,000	60,675,000	122,564,000
	1918	3,666,000	41,213,000	81,190,000
Hay	1919	1,769,000	a 4,299,000	60,186,000
	1918	1,701,000	a 2,381,000	40,953,000
Potatoes	1919	115,000	6,325,000	12,018,000
	1918	121,000	10,406,000	12,279,000

a Tons.

TRANSPORTATION. The total railway mileage of the State on Dec 31, 1919, was 8392. The railroads having the longest mileage were: (Chicago, Burlington, and Quincy, 3601; Union Pacific, 2104; Chicago and Northwestern, 1306. Very little railroad construction was done during the year.

FINANCE. According to the treasurer's report, the total receipts for the fiscal year 1918 were \$4,980,973. The disbursements for the year amounted to \$4,012,279. The balance at the beginning of the year was \$483,186, and at the end of the year \$1,451,880. The State has no bonded debt.

EDUCATION. The total school population in 1918 was 387,394. The enrollment in the public schools was 292,362, with an average daily attendance of 219,246. The number of teachers, male and female, was 12,697, and their average salary was \$64.45 a month.

POLITICS AND GOVERNMENT. The regular session of the legislature was held, January March. Its principal work was the passage of a so-called "code" bill, which consolidates the several boards and commissions under the governor, with secretaries forming his "cabinet." The purpose is to unify the administration of the state's business, doing away with duplications and overlapping jurisdictions. Provisions were also made for the constitutional convention, ordered by the referendum. This convention met on December 5th, organized, named its committees and took a recess until January 6th. The legislature also enacted several amendments to the banking laws, the "blue sky" law and the workmen's compensation law. A bill to provide for the erection of a new State capitol building, levying a tax to pay for the same, and naming a commission with the governor as chairman to receive and adopt plans, was also passed.

A special session of the legislature was called in October, to grant to Douglas county the right to issue bonds for the purpose of repairing the county court house, which was damaged by fire during a riot on the night of September 28th. At that time a mob surrounded the court house, situated in the centre of the Omaha downtown district, and set the interior of the building on fire to force the sheriff to turn over a negro prisoner held in the county jail, which is on the roof of the building. The total damage wrought by the fire is estimated at \$898,000. While the sheriff was removing the prisoners from the jail quarters, that had become untenable, the negro was secured by the mob, hung, shot, and his body afterwards cremated. During the progress of the riot, Mayor Edward P.

Smith of Omaha was captured by the mob and badly beaten, narrowly escaping being hanged, his rescue being effected by a group of citizens.

STATE OFFICERS. Governor, Samuel R. McKelvie; Lieutenant-Governor, P. A. Barrows; Secretary of State, D. M. Amsberry; Attorney-General, Clarence A. Davis; Auditor, George W. Marsh; Treasurer, D. B. Cropsey; Commissioner of Public Lands, Dan Swanson; Railway Commissioner, H. G. Taylor—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, A. M. Morrissey; Associate Justices, Charles B. Letton, William B. Rose, George W. Day, Albert J. Cornish, James R. Dean, Chester H. Aldrich. See MINIMUM WAGE.

NEBRASKA, UNIVERSITY OF. A co-educational State institution of learning, founded at Lincoln, Neb., in 1869. In the fall of 1918 there were 3234 students and 329 members of the faculty; a large proportion of the attendance was incident to the establishment of a unit of the Student Army Training Corps. Volumes in library, 137,868. The total revenue of the university for the year 1918 was \$3,654,874. Chancellor, Samuel Avery, Ph.D. See AGRICULTURAL EDUCATION.

NECROLOGY. The following list contains the names of notable persons who died in 1919. Articles will be found in the YEAR BOOK in their proper alphabetical order on those whose names are mentioned below without other text.

Aaronsohn, Aaron. Agriculturist, died May 15 near Boulogne, France, in a fall from an aeroplane. He was technical adviser of the United States Department of Agriculture. He was born at Haifa, Palestine.

 Williams, Arthur Llewellyn
 Wilson, John Moulder
 Wise, Otto Irving
 Wood, Daniel Joseph
 Woolworth, Frank W.
 Worthen, George Carlton. Botanist, died April 10. He was born in 1871. He specialized in economic botany, and was a member of the Bussey Institute at Harvard
 Wyndham, Sir Charles
 Yates, Fred
 Young, Bennett Henderson
 Young, Richard Whitehead
 Young, Sophie. Curator of botany, died March 5. For eight years preceding her death she had been curator and instructor in botany in the University of Texas
 Zeisler, Joseph
 Zelaya, J. S. Former President of Nicaragua, died May 17 in New York. He was born in 1854
 Zimmerman, Max Georg. German lecturer on art history at the University of Bonn

NEGRI SEMBILAN, THE (NINE STATES). A federation of states composing a state in the Federated Malay States (q.v.).

NEO-MALTHUSIAN LEAGUES, FEDERATION OF. See BIRTH CONTROL.

NEPHRITIS. See BRIGHT'S DISEASE.

NERVO, AMADO. Mexican author. See SPANISH LITERATURE.

NETHERLANDS, THE (or HOLLAND). A kingdom of central Europe, on the North Sea, in latitude 50° 46'-53° 34' north, and longitude 3° 22' 7" east, comprising 11 provinces. Capital, the Hague.

AREA AND POPULATION. Total area including the rivers of Zealand and South Holland, the Dollart, the Zuider Zee, and the Wadden (shallows on the shores of Friesland and Groningen extending to the Dollart), 40,828.71 square kilometers (15,764 square miles), as based on low-

tide planimetric calculation. The area by provinces and the population according to the communal population lists of Dec. 31, 1916, and Dec. 31, 1917, are shown in the following table:

	<i>Sq km</i>	<i>1916</i>	<i>1917</i>
North Brabant	4,973	699,838	714,973
Gelderland	5,024	707,898	723,437
South Holland	2,391	1,599,164	1,636,097
North Holland	2,762	1,244,499	1,270,808
Zeeland	1,832	243,698	245,933
Utrecht	1,363	320,913	327,192
Friesland	3,220	380,526	384,363
Overijssel	3,354	426,010	431,757
Groningen	2,284	355,154	358,663
Drenthe	2,262	196,505	200,951
Limburg	2,195	409,022	430,409

Land area, about 12,580 square miles. Density, 535 per square mile. On Dec. 31, 1917, 3,969,679 or 59.03 per cent of the total population was classed as rural. The population of the 10 largest cities on Dec. 1, 1917, was as follows.

Amsterdam	640,993	Haarlem	74,816
Rotterdam	500,221	Arnhem	70,661
The Hague	344,636	Leiden	60,817
Utrecht	135,368	Nimeguen	66,479
Groningen	87,063	Tilburg	59,519

In 1917 there were 49,344 marriages, 173,112 births (3803 illegitimate), 87,273 deaths, and 6788 still births. Emigrants in 1917 numbered 867.

PRODUCTION Area under wheat in 1918, 122,059 acres; production, 957,000 quarters; rye, 470,849 acres and 3,212,687 quarters; barley, 51,992 acres and 485,087 quarters; oats, 385,372 acres and 4,201,437 quarters; flax, 30,675 acres and 3617 hundredweights; sugar beets, 114,262 acres and 1,458,000 tons; potatoes, 432,722 acres. Live stock (census of August, 1918): Cattle, 2,048,872; sheep, 692,324; pigs, 600,133. Coal production (1918), 3,418,751 tons of which the state mines produced 1,402,311. The vessels engaged in the fisheries in 1917 numbered about 17,673.

COMMERCE. The statistics of general trade have long been defective, but new methods of compilation were recently introduced, and the following information concerning the results is supplied by the United States Bureau of Foreign and Domestic Commerce, December 26th: The statistics gathered under the new method cover the calendar year 1917. For 1918 and the first six months of 1919 only partial statistics covering selected items have so far been issued. Consequently, no adequate comparison with these periods can be made, except for individual commodities. Comparison with prior years is of doubtful value, as the methods of compiling and recording statistics were so radically changed on Jan. 1, 1917. According to the new statistics, the total imports into the Netherlands in the calendar year 1917 amounted to 7,472,339 metric tons, gross weight, valued at \$435,000,208. The total exports from the Netherlands for that year equaled 3,321,590 metric tons, gross weight, with a value of \$336,673,258. This excess of imports over exports is a normal phenomenon in the trade of the Netherlands. As regards weight, the imports of that country consist in large part of bulky raw materials, noticeably coal, whereas its exports are composed to a greater extent of manufactures which possess a higher value per ton. As regards value, the Netherlands is a "creditor nation," with large sums invested in

less developed lands (especially its colonies), and must receive a large part of the interest due and repayments of principal in the form of goods. In 1912 the Netherlands had an import trade of \$1,452,458,170, as against an export trade of \$1,251,472,030; in 1913 the Dutch imports were valued at \$1,574,989,940, and the exports at \$1,239,359,908. The principal countries entering into the import and export trade of the Netherlands during the year 1917, are listed in the following table:

<i>Countries of origin or destination</i>		
	<i>Calendar year 1917</i>	
	<i>Value</i>	<i>Per cent of total value</i>
IMPORT TRADE		
Germany	\$106,187,500	24.41
United States	79,816,300	18.35
Belgium	9,022,500	2.07
United Kingdom	115,072,500	26.45
Sweden	29,567,500	6.80
Argentina	19,273,900	4.43
Dutch East Indies	40,556,600	9.32
All other countries of origin	35,503,000	8.17
Total imports	\$435,000,200	100.00
EXPORT TRADE		
Belgium	\$25,020,000	7.49
Germany	127,325,500	37.82
United Kingdom	82,857,000	24.61

France	9,056,300	2.69
Dutch East Indies	15,747,500	4.68
Norway	3,615,400	1.09
Sweden	8,181,900	2.43
Denmark	3,789,700	1.12
Switzerland	8,618,900	2.56
All other countries of destination	19,118,900	5.57
Total	\$336,673,300	100.00

The principal individual items in point of value in the import trade of the Netherlands during 1917, together with the proportion which they bear to the total import trade, are shown in the following table:

<i>Principal imports</i>	<i>Value</i>	<i>Total imports Per cent</i>
Gold coin	\$37,712,000	8.67
Gold bullion, leaf, and waste	7,239,000	1.66
Wheat	29,115,000	6.69
Coal	28,205,000	6.48
Corn	14,605,000	3.36
Norwegian lumber		
Sawed	14,979,000	3.21
Round or square, sawed or hewn	5,051,000	1.16
Cotton yarn, untwined and undyed	12,325,000	2.83
Sumatra leaf tobacco	11,707,000	2.69
Java leaf tobacco	8,899,000	2.05
Palm-kernel oil	7,168,000	1.65
Cement	7,016,000	1.61
Tools and instruments	4,560,000	1.51
Copra	6,508,000	1.50
Linseed cake and meal	5,083,000	1.17
Chile saltpetre, crude	5,010,000	1.16
North American cotton, raw	4,665,000	1.07
Wool, unwashed and rough		
washed	4,281,000	.98
Java coffee, unroasted	4,198,000	.96
Coke	4,129,000	.95
Cacao beans	3,559,000	.82
Barley	3,546,000	.82
Rapeseed oil	3,472,000	.80
Petroleum	3,273,000	.75
Oats	3,101,000	.71
Cottonseed oil	2,920,000	.67
Iron and steel		
Beams, rods, bands, etc., profiled	2,884,000	.66
Plates	4,767,000	1.10
Drawn bars and rods	4,100,000	.94
Other, n. e. s.	4,590,000	1.06

The prominent part played in the import trade by foodstuffs, raw materials for industry, and colonial products for resale will be noted. Correspondingly prominent in the export trade are the products of dairying and husbandry, diamonds (of which Amsterdam is a world market), fishery products, and colonial wares imported for resale to the outside world. Important, but less noticed by the casual observer, are the products of Dutch manufacture, the variety and extent of which are not always realized. The values of the principal items entering into the export trade of the Netherlands for 1917 are given in the following table, with the percentages which these values represent of the total exports for the year:

<i>Principal exports</i>	<i>Value</i>	<i>Total exports Per cent</i>
Margarine and artificial butter	\$33,626,000	9.99
Cheese	27,705,000	8.23
Butter	21,673,000	6.44
Condensed milk, sweetened	13,434,000	9.99
Dried vegetables	11,608,000	3.45
Fresh eggs	11,189,000	3.32
Diamonds, cut and uncut, not set	9,939,000	2.95
Sumatra leaf tobacco	9,701,000	2.88
Salt pork and bacon	7,759,000	2.30
Java leaf tobacco	7,505,000	2.23
Flax, retted and swingled	7,421,000	2.21
Pickled vegetables	6,114,000	1.82
Gold coin	5,910,000	1.76
Metal filament electric lamps	5,054,000	1.50
Fresh sea fish, n e s	4,557,000	1.35
Bleached cotton goods	4,369,000	1.30
Onions and shallots	4,194,000	1.25
Cigars	3,938,000	1.17
Potatoes	3,930,000	1.17
Flower bulbs	3,183,000	.95
Horses, less than 3 years old	3,030,000	.90
Seed leaf tobacco, in the leaf	2,933,000	.87
American leaf tobacco	2,901,000	.86
Fresh vegetables, n e s	2,780,000	.83
Sauerkraut	2,724,000	.81
Fowls, slaughtered	2,517,000	.75
Colored cottons	2,506,000	.74
Greek leaf tobacco	2,502,000	.72
Strawboard paper	2,405,000	.71
Quinine sulphate and other alkaloids of quinia	2,367,000	.70

COMMUNICATIONS. Vessels entered in 1918, 1779 with a tonnage of 1,663,093, cleared, 1966, with a tonnage of 1,700,309. Of those entered, Dutch vessels numbered 809 with a tonnage of 479,070, and of those cleared, 947 with 584,719. Total length of canals, about 2000 miles; of the four principal railways (1917), 2377.

FINANCE. The budget for 1918 was: Revenue, 285,677,443 guilders; expenditure, 588,706,424 guilders. Budget estimates for 1919 were: Revenue, 307,533,000 guilders; expenditure, 438,211,778 guilders. The total national debt in 1919 was given as 1,850,646,000 guilders, bringing an annual interest of 82,017,526 guilders.

GOVERNMENT. Executive power is vested in the sovereign and legislation in a Parliament (States-General) of two houses. Reigning sovereign, Queen Wilhelmina (born Aug. 31, 1880) who ascended the throne Nov. 23, 1898; heiress apparent, Princess Juliana (born April 30, 1909). Prime Minister at the beginning of 1919, Dr. Ch. J. M. Ruys de Beerenbrouck (appointed Sept. 9, 1918).

HISTORY. During the early part of 1919 the criticism of the government for harboring the former German Emperor continued. The attitude of the Socialists became more aggressive and their leader, Peter J. Troelstra, went so far

as to declare in Parliament that the time had come when the working classes should assume control of the government, and another Deputy even demanded the immediate abdication of the Queen. Friction with Belgium arose as is noted elsewhere (see WAR OF THE NATIONS) as a result of the latter's demand that Limburg and other regions belonging to the Netherlands should be ceded to it. The Peace Conference refused the Belgian demand, and there were signs of bitter feeling toward the close of the year. A cabinet crisis was threatening at the close of the year. On December 23d the Minister of War announced his resignation following the resignation of the Minister of the Navy a week before. Difficulties arose from the policy of defense advocated by members of the government after the war and its relation to the fate of the League of Nations. The government stood for a policy of self-protection for the present in view of the fact that reliance could not be placed in the League of Nations as a safeguard and it held that the situation of the world was still precarious and that the country needed the protection of a considerable army. The Socialists opposed this policy declaring that the League of Nations would obviate any need of heavy armaments. The Minister of War resigned when Parliament modified his war budget, greatly reducing the amount he had demanded for munitions. His war budget looked to an army of about 200,000 men. See EXPOSITIONS.

NEVADA. POPULATION. The population of the State in 1910 was 81,975 and on July 1, 1919, it was estimated to be 118,745, a gain during the year of 4000.

AGRICULTURE. The following is compiled from an annual report of the Federal Department of Agriculture

<i>Crop</i>	<i>Year</i>	<i>Average</i>	<i>Prod Bu</i>	<i>Value</i>
Oats	1919	12,000	384,000	\$ 384,000
	1918	14,000	532,000	628,000
Barley	1919	12,000	420,000	630,000
	1918	12,000	408,000	628,000
Wheat	1919	29,000	668,000	1,429,000
	1918	42,000	1,070,000	2,203,000
Hay	1919	225,000	552,000	10,310,000
	1918	221,000	575,000	11,442,000
Potatoes	1919	6,000	900,000	1,350,000
	1918	9,000	1,539,000	1,893,000

a Tons

TRANSPORTATION. The total railway mileage in the State in 1919 was 2843. Of this 2281 was first track. The longest roads were the Southern Pacific and the Western Pacific.

FINANCE. According to the annual report of the State Treasurer, the balance in the treasury on Jan. 1, 1919, was \$886,313, and on Dec. 31, 1919, it was \$814,736. The total receipts for the year amounted to \$2,174,188; while the disbursements for the year amounted to \$2,245,764. The largest items of income were from the sale of lands, from fees and licenses, and interest on investments, together with the county tax. The largest items of expenditure were for schools, highways and administration. The outstanding State bonds, as of Dec. 31, 1919 amounted to \$716,500, of which \$19,500 were issued in the course of the year.

CHARITIES AND CORRECTIONS. The penal and charitable institutions of the State are under separate control. The following is a list of said institutions; State Orphans' Home, Carson

City; Prison, Carson City; Hospital for Mental Diseases, Reno; School of Industry, Elko; Crittenden Home, Reno. The expenditure for 1918 was \$148,521.

EDUCATION. The school population in 1918 was 14,441; the enrollment, 14,578; and the average daily attendance was 11,014. The total expenditure for educational purposes in 1918 was \$504,474.

OFFICERS. Governor, Emmet D. Boyle. Lieutenant-Governor, M. J. Sullivan; Secretary of State, George Brodigan; Treasurer, Ed Malley; Comptroller, George A. Cole; Attorney-General, Leonard B. Fowler.

JUDICIARY. Supreme Court: Chief Justice, Ben W. Coleman; Associate Justices, J. A. Sanders, Edward A. Ducker; Clerk, William Kennett.

NEVADA, UNIVERSITY OF. A co-educational State institution at Reno, Nev., in 1873. The enrollment for the summer of 1919 was 118 and for the fall, 379. The faculty numbers 48. Productive funds of the university amount to \$305,737. The library contains 40,000 volumes. During the year construction was started on the new education building. President, Walter E. Clark, Ph.D., LL.D.

NEWARK, NEW JERSEY. See CITY PLANNING and GARRAGE.

NEW BRUNSWICK. One of the Maritime Provinces of Canada, east of the State of Maine, and south of the Province of Quebec. Capital, Fredericton. Area, 27,985 square miles, population (1911), 351,889. Largest city, St. John (population in 1911, 42,511). The capital, Fredericton, had a population (1911) of 7208. Area under field crops in 1917, 880,000 acres, with a production valued at \$24,404,000. Spring wheat in 1918 yielded 1,051,000 bushels, oats, 7,856,000; barley, 1,794,000; potatoes, 9,078,000. Cattle in 1918 numbered 287,000. It is under a lieutenant-governor appointed by the governor-general of Canada. Lieutenant-governor at the beginning of 1919, W. Pugsley, prime minister, W. E. Foster. See CANADA.

NEW CALEDONIA. A French colony of Melanesia, comprising as dependencies the Wallis Archipelago, Loyalty Islands, Isle of Pines, Huon Island, and the islands of Futuna and Alafi. Area of New Caledonia itself, 7650 square miles; population (1911), 50,808. Capital, Nouméa, with a population of about 10,000 (1915). Imports (1917), 17,947,849 francs, exports, 19,852,393 francs.

NEWFOUNDLAND. An island colony of Great Britain in the northeastern part of the Gulf of St. Lawrence. Area 42,734 square miles; population (1911), 242,619, estimated, Dec. 31, 1917, 252,464. St. Johns is the capital, with a population of 33,980 in 1917. Other towns with their populations in 1911 are Harbour Grace, 4279; Bona Vista, 3911; Carbonear, 3540. The coast range rises to about (2000 feet) and beyond the mountains which attain their highest point near the coast is a rolling country, part of which is heavily timbered. Fertile land, however, is found around the water courses and lakes. The chief industries are agriculture, fishing, mining and lumber. The chief agricultural products are hay, potatoes and other vegetables, and oats. In 1917, 1298 men and 78 Newfoundland sailing vessels were engaged in the bank cod fishery, and the catch in 1917 was valued at \$1,324,980. In 1918 the number of seals caught was 151,431, valued at \$864,000. Val-

uable iron deposits have been found on Belle Island on the eastern coast and others on the western coast, the total being placed at 3,600,000,000 tons. There is a considerable exploitation of copper ore and pyrites and there are coal deposits near St. George's on the western coast and in the neighborhood of Grand Lake. Large paper and pulp mills have been established in recent years at Grand Falls and Bishop's Falls. More recently there has been a development of the manufacture at Deer Lake.

Imports, 1918-19, £5,528,000; exports, £6,198,000; revenue, estimated for 1917-18, \$5,700,000; expenditures, \$5,450,000; for 1918-19, revenue, \$6,500,000; expenditure, \$5,400,000. Public debt (1917), £7,089,557. Reported length of government railways open for traffic in 1917, 841 miles; private railway, 47 miles; telegraphs (1916), 4591. Included in the administration of Newfoundland is that portion of the peninsula of Labrador which lies between the Hudson Strait and Blanc Sabline, and whose coast line extends 600 miles; area about 120,000 square miles and population estimated in 1917 at 4031. Executive power is in the hands of a governor assisted by executive council and legislative power in the hands of a legislative council and elected house of assembly. Governor at the beginning of 1919, Sir C. A. Harris; Prime Minister, Sir W. F. Lloyd. On May 23d a new ministry was formed under Sir M. P. Cashin, former minister of finance. Newfoundland was represented at the Peace Conference by the premier, Sir W. F. Lloyd.

NEW GUINEA. An island of the East Indies, next to Australia and Greenland, the largest in the world. Area estimated at about 310,000 square miles; population estimated roughly at a little less than 1,000,000. The island is distributed as follows: Western part to 141° east included in the Dutch East Indies; northeastern part included in the former German colony of Kaiserwilhelmsland, southeastern part in the British colony of Papua. See DUTCH EAST INDIES, GERMAN NEW GUINEA, KAISERWILHELMSLAND, PAPUA. The British Board of Trade January, 1919, published figures for imports and exports of New Guinea for 1917-18. The imports were \$1,381,074; exports \$2,073,545—in each case an increase over the previous year and in case of the exports an increase of 100 per cent over 1915-16. It was due in part to the increase in the production of pearls but chiefly to the advance in copra and rubber production.

NEW HAMPSHIRE. POPULATION. The population in 1910 was 430,572 and July 1, 1919, it was estimated to be 448,274, a gain of less than 2000 during the last twelvemonth.

AGRICULTURE. The following table of the more important crops of the State is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acres	Prod Bu	Value
Corn	1919	21,000	1,050,000	\$1,785,000
	1918	24,000	1,080,000	1,620,000
Oats	1919	33,000	1,221,000	1,038,000
	1918	30,000	1,140,000	992,000
Hay	1919	450,000	a 675,000	16,200,000
	1918	440,000	a 506,000	9,513,000
Potatoes	1919	20,000	2,400,000	4,200,000
	1918	21,000	2,940,000	4,263,000

a Tons

FINANCE. According to the report of the State Treasurer, the balance on hand Sept. 1,

1917, was \$142,390, and that on hand Sept. 1, 1918, was \$447,764. The receipts for this period amounted to \$4,367,422 and the disbursements, \$4,062,048. The net indebtedness on the latter date was \$1,541,351 and the increase during the year of \$110,348. These are the latest available figures for the State's finances.

TRANSPORTATION. The total railway mileage in the State in 1919 was 1202. There has been practically no construction of recent date. The lines controlled by the Boston & Maine comprise 1020 miles.

CHARITIES AND CORRECTIONS. The State Board of Charities and Corrections has supervision over the following institutions: State Industrial School, at Manchester; State Hospital for the Insane, at Concord; State Prison, at Concord; State Sanatorium, at Concord; School for Feeble-Minded, at Laconia; Soldiers' Home, at Tilton. The Board also has charge of county almshouses and jails. The population of these on Aug. 31, 1918 was 754 and 70 respectively. In the year ending on that day there were committed to county houses of correction, 892 men and 69 women. At this time, also, there were 799 boys and 695 girls in orphans' homes and asylums, while there were in the State a total of 763 children under 15 dependent or delinquent. In March, 1918, there was started a Child Welfare Department; for several years the State has been aiding the blind by means of out-door relief. The expenses for the Board in the year ending Aug. 31, 1918, totalled \$52,549.

LEGISLATION. The biennial session of 1919 passed laws as follows: Revising the method and time of payment of wages by industries and corporations; making the salary of the State treasurer \$3500; regulating the practice of dentistry, insurance agents, building and loan associations, peddling, etc.; defining the term "net assets" as applied to mutual insurance companies; vesting control of certain State institutions in the governor and council; revising the inheritance tax law; authorizing the judiciary to order an allowance by the husband to wife during pendency of a suit for divorce; providing for the issuance by the governor to ministers of licenses to marry persons within the State; relating to trade names; making uniform the law of fraudulent conveyances; revising the law relating to work in factories, and the liability of employers therein; establishing a board of registration in optometry, and regulating the practice thereof; regulating the jitney business, declaring jitneys common carriers and subject to governmental control; raising the poll tax from two to three dollars; a business corporation law; relating to nuisances and remedies, etc.; exempting from taxation pure-bred live-stock; pertaining to public schools and the State board of education; authorizing cities to acquire and operate street railway properties; establishing a new system of cross-state highways; granting fiduciary powers to trust companies and national banks; revising the taxation of street railways; regulating the practice of chiropody; decreeing that the purple lilac be the State flower; providing for an executive budget system; an act "to prevent the overthrow of the government by force." The Federal prohibition amendment was ratified on January 15th. In all 220 acts were passed.

OFFICERS. Governor, John H. Bartlett; Secretary of State, Edwin C. Bean; Treasurer, John

W. Plummer, Attorney-General, Oscar L. Young. **JUDICIARY.** Supreme Court: Chief Justice, Frank N. Parsons; Associate Justices, Reuben E. Walker, John E. Young, Robert J. Peaslee, William A. Plummer; Clerk, A. H. Chase.

NEW HAMPSHIRE COLLEGE. A State institution of learning, founded in 1866 at Durham, N. H. In the fall the registration was 806, and there were 68 members in the faculty. The income for the year amounted to \$310,000. The library contains 30,000 volumes. President, Ralph Dorn Hetzel, LL.D.

NEW HEBRIDES. A group of Melanesian islands under the joint administration of France and Great Britain in accordance with the Anglo-French agreement of October, 1906. Estimated area, 5000 square miles; estimated population, about 70,000. The seat of government is Vila on the island of Efata. The natives are uncivilized but there are Presbyterian and French Catholic mission schools among them. The sale of intoxicants, arms and ammunition to the natives is prohibited. Revenue estimated for 1918, £10,260; expenditures £15,061; the deficit being met by the British and French governments jointly. In 1918 the expenditure for purely British purposes was estimated at £7754. The administration is in the hands of high commissioners for Great Britain and the French Republic respectively. At the beginning of 1919 the British resident was M. King and the French resident, E. Lippman. In certain French quarters it was urged that the Anglo-French condominium should be terminated and the entire archipelago be annexed to the French colonial domain. The question would no doubt have been settled by the Anglo-French commission which met in London in 1914 to consider changes in the matter of territories subject to the joint control of the two governments, but that commission was broken up by the war. The arguments advanced for French annexation were as follows. (1) French numerical predominance; figures for the European population in 1918 were given as French, 664; English, 262. (2) Greater property interest of the French; French ownership of real estate was placed at 617,000 hectares; British, at 129,000. (3) Greater commercial interest of the French; out of a total trade of 7,866,000 francs in 1912, 5,309,000 francs was attributed to France. (4) Justice to French interests, in view of the fact that "all the German colonies of the Pacific lying to the south of the equator, in the capture of which France had participated, had been incorporated in the British Empire; that in particular New Guinea, the Bismarck archipelago, and the German Solomon islands had been especially attributed to Australia."

NEW JERSEY. POPULATION. The population of the State in 1910 was 2,537,167 and July 1, 1919, it was estimated to be 3,146,517, a gain during the twelvemonth of 66,000.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu	Value
Corn	1919	270,000	10,800,000	\$16,524,000
	1918	265,000	10,865,000	16,298,000
Wheat	1919	109,000	1,962,000	4,316,000
	1918	87,000	1,479,000	3,180,000

TRANSPORTATION. The total railway mileage of the State in 1919 was 6006. The longest roads were the Pennsylvania, and the Central Railroad of New Jersey.

FINANCE. The balance in the treasury on July 1, 1918, was \$15,263,536 and on June 30, 1919 it was \$18,458,832. The total disbursements during this period were \$29,392,084 and the receipts amounted to \$32,587,384. See OLD AGE PENSIONS.

EDUCATION. The enrollment in public day schools in 1918 was 561,825, and in evening schools, 33,588. This is a net increase over 1917 of 16,170. The average daily attendance in day schools was 423,570. There were 2414 men and 15,329 women teaching in the schools in 1918. The salaries of teachers totalled in 1918 \$15,785,310, an increase of \$1,335,895 over 1917. The average salary per year for day schools was \$948.29, an increase over 1917 of \$52.60. The total receipts during the year, including the balance at the beginning of the year, were \$37,429,736; the expenditures total \$32,723,115. On July 1, 1918, the outstanding debt for schools was \$55,107,847. On July 1, 1918, the outstanding debt for schools was \$55,107,847. The State school tax for the year beginning July 1, 1917 was \$7,314,863; the State appropriation was \$100,000; the State school fund appropriation was \$250,000, and the railroad tax, used for this purpose, was \$2,991,422.

LEGISLATION. The legislature of 1919 passed 261 measures. These included: A revision of the laws relating to State charitable, penal, and reformatory institutions, centralizing these and others under the Department of Institutions and Agencies, and determining the jurisdiction and procedure of the Department; provision for the inspection of refrigerating plants using ammonia or ethyl chloride; revision of two conflicting systems of Teachers' Pensions; making more stringent the law and penalty for arson; revising the law which classifies those exempt from taxation; establishing rules for the dissolution and distribution of assets of partnerships; making the soliciting by persons not of the bar of New Jersey, to institute a suit for damages, a misdemeanor; providing for absentee voting for citizens in military and naval service; giving State banks power to act in a fiduciary capacity; "Red Flag" law providing that "Any person who shall, in public or private, display a red flag, a black flag, or any ensign or sign bearing an inscription opposed to organized government, for the purpose of inciting, promoting or encouraging hostility or opposition to or the subversion or destruction of any and all government, shall be guilty of a high misdemeanor and punished by a fine not exceeding \$2000, or imprisonment at hard labor not exceeding 15 years, or both"; giving power to local government agencies to issue bonuses to employees, till 1922, the purpose being to tide over the present abnormal price situation; permitting municipalities to purchase sewer and water systems; laws concerning cities, corporations, conveyances,

counties, building and loan associations, elections, primaries, workmen's compensation, etc.; an eight-hour law for miners; creating a State Employment Bureau; amending the law regulating the practice of medicine, whereby after July 1, 1920, all applicants must present certificates showing that at least one year of study beyond high school was pursued in arts and sciences, before entering the medical college; changing the penalty for murder; establishing a uniform law of conditional sales; uniform laws of partnership and limited partnerships; a uniform law of fraudulent conveyances. Joint resolutions were passed creating commissions to investigate the tax laws; to urge upon Congress the importance of appropriating money for the construction of a canal across the State of New Jersey; to confer with the State of New York concerning the development of the harbor of New York; on municipal financing, medals for soldiers, and pension and retirement funds. Resolution No. 4 purports to secure for the State of New Jersey the permanent site of the headquarters of the League of Nations, by allowing littoral cities of certain size to purchase land, etc., for this purpose.

OFFICERS. Governor, William N. Runyon; Secretary of State, Thomas F. Martin; Attorney-General, Thomas F. McCran; Treasurer, William T. Read; Comptroller, N. A. K. Bugbee; Purchasing agent, E. E. Grosceup; Adjutant-General, Frederick Gilkyson; Commissioner of Banking and Insurance, Frank H. Smith; Commissioner of Labor, L. T. Bryant.

JUDICIARY. Supreme Court, Chief Justice, William S. Gummiere; Justices, T. W. Trenchard, C. W. Parker, J. J. Bergen, J. F. Minturn, C. C. Black, C. G. Garrison, F. J. Swayze, S. Kalisch; Clerk, E. L. Johnson.

NEW JERUSALEM, CHURCH OF THE Also known as the New Church, this denomination was founded in 1787 in London, its teachings being based on the writings of Emanuel Swedenborg, who was born in Sweden in 1688. In 1792 two branches were established in the United States, the General Convention and the General Church, although not fully organized until some time later. The General Convention conducts missionary work in Germany, France, Switzerland, Italy, Austria, Denmark, Sweden, and a few small stations in neighboring countries. A theological seminary is maintained at Cambridge, Mass. The latest available statistics are for 1916, when there were 108 churches, 6352 members, and church property valued at \$1,711,090. The General Church was at first connected with the General Convention, but severed all connection in 1890. The church differs from other branches of the New Church simply in its attitude toward the writings of Swedenborg, which it regards as being "divinely inspired and thus the very Word of the Lord, revealed at His second coming." In 1916 there were 15 churches, 733 members, and church property valued at \$55,032. *The New Church Messenger* is the official journal. The publishing house (publishing Swedenborg's works) is at 3 W. 29th St., New York City.

NEW MEXICO. POPULATION. The population of the State in 1910 was 327,301 and July 1, 1919, it was estimated to be 450,381, a gain during the twelvemonth of 13,000.

AGRICULTURE. The following is compiled from

an annual report of the Federal Department of Agriculture.

Crop	Year	Acres	Prod Bu	Value
Corn	1919	240,000	7,200,000	\$10,872,000
	1918	160,000	4,000,000	7,200,000
Oats	1919	65,000	2,340,000	2,223,000
	1918	46,000	1,288,000	1,146,000

CHARITIES AND CORRECTIONS. The following institutions are supported by the State: Blind Asylum, at Santa Fe; Deaf and Dumb Asylum, at Santa Fe; Insane Asylum, at Las Vegas; Miners' Hospital, at Raton; Orphan School, at Santa Fe; Penitentiary, at Santa Fe; Reform School, at Springer.

TRANSPORTATION. According to the statistics of the 1919 New Mexico *Blue Book*, the following is the mileage of the chief railways of the State.

	Miles of Road	Track of Yard etc	Total
Atchison, Topeka and Santa Fe	1,487	465	1,953
Rock Island	153	24	177
Denver & Rio Grande	236	14	250
El Paso & Southwestern	500	105	605
E P & S W rd Co	241	29	270
New Mexico Central	116	4	120
Southern Pacific	168	47	215
Total mileage of all roads	3,102	714	3,817

LEGISLATION. The Fourth State Legislature, sitting from January to March, passed the following measures. A system of proceedings in *quo warranto* was established; the penalty for larceny of cattle was increased; restriction of live-stock owners to one brand; expenditures of rural schools were limited to 10 mills; exemption from tax of lands the title to which is held by the State; provision of method of resignation of members of the legislature; fixation of feeding of jail prisoners at a maximum of 75 cents per diem, defining the offense and penalty of conspiracy; prohibition of the desecration of the flag and its use for purposes of advertisement; creation of a State bath house at Hot Springs; creation of State board of dental examiners; creation of site registration board; creation of a State department of health; amendment to ballot law of 1917; creation of a girls' welfare board; an act regulating the leasing of State lands for mineral purposes and retaining permanent ownership of all oil lands with an eighth royalty; creation of a soldiers' settlement board; prohibition of nepotism by State, county and city officials; an act permitting cities to buy public utilities by hypothecating revenues; creation of office of State traveling auditor; codification of laws on irrigation and drainage; creation of State tax commission; establishment of State mounted police; recodification of general banking act; permission of commission form of government in cities of 10,000 or more population; establishment of child's welfare service; provision of teaching of Spanish in public high schools on petition; an act requiring establish-

ment of night schools for illiterates; imposition of an annual franchise tax on corporations; also establishment of State inheritance and income taxes; a workmen's compensation bill; the State budget system was made permanent; an election on a \$2,000,000 road bond issue was authorized; the maximum rate of interest was fixed at 10 per cent; and many laws were passed regulating and revising legal procedure.

OFFICERS. Governor, O. A. Larrazolo; Lieutenant-Governor, B. F. Pankey; Secretary of State, Manuel Martinez; Auditor, Edward Sargent; Treasurer, Charles U. Strong; Attorney-General, O. O. Askren; Superintendent of Public Instruction, J. H. Wagner; Adjutant-General, James Baca.

JUDICIARY. Supreme Court: Chief Justice, Frank W. Parker; Associate Justices, Herbert J. Reynolds, Clarence J. Roberts; Clerk, Jose D. Sena.

NEW ORLEANS OPERA. See *MUSIC, Opera*.

NEW SOUTH WALES. A state of the Commonwealth of Australia, situated in the south-eastern part of the continent and bounded by Queensland on the north, Victoria on the south, South Australia on the west and the Pacific on the east. The capital is Sydney, the second largest city in the southern hemisphere, being next to Buenos Aires. Area of New South Wales, 309,432 square miles or about one-tenth of the Commonwealth area; population estimated June 30, 1918, 1,897,084. The forests cover about one-fourth of the total area. Education is compulsory between the ages of seven and 14. In 1917 there were 3412 public schools while 659 were privately conducted. There were 282,757 children enrolled in public schools and 8228 teachers. The State religion was abolished in 1862 but the Church of England predominates.

For the fiscal year ended June 30, 1918, the railways of New South Wales had a net loss of £28,916, which profits of £48,835 on the tramways turned into a profit of £11,919. For the year 1918-19 the railway loss was £211,817, and as the profit from the tramways was £18,448, the deficit was one of £193,369. Both passenger and goods receipts were higher in the latter year, so that the increase was £1,003,293, or 11.2 per cent, of which £444,137 were received from increased rates and fares in force from November 1, 1918. On the other hand, working expenses increased £964,003, or 16.2 per cent. Wages took £283,000, increased price of coal £16,000, and of other materials £184,000. A strike of the employees, the influenza epidemic, and a prolonged drought were other misfortunes of the year. See *AUSTRALIA*.

NEW SYMPHONY ORCHESTRA. See *MUSIC, Orchestras*.

NEW YORK. POPULATION. The population of the State in 1910, was 9,113,614 and July 1, 1919, it was estimated to be 10,833,795, a gain during the last 12 months of 186,000.

AGRICULTURE. The following table is compiled from a report of the Federal Department of Agriculture.

Crop	Year	Acres	Prod Bu.	Value
Corn	1919	820,000	35,260,000	\$58,532,000
	1918	800,000	28,800,000	50,400,000
Oats	1919	1,160,000	29,580,000	24,551,000
	1918	1,260,000	51,660,000	43,394,000
Wheat	1919	524,000	11,178,000	24,082,000
	1918	430,000	7,840,000	16,856,000

Crop	Year	Acres	Prod Bu.	Value

CHARITIES AND CORRECTIONS. The following is a list of the various State charitable and reformatory institutions with their respective populations, as of June 30, 1918.

Western House of Refuge for Women, at Albion, 206; School for the Blind, Batavia, 126; Soldiers' and Sailors' Home, Bath, 1005; Reformatory, Elmira, 726; Eastern New York Reformatory, Napanoch, 206; Training School for Girls, Hudson, 366; Custodial Asylum for Feeble-Minded Women, Newark, 891; House of Refuge, Randall's Island, 645; Custodial Asylum, Rome, 1724; Agricultural and Industrial School, Industry, 837; Institution for Feeble-Minded Children, Syracuse, 582; Thomas Indian School, Iroquois, 177; Craig Colony for Epileptics, Sonyea, 1477; Woman's Relief Corps Home, Oxford, 181; Hospital for Care of Crippled and Deformed Children, West Haverstraw, 134; Hospital for Treatment of Incipient Pulmonary Tuberculosis, Raybrook, 302; Letchworth Village, Thiells, 351; Reformatory for Women, Bedford Hills. The cost of these institutions to the State is about \$3,000,000. The official head is the fiscal supervisor of State Charities.

TRANSPORTATION. The total railway mileage of the State in 1919 was about 8500. The longer roads are the New York Central, the Erie, the Delaware and Hudson, and the Lehigh Valley.

STATE OFFICERS. Governor, Alfred E. Smith, Dem.; Lieutenant-Governor, Harry C. Walker, Dem.; Secretary of State, Francis M. Hugo, Rep.; Comptroller, Eugene M. Travis, Rep.; Treasurer, James L. Wells, Rep.; Attorney-General, Charles D. Newton, Rep.; Engineer and Surveyor, Frank M. Williams; Superintendent of Public Works, Edward S. Walsh; Commissioner of Education, John H. Finley; Superintendent of Insurance, Jesse S. Phillips, Rep.; Adjutant-General, Charles W. Berry, Dem.

JUDICIARY. Court of Appeals: Chief Judge, Frank H. Hiscock, Associate Judges, E. A. Chase, Frederick Collin, W. H. Cuddeback, J. W. Hogan, B. N. Cardozo, C. W. Pound, C. B. McLaughlin, F. E. Crane, W. S. Andrews; Clerk, Richard M. Barber; Reporter, J. N. Fiero. See AGRICULTURAL EXPERIMENT STATION; CHILD LABOR; ROADS; TAXATION.

See OLD AGE PENSIONS, SOCIAL INSURANCE.

NEW YORK CITY. See EXPOSITIONS; DOCKS AND HARBORS; WATERWORKS.

NEW YORK PHILHARMONIC SOCIETY. See MUSIC, *Orchestras and Novelties*.

NEW YORK UNIVERSITY. A non-sectarian educational institution in New York City. Women are admitted to some of its departments. The enrollment for the summer school of 1919 was 1300 and for the fall there were 9765 additional students. The faculty contains 518 members. In 1917-18 the productive funds amounted to \$1,198,285 and the income \$762,192. The library contains 141,196 volumes. In 1919 construction was begun on the main building of a new chemistry laboratory, and also on the main engineering building. The university was

founded in 1831. Chancellor, Elmer Ellsworth Brown, LL.D.

NEW ZEALAND, DOMINION OF. A self-governing British dependency in the South Pacific, comprising three principal islands and several small ones. The capital is Wellington.

AREA AND POPULATION. Area of North Island, 44,130 square miles; South Island, 58,120; Stewart Island, 662; total, 103,581. Total population estimated June 30, 1918, 1,106,677 exclusive of Maoris and inhabitants of Cook Island. Population of North Island (1916), 651,072; South Island (including Stewart Island and Chatham Islands), 448,337; Total, 1,162,293 (including 49,776 Maoris and 12,797 inhabitants of Cook and other islands in the Pacific annexed in 1901). Population of the chief cities on October, 1916: Auckland, 133,712. Wellington, 95,235; Christchurch, 92,733; Dunedin, 68,716. Wanganui, 19,517; Invercargill, 17,862. The total number of births in 1918 was 25,867, which was lower than in any preceding year after 1907, the highest point having been reached in 1916 with 28,509. The births in 1917 numbered 28,239 of which 1159 were illegitimate. In 1918 the number of deaths greatly increased, reaching 16,364 (or 14.84 per 1000), as compared with 10,596 (or 9.64 per 1000) in 1916. In 1917 the deaths had numbered 10,528, and the marriages 6417. In 1917 the immigrants numbered 15,649, and the emigrants 13,869, both exclusive of the expeditionary forces. This was a large falling off from 1916 when the numbers were respectively 21,799 and 21,163.

EDUCATION AND RELIGION. Illiteracy is rare. In 1916 95 per cent of the population over five years of age were reported as able to read and write. At the end of that year the primary schools numbered 2335 with 5781 teachers, and 185,884 pupils enrolled, and there were 37 secondary schools with 323 teachers, and 7052 pupils. Education is compulsory between the ages of 7 and 14. There is a university which is simply an examining body whose graduates in 1917 numbered 2236, and four affiliated colleges at Dunedin, Christchurch, Auckland, and Wellington, respectively. The Church of England is the most important denomination numerically, having nearly 43 per cent of the church members. Next in importance numerically were the Presbyterian and the Roman Catholic churches. The church population, according to the census of 1916, was 1,069,948, the number of places of worship, 3847, and the number of clergy in June, 1918, 1638.

PRODUCTION. The area under crops was 16,906,672 acres in 1917; under forest, about 17,000,000 acres. Preliminary figures of the number of acres devoted to the three main crops in 1918, together with the size of the crop in 1000 bushels and the average yield per acre are shown in the following table:

Main crops	Area (acres)	Crop (1000 bu.)	Average yield per acre
Wheat	276,877	6,761	24.42
Oats	153,399	4,785	31.20
Barley	19,289	572	29.66

In 1918 the live-stock was as follows: Horses, 378,991; cattle, 2,888,214; sheep, 26,538,302; pigs, 258,269. The season ending June 30, 1918, showed an increase in wheat over the previous

fiscal year of 6,761,249 bushels. The outlook for the 1918-19 crop was not promising and it was expected to fall below the crop of the previous season. In 1918 the government arranged to guarantee a minimum price of \$1.54 per bushel for wheat grown in New Zealand, and this was to extend to the 1919-20 harvest. During the season of 1917-18 there were 819,169 acres in grain and pulse crops as compared with 844,624 during the previous season. The Department of Agriculture was planning for a thorough, scientific, and practical system of farm education, and the government was doing progressive work on experimental farms. The farmers' cooperative associations during 1918 made marked progress.

unsettled. In 1918 there was a general demand that the able-bodied and other workmen should receive a minimum wage of \$14.60 per week and in the case of skilled workmen, \$19.46 a week. Farm labor was short during the year. See AGRICULTURE.

COMMERCE. After the beginning of the war the foreign trade of New Zealand showed remarkable progress and promised well for the future except for the danger to production involved in labor difficulties. In 1918 the foreign trade was \$256,500,761 as compared with \$255,573,064 in 1917. The following table shows the foreign trade, including specie, by countries for 1914, 1916, and 1918:

Countries	Imports		Exports	
	1914	1916	1918	1914
United Kingdom . . .	\$58,329,606	\$67,495,703	\$13,690,100	\$104,064,705
Canada . . .	2,331,735	3,685,333	4,530,536	2,898,541
Australia . . .	3,376,371	19,476,565	24,981,618	9,384,607
Belgium . . .	537,218	21,072	10	7,592
France . . .	718,670	551,628	164,405	1,104,827
Germany . . .	1,997,572	20,863	1,868	2,219,917
Italy . . .	269,190	503,615	278,969	4,417
Netherlands . . .	618,230	344,840	113,264	3,645
Sweden . . .	388,429	500,081	340,013	2,915
China . . .	159,616	336,392	561,419	813
Japan . . .	912,473	2,739,712	5,912,110	289,596
Philippine Islands . . .	107,121	152,176	173,003	151
United States . . .	11,110,054	19,319,639	24,238,831	5,003,025
All other countries . . .	25,506,376	13,032,502	12,948,312	2,824,725
Total . . .	\$106,362,691	\$128,180,121	\$117,934,488	\$127,809,476
				\$161,990,879
				\$138,566,273

a Imports other than gold specie b Exports other than gold specie.

The chief of these associations was that known as the New Zealand Farmers' Cooperative Association of Canterbury, which was organized 30 years before, and whose business amounted to about \$18,000,000 a year. The fresh meat, dairying, and fruit interests of the country are of especial importance. According to the census of the manufactures of 1916 the following industries were the most important in respect to the value of output. Meat-freezing and preservation; butter and cheese factories; grain mills; saw-mills and sash and door factories; tanning; tallowing and wool scouring; printing and book-binding. The following table shows the quantity and value of the chief minerals exported from the country in 1917.

	Quantity	Value
Silver . . .	787,152	\$105,299
Tungsten-ore . . .	161	28,972
Coal . . .	221,125	236,063
} Exported . . .		
} Consumed . . .	1,847,294	923,647

On account of insufficient labor, the mining industry declined, and in 1919 there was reported to be a marked shortage in the coal supply. Discontent of the coal miners was the chief element in this. The government had exempted them from military service, but at the end of the war they either stopped work or worked on part time, thus reducing the output. No figures for the gold-mining industry were available in 1917 or 1918, but reports of the press indicated generally a decrease from 1916 when the value of the gold was placed at £1,199,212. The Kauri gum industry was important before the war and continued to yield good returns till 1916, but the exports from it in 1918 fell off considerably, owing to the lack of labor. During 1918 a higher rate of wages prevailed than in the previous year, but labor conditions were

The United States and Japan each considerably increased its imports. The exports during the year ending June 30, 1919, were \$193,100,262, imports, \$139,330,481. The principal classes of exports are shown in the following table:

Articles	1918-19
Wool . . .	\$74,841,529
Ment . . .	22,279,538
Tallow . . .	7,850,841
Butter . . .	17,484,726
Cheese . . .	26,772,816
Sheepskins . . .	9,127,588
Hides . . .	3,440,893
Timber . . .	2,516,866
New Zealand hemp . . .	5,155,161
Other New Zealand produce . . .	20,376,191
Total, New Zealand produce . . .	190,146,189
Reexports and specie . . .	2,954,073
Grand total . . .	\$193,100,262

COMMUNICATIONS. In 1917, 543 vessels of 1,405,776 tons entered New Zealand ports, and 547 of 1,381,882 tons departed. Only 32 and 33 of these respectively were foreign ships. On March 31, 1918, the government railway system comprised 1269 miles in the North Island, and 1714 in the South Island, which with 29 miles of private lines made a total of 3012. In 1918 passenger traffic was light, owing largely to the increased fare. During the calendar year ending March 31st, the railways carried 11,730,643 passengers as compared with 14,528,947 for the previous year, and this decrease continued throughout the year 1918. On March 31, 1918, the government telegraph system comprised 13,687 miles of line and 50,291 of wire. The telegraph and telephone revenue for 1917-18 was \$861,233. Not much railway construction work was done during 1918, but extensive plans were

under consideration for execution as soon as the necessary labor could be obtained. Cost of railway construction for the fiscal year ending March 31, 1919, was placed at \$3,260,555. In the fiscal year ending March 31, 1918, 12,330 miles of wire were added to the telephone system. In 1919

at that time about \$43,790,000. War pensions called for \$19,000,000 and old age pensions for \$3,500,000.

The following table from the *Statesman's Year Book* of 1919 shows the revenue from 1914 to 1918 inclusive:

Year ended March 31	Customs	Stamps, including post and tel	Railways	Land tax	Income tax	Total (including others)
1914	£8,426,744	£2,479,508	£4,028,739	£767,451	£554,271	£11,961,493
1915	8,167,283	2,770,650	4,106,675	799,641	540,318	12,125,132
1916	3,866,171	3,160,224	4,484,337	1,048,356	1,392,119	14,186,095
1917	3,849,675	3,514,593	4,836,275	713,118	4,262,126	18,033,589
1918	3,364,308	3,728,270	4,668,223	1,385,708	5,619,561	19,860,884

extensive plans for harbor improvement were outlined. During the previous year there was a

The expenditures for 1914 to 1918 inclusive are shown in the following table:

Year ended March 31	Public debt charges	Railways	Education	Post and telegraph	Constabulary and defense	Total (including others)
1914	£2,887,980	£3,004,181	£1,206,678	£1,170,883	£753,471	£11,825,864
1915	3,071,448	2,881,087	1,288,795	1,245,224	804,007	12,379,803
1916	3,190,798	2,954,006	1,441,398	1,294,712	703,634*	12,493,107
1917	4,014,792	2,891,977	1,525,106	1,368,490	719,595*	14,058,770
1918	4,430,779	3,067,658	1,581,600	1,487,145	731,661*	15,120,286

* Not including special war expenditure.

shortage of shipping which embarrassed both exporters and importers and interfered with local business. At the end of 1918, however, conditions improved and the freight rates between Europe and the United States were reduced about 50 per cent.

The annual report of the New Zealand Railways, for the year ended Mar. 31, 1919, showed earnings of £4,988,632, as compared with £4,687,700 in 1917-1918. Expenditure was £3,308,575, as against £3,042,907, and net receipts £1,680,057, as compared with £1,644,793. The gross receipts per train mile were 160d., as against 150.5d. It was stated that the prospects when normal conditions were fully restored were very bright.

FINANCE. Revenue for the year ending March 31, 1918, was \$98,333,575 as compared with \$89,385,667 for the previous year; expenditures, \$73,582,877 compared with \$60,797,056 for the previous year. The following table shows the items of revenue for the calendar years 1917 and 1918:

Sources of revenue	1917	1918
Customs	\$16,306,790	\$17,691,582
Stamp and death duties	8,242,468	10,274,637
Post and telegraph	9,172,472	9,762,282
Land tax	5,709,767	8,175,628
Income tax	21,859,408	27,750,058
Beer duty	1,048,453	1,292,888
Railways	22,065,431	23,510,105
Registration, etc., fees	483,516	518,642
Marine	187,224	176,114
Miscellaneous	3,418,035	4,873,050
Territorial	1,006,334	987,535
National endowment	489,049	529,597
Other	194,942	340,721
Total	\$90,183,889	\$105,882,890

Revenue receipts for the calendar year 1918 showed a gain of \$15,698,950 as compared with 1917. The income tax made a gain of \$5,890,650. A new loan was demanded by the government in April, 1919, for \$48,665,000 at 4½ per cent. In general financial conditions since 1919 were reported to be sound, but there was a need of heavy outlay in the future to meet the interest and pension demands. The interest demand was

ARMY. Before the war the territorial force was about 300,000 strong. In 1916 conscription was introduced and during the war the number of men of all ranks who went over seas was 99,650. The casualties down to October, 1918, were over 52,000 including 14,500 killed or dead, and 37,000 prisoners.

GOVERNMENT. The government consists of a governor-general and a General Assembly of two chambers, the Legislative Council and the House of Representatives. The governor-general may veto measures and send drafts of bills to the Assembly for consideration. The Legislative Council has 38 members holding office for seven years, and the House of Representatives 80 members elected by the people for three years. The governor-general at the beginning of 1919 was the Earl of Liverpool, and the prime minister, appointed August 7, 1915, was W. F. Massey.

NICARAGUA. The largest of the six Central American states. Capital, Managua.

AREA AND POPULATION. The estimated area is 49,552 square miles, but it is sometimes placed at the lower figure of 49,200. The population which is principally Mestizo and Indian was estimated on Dec. 31, 1917 at about 800,000 as against 689,891 on Dec. 31, 1913. Fully three-fourths of the inhabitants live in the western half of the country. The chief towns with their estimated populations are Leone, 62,569; Managua, 48,367; Granada, 25,000. A law providing for a new census was passed in 1919.

EDUCATION. The number of elementary schools has been placed at 356 and the secondary schools at 10. There are three universities, namely at Managua (the Central university), Leone (the Western and Northern university), and Granada (the Western and Southern university). The state supports a number of normal schools. There is an industrial, commercial and scientific museum at Managua.

PRODUCTION AND COMMERCE. During the year 1919 important discoveries of asphalt and coal resources were reported. Contracts were formed during the year for the carrying out of geological survey of the petroleum resources. The following information in regard to the foreign trade

for 1918 is supplied by the *Pan-American Union*: The foreign trade of Nicaragua for the year 1918, in values, amounted to \$13,684,743, a gain of \$1,316,419 as compared with 1917. There was a decrease in imports of \$463,265—from \$6,393,068 in 1917 to \$5,929,803 in 1918; and an increase in exports of \$1,779,684—from \$5,975,256 in 1917 to \$7,754,940 in 1918, together showing a net increase as above.

The chief countries of export were: United States, \$6,412,921; Mexico, \$965,977; Panama, \$90,143; and Canada, \$79,850. The principal articles of export were: Coffee, \$2,249,056, all of which, except about \$26,000 worth, was exported to the United States; cabinet woods, \$1,431,640, nearly all to the United States. The chief cabinet wood was mahogany, accounting for more than 90 per cent of the total exports. Cedar, guayacan, and genizaro accounted for nearly all the remainder. Gold, \$1,245,484, in bars, amalgams, concentrates, precipitates, etc., the total to the United States. Sugar, \$742,077, of which \$642,871 to Mexico, nearly \$80,000 to Canada, and about \$19,000 to Panama. Bananas, \$535,042, all to the United States. Hides and skins, \$316,332, all, except less than \$100, to the United States. There was an increase in the value of coffee exported of nearly \$500,000 as compared with the preceding year; an increase in the value of cabinet woods, of over \$125,000; in gold, of \$320,000; and in sugar, of over \$500,000. There was a decrease in the value of hides and skins exported, of over \$206,000. The exports to Mexico, amounting to 12 per cent of the whole in 1918, was entirely a new trade, and was due to the export of sugar as above, and of beans, corn, and lard. The export of corn to Mexico amounted to \$208,969. The principal countries of import were: United States, \$4,630,457; United Kingdom, \$596,809; France, \$154,324; Chile, \$139,789; and Panama, \$138,559. The principal imports were: Cotton goods, \$1,580,037, the chief items of which were piece goods, \$1,069,814; of which \$580,694 from the United States, \$165,558 from the United Kingdom; ready-made clothing, \$72,982, practically all from the United States; and thread \$62,708, about two-thirds from the United Kingdom and most of the remainder from the United States. Of the other items under cotton goods, \$180,192 from the United States and \$55,733 from the United Kingdom. Manufactures of iron and steel, \$709,990, nearly all of which was from the United States. Wheat flour, \$356,705, of which \$139,789 from Chile, \$138,559 from Panama, and \$62,727 from the United States. The flour imports from Chile and Panama, the latter a transit trade, represent the total imports from these two countries. Hides and skins and manufactures, \$358,355, consisting of leather, \$213,194, and boots and shoes, \$130,144, all of which, except less than \$1000, came from the United States.

SHIPPING. There are five seaports: In the west are Corinto, San Juan del Sur, through which two-thirds of the imports and three-fourths of the exports pass; in the east, Bluefields, Cape Gracias a Dios, Las Pallas, and Greytown. The shipping in 1917 at these five ports comprised 932 vessels of 377,656 tons.

RAILWAYS. In 1919 a new railway was projected from a point on the Cuculaya River, along the course of the Bambana and the Oconguas with a total length of 75 miles and 40 miles

had already been constructed. The road was expected to benefit greatly the southern part of the republic by the admitting of rapid transportation to the Atlantic. Preparations were also made for the completion of railways under process of construction from Managua to Matagalpa and from Port Diaz to Bluefields.

FINANCE. The Budget for 1918 balancing according to an English authority at £291,998, was adopted on Dec. 31, 1918, for the following year.

The total debt was on Dec. 31, 1917, £1,237,644, of which the internal debt amounted in September, 1916, to 10,000,000 cordovas. The surplus created by the taxes for 1918 was set aside for the payment of the debt which was materially reduced during the year 1919.

President in 1919, General Emiliano Chamorro.

NICKEL. During 1919 there was but comparatively little nickel produced owing to the lack of demand following post-war conditions. The Sudbury district of Ontario, and especially the Creighton mine, furnished approximately 80 per cent of the world's nickel in the form of sulphide ores which are treated in large measure at the Copper Cliff, Ont., plant of the International Nickel Co., whose smelter was said to handle about 60 per cent of the metal that goes into commerce. This plant had been increased for war needs, but with the slackened demand it was maintained in 1919 on a reduced basis so that as calls came it was able to meet requirements. These increased by the end of the year so that the plant worked on a pre-war scale or at about 55 per cent capacity with a production for December of some 3500 tons of 80 per cent copper-nickel matte which was refined at the company's refineries. In the United States and Canada metallurgical methods were not changed materially during the year though experiments with flotation processes were tried on Sudbury ores. A new smelter for the British America Nickel Co. was under construction at Nickelton, Ont., during the year to treat the ore from the Murray mine, smelting the ore and shipping the white metal thus obtained to Deschene, Quebec, for Electrolytic refining. An interesting development of the year was the manufacture of nickel-copper-steel direct from the Sudbury nickel ores. This was known as the "Nieu" process and was applied to small ordnance which was thoroughly tested and accepted by the British government. Plans were under way for the commercial working of the new process and the preliminary treatment of the ore was to be done in the Sudbury district and the final smelting by electric methods at some point where there was cheap power. There was an increased tendency to use nickel not only in steel for motor cars and other purposes but also in a greater number of alloys. Nickel coinage also attracted more attention during the year. Pure nickel coins had been used in Austria-Hungary since 1892, and also were employed in Italy, France, Siam, Switzerland, and Turkey, being hard and of fine color, but the metal afforded difficulties in minting. This hardness, however, gave the advantage of good wear. Coins of nickel bronze were in use in Argentina, Belgium, Brazil, Bulgaria, Egypt, Germany, India, Japan, Korea, Persia, Rumania, Switzerland, United States, Uruguay, and several other countries. They had been minted in London for many years for use in Jamaica, West and East Africa, Ceylon, and British Honduras. In view of the shortage of

subsidiary coinage in Great Britain, a proposition to use nickel for coinage in the United Kingdom and to a greater extent than heretofore in India and other British dependencies was advanced. If this was carried out, there would be involved the increased utilization of an important British product, for as stated above four-fifths of the world's supply of nickel is produced from ores mined and smelted in Ontario, Canada, and the only other important producer is the French new colony of Caledonia.

See SILVER.

NIGERIA, COLONY AND PROTECTORATE OF. A British possession in West Africa consisting of the old protectorate of Northern Nigeria along with the former protectorate of Southern Nigeria. The three chief divisions of the country comprise the colony itself (area 1400 square miles); the Northern Province (area 255,700 square miles); and the Southern Province (78,600 square miles). The government schools in 1917 numbered 13 and there were besides 46 unassisted private schools, the average attendance at both being about 1830. The number of Mohammedan schools was over 24,000 with over 200,000 pupils. In 1917 the legal status of slavery throughout the protectorate was abolished and by that time the slave traffic had been virtually suppressed by native rulers. In the northern province 7212 slaves were freed in 1917. Among the most important products is palm oil which is extracted from the oil palm. Palm kernels are produced in large amounts. From the raw products of the oil palm are obtained edible oils, fats, meal, margarine, soap, glycerine, etc., and other oil products are obtained from the benne seed (sesame). There is a considerable production of hides and skins of which the centre of trade is Karo. The foreign trade in 1918 exclusive of specie totaled \$82,406,338 as against \$65,347,446 in 1913 and it was nearly five times as great as it had been in 1900. The imports amounted to \$36,121,092 and the exports \$46,285,246 (exclusive of specie in each case). The principal articles according to value in 1918 in imports were, cotton piece goods, coopers' stores, yams, bags and sacks, railway material. The principal exports were palm oil and palm kernels. The chief participants in the export trade of Nigeria in 1918 as in the years immediately preceding were: United Kingdom (83.8 per cent), and the United States (11.53 per cent). In the export trade in 1918 the United Kingdom received 90.8 per cent and the United States 6 per cent. The revenue for 1917 \$3,492,738; expenditures \$3,219,957; the debt £8,470,593 and the shipping entered and cleared in 1917 had a tonnage of 939,159 of which 883,448 was British. In 1917 there were 975 miles of railway open for traffic. On Jan. 1, 1914, the executive commission of the colony became the executive council of the protectorate also. In addition to this council there is an advisory and deliberative body called the Nigerian Council composed of the Governor, the members of the executive council and others. Governor at the beginning of 1919, Sir Hugh Charles Clifford.

NITROGEN. See CHEMISTRY, INDUSTRIAL.

NITROGENOUS FERTILIZERS. See FERTILIZERS.

NOBEL PRIZE. The board of directors of the Nobel Prize which has charge of the funds of the institute has its headquarters at Stockholm, Sweden. The value of the prize is on the

average about \$40,000. In 1919 the prize was awarded to Professor Stark, a German.

NON-PARTISAN LEAGUE. See NORTH DAKOTA, paragraph on *Politics and Government*.

NORFOLK. See DOCKS AND HARBORS.

NORFOLK FESTIVAL. See MUSIC, *Festivals*.

NORTH CAROLINA. POPULATION. The population of the State in 1910 was 2,202,287 and on July 1, 1919, it was estimated to be 2,497,668, a gain during the twelvemonth of 29,000.

AGRICULTURE. The following table is issued by the Federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu.	Value
Corn	1919	2,900,000	55,100,000	\$101,935,000
	1918	3,030,000	63,630,000	112,625,000
Oats	1919	322,000	3,767,000	3,993,000
	1918	300,000	5,100,000	5,508,000
Wheat	1919	850,000	7,225,000	16,834,000
	1918	900,000	6,300,000	14,490,000
Tobacco	1919	554,000	310,240,000 a	166,289,000
	1918	468,000	329,940,000 a	115,809,000
Hay	1919	800,000	1,040,000 b	25,168,000
	1918	640,000	768,000 b	16,128,000
Peanuts	1919	116,000	4,756,000	11,605,000
	1918	145,000	5,800,000	12,006,000
Cotton	1919	1,568,000	875,000 c	154,000,000
	1918	1,600,000	898,000 c	118,504,000
Potatoes	1919	58,000	4,930,000	8,036,000
	1918	65,000	6,175,000	8,336,000
Sweet Potatoes	1919	106,000	9,858,000	13,604,000
	1918	95,000	10,450,000	13,794,000

a Pounds. b Tons c Bales.

TRANSPORTATION. The total railway mileage of the State in 1919 was approximately 4997. The longest roads were the Southern Railway, and the Atlantic Coast Line.

CHARITIES AND CORRECTIONS. The State maintains the following institutions: Hospitals, at Morganton, Raleigh, Goldsboro, Prison, at Raleigh; Caswell Training School for Feeble-Minded, at Kingston; Schools, for White Blind at Raleigh, for Colored Blind and Deaf at Raleigh, and for White Deaf at Morganton; Confederate Soldiers' Home, at Raleigh; Samaritan Manor, a home and industrial school for women.

FINANCE. According to the report of the State Treasurer, for the biennium ending Dec. 1, 1918, the receipts amounted to \$12,665,351 and the disbursements were \$11,850,430. The balance on hand on Dec. 1, 1916 was \$224,623, two years later it was \$1,039,543. On Dec. 1, 1918, the outstanding debt of the State was \$9,393,900. The State has invested in turnpike and railroad companies \$4,943,447, having a controlling interest in the N. C. R. Co., and the Atlantic and N. C. R. Co.

OFFICERS. Governor, Thomas W. Bickett; Lieutenant-Governor, O. Max Gardner; Secretary of State, J. Bryan Grimes; Treasurer, R. R. Lacy; Auditor, W. P. Wood; Attorney-General, J. S. Manning.

JUDICIARY. Supreme Court: Chief Justice, Walter Clark; Associate Justices, Platt D. Walker, George H. Brown, William A. Hoke, W. R. Allen; Clerk, Joseph L. Seawell.

NORTH CAROLINA, UNIVERSITY OF. A State institution of learning, founded in 1795 at Chapel Hill, N. C. The summer session of 1919 numbered 921 students, and the fall term, 1316. The members of the faculty are 105 in number. The library contains 85,000 volumes. A new building for physics and engineering is in course of construction. H. W. Chase, Ph.D., was chosen

to succeed President Edward K. Graham, who died in October, 1918.

NORTH DAKOTA. POPULATION. By the federal census of 1910 the population of the State was 577,056; by the State census of 1915, it was 636,994; and on July 1, 1919, it was estimated by the federal Bureau of the Census to be 817,554, a gain during the twelvemonth of 26,000.

AGRICULTURE. The following table is compiled from a report of the Federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu.	Value
Corn	1919	508,000	16,764,000	\$ 23,470,000
	1918	484,000	9,196,000	11,955,000
Oats	1919	2,400,000	38,400,000	25,728,000
	1918	2,575,000	60,512,000	36,912,000
Barley	1919	1,300,000	14,950,000	16,146,000
	1918	1,734,000	37,281,000	27,215,000
Wheat	1919	7,770,000	53,613,000	129,207,000
	1918	7,770,000	105,672,000	214,514,000
Rye	1919	1,945,000	15,560,000	18,828,000
	1918	1,900,000	19,950,000	28,928,000
Hay	1919	605,000	a 908,000	12,803,000
	1918	550,000	a 605,000	8,833,000
Potatoes	1919	90,000	5,670,000	9,072,000
	1918	92,000	9,108,000	6,649,000

a Tons.

TRANSPORTATION. The total main line track-age of steam railroads in the State on June 30, 1918, was 1445 miles; there were 358 miles of secondary main line, and 3404 miles of branch lines, with 1009 miles of sidings, etc. The longest roads were the Northern Pacific, the Great Northern, and the Minneapolis, St. Paul, & Sault Ste. Marie.

EDUCATION. The school population in 1918 was 200,532, and the enrollment was 162,572, with an average attendance of 114,582. There were 7712 teachers in 1918. Their average monthly salary was \$45.70, on a 12-month basis.

CHARITIES AND CORRECTIONS. The Legislature of 1919 created the Board of Administration, which at once assumed the duties of the Boards of Regents, of Control, and of Education. This is the result of 10 years' labor, looking toward a concentration and centralization of control of all State institutions, charitable, reformatory, educational, and penal. In October parts of the Act creating this Board were upheld by the State Supreme Court, as not unconstitutionally interfering with the constitutional office of the Superintendent of Public Schools. Since the organization of the Board shortly after July 26th, the day on which the bill became a law, they have pursued a vigorous policy, publishing late in the year a report covering the period from July 26th to October 31st. The following table gives statistics, as of the last date, for the charitable and penal institutions of the State.

Institution	Location	Population	Appropriation
Reform School	Mandan	66	\$308,960
Penitentiary	Bismarck	148	286,281
Hospital for Insane	Jamestown	1243	330,465
School for the Deaf	Devils Lake	110	91,702
Institution for Feeble Minded	Grafton	276	223,555
School for the Blind	Bathgate	35	
Tuberculosis Sanatorium	Dunseith	75	181,250

LEGISLATION. The following is a digest of some of the more important laws enacted by the 16th Legislative Assembly, in 1919, as listed in an interesting pamphlet issued by the Industrial

Commission of the State: *Acts relating to "State Economics and Industries"*: an act creating an Industrial Commission, authorizing it "to conduct and manage on behalf of the State certain utilities, industries, enterprises, and business projects." This Commission is composed of the Governor, the Attorney-General, and the Commissioner of Agriculture and Labor, with the Governor as Chairman. It is empowered to operate and control all utilities, etc., now or hereafter "established, owned, or operated" by the State, except those of penal, educational, or charitable institutions. It is given wide powers of control, including that of eminent domain, investigation with compulsory summons of witnesses, fixation of prices of property incident to the said industries, the securing of necessary funds by issuance of bonds under law, and other similar powers. An act approved the same day provided for the establishment and operation of a State Bank and banking system "for the purpose of encouraging and promoting agriculture, commerce, and industry." An issue of \$2,000,000 bonds of the State for this venture was authorized. It was further enacted that whenever first mortgages upon real estate shall be held by the State Bank to the amount of \$100,000, the Manager of the Bank may assign them to the State Treasurer in trust as security for bonds to be issued by the State "for the purpose of making delivery to the Industrial Commission . . . to the end that the . . . Commission may . . . procure necessary funds for the Bank . . . thus replacing in the Bank the funds employed by it from time to time in making loans upon first mortgages of real estate." There was also passed an act establishing the North Dakota Mill and Elevator Association, a publicly owned and operated warehouse, elevator, and flour mill system. Bonds for this purpose were authorized. In addition, a Hail Insurance system was established, and a system of providing homes for residents of the State, under the name of the Home Building Association.

Under the head of Laws Relating to Conditions of Labor, the State has established a workmen's compensation fund, with definition of employer's liability; an eight hour day and a minimum wage for women; the inspection of coal mines; a drastic law limiting the issuance of injunctions in labor disputes (in which law there is the following interesting provision—"nor shall any of the acts specified in this . . . be considered or held to be illegal or unlawful in any court in this State"); compelling a full train crew upon the common carriers within the jurisdiction of the State.

North Dakota in 1919 established an income and an inheritance tax. Cities are under certain restrictions permitted to employ city managers. And a Board of Administration was established to manage all State Penal, Charitable, and Educational institutions, with provision for a unification of the latter. Early in 1920 the State is to vote upon a proposed amendment to the Constitution, providing for the recall of Congressional, State, County, Judicial, and Legislative Officers.

POLITICS AND GOVERNMENT. The most important feature of the political record during the year was the referendum of the legislative programme of the Non-Partisan League. The issue according to the members of the League was the question whether henceforth the power of the

State was to enhance the interests of the producing class. They had all been passed by the Legislature during the 1919 session and signed by the government, but at the demand of the opposition a referendum election was held on June 26, 1919. The list of the measures together with the votes, for and against is as follows:

	Yes	No
1 Bank of North Dakota	61,495	48,239
2. Industrial Commission	61,188	50,271
3. Tax Commission	60,412	50,316
4. Judicial Redistricting	60,343	49,925
5. Board of Administration	59,749	51,894
6 Printing Commission	59,364	52,450
7 Commissioner of Immigration	59,421	52,156

The bank and industrial laws passed in 1919 are described in the preceding paragraph. The tax commission measure abolished the commission of three members and set up a single tax commission in their place. The judicial redistricting bill changed the district system for the State in order to facilitate the work of the State courts. The board of administration bill put an end to the three State boards and created a single board to take their place, thus substituting a commission of five for the three boards which comprised 20 members. The printing bill required one instead of three official county papers in each county, etc. The campaign was a bitter one and abounded in accusations against the League including the charge that the Industrial Commission had been empowered by the Legislature to take farms and other property away from the owners.

In the elections the larger cities and the northern and western counties showed gains for the League but it sustained losses among the farmers of the western counties on account of the fear of increasing taxation. The largest majorities as may be seen from the above returns were given to the Industrial Commission bill and the Bank of North Dakota bill, both of which were essential to the execution of the League programme. Shortly before the election namely on June 23 the President of the Non-Partisan League, Mr. A. C. Townley, and the former general manager of the organization department of the League were brought to trial at Jackson, Minn. They were charged with having violated the State sedition law and after three weeks they were both found guilty. The trial gave rise to the bitterest recriminations.

As to the strength of the Non-Partisan League, it claimed at the close of 1918 to have a membership in North Dakota of 35,062. Outside of North Dakota the membership claimed by the League was as follows: Minnesota, 50,162; South Dakota, 24,669; Montana, 21,550; Nebraska, California, Washington, Texas, Wisconsin, Kansas, Iowa, Oklahoma, and Idaho, 56,922. See MINIMUM WAGE; WORKMEN'S COMPENSATION.

OFFICERS. Governor, Lynn J. Frazier; Lieutenant-Governor, Howard R. Wood; Secretary of State, Thomas Hall; Auditor, Carl R. Kositzky; Treasurer, Obert A. Olson; Superintendent of Public Instruction, Minnie J. Nielson; Commissioner of Insurance, S. A. Olsness; Bank Examiner, O. E. Lofthus; Director-General, State Bank, F. W. Cathro.

JUDICIARY. Supreme Court: Chief Justice, A. M. Christianson; Associate Justices, J. E. Birdzell, R. H. Grace, J. R. Robinson, H. A. Bronson; Clerk, J. H. Newton.

NORTH DAKOTA, UNIVERSITY OF. A co-educational State institution at Grand Forks, N. D. (post office, University, N. D.). The enrollment for the summer session was 215, and for the fall, 1088, including 131 in the high school. The faculty numbers 89. Endowment of the university is \$2,015,150, and the income therefrom is \$64,000. During the year a new chemistry building and an armory were completed. The university includes colleges of arts, education, engineering, law, medicine, and the graduate and high schools. The institution was founded in 1883. President, Thomas Franklin Kane, Ph.D., LL.D.

NORTHERN TERRITORY. A territory of the Australian Commonwealth situated in the central and northern part of the continent: formerly part of the state of South Australia but transferred to the Commonwealth Jan. 1, 1911. Area, 523,620 square miles; population, estimated June 30, 1918, 5269, excluding aborigines, who were estimated at about 20,000. Capital, Darwin, with a population in 1911, of 958. See AUSTRALIA.

NORTHWESTERN COLLEGE. A co-educational institution at Naperville, Ill., supported by the Evangelical Association, but non-sectarian in its requirements. Its enrollment for 1919 was as follows: College, men, 193, women, 129, academy, men, 33, women, 17; other schools, 49; total, 423. There were 30 members in the faculty, additions of the year including professors of physics, and military science. The endowment is \$256,695, and the income for the year was \$54,018. The library contains 14,500 volumes. During the year an apportionment of \$750,000 in the \$2,500,000 Forward Movement was received. The Evangelical Association for the next five years is conducting a campaign, \$500,000 for additional endowment, \$100,000 for a chapel building, \$150,000 for a girls' dormitory, the latter building to begin at once. The college was founded in 1861 and incorporated in 1876. President, Edward Everett Rall, Ph.D.

NORTHWEST PROVINCES. The Prairie Provinces of Canada. See CANADA.

NORTHWEST TERRITORIES. That part of Western Canada which is bounded on the west by Yukon Territory and separated by the 60th parallel from British Columbia and the Prairie Provinces, on the south. The area is estimated at 242,224 square miles; population (1911) 5900.

NORWAY. A constitutional monarchy in northwestern Europe; formerly united with Sweden but separated on June 7, 1905; forming the western and northern part of the Scandinavian peninsula, with an extreme length of 1100 miles and an extreme width of 250 miles. It is generally a barren and mountainous country and large continuous tracts of cultivable land do not exist. It is estimated that 75 per cent of the area is unproductive, 21.5 per cent under forests, and only 3.5 per cent under cultivation. It is divided into 20 provinces or amter. Area, estimated at 24,643 square miles; population, Dec. 1, 1910, 2,391,782; estimated Jan. 1, 1918, 2,632,010. Capital Christiania, with an estimated population on Dec. 1, 1918, of 259,445. The movement of the population in 1917 was as follows: Births, 64,930; deaths, 34,063. The total emigration in 1917 was 2518 of whom 2344 went to the United States. The national church is Lutheran which is endowed by the state and in 1910 there were only 62,553 dissenters. The

other denominations and churches being the Free Lutheran Church with 15,287; Methodist with 10,986, and Baptist with 7659. Professors of all religions are tolerated with the exception of Jesuits. Education is compulsory. The number of public elementary schools in 1915 was 6130 with 283,136 pupils in the country, and 3345 with 98,876 pupils in towns. The university at Christiania had an attendance in 1915 of 550.

PRODUCTION. According to the registration of Sept. 30, 1917, the number of farms was 246,634, of which 142,930 had an area of two hectares or less. No later figures in detail were available than those given in the preceding YEAR BOOK. (See also the article AGRICULTURE.) The live stock on June 20, 1918, were as follows: Cattle, 1,053,743; sheep, 1,216,291; horses, 220,900; swine, 224,803; goats, 203,852. The chief natural sources of wealth are forests and fisheries. The area under forests is estimated at 26,685 square miles of which 75 per cent is pine; and the state forests cover about 3060 square miles. The department of forestry was organized in 1857 and since that date the income to the country from the forest has amounted to \$1,474,000. On the average the fish catch makes up about half of the total annual export values. In 1915 92,865 persons were engaged in cod fisheries; 20,874 in summer-herring fisheries; 4489 in mackerel fisheries. The total value of fisheries in 1918 was 85,292,024 kroner. The most important mineral product is pyrite. There are valuable deposits of iron ore, but smelting is retarded by the lack of coal. The chief mineral products besides pyrites are silver, copper ore, iron, felspar, and nickel ore. There were about 87 mining establishments in 1916. There is considerable manufacturing for although the country lacks coal, it has abundant water power which has for the most part been employed in the production of electro-chemical products—a growing industry. According to figures published at the beginning of 1917 there were 6886 manufacturing establishments employing a total of 161,772 persons.

COMMERCE. In 1916 the leading countries in respect to the value of imports into Norway were in the order of their importance: America, Great Britain and Ireland, Germany, and Sweden. Chief among the countries to which goods were exported were Germany, Great Britain and Ireland, Russia, France, and America. The total value of the imports in 1916 was 1,353,664,900 kroner; of the exports 988,333,000 kroner; and the chief classes of imports in their order of value in 1916 were: Vessels, carriages and machinery, etc.; unwrought minerals; bread stuffs; textile manufactures, etc. Leading articles of export were animal produce; timber and wooden goods; manufactured minerals and tallow, oils, tar, etc. The chief products imported into Norway in 1919 were rye, rye flour, wheat flour, coffee, sugar, meat, dairy products, and Indian corn. The following table shows the imports of food during the first nine months of 1919 and 1918.

Commodity	First nine months of—	
	1919 Kilos	1918 Kilos
Beef	3,486,700	3,727,841
Pork	9,862,459	544,754
Cheese	1,386,386	96,086
Butter	2,681,679	1,066,695
Eggs	1,649,663	747,898
Indian corn	8,106,986	1,180,101

Commodity	First nine months of—	
	1919 Kilos	1918 Kilos
Rye, whole	66,100,400	17,618,800
Rye flour	12,212,100	24,133,400
Wheat flour	30,797,100	18,069,000
Coffee	22,456,956	4,912,028
Tea	242,429	53,152
Sugar	52,925,425	25,232,456

RAILWAYS. The state railways on Jan. 1, 1917, had a mileage of 1719; private lines 290, total 2009.

SHIPPING. The following information in regard to the shipping in 1919 was supplied by the United States Bureau of Foreign and Domestic Affairs on the basis of official Norwegian figures: During the year there was a decrease of 40 steam vessels with a total of 35,041 gross registered tons, 48 motor vessels with a total of 6714 tons, and 96 sailing vessels of 29,749 tons, making a total of 193 vessels representing a total of 71,504 gross registered tons. Three steamers were wrecked as a result of operations of war, 13 steamers, 26 motor vessels, and 12 sailing vessels were wrecked by the ordinary dangers of the sea. Three steamers, 1 motor vessel, and 2 sailing vessels were condemned as unfit for further use. Twenty-eight sailing vessels with a total of 2225 tons were dismantled or destroyed. Thirteen steamers of 12,094 tons, 5 motor vessels of 983 tons, and 9 sailing vessels of 7965 tons were sold abroad. The increase in the merchant marine amounted to 155 steamers of 163,641 tons, 285 motor vessels of 59,017 tons, and 16 sailing vessels of 3707 tons, making a total of 416 vessels of 226,365 tons. On Jan. 1, 1919, the Norwegian merchant marine consisted of 1759 steamers of 1,504,432 tons, 1146 motor vessels of 112,687 tons, and 563 sailing vessels of 279,294 tons, making a total of 3441 vessels of 1,896,413 tons. On Jan. 1, 1920, the fleet included 1825 steamers of 1,633,032 tons, 1383 motor vessels of 164,990 tons, and 456 sailing vessels of 253,252 tons, making a total of 3664 vessels of 2,051,274 tons. The net increase in the Norwegian merchant marine during the year 1919 is 223 vessels of 154,861 tons.

FINANCE. The budget for 1918-19 was as follows: Revenue, 624,891,900 kroner; expenditures, 624,891,900. The debt on June 30, 1917, was 455,504,598 kroner.

GOVERNMENT. Norway is a constitutional hereditary monarchy whose executive power is vested in a king who governs through a council of state. Legislative power is vested in a parliament or storting elected on the basis of universal suffrage without distinction of sex. Comprising in 1919, 126 members. The King is Haakon the 7th (born Aug. 31, 1872) who was elected king Nov. 18, 1905. The composition of the Storting in 1919 according to political parties was as follows: Liberals, 52; Conservatives, 39; Moderate Liberals, 10; Socialists, 18; Agricultural Party, 3; Democrats, 3; Independents, 1.

The ministry in 1919 was constituted as follows: Premier and Minister of Agriculture, Gunnar Knudsen; Ministry for Foreign Affairs, Nils Claus Ihlen; Ministry for Finance, A. Omholt; Ministry for Labor, Haakon Hauan; Ministry for Commerce, Navigation, Industry, and Fisheries, Birger Stuevold-Hansen; Ministry for Defense, General Aatsvatmark; Ministry for Worship and Instruction, Jorgen Lovland; Ministry of Public Works, Frederik Anton Mar-

tin Olsen Nalum; Ministry for Provisioning, M. Fjave; Ministry for Social Affairs, M. P. Berg.

The same sort of disturbances occurred in Norway during the year as in other European countries and there was much fear of the spread of Bolshevism. On June 10th the Norwegian Labor Party took the same course as that of the Swedish Independent Socialists. They also passed a resolution calling upon the government to provide asylum for political fugitives.

NORWEGIAN LITERATURE. See SCANDINAVIAN LITERATURE.

NOTRE DAME, UNIVERSITY OF. A Roman Catholic institution for the education of men, located at Notre Dame, Ind.; Founded in 1842. President, Rev. John Kavanaugh, D.D., C.S.C.

NOVA SCOTIA. One of the Maritime Provinces of Canada. Capital, Halifax, the chief naval station of Canada. Estimated area, 21,428 square miles of which 360 are under water; population in 1911, 492,338. Population of Halifax (1911), 46,619, and of the next largest city, Sydney, 17,723. The main occupation is agriculture. There is a profitable fruit industry, apples being the most important crop; and potatoes of a superior quality are raised. In 1918 there were 407,000 cattle in the province and the annual wool clip averages 10,000,000 lbs. Executive power is in a lieutenant-governor, appointed for five years by the Governor-General of Canada, and acting through a council or responsible ministry; legislative power is in an assembly of two chambers, namely the legislative council of 21 members appointed by the Crown and holding office for life, and the House of Assembly of 43 members chosen by popular vote for five years. At the beginning of 1919 the House of Assembly was distributed among political parties as follows: Liberals, 30; Conservatives, 13. Down to that time the Liberals had held the power continually for 36 years. Lieutenant-Governor in 1919, J. McC. Grant; Prime Minister, G. H. Murray. See CANADA.

NOVELLI, ERMETE. Italian actor, died at Rome, January 29. He was well known in the United States, where he made a successful tour in 1906. He was born in 1851, the son of a prompter in a traveling troupe of Italian players, and went on the stage in his boyhood, playing always in the comic parts, owing to his somewhat grotesque appearance. He achieved success at an early age, and became chief of his troupe in 1884. His reputation soon spread throughout the Latin countries in Europe and in South America. He determined in spite of ridicule and opposition to succeed in serious and even tragic parts, and he eventually became known as one of the best interpreters of such rôles as *Shylock*, *Louis the XI*, *Othello*, etc. He was the founder of the Casa Goldone, an Italian theatre formed on the model of the Comédie Française. He was the subject of high praise from some of the most serious critics of the day, by whom his playing was described as broad, vivid, and forcible, rather than subtle and minute. He was especially admired for its versatility.

NOYES, HENRY ERASTUS. Brigadier-general, United States army, died at Berkeley, Cal., July 14. He was born in Belfast, Me., Aug. 23, 1839, and graduated at the United States Military Academy in 1861. He took part in the battles of Bull Run, South Mountain, Antietam, and many other battles and engagements, and was

twice brevetted for gallant and meritorious service. After the Civil War he was engaged in Indian warfare and he served in Cuba in 1898. He retired in 1901.

NOYES, LAVERNE W. Capitalist, died in Chicago, Ill., July 24. He was born at Genoa, N. Y., Jan. 7, 1849, and engaged in manufacturing in Illinois in 1876. He soon afterwards began the invention of a series of over 100 mechanical devices, some of which were very successful. He began the manufacture of agricultural implements and later organized the Aërmotor Company, of which he was president down to the time of his death. He was a member or trustee of important educational and literary bodies and a generous contributor to them. He presented a building to the Chicago University and endowed many scholarships for the Lewis Institute.

NUTRITION, DISEASES OF. In medical parlance these are known as diseases of metabolism and comprise obesity, diabetes, gout, and others, which are either more doubtful as to their intimate nature or else of less importance. While the corpulent man is often vigorous and of robust subjective health, he is ranked as a kind of invalid when practical tests are instituted. The insurance companies do not accept overweight risks. Horace Fletcher, recently deceased, was declined in middle life for overweight by a leading life-insurance company and this catastrophe was responsible for his propaganda of economy of nutrition by forced mastication. He thereby secured for himself 20 years of usefulness as a teacher and model of proper nutrition, but his death at 69 tends to show, in the absence of any element of accident, that he was not constructed by nature for longevity and that life-insurance selection in his case was in the main justified. A distinction was formerly made between normal and pathological corpulence, but at present all corpulence is regarded as abnormal. We used to hear of "firm" fat as distinguished from "flabby" fat, and well distributed adipose as a foil to asymmetrical deposit of fat. These distinctions hold good only to a limited degree. Fat accumulation from forced feeding, including the consumption of beer is not an asset; is not, as once believed, a reserve to draw on in lean years. Even the gain in weight which follows the emaciation of typhoid fever may be pathological. A Swiss practitioner, Dr. Gigon, who has carefully watched these cases says that exceptionally a subject gets fat where as a rule and by all rights he should emaciate. Tuberculosis and lues, which usually cause rapid emaciation, exceptionally cause obesity. The same is true of severe nervous and mental diseases. Sudden gain in weight and slowly acquired corpulence alike mean that something is amiss in the individual's nutrition. Cases accumulate in which such accumulation is due to disease of the glands of internal secretion, as the gonads, thyroid and pituitary body. The poisonous minerals can cause corpulence, for hogs can be fattened on mercury and the arsenic eaters of Styria are, if not fat—for they lead very active lives and are mountaineers—at least very well nourished. It is when we seek to reduce corpulence by diet and exercise that we realize its intimate nature, for many cases do not react at all to these prescriptions, but are remedied in other ways. The moderate accumulation of flesh which is reducible by proper diet and exer-

cise may be looked on as approximately physiological; but it is not of such examples that we are writing.

Obesity and diabetes are closely allied in many ways and both are fostered in predisposed cases by excessive use of sweets. In this connection the recent passing of alcohol as a beverage has reacted on life insurance in a peculiar fashion. Years ago it became apparent to some actuaries that ex-drinkers did not automatically become improved risks. The reasons were not straight-way apparent. At the present time one reason at least is in evidence, to wit, that the former tippler who had secured an insurance policy would be exposed to the likelihood of drinking inferior illegal spirits or would resort to drugs. The alleged increased consumption of sweets in several forms as a result of prohibition is also regarded with some apprehension by life-insurance companies, because of the likelihood that diabetes, which causes thousands of deaths annually, will increase in frequency. These fears may seem far-fetched and years will be required to show whether or not they are well grounded. In the meantime the companies will doubtless spare no pains to discourage the excess consumption of sweets which tends to swell the ranks of both overweighted and diabetics.

NYSSALAND PROTECTORATE. A British protectorate, formerly called Central Africa, situated on the southern and western shores of Lake Nyassa and extending towards the Zambezi River. Area, 39,573 square miles; population (1918), 1,228,579 natives, 715 Europeans, and 422 Asiatics. The seat of government is at Zomba; chief town Blantyre. Coffee is largely produced and tobacco is raised in sufficient quantities for export. There is also a promising development in cotton production. Live stock in 1918 were as follows: Cattle, 93,000; sheep, 40,414; goats, 17,721; pigs, 20,350. Imports 1918-19, £648,569; exports, £504,740; revenue, £187,645; expenditures, £150,198. River steamers communicate with the coast at Chinde which lies at the only navigable mouth of the Zambezi River. There is a railway of 129 miles from Blantyre to Port Herald which has been extended to Zambezi. Governor at the beginning of 1919, Sir George Smith.

OATS. The total yield of oats as reported by the International Institute of Agriculture, Rome, in Spain, France, Great Britain, Italy, the Netherlands, Rumania, Switzerland, Canada, the United States, Japan, and Tunis in 1919 was about 2,087,000,000 bushels or 16.2 per cent less than in 1918 and 9.7 per cent less than the average from 1913 to 1917. From 1909 to 1916 inclusive the world's production averaged over 4,000,000,000 bushels. In 1919 a smaller acreage and to a greater degree a lower average yield per acre were the causes of the reduced production. The Canadian yield was estimated at 424,000,000 bushels, the French at 168,000,000 bushels, and that of Great Britain at 157,000,000 bushels. According to preliminary estimates Argentina, the largest oats-producing country in the southern hemisphere yielded 44,092,000 bushels in the crop year 1918-19.

Estimates by the Department of Agriculture placed the production of the United States in 1919 at 1,248,310,000 bushels, as against 1,538,124,000 bushels in 1918, and 1,331,287,000 bushels the average in the 5-year period 1913-17. The area in oats in 1919 was 42,400,000 acres

which was 1,949,000 acres under the area of 1918 but 1,817,000 acres above the average acreage for the 5-year period. The average yield per acre was 29.4 bushels as compared with 34.7 bushels the year before and 32.8 bushels for the years 1913 to 1917 inclusive. The average farm value of oats on Dec. 1, 1919, was 71.7 cents per bushel while the corresponding value in 1918 was 70.9 cents, and for the 5-year period 48.3 cents. The total value of the 1919 crop on this basis was \$895,603,000 or \$194,719,000 less than the total value in the preceding year but still \$252,416,000 above the 5-year average. The estimated average weight per measured bushel was 31.1 pounds or 0.9 of a pound under the standard bushel weight.

A severe drought with extreme heat greatly reduced the yields and the quality of oats in Montana and in parts of North Dakota, Alberta, and Saskatchewan, and caused a scarcity of seed oats for the next crop in this region. As based on several thousand estimates in 1918 of the portion of the crop used for feed in the United States 67.8 per cent is fed to horses and mules, 13.2 per cent to cattle, 10.8 per cent to swine, 2.3 per cent to sheep, and 5.9 per cent to poultry.

Studies made by the Missouri Agricultural Experiment Station from 1910 to 1917 inclusive on the cost of producing oats showed that the crop in the bin on the farm cost an average of 42 cents per bushel and \$11.11 per acre. In the last four years of the study the range per bushel was from 35 cents in 1917 to 55 cents in 1916. In 1915 when the cost of production was 51 cents per bushel the farmer received nothing for his labor while for the entire period he received an average of \$1.17 for each 10 hours of labor put on the crop. The highest return for each 10 hours of labor was \$11.40 in 1917.

OBERLIN COLLEGE. A non-sectarian co-educational institution at Oberlin, Ohio. The enrollment in the summer session of 1919 was 162, in the fall it was 1535. There were 175 members in the faculty. The funds of the college amount to \$7,761,303, and the income for 1919 was \$540,000. The library contains 196,000 bound volumes and 158,000 pamphlets. Oberlin was founded in 1833. President, Henry Churchill King, D.D., LL.D., L.H.D.

OCCUPATIONAL DISEASES. The interest in occupational diseases has greatly increased in recent years because of the gradual accumulation of adequate information as to the general prevalence of these diseases. Accurate information concerning these diseases is of great industrial as well as social importance because of the enormous waste resulting from the reduction which they cause in industrial efficiency. The increased interest has manifested itself in attempts to obtain further information as to diseases caused by industrial processes. These attempts have resulted in wide-spread recognition of the very great need for reliable statistics based on physical examination of workers in order that the real industrial conditions of the country might be determined with some degree of accuracy. The chief lines of investigation in this field are concerned with ascertaining: 1 what diseases are due to industrial employment; 2 what conditions or factors of the industrial processes cause the diseases; 3 what safe-guards can be provided which will permit the continuance of the necessary employments without imperiling the health of the workers; 4 what processes may

be substituted for those which are injurious. In addition, the enactment of legislation giving compensation for occupational diseases is increasing. The question of what constitutes an occupational disease has not been settled with finality nor do the lists of occupational diseases for which compensation is provided by law, correspond. Diseases generally included in a list of occupational diseases are: Anthrax, lead, phosphorus, arsenic, mercury, and TNT poisoning, nystagmus, glanders, several miner's diseases, and a number of diseases caused by poisonous fumes and acids.

In the United States, California, Massachusetts, Wisconsin, Connecticut, North Dakota, Hawaii, and the federal government provide compensation for occupational diseases. Massachusetts and the federal government provide compensation for occupational diseases through commissions and courts, while California, Wisconsin, Connecticut, North Dakota, and Hawaii do so through statutes.

Occupational diseases have become compensable in Connecticut, Wisconsin, and North Dakota only during the past year. Wisconsin effected the compensation of industrial diseases by extending the provisions of the original workmen's compensation law, to include, in addition to accidental injuries, all other injuries including occupational diseases growing out of and incident to employment. The Connecticut law includes those occupational diseases due to "causes peculiar to the occupation and which are not of a communicable, contagious, or mental nature." The law also provides that "if an injury arises out of and in the course of the employment it shall be no bar to a claim for compensation, that it cannot be traced to a definite occurrence which may be located in point of time and place." The State compensation commissioners had awarded compensation for occupational diseases under the original workmen's compensation law, but they were over-ruled by the courts. North Dakota in enacting its workmen's compensation law provided compensation for *injuries*. The workmen's compensation bureau of the State interprets this as including occupational diseases.

Compensations have been awarded in States not providing such benefits, for: anthrax, dermatitis, arsenic poisoning, fume poisoning, occupational neuritis, housemaid's knee, and other diseases, not because the disease suffered was an occupational disease, but because "it satisfied in other respects the requirements of a compensable injury as defined by statute or as interpreted by the court." No States except those mentioned award compensation for diseases which have developed gradually and which are inherent in the employment. In general the courts and commissions grant compensation, 1 if the disease resulted in injuries, such as lesions, to the physical structure of the body; 2 if the injury did not occur in the usual course of events; 3 if the injury can be placed to a definite time and place in the employment; 4 if reasonable safeguards were not provided by the employer against an inherent risk of the occupation, or, 5 if the injury was not due to a known risk of the employment.

PUBLIC HEALTH ASSOCIATION. The American Public Health Association held its 47th annual meeting in New Orleans from Oct. 27-30, 1919. The association is composed of nine divisions:

Health Administration, Laboratory, Sociological, Sanitary Engineering, Vital Statistics, Food and Drug, Industrial Hygiene, Child Hygiene, and Personal Hygiene. "In the section on industrial hygiene, papers were read on health hazards in different industries, such as the effects of non-poisonous dusts, dyes, oils, and compounds; industrial fatigue in general; and physical examinations with reference to their use in placing and classifying employees, as well as in increasing production."

The fourth annual convention of the American Association of Industrial Physicians and Surgeons was held at Atlantic City on June 8, 1919. This association was organized in 1916 by Col. Harry E. Mock of the Surgeon General's Office. Among the significant questions considered were: the increasing recognition of the importance of physical examination of employees; the need for real statistics based on physical examinations in order to facilitate definite conclusions regarding industrial conditions; uniformity in workmen's compensation, legislation including the appointment of a medical adviser to every commission, the possibility of reclaiming men for industry; and the introduction of courses in industrial medicine in medical schools. Papers were also read on: The conservation of the vision of industrial workers through goggles, etc.; a national programme for industrial hygiene and medicine; and proper lighting conditions in factories. "Resolutions presented to the convention on the subject of compensation laws, health insurance, industrial clinics, and artificial respiration were referred to the board of directors with power to act." At the convention Colonel Mock was re-elected president of the organization.

The Bureau of Mines has received many inquiries during the past year concerning the use of army gas masks in industries as a safeguard against poisons and irritating gases and dusts. The public has been under the impression that the army gas masks can protect the wearer under all conditions. However, the conditions of the battlefield are quite different from those obtaining in factories. The percentage of gas in the air under field conditions will be much smaller than that in the confined space of a factory operation. In addition the army mask affords no protection against the more common industrial gases such as illuminating, natural, producer, and blast-furnace gas. In view of these limitations of the army gas mask, the Bureau of Mines has issued a brief statement concerning the industrial use and limitations of dust respirators, gas masks, and oxygen-breathing apparatus. In addition, a thousand cubic-foot gas chamber has been installed at the Pittsburgh Experiment Station of the Bureau for research purposes. Results of the investigations will enable the Bureau to give adequate information as to the suitability of army masks for use in various industrial gases and the kind of gas mask required if the army type is inadequate.

The programme of the United States Public Health Service in respect to the after-the-war needs in industrial hygiene is as follows: 1 "Continuation in the extension of health surveys in industry with a view to determining precisely the nature of the health hazards and the measures needed to correct them; 2 securing adequate reports of the prevalence of disease among employees and the sanitary conditions in indus-

trial establishments and communities; 3 national development of adequate systems of medical and surgical supervision of employees in places of employment; 4 establishment by Public Health Service, in cooperation with the Department of Labor, of minimum standards of industrial hygiene and the prevention of occupational diseases; 5 improvement of the sanitation of industrial communities by officers of the Public Health Service, and cooperation with State and local health authorities and other agencies; 6 medical and sanitary supervision, by the Public Health Service, of civil industrial establishments owned or operated by the federal government."

GREAT BRITAIN. The Workmen's Compensation Act of 1906 made provision for compensation of occupational diseases. The compensable diseases were specified in the act and the Secretary of State for the Home Office was given authority to include other diseases. The list of occupational diseases corresponded to that given in the beginning of this article. About 20 diseases have been added to those listed as compensable under the original act and in 1918 poisoning by dinitrophenol and tetrachlorethane were added. Compensation is recoverable from the last employer but he in turn may recover from other employers whose employment within the year contributed to the contraction of the disease. If an employee through contraction of dermatitis or ulceration of the skin is disabled only for employment in the process in which the disease was contracted no compensation is allowed. Under the Factory and Workshop Act certain occupational diseases must be reported to the Home Office. Statistics show that there has been considerable reduction in these diseases. From November, 1917, to November, 1918, there were 243 cases of poisoning and of anthrax reported as compared with 623 cases the preceding year. In 1918 the number of deaths was 25, in contrast to 79 for 1917. In addition 35 cases of lead poisoning among house painters and plumbers were reported for 1917-18 as against 53 cases in 1916.

The prevalence of the more common industrial poisons in Great Britain, is indicated in a recent report covering the period from 1900 to 1918. The figures given in the report show that the number of cases and deaths resulting in lead and mercurial poisoning is steadily decreasing. There has been practically no change in the small number of phosphorus poisonings, showing that ameliorative measures have reached their limit for the present. Few cases of arsenic poisoning have been recorded in recent years except in 1917. War conditions were responsible for this exceptional year. Before the war there were no cases of toxic jaundice but in 1916, 206 cases were reported and in 1917 there were 190 cases. In 1918 there were only 34 cases showing that the disease is being brought under control. Figures for anthrax show a considerable increase in cases but war conditions were partly responsible for this increase.

CANADA. The provinces of Canada have made provisions for compensating occupational diseases very similar to those of Great Britain. Nova Scotia, Manitoba, and British Columbia have copied the British law and schedule of diseases without change. Miner's phthisis has been added to the original list of Great Britain by Ontario and Alberta. New Brunswick has adopted the law but not the schedule. It con-

ferred the discretionary power on the workmen's compensation board to declare what occupational diseases and processes should be legally compensable. The only provinces which do not provide compensation for industrial diseases are Quebec and Saskatchewan.

FRANCE. The results of the extensive studies of industrial poisons, made by experts of the French government during the war, have been placed in the hands of Dr. Roger G. Perkins, consultant in hygiene to the United States Public Health Service. An abstract of the French findings recently published by Dr. Perkins reveals that the explosive which caused the greatest amount of poisoning in the United States and England, trinitrotoluol, gave very little trouble in France. On the other hand, dinitrophenol, a compound produced in manufacturing picric acid, was the source of very serious and fatal poisoning in France. The French records are incomplete because it was necessary to shift constantly, factory physicians and gangs of men from one department to another and from factory to factory. Though the records have not continuity, yet they present very interesting and valuable observations in this field.

ABROAD. Argentina, New South Wales, Switzerland, and the Union of South Africa make specific provisions for compensating industrial diseases. In most foreign countries compensation is provided for through compulsory sickness and invalidity insurance systems. See **WORKMEN'S COMPENSATION; SOCIAL INSURANCE; INSURANCE; and WELFARE WORK.**

OHIO. POPULATION. The population of the State in 1910 was 4,767,121 and on July 1, 1919, it was estimated to be 5,335,543, a gain during the twelvemonth of 61,000.

TRANSPORTATION. The railway mileage in the State in 1919 was approximately 9316.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture, for December, 1919.

<i>Crop</i>	<i>Year</i>	<i>Acreage</i>	<i>Prod Bu.</i>	<i>Value</i>
Corn ..	1919	3,700,000	162,800,000	\$196,988,000

OFFICERS. Governor, James M. Cox; Lieutenant-Governor, Clarence J. Brown; Secretary of State, W. D. Fulton; Treasurer, Rudolph W. Archer; Auditor, A. V. Donahey; Attorney-General, John G. Price.

OHIO RIVER IMPROVEMENT. See **INTERNAL WATERWAYS.**

OHIO STATE UNIVERSITY. A co-educational institution under the supervision of the State, at Columbus, Ohio. The enrollment for the summer session of 1919 was 1240; for the regular fall term, 6608. There are 517 members of the faculty, 118 in agricultural extension, 28 in the library force, and 13 administrative officers. Productive funds total \$1,045,321 and the income for the year was \$62,000. The university

was founded in 1872. President, William Oxley Thompson, LL.D.

OHIO UNIVERSITY. A co-educational state institution, founded in 1804 at Athens, Ohio. In the summer school of 1919 there were 1694 students, and in the continuation summer school, 386. In the fall there were 1024 students, and 110 members of the faculty. The productive funds of the university total \$200,000. The income for the year was \$338,162. The library contains 47,340 volumes. President, Alston Ellis, Ph.D., LL.D.

OHIO WESLEYAN UNIVERSITY. A co-educational institution under the auspices of the Methodist Episcopal Church, founded at Delaware, Ohio, in 1844. In the fall of 1919 there were 620 men and 808 women students in the university, 1318 of these being enrolled in the College of Liberal Arts. The faculty contained 63 men and 27 women. Productive funds for 1919: \$1,274,850 endowment, and \$480,294 annuity. Volumes in the library numbered 87,000. President, John Washington Hoffman, D.D., LL.D.

OKLAHOMA. POPULATION. The population of the State in 1910 was 1,637,155 and July 1, 1919 it was estimated to be 2,465,402, a gain during the twelvemonth of 87,000.

TRANSPORTATION. The railway mileage in the State in 1919 was 6532; of this 916 miles were built during the year, of new first track. This is more construction than was done in any other State in 1919.

AGRICULTURE. The following table is compiled from a report of the Federal Department of Agriculture.

Crop	Year	Acres	Prod Bu	Value
Corn . . .	1919	3,100,000	74,400,000	\$94,488,000
	1918	3,100,000	23,250,000	38,120,000

CHARITIES AND CORRECTIONS. The following institutions are maintained by the State: Institute for Feeble Minded, at Enid; School for the Blind, at Muskogee; School for the Deaf, at Sulphur; Training School for Boys, at Pauls Valley; State Orphanage, at Pryor; and Colored Orphans' Home, at Taft.

OFFICERS. Governor, J. B. A. Robertson; Lieutenant-Governor, M. E. Trapp; Secretary of State, Joe S. Morris; Treasurer, A. N. Leecraft; Auditor, Frank Carter; Attorney-General S. P. Freeling.

OKLAHOMA, UNIVERSITY OF. A non-sectarian co-educational State institution, founded in 1892, at Norman, Okla. President, S. D. Brooks, LL.D.

OLD AGE PENSIONS. It is generally conceded that compulsory insurance against old age is a vital part of any programme of social insurance, and most of the industrial nations of the world have adopted legislation providing pensions for superannuated citizens under insurance

schemes, the most effective of which are obligatory. Often old age insurance and invalidity insurance are provided for under one programme. Both of these insurances were made compulsory in Germany in 1889; in Great Britain in 1908, 1911 (old age insurance); in France 1910, 1912 (old age insurance); Luxemburg, 1911; the Netherlands, 1913; Rumania, 1912; Sweden, 1913 (old age insurance); Glarus (Switzerland), 1916; Australian Federation, 1908, 1912; and New Zealand, 1898. Old age and invalidity insurance are compulsory in Austria for workers in mines, and salaried employees, and in Russia for railroad workers. In addition, Belgium, France, Italy, Spain, Canada, and Massachusetts and Wisconsin in the United States, provide for State subsidies or allowances in the case of voluntary old age insurance subject to State control.

THE UNITED STATES. Compulsory old age insurance has never been inaugurated in the United States, although the past few years have seen increasing interest in the problem, and old age pensions have been paid to Federal and State employees, and to the workers in many private enterprises. During the past year the Ohio Health and Old-Age Insurance Commission handed down an extensive study and report, in which Old-Age Insurance in compulsory form was recommended. Legislation was enacted by State legislatures during 1919 relating to the payment of Old-Age Pensions, as follows:—

California. A retirement system is established for county employees. Contributions are required from employees, and after an employee has contributed for 10 years the county is to place to his credit monthly an equal amount. On reaching the age of 60, if the employee has been in service 10 years, otherwise on reaching 70, the employee may be retired on the annuity to which his contributions plus the county contributions, with interest, will entitle him. The plan is to be supervised by the insurance commissioner. (C. 373, in effect July 21, 1919.) Congress is requested to pass the McKellar-Keating bill for pensioning superannuated and disabled civil service employees of the United States (S.J.R.5,C.14. In effect Jan. 25, 1919).

Connecticut. The Board of control is empowered to retire on half pay any one who has been in the State service 30 years and is 65 years old, or for 25 years and is 70 years old. (C.210. In effect, July 1, 1919.)

Illinois. The tax which the park commissioners are authorized to levy so as to be sufficient when added to the contributions of employees to cover the benefits authorized to be paid from the park employees' annuity and benefit fund, must not exceed two-thirds of a mill on a dollar. (S.B. 562. In effect July 1, 1919.) The limit of the tax which cities of over 100,000 are permitted to levy for the support of the municipal employees' pension fund is reduced from one-half to one-third of a mill. (S.B. 437. In effect, July 1, 1919.)

Maine. Heads of State institutions and departments may recommend the retirement on pension of persons employed for 25 consecutive years. Such persons may then on the approval of the governor and the council be retired on not more than one-half of their average wage during the previous five years. (C.38. In effect, July 3, 1919.)

Massachusetts. The pension plan for State

employees is modified to permit reinstatement of war veterans within two years after discharge from the colors. (C.94. In effect, May 9, 1919.) The act providing for retirement of superannuated city or town employees on pensions equal to one-half of the average salary of the two years prior to retirement is amended to make the pension one-half of the salary at the time of retirement. (C.21. In effect, April 4, 1919.) The pension plan for county employees is amended to permit reinstatement after two years' absence and to provide that in the case of War veterans the time spent in the service shall be excluded in reckoning the two years. (C.106. In effect, April 16, 1919.) When approved by the mayor and council pensions for superannuated laborers employed by Boston are no longer to be limited to \$360 a year. (Sp.C.55. In effect, March 30, 1919.) When approved by the mayor and council, the maximum pension for superannuated janitors and attendance officers of the Boston schools will be raised from \$360 to \$500 per year. (Sp.C. 132. In effect, May 9, 1919.) (Cities outside of Boston, and towns having a population of 10,000 or more are authorized to retire school janitors who have served 25 years and become incapacitated at the age of 65 years, on half pay, but not more than \$500 per year. For cities the act may be accepted by the mayor and city council, for towns by the voters at town meetings. (C.143. In effect May 31, 1919.) The act relative to pensioning laborers employed by cities and towns may be extended to foremen employed by Holyoke if so desired by the voters at the next municipal election. (Sp.C.49. In effect March 29, 1919.)

Minnesota. Any employee who has been for 20 years in the service of any county having 33,000 or more inhabitants, and who has become physically or mentally incapacitated, may be retired and his salary continued for three months (C.23. In effect Sept 22, 1919.)

New Jersey. The law establishing pension funds for the employees of street and water commissions is amended to permit assessments in excess of 2 per cent of the annual salary and provision is made for the refunding of contributions of honorably discharged employees (C.259. In effect April 17, 1919.)

New York. Members of the retirement pension commission are not to be disqualified from holding other State or municipal offices, and the date for filing their report is postponed until 1920. (C.22. In effect, Feb. 26, 1919.)

Oregon. The State's Congressional representatives are urged to use all honorable means to secure the passage of the federal employees' pension bill. (S.J.R. 24. In effect, Feb. 24, 1919.)

Pennsylvania. The pension plan for counties of from 1,000,000 to 1,500,000 population is amended, making it more specific as to administrative detail. (No.100. In effect, May 8, 1919.)

Wisconsin. A "pension laws commission" of five unpaid members is directed to investigate the operation of pension laws and make recommendation to the Legislature. (C.514. In effect, July 11, 1919.)

ITALY. Through the viceregal decree of April 21, 1919, No. 603, Italy has introduced compulsory old-age and invalidity insurance for practically all manual workers, salaried employees, and professional classes, within its borders. The

decree replaced the government-subsidized voluntary insurance plan, and had the unanimous support of all employers' and employees' associations. Under its provisions insured persons have a valid claim for a pension (1) when they have completed the 65th year of age, and have made at least 240 bi-weekly contributions, and (2) at any age if they have become permanently disabled for work, and have made at least 120 bi-weekly contributions. An injured person is considered permanently disabled when his earning capacity has been reduced to less than one-third of the usual earning capacity of persons engaged in the same work in the same locality. If the condition of a pensioner improves so that he no longer comes within the definition of permanently disabled, the pension may be suspended. The income for this insurance is derived from contributions levied on each insured person and his employer in equal amounts, and from funds furnished by the state as a subsidy. Provision is made for increasing the insurance through voluntary increase of contribution rates. General supervision is exercised by the Ministry of Industry, Commerce, and Labor, which is required to submit an annual report to the Italian Parliament. The Insurance Council is placed in an advisory capacity, and the establishment of a technical actuarial office, to supervise the application of the law and to conduct researches, is provided for. The decree becomes effective on Jan. 1, 1920.

SPAIN. In Spain provision for the creation of deferred life annuities on a contributory and state-aided basis, was effected by the law of Feb 27, 1908. The act was of a voluntary, not compulsory, nature. However, by a Royal Decree of March 11, 1919, old age insurance was made compulsory for all wage earners from 16 to 65 years of age whose total income was below \$800 per year. This insurance programme is supported by the state, a tax on employers, and compulsory contribution from insured persons; it yields a maximum of \$400 per year, payable from the age of 65. It is administered by the National Insurance Institution, a government organization which was established in the year 1908.

URUGUAY. The Old Age Pensions Law became effective in Uruguay on May 15, 1919. It provides for all persons reaching the age of 60 years, and other persons who may become entirely incapacitated and who are indigent, an annual pension of not less than 96 pesos (\$99.28), which may be paid in cash or in assistance. Foreigners or naturalized citizens of 15 years continuous residence are entitled to the pensions. Funds for the payment of these pensions are to be derived from new and increased imposts, as follows: 1. A monthly tax of 20 centesimos (20.68c) payable by each employer for each person in his employ. 2. A surtax on real estate having a value of not less than 200,000 pesos (\$206,840) graduated from 1.05 peso (\$1.09) to 1.30 pesos (\$1.34) per 1000 pesos value, the latter representing the assessment on property valued in excess of 700,000 pesos (\$723,940). 3. Revenue taxes levied on playing cards, liquors, etc.

O'LEARY, ARTHUR. An English organist and eminent teacher, died at London, March 19. He was born at Tralee, Ireland, Mar. 15, 1834. For more than half a century he taught at some of the foremost music schools of London (Royal

Academy of Music, Guildhall School, etc.). He wrote some symphonic music and edited the piano-works of S. Bennett.

OLIVER, GEORGE TENER. Former United States Senator, died at Pittsburgh, Pa., January 22. He was born in Ireland, Jan. 22, 1848, and graduated at Bethany College, W. Va., in 1868. He practiced law in Pittsburgh from 1871 to 1881 and for the next 20 years was engaged in iron and steel manufacturing. He purchased the *Pittsburgh Gazette* and *Pittsburgh Chronicle Telegraph* in 1900 and continued as publisher to the time of his death. He was presidential elector in 1887 and delegate to the Republican National Conventions (1904-16). He was elected to the Senate on Mar. 17, 1909, for the term that expired in 1911 when he was reelected.

OLIVERAITE. See MINERALOGY.

OMAN. An independent Mohammedan state in Southeastern Arabia whose integrity has been guaranteed by Great Britain and France. Area, estimated at 82,000 square miles; population, at 500,000 chiefly Arabs. Capital, Muscat, with a population including the adjacent town of Muttrah, of about 24,000. Reigning Sultan, Seyyid Taimur bin Feysil.

ONE BIG UNION. See INDUSTRIAL WORKERS OF THE WORLD.

ONTARIO. Next to Quebec, the largest province of Canada lying between Quebec on the east and Manitoba on the west, capital, Toronto. Area, estimated at 407,262 square miles of which 41,382 are under water. Population 1911, 2,523,274. The population of Toronto was estimated in 1917 at 473,829—the largest city in Canada; population of Ottawa the capital of the Dominion, 100,561. The executive power is in the hands of a lieutenant-governor appointed for five years by the Governor-General, and an executive council or responsible ministry; legislative power, in a single chamber of 111 members, elected for four years. The Legislature was distributed among the political groups at the beginning of 1919 as follows: Conservatives, 79; Liberals, 31; Labor, 1. Lieutenant-governor in 1919 Sir J. S. Hendrie; Prime Minister, E. C. Drury. See CANADA.

OPERA. See MUSIC.

ORANGE FREE STATE. A province of the Union of South Africa. Capital, Bloemfontein with a population of 26,925 in 1911. European population in 1918, 15,752. See SOUTH AFRICA, UNION OF.

ORCHESTRAS. See MUSIC.

OREGON. POPULATION. The population of the State in 1910 was 672,765 and July 1, 1919, it was estimated to be 914,493, a gain during the twelvemonth of 26,000.

TRANSPORTATION. The main line single track mileage in the State in 1919 was 2937. The longest roads were the Oregon & Washington Railroad & Navigation Co., and the Oregon & California.

AGRICULTURE. The following is compiled from an annual report of the Federal Department of Agriculture.

Crop	Year	Acreage	Prod Bu	Value
Corn	1919	71,000	1,860,000	\$2,883,000
	1918	44,000	1,364,000	2,114,000
Oats	1919	347,000	11,104,000	10,216,000
	1918	361,000	9,025,000	8,664,000
Barley	1919	82,000	1,886,000	2,829,000
	1918	164,000	4,100,000	5,576,000

EDUCATION. The school population in 1919 was 207,158, and the enrollment was 146,546. The average daily attendance was 111,832 86, and there were 5913 teachers. The total educational expenses of the State for elementary and high schools in 1919 amounted to \$8,275,334.

FINANCE. The balance on hand on Dec. 31, 1918, was \$3,128,789, and on Dec. 31, 1919, it was \$3,271,798. The receipts for this period were \$17,811,118 and the disbursements amounted to \$17,668,110. The bonded indebtedness of the State on Sept. 30, 1918, was of a par value of \$3,040,000, with a discount on sale price of \$159,310. The laws of 1917 are authority for the issuance of all these bonds.

OFFICERS. Governor, James Withycombe; Secretary of State, Ben W. Olcott; Treasurer, O. P. Hoff; Attorney-General, George M. Brown. See OLD AGE PENSIONS.

OREGON, UNIVERSITY OF. A co-educational State institution, located at Eugene, Ore. There is a medical school at Portland, Ore, connected with the university. Early in 1919 a unit of the Reserve Officers' Training Corps was established. The institution was founded in 1876. President, P. L. Campbell, LL.D.

ORGANIC CHEMISTRY. See CHEMISTRY, GENERAL PROGRESS OF.

ORGANOTHERAPY. According to representatives of the manufacturing drug industry the demand for internal secretions on the part of physicians is likely to double in the near future. This comes about from several causes. First, in the individual case the result is very often marvelous and not easily explained by suggestion. When the drug is withdrawn improvement may cease, to reappear when the drug is resumed. This does not prevent permanent cures when the extracts are given over a sufficiently long period and when there is a genuine indication for their employment. The second reason is the naturalness of the treatment, for a child can understand that if the organism lack an ingredient which is indispensable to proper functioning, supplying the missing substance is a matter of feeding rather than medication. There is none of the mystery which attaches to the usual treatment of disease by drugs. It is, however, true that some of the active principles of organs are powerful drugs as well, and thus have a double use. Third, when disease can be treated from this viewpoint diagnosis as well as treatment is greatly simplified. When the practitioner has insight into the nature of a disease, treatment in the great majority of cases is a simple matter. The presence of the lues is readily recognized and treatment is as simple a matter as diagnosis, for we possess specific remedies. The same holds good for malaria. Treatment of disease by organic preparations falls under the same head. Nor is it usually necessary in these cases to submit the patient to exhaustive, repeated laboratory tests and to direct measures of treatment to the entire organism. The practitioner always looks forward optimistically to a treatment of disease by specific remedies and is inclined to believe,

in connection with obscure and incurable disease, that we have not yet discovered the real inwardness of the disease-process. Quite recently leprosy, once called the most incurable of diseases (with the possible exception of cancer) has come to be regarded as entirely curable. The remedy in this case is not new and not an organ extract but a substance long regarded as having specific properties. It is (Chaulmoogra oil and the improved results are due merely to improved technic. But it is not absurd to state that organ extracts may come in time to possess values but little dreamed of and even to-day it is known that thyroid extract is of great value in old lues, probably in part because it contains considerable iodine in an assimilable form. It may also come in time to be shown that various remedies really produce their good results by stimulation or other modification of the internal secretions. Organ extracts are, when viewed as remedies, specifics, and as such entitled to be placed alongside of quinine in malaria, mercury and salvarsan in lues, etc. That we cannot rapidly and effectively cure tuberculosis and cancer may be due to our ignorance of their intimate nature rather than to essential incurability.

The recently reported results in Paris of grafting the interstitial portion of the male gonad (testicle) into the tissues of old men will give an impetus to organotherapy. These experiments have not yet seen the full light of day and some medical men have wrongly looked upon the whole subject as a newspaper hoax. But the idea is not new in the United States, for Dr. G. Frank Lydston of Chicago and others have been engaged in this field of work for many years. Cases long ago published, however, did not include old men, but men who were young or in the prime of life, who had lost their gonads from accident or disease. It is stated however that Dr. Lydston has also reported cases in which old men were the subjects and according to the daily press Lydston's technic has been used upon aged convicts in San Quentin prison. In all of these experiments the old have undergone a sort of general rejuvenescence as a result of the grafting, but this improvement has been limited to the subjective feelings, the bearing, etc., and did not extend to the restoration of many youthful objective characters.

In the French experiments the gonads of apes were used while in the American experiences the organs were taken from executed criminals, men dead of accident or previously subjected to operations, etc. It is not absolutely necessary that the grafted gonads be healthy as long as a certain amount of interstitial tissue remains intact.

Combinations of extract of male gonads, adrenal glands and thyroid glands have long been recommended for senility, general debility, etc., although no marvelous results have been claimed. It is possible that results obtained by grafting may come to be duplicated by ordinary internal medication. We no longer look forward chiefly to the diagnosis and treatment of conditions due to deficiency in a single gland, but to so-called "pluriglandular syndromes" in which defective secretion concerns several glands. The practitioner in his diagnosis recognizes the shortage in the activity of several glands concerned and prescribes a mixture of

extracts which can subsequently be modified to suit the case. The failure to get good results in a given case is frequently due to prescribing one gland instead of a mixture, or to neglecting to vary the mixture first prescribed. Only prolonged experience will make it possible to prescribe correctly so that we shall probably soon see endocrinology a recognized specialty. Already there is a National Society directed to the study of this subject and an official organ named "Endocrinology," has been in existence for several years. Not all organotherapy is directed to deficient secretion of the endocrine glands for some maladies are due to excessive or perverted secretion. The most striking results are, however, obtained when there is defective action. The subject must not be confused with Deficiency Diseases believed to be due to lack of so-called vitamins. See DEFICIENCY DISEASES.

ORLANDO, VITTORIO EMANUELE. Italian representative at the Paris Peace Conference. He was at that time Prime Minister of Italy. He was a Sicilian by birth and had been professor of constitutional law at Palermo university. For many years he was a close ally of the former Prime Minister, Giolitti, and he was Minister of the Interior in the recent cabinet of Boselli, in which capacity he was criticized as too mild in his dealings with neutrals and pacifists. But upon succeeding Boselli as Prime Minister in 1917 he governed with a strong hand and he also won confidence by his courage during the period of great depression after the Caporetto disaster, when he solidified the national resistance by his patriotic speeches and administrative measures. He was believed to be in favor of a liberal foreign policy, and it was he who had assumed a friendly attitude toward the Jugo-Slavs at the time of the Congress of Oppressed Nationalities.

ORVILLITE. See MINERALOGY.

OSLER, SIR WILLIAM. British physician, for a long time a resident in the United States, died at Oxford, England, December 29. He was well known as a physician in the United States, where he made an especial impression by an address in which he was reported as characterizing all men over 40 years as comparatively useless. He was born at Bondhead, Canada, July 29, 1849, educated at Trinity University, Toronto; McGill University, Montreal, and London University, England. He was professor of physiology and pathology at McGill 1874-84, became professor of chemical medicine in the University of Pennsylvania in 1884, and professor of medicine at Johns Hopkins in 1889. From 1905 he was Regius professor of medicine at Oxford, and he lived in England until his death. His work embraced nearly every field of medicine and he was, besides, an admirable lecturer and organizer. In 1914-15 he was engaged in investigating the medical preparedness of the British armies. The remark above-mentioned in regard to men over 40 was widely quoted in the press and the spirit of his address on that subject was perverted, the term "Oslerism" being employed as if it meant literally that men over 40 years of age should be put out of the way as no longer of value to society. His views on the subject were not so one-sided as they were made to appear. As a

teacher his influence was remarkable and applied not only to medicine but to a wide range of interests. He remained in active practice until the close of his life. During the war his only son, a lieutenant in the army, was killed in action (1917). Among his publications may be mentioned the following: *Cerebral Palsies of Children*, (1889); *Chorea and Choresform Affections*, (1894); *The Principles and Practice of Medicine*, (8th ed., 1912); *Lectures on Abdominal Tumors*, (1895); *On Angina Pectoris and Allied States*, (1897); *Monograph on Cancer of the Stomach*, (1900); *Science and Immortality*, (1904); *Equanimity and other Addresses*, (1904); *Counsels and Ideals*, (1905); editor of *A System of Medicine*, (2d ed., 1915); *Thomas Linacre*, (1908); *An Alabama Student and other Biographical Essays*, (1908); *A Way of Life*, (1914).

PACKING HOUSE. See LIVE STOCK and FOOD AND NUTRITION.

PAGEANTS. No important pageants were held during the year but worthy of mention are the military pageants held in New York City on May 3d and the Peace Pageant held in Washington, D. C. on July 4th, which are briefly described under CELEBRATIONS (q.v.).

PAHANG. See FEDERATED MALAY STATES.

PAINTING AND SCULPTURE. The year 1919 saw the end of the great war and a cessation of the multitudinous activities of artists and art societies connected directly with war propaganda, Liberty Loan drives, and the like. The last effort and perhaps the most ambitious, was the Victory Liberty Loan drive. All the principal cities were embellished with posters, and vivid street decorations. In New York the "Victory Way" a very ambitious effort, converted a public thoroughfare into a great court-way with huge pillars on either side and a series of immense mural decorations representing the Allied nations, the whole presenting quite a grandiose effect. The immediate result of the war was an unprecedented demand for public memorials of all descriptions. Great care must be exercised that only works of real artistic merit be selected.

The necrology list of 1919 includes among American artists, the names of Charles Yardley Turner, mural decorator; the veteran figure and portrait painter, Frank Duveneck; Jules Stewart, long resident in Paris; Julian Story, portrait painter; E. L. Henry, the well-known painter of old fashioned American genre subjects; Ralph A. Blakelock, whose landscapes have become famous, Julian Alden Weir, prominent landscape and figure painter, president of the National Academy from 1915-17, and member of the "The Ten"; Gilbert Gaul, battle painter; Kenyon Cox, mural decorator, author and critic. Also James R. Brevoort, painter, Charles F. W. Mielatz, etcher; Edmund C. Messer, painter and former principal of the Corcoran School of Art; Darius Colt, painter and poet; Herbert T. Ward, sculptor, and Sarah Morris Green, sculptor. The death list included also two eminent art collectors, Charles L. Freer, who donated his large collection to the National Museum, Washington, and Henry Clay Frick, whose superb collection of old masters together with the handsome residence in which they were hung, becomes public property on the death of his wife; the architect, Charles Pratt Huntington, and Edwin A. Rockwell, for many years art editor

of the Brooklyn Eagle. In Great Britain we note the death of Sir Edward John Poynter, President of the Royal Academy; George A. Storey, artist and authority on perspective; Sir Ernest Albert Waterlow, landscape painter; George Howell Baker, figure and landscape painter; Arthur Hacker, R.A.; Charles Fairfax Murray, eminent art collector and connoisseur, and Henry J. Duveen, head of the firm of that name. In France were Jules Guiffrey, writer and former director of the Gobelins, a member of the Academy; Auguste Lepère, engraver; Alfred Philippe Roll, figure and portrait painter. Ernest Casini and Eduard Houssin, sculptors, and Auguste Renoir, pioneer of Impressionism, one of the foremost French painters of the century. The necrology of artists for other European countries is not available; it includes, among others, Paul Berthet, German sculptor.

EXHIBITIONS: PENNSYLVANIA ACADEMY. The 114th annual exhibition of the Pennsylvania Academy of Fine Arts at Philadelphia opened with fewer exhibits than usual, 400 instead of the usual 600-700. This naturally permitted greater freedom in hanging the pictures, and the result was an unusually interesting and attractive display. The prize winners were Charles H. Davis, to whom went the Jennie Sesnan Gold Medal for "Over the Hills," an able and characteristic work; Colin Campbell Cooper, who carried off the Walter Lippincott Prize for the best figure composition in the exhibition, with "Summer," two pretty girls in a boat, gathering lilies; Daniel Garber won the Temple Gold Medal with a charming effect of a slim young girl silhouetted against the light, entitled "The Orchard Window"; Juliet W. Gross, with her bright, vivacious "On the Hill" captured the Mary Smith Prize for the best work by a woman in the exhibition, and Leslie P. Thompson the Beck Gold Medal for the best portrait. The Stotesbury Prize was awarded to Arthur B. Charles for a large, sensational canvas entitled "La Marseillaise." Miss Jess M. Lawson received the Widener prize for her dramatic "Belgium—1914," already familiar. Among the many good portraits were examples by Leopold Seyffert, Cecilia Beaux, Albert Rosenthal, Howard Smith, Adolphe Borie, DeWitt Lockman, and Lamar Raditz. Special mention might be made of J. McLure Hamilton's double portrait of Judge and Mrs. Alexander Simpson; the full length presentment of Eugene Castello by Wayman Adams; Robert B. Susan's "Girl in White," and George Luks' "Mary Ellis." Notable figure compositions were the "Interior," by Frank Benson; "Greenwich Village," by John Sloan; Philip Hale's large "Cain"; the "Gold Fish," by Richard Miller; two large Indian subjects in the familiar styles of Irving B. Couss and E. Blumenschein, and especially, "The Conspiracy," by Wayman Adams, a group portrait of three men, in hats and overcoats, absorbed in animated conversation in front of the Philadelphia Public Buildings. Other figure compositions were by Childe Hassam, Charles Hawthorne, Leopold Seyffert, Wm. Paxton, and Robert Henri. An unusually spirited marine was the "Transatlantic Convoy," by Frederic Waugh. Hayley Lever, Richard Andrews and Henry Reuter dahl were represented by excellent marine subjects. Characteristic landscapes, always a pleasure to see, were by J. Alden Weir, Cullen Yates, Robert Vonnob, Olaf Brauner, Willard Metcalfe,

Edw. Redfield, Carl Rungius, Robert Spencer, Chauncey Ryder, George Bellows, a sombre "Moonlight Ride," Charles Rosen, with "Opalescent River" and Jonas Lie "At the Docks," a strong and convincing work. Examples by younger artists with a strongly localized American flavor were by Paul King, Roy Brown, Fred. Wagner, Charles Reiffel, and Eric Hudson. The small sculpture exhibition included examples by Chester Beach, Albin Polasek, Charles Gaffly, A. A. Weinman and Leo Friedlander.

NATIONAL ACADEMY, SPRING EXHIBITION. The 94th annual exhibition of the National Academy presented a competent if somewhat monotonous aspect. The paintings were less in number, smaller in size and harmoniously hung, with landscapes predominating. Interest naturally centred in those by Edward Redfield and Gardner Symons, which won the first and second Altman prizes. Mr Redfield's "Old Mill in Winter" showed delicate color and fine composition, and "Shimmering Tree Shadows" by Gardner Symons, was a really beautiful canvas, with more poetry in it than is usually displayed by this artist. Other notable landscapes were "The Hawk's Nest" by Daniel Garber, and Childe Hassam's "The Alders" both beautiful in color and full of suggestive content; "Hills and River," by Charles Rosen, strong and fine in color; a breezy colorful production by Van Perrine; W. Granville Smith's luscious "Summer Night," the delicately luminous "Lily Pond," by Paul King and an excellent example of Hayley Lever's spirited work. The list included also landscapes by Chauncey Ryder, Ernest Lawson, Reynolds Beal, DeWitt Parshall, Edward Potthast, Howard Russell Butler, Guy Wiggins, Emil Carlsen, Walter Griffin, Ehot Clark, Robert Spencer, John Follisbee, and Albert Groll. "Between Setting Sun and Rising Moon," a blue-toned wood interior of dark, mysterious sentiment by Robert Strong Woodward, was awarded the first Hallgarten Prize.

The Isaac Maynard Prize for the best portrait went to Irving Wiles for "The Little Green Hat" and the "Portrait of Miss Marion Ryder," by Ercle Cartotto, very delicate and restrained in handling, captured the second Hallgarten Prize. Other portraits of note were by W. T. Smedley, Leon Kroll, who contributed a presentment of the artist Howard Giles; Victor Hecht, Leopold Seyffert, Henry Rittenberg, Lydia Field Emmet, Henry Poore, De Tryffyllis, and Malcolm Purcell, whose "Louine," in subdued grays and greens, won the Saltus medal. A dashing, life size portrait of a young woman by DeWitt Lockman, with brilliant color and vivacious texture handling, calls for special mention.

Figure compositions were limited in number and of no striking import. "Trawlers, Monterey," by a new comer, Armin Hansen, was a marine with rich abundant color and breezy movement. Jerome Myer's "Evening," a group of women in East Side New York, of satisfying fullness of color, won the Thomas B. Clarke prize. Other good examples were "On the Porch," by Adolphe Borie; "A Spanish Lady," by Philip Hale; "Mending the Ballet Skirts," by Louis Kronberg; "Indian Corn," by Walter Ufer; G. L. Nelson's "Child's Supper"; "Rosemary," a baby portrait by Luis Mora; a small "Market Scene," by Olaf Olson, and an unusual little canvas "Christ and His Disciples," by

Andrew Conor. The "Jade Bowl," a still life by Dines Carlsen, received the third Hallgarten Prize. Among 53 pieces of sculpture shown were examples by Emil Fuchs, Brenda Putnam, Chester Beach, A. Lukman, C. S. Paolo and J. S. Juszko, the latter a strong portrait head of Judge Gary.

CHICAGO ART INSTITUTE. The 32d annual exhibition of American paintings and sculpture at the Art Institute showed perhaps less conservative tendencies than usual in the general selection of the exhibits. Paintings by George Bellows filled an entire room, a number of them being his already familiar war pictures, and an Indian painting of colossal size, by Julius Rolshoven, covered the entire wall of another room. Leon Kroll was awarded the Logan Prize for his striking "Leo Ornstein at the Piano." Other awards were to Frederic J. Waugh, Robert Spencer, Frank V. Dudley and Lillian Westcott Hale. The latter's painting, a charming "Portrait of a Child," took the Potter Palmer Prize. "Sand Dunes," by Frank V. Dudley, a Chicago artist, was an exceptionally fine effort. The sculpture display was small and contained, among others, works by Albin Polasek, Louis Mayer, Victor Salvatore, and Gilbert P. Riswold.

CORCORAN ART GALLERY EXHIBIT. After an interval of two years, owing to war conditions, the exhibition of "Contemporary American Oil Paintings" at the Corcoran Art Gallery, Washington, was again resumed, with a large and representative showing of American painting at its best. The 316 paintings were well hung in the handsome and spacious galleries, and nearly all were seen for the first time. Beginning with such veteran artists as Elihu Vedder, Abbot Thayer, George deForest Brush, Mary Cassatt, J. S. Sargent, Gari Melchers, Edmund Tarbell, Childe Hassam, Cecilia Beaux, Joseph DeCamp, Horatio Walker, T. W. Dewing, the list included also such names as Arthur Davies, Maurice Sterne, Eben Comins, Sargeant Kendall, Randall Davey, Paul Dougherty, John C. Johansen, Walter Ufer, Howard Giles, Daniel Garber, Charles W. Woodbury, Hobart Nichols, W. L. Lathrop, Walter Griffin, Everett Warner, Eliott Clark, Edward Redfield, Chauncey Ryder, Paul King, Carl Rungius, and a host of others. The winners of the four William A. Clark Prizes were Frank W. Benson, with an interior "The Open Window"; Charles H. Davis, "Sunny Hillside," a landscape with rich and juicy color; Edwin Rook, a brilliant flower piece "Peonies," and Wm. S. Robinson, a landscape "October." The paintings purchased for the permanent collection of the Corcoran Art Gallery were, besides the prize winners, Frederic Frieseke's "Lady in Pink," and landscapes by Gardner Symons, Bertha H. Perrie, Relicie W. Howell, and Robert Spencer.

NATIONAL ACADEMY, WINTER EXHIBITION. A dearth of impressive portraits, the lack of representation by many well known academicians, and an unusual number of smaller paintings of good quality by artists more or less unfamiliar, marked the winter exhibition of the National Academy of Design. The most satisfactory prize winning picture was an excellent portrait study "The Painter," by Walter MacEwen. The Altman awards were undoubtedly open to criticism. A figure piece, agreeable but devoid of depth or originality, entitled "The Top of the World," by Charles C. Curran, received the first prize,

and a bright and cheerful but quite uninspired rendition of a familiar motif, a Hudson River steamboat with people disembarking at some upriver town, by Gifford Beal, was awarded the second. The Carnegie Prize went to Emil Carlsen for a beautiful surf painting, and the Isidor Gold Medal was given to R. McMillan for a convincing little portrait study entitled "An Old Lady." Two exceptionally fine marines, "Lifting Fog" and "The Sea Toilers," by Jonas Lie call for special mention. Notable figure compositions were "Pegasus," by Karl Andersen, C. C. Campbell's "Summer," exhibited before in Philadelphia; an impressive standing row of Indians by Walter Ufer; James A. Hopkinson's lanky Cumberland mountaineer; Ivan Olinson's charming if somewhat sentimental "Adoration"; Raymond Neilson's bright and decorative "The White Parasol," and K. A. Buehr's "Home and Hollyhocks," while a bit thin in spots constituted a pleasing and well arranged canvas. Others were by Gertrude Fiske, Louis Ritman, Richard Miller, John Costigan, Louis Kronberg, Jerome Myers, G. J. Stengel, John F. Folinsbee, Philip L. Hale, whose "Flowers in the Moonlight," had a strange, unearthly quality; Maurice Fromkes, E. Irving Couse, and Maurice Molarsky. Among the portraitists were good examples by the following: Orlando Rouland, Jean McLane, Sidney Dickenson, A. Franzen, Robert Gauley, Leon Kroll, Edmund Greacen, Edith C. Phelps, Giuseppe Trotta, Luis Mora, and Norwood MacGilvary. A life size portrait group of three, with vivid orange as a key note, by Charles Hawthorne, and an unobtrusive but sensitive and striking little head of Mdle. de K. by Anne Goldthwaite may be specially mentioned. Characteristic landscapes by Ernest Lawson, John Carlsen, Cullen Yates, H. R. Butler, W. Granville Smith, R. S. Woodward, C. Chapman, Ernest Albert, A. Molarsky, Bruce Crane, Ernest D. Roth, Guy Wiggins, Robert Spencer, Charles Reiffel, Howard Giles, and others formed points of interest in the different rooms. A fine open western landscape "Wyoming," by Carl Rungius; the impressive "Peace and Quiet," by G. Glenn Newell, and "Early Spring," by Carleton Wiggins, breathing peace and quiet, appealed especially.

Uniformly small in size were the 85 pieces in the sculpture exhibit. "Big Oak," a finely characterized portrait head by Victor Salvatore, received the Helen Foster Bennett Prize. The genial "Baby Boat," by Laura Gardin Fraser, took the Julia H. Shaw Memorial Prize, and the Watrous Gold Medal was given to Rudolph Evans for "Boy and Panther." Janet Scudder, Abraham Rosenstein, Marco Zim, Gerome Brush, G. Novani, Chester Beach, Isidore Konti, A. A. Weinman, J. Juszko and F. Tolles Chamberlin contributed portrait busts, while interesting figures and animal groups by Ulysses A. Ricci, Allan Clark, A. P. Proctor, Karl F. Skoog, Alexandre Zeitlin and Brenda Putnam were noteworthy.

SOCIETY OF INDEPENDENT ARTISTS. The third annual exhibition of this society, which maintains the principle of "no prizes, no jury," opened in New York, with 650 exhibits as against the 1500 of their first venture. A general survey revealed a noticeable falling off of examples of Futurist and Cubistic art. As all paintings were hung in alphabetical order, amazing juxtapositions resulted. Although

much of the work shown was by artists still apparently in the experimental stage, many excellent works were shown by well known artists like Robert Henri, William Glackens, Jonas Lie, George Luks, George Bellows, Reynolds Beal, and others, as well as some by lesser known men.

OTHER EXHIBITIONS. Perhaps the most important and interesting exhibition of the year was the Gustave Courbet Centenary Memorial, held at the Metropolitan Museum of Art. Over 40 fine canvases were on view, all characteristic works of this great realist, whose influence on contemporary painting was so far reaching. A loan exhibition of old masters at the Lotos Club, New York, was a revelation of the many important examples of early Dutch and Flemish art in private collections. Examples of Pieter de Hooch, Jan Steen, Thos. de Keyser, Van Goyen, Terborch, Cuyp, Plihek, Nicholas Maes, Rembrandt, Hals, Tintoretto, Velasquez, Van Dyck and Rubens, were to be seen, and especially the superb "La Jahagie" of Brouwer, belonging to Mr. Michael Friedsam. At the Corcoran Art Gallery, Washington, an exhibition of "The Ten" was held. The American Painters, Sculptors and Gravers held their first annual exhibition in New York, with works by Gari Melchior, Robert Henri, G. Du Bois, Jonas Lie, Samuel Halpert, Randall Davey, Maurice Sterne, Rockwell Kent, and others, including the sculptors, Paul Bartlett, A. Sterling Calder, John Flanagan, and Mahonri Young. Other societies which held annual exhibitions in New York were "Women Painters and Sculptors," "New York Water Color Club," "New York Society of Painters," "National Association of Portrait Painters," and the "Allied Artists of America." Of exceptional interest were certain exhibitions of the works by single artists in local galleries; of Auguste Renoir, with 21 examples completed since 1914; Monet, with examples of his latest work; Odilon Redon, a series of lithographs and etchings of great interest, Jean Julien Lemordant, poet-painter, blinded in action in the great war, and the impressionist Pissaro. An exhibition of French drawings, etchings and lithographs showing the development from Ingres and Delacroix down to the present day was especially noteworthy. An exhibition of American painting and sculpture was sent to Paris and placed on view in the Luxembourg. In return the French government organized an exhibition of contemporary French art, which, after many delays, was finally installed in the Metropolitan Museum of Art. The exhibition as a whole, although containing examples by eminent artists like Renoir, Monet, Andre, Simon, LeSidaner, Caro-Devaille, Maurice Denis, Desnard, and others, did not uphold the expected high standard of modern French art.

MUSEUM ACQUISITIONS. During the year the Metropolitan Museum of Art acquired two early Italian pieces, a Siennese triptych, and Florentine panel, a "Crucifixion," by Pesellino; a valuable eighteenth century French cylinder desk with the royal coat of arms; a large Courbet, "Roger Le Diable," both gifts; ten drawings from the Degas Sale; and "Marsyas," a characteristic example of the French sculptor, Pierre Puget, a purchase. An important piece of American sculpture "Memory," by Daniel Chester French, also a gift, was added to the collection of contemporary work. The Egyptian

Department was enriched by the addition of seven large seated statues of the goddess Sekhmet, and a choice collection of jewels excavated from the tomb of the Princess Sat-Hathor-Iunut of the twelfth dynasty, unequalled in beauty and number in any other museum outside of Cairo and acquired through the generosity of Mr. Walters of Baltimore. To the Print Department was added a complete set of 42 proofs of the woodcuts of Hans Holbein's "Dance of Death," and a notable addition to the Arms and Armor section was a beautifully engraved and gilded suit of French armor for man and horse, dated 1527. The Museum purchased in Portsmouth, N. H., the Wentworth-Gardner colonial house (1721) which will be preserved as a monument of a historic period.

In Youngstown, Ohio, the new Butler Art Institute, a beautiful marble building in the style of the early Italian Renaissance, was completed.

ITEMS OF INTEREST. A National Portrait Gallery Foundation was provided for through a donation of Mr. Christoffer Hannevig, and well known American artists have already been selected to paint 25 portraits of men prominent during the great war. Mr. Louis C. Tiffany offered his home on Long Island and a substantial endowment for purposes of an institute for art education, to be known as the "Louis C. Tiffany Art Foundation." Among the many projected war memorials, "Patriotism Guarding the Flag," by Paul Bartlett in Duluth, Minn., has already been completed. Other public monuments erected were the "Princeton Battle Monument," by Frederick MacMonnies, at Princeton, N. J.; "The Pioneer," at Eugene, Ore., designed by A. Phimister Proctor, and the "Benjamin Franklin" monument, by Paul Bartlett, at Waterbury, Conn.

In Paris, the beautiful eighteenth century Hotel Biron was converted into a Rodin Museum.

SALES. In America the outstanding single sales of importance were, the purchase by Mr. Henry Clay Frick, of the "Camperdown" Washington, by Gilbert Stuart for the sum of \$75,000; a beautiful Vermeer van Delft, from the Simon Collection, Berlin, and part of the famous collection of Limoges enamels, bronzes, etc., which formed part of the late Mr. J. P. Morgan's collection. Mr. Michael Friedsam acquired the portrait of Benjamin Franklin by Duplessis, and Josef Stransky added Degas' "Le Salut de L'Etoile," to his extensive collection. Single sales reported were the superb "Coast in Winter," by Winslow Homer for \$33,000 to a private collector; Whistler's well-known portrait of a lady as a Japanese; Manet's "Boy with a Soap Bubble," bought by Mr. Adolphe Lewisohn, and the famous "La Frileuse," by Houdon, purchased by Mr. H. P. Davison. Important events in Paris were the Michel Levy, Hoentschel and Flameng sales. Sir George Drummond's well-known collection of old masters long in Montreal, was dispersed in London, and single sales such as Reynolds's famous "Mrs. Siddons as the Tragic Muse," Jan Steen's "Spendthrift," a Romney portrait from the Hamilton House sale, purchased by Duveen Brothers, all brought record prices.

PALESTINE. A small region in Asia Minor in the southwestern part of Syria with an area estimated at 9900 square miles and a population estimated at 720,000, of whom about 500,000 were Mohammedan, 120,000 Jews, and

100,000 Christians. Of late years the trade of southern Palestine whose chief town is Gaza (pop., 35,000 to 45,000), has been expanding. Self-administering colonies of Jews and Germans have been established in Palestine. In the neighborhood of Jaffa there were 45 such colonies at the beginning of 1917 with a population of 15,000, consisting mainly of Russian Jews, and using Hebrew in the daily speech and in the schools. After the British conquest in 1918 it was occupied by the British, but in 1919 the French claimed the preponderant interest in all of Syria. See SYRIA; and WAR OF THE NATIONS; also ARCHÆOLOGY.

PALGRAVE, Sir ROBERT HARRY INGLIS. British economist, died January 25. He was the editor of the well-known Palgrave's *Dictionary of Political Economy* (3 vols., 1894-1914). He was born at Westminster, June 11, 1827. His other writings include: *The Local Taxation of Great Britain and Ireland*, (1871); *Notes on Banking in Great Britain and Ireland, Sweden, Denmark, and Hamburg*, (1873); *An Analysis of the Transactions of the Bank of England for the Years 1844-72*, (1874); *Bank Rate and the Money Market in England, France, Germany, Holland and Belgium 1844-1900*, (1903); *An Enquiry into the Economic Condition of the Country*, (1904).

PALMA, RICARDO. Peruvian author. See SPANISH LITERATURE.

PANAMA. A state of Latin America, situated between Colombia and Costa Rica; previous to Nov. 3, 1903, a department of Colombia Capital, Panama.

AREA AND POPULATION. The area of the eight provinces into which the country is divided is estimated at 33,776 square miles, and the population (1917) at 401,554 (census of 1912, 336,742), not including the Canal Zone. Chief towns, Panama, with a population estimated in 1915 at 60,028, and Colon with about 30,000. The prevailing religion is Catholicism. The government was authorized by the legislature on March 7th to promote immigration, preferably from the Canary Islands or Porto Rico for the purpose of developing the land. The government was to protect the immigrant and find a place for him if necessary. Any person under 50 years of age entering the country for agricultural purposes was entitled to these benefits. Education is supported by the State. Changes were introduced in the system of public instruction by the law of March 10th. Among the changes may be mentioned the requirement that primary instruction should be obligatory for all children from seven to 15 years of age, and that parents and guardians should be responsible under the penalty of 25 cents a day during the child's absence; the authorizing of the secretary of public instruction to obtain teachers of technical branches from foreign countries when necessary; the provision that employees should not be dismissed for political opinions or required to contribute to political funds.

PRODUCTION, COMMERCE, ETC. About five-eighths of the land is unoccupied, although the soil is of great fertility; and the cultivated tracts are not properly developed. The chief product is bananas; other products are coffee, cocoanuts, rubber, corn, sugar, tobacco, mahogany and other forest products. Sugar production for 1918 was estimated at 40,000 quintals. Statistics for commerce were not available later

than those given in the preceding YEAR BOOK. In 1917 imports were \$9,223,000 and exports \$5,624,000. The greater part of the trade was with the United States. There were about 200 miles of railway open to traffic including the Panama railway, crossing the Isthmus and connecting Panama with Colon. There is communication between the Isthmus and American and European countries on both sides by several lines of steamships. Traffic with Panama and Colon is carried on through the ports of the Canal Zone.

FINANCE. Gold is the standard of currency and the unit is the balboa, equivalent to the United States dollar. The budget for the two-year period Jan. 1, 1917 to Dec. 31, 1918, balanced at \$7,189,170. The two-year budget for 1919-21, inclusive, was estimated on January 28th at 7,220,474 balboas, and the net expenditure at the same amount. The latter was distributed as follows: Administration and justice, 2,664,910 balboas; foreign relations, 182,440; treasury, 1,935,817; public instruction, 1,100,730; agriculture, 1,356,577. Any excess revenue over that calculated was to be distributed in the following manner: Not less than 75 per cent to be used to establish a fund for road-building and repairing, and not more than 25 per cent to cover extra or special credits not in the budget for necessary expenses.

GOVERNMENT. Executive power is vested in the president, three vice-presidents and cabinet of five ministers; legislative power in the national assembly of 33 members, one for every 10,000 inhabitants. Each of the provinces has its governor. The president in 1919 was Dr. Belisario Porras. The year 1919 was the 400th anniversary of the founding of the city of Panama and celebrations were fixed for the 15th of August. See EXPLORATION, NORTH AMERICA.

PANAMA CANAL. In 1919 there passed through the Panama Canal a greater amount of traffic than in any year since it was opened. Two thousand, three hundred and ninety-six ships of 7,128,000 net tons, passed through the waterway. The cargoes of the merchant ships amounted to 7,711,000 tons.

Ships measuring 7000 tons, carrying 10,000 tons of cargo, were 2 per cent greater than in any previous year.

In December all previous monthly records were surpassed as 283 ships of 957,000 net tons, carrying cargoes of 953,000 tons, went through the canal. The tolls collected amounted to \$891,373 for December and \$6,972,000 for the year. In the fiscal year which ended June 30, 1919, the Panama Canal earned \$241,822 more than its operating expenses. The total cost of maintaining and operating the canal during the year was \$6,112,194. Of this amount \$3,382,163 was for overhead charges for civil government, hospitals, quarantine, sanitation, etc. Tolls on the vessels passing through the canal amounted to \$6,156,118, and revenue from licenses, taxes, fines, and profits on business operations increased this to total earnings of \$6,354,016. It was stated in connection with the financial report that the expenditures for maintenance and operation did not include any allowances for depreciation of the plant and equipment or any interest charges on the capital invested in the canal. It was of interest to consider that the entire investment of the United States in the canal up to June 30, 1919, was \$365,416,000.

In addition to this, the operating expenses had exceeded the revenue to 1919 by \$4,618,690. The net earnings over operating expenses in 1919 were about half what they were in the preceding year, the falling off being due to a decrease of about \$58,000 in revenues and an increase of about \$192,000 in operating expenses. The number of ships according to nationalities using the canal during the fiscal year 1919 was: Belgian, 1; British, 602; Canadian, 2; Chilean, 93; Chinese, 4; Colombian, 1; Costa Rican, 12; Danish, 79; Dutch, 19; Ecuadorian, 1; French, 104; Greek, 3; Japanese, 87; Mexican, 1; Panamanian, 128; Peruvian, 65; Russian, 3; Spanish, 5; Swedish, 29; United States, 786; total, 2025. On July 24th and 25th, 33 vessels of the Pacific Fleet of the United States navy were passed through the canal, the largest operation effected up to that time.

The following tables show the number of vessels moving through the canal in each direction during the fiscal year by months and the total number for five fiscal years:

Governor of the Canal Zone in 1919, Col. Chester Harding, U. S. A.

PAN-AMERICAN CHILD WELFARE CONGRESS. See CHILD LABOR.

PAPER. The American paper and pulp industry in 1919 was marked by general prosperity for the manufacturers, high prices for the consumers, and increased exports with promise of important developments in this last field. War restrictions had been abolished in the previous year, and while there were complaints of high prices and threatened investigations, yet the paper makers pointed to the fact that the alleged inordinate profits had not been such as to attract capital to embark in the industry on any large scale and there was a shortage of producing capacity for ordinary needs. The production of all classes of paper showed an increase over 1918. Thus in newsprint there was a substantial gain. In the U. S. from 24 companies reporting their statistics for the year 1919 a total production of 1,116,148 tons was reported, or 81,292 tons, nearly 8 per cent, in excess of that for 1918, 1,034,856 tons. In 1919 the production was 98.9 per cent of maximum and in 1918 it was 88.9 per cent. In 1919 the average daily output was 3600 tons as compared with 3338 tons in 1918. The total shipments from United States mills in 1919 were 1,121,613 tons as compared with 1,071,711 tons in 1918. In Canada the production of newsprint for 15 companies that furnished similar statistics was 769,809 tons in 1919, which amount exceeded the 1918 production, 702,936 tons, by 66,866 tons or more than 9 per cent. In 1919 the daily output was 2489 tons and in 1918 2275 tons. Canadian shipments in 1919 totalled 775,968 tons and in 1918, 712,959 tons. Along with the shortage of newsprint the prices were correspondingly high, that is as compared with earlier years, but not according to the paper makers when compared with the increases that had taken place in other commodities. Thus in a statement of average prices by months of newsprint F.O.B. at the mills there was a range of from \$3.588 per 100 pounds to \$3.902 at the end of the year, where in 1914 a similar range extended from \$1.92 to \$2.

What was true for newsprint held for other grades of paper and paper products during 1919 and there developed during the year an active export business. The newsprint exportation from the United States for 11 months ended November, 1919, amounted to 106,720 tons valued at \$9,717,599 as compared with 90,820 tons valued at \$7,451,417 in 1918. In these 11 months Argentina was the largest consumer and took 26,000 tons valued at \$2,182,583. In the same period book paper to the amount of over 74,000 tons valued at \$15,577,753 which was nearly double that of 1918, was exported. Writing paper to the value of \$12,716,637 was exported in the same 11 months of 1919 and represented an increase of more than \$7,000,000 from the previous year. Wrapping paper exported in the same period of 1919 aggregated 35,050 tons valued at \$6,239,463 as compared with 26,900 tons valued at \$4,392,851. In paper boards there was also an increase in exports while in rags and paper stocks exports of 15,000 tons valued at \$662,953 in 1918 grew to 23,747 tons valued at \$1,343,910 in 1919. Wood pulp increased from 18,266 tons valued at \$1,595,512 in 11 months of 1918 to 33,177 tons valued at \$2,815,799 in 11 months of 1919. For 10 months ending October,

1919, paper and paper products exported from the United States reached a grand total of \$76,377,538 in value. In November there was a decline in exports as American traders were disturbed by the low and fluctuating rates of foreign exchange. It was however manifest that where as in 1913 the United States only produced for its own consumption and was a large importer, in 1919 its exports were in active demand. In fact throughout the industry conditions were such that over \$5,000,000 worth of paper machinery was on order and new mills were under construction as a shortage of producing capacity was clearly evident. Typical of the high prices that this condition engendered it may be said that dealers in newsprint at the end of the year were asking \$85 to \$90 a ton in large yearly contracts and \$200 a ton for lots from 200 to 500 tons. This shortage affected in large measure the small publishers especially of rural papers and a bill was introduced into Congress by Representative Anthony to reduce the size of papers. Hearings were had on this bill, and informally it was agreed to cut down consumption for the next six months in the general interest. The paper men rather had the best of it in 1919 in their controversy with the publishers as the shortage of paper acted to reduce space available for advertising and thus cut down the publisher's profits.

In addition to the United States and Canada Japan showed a flourishing paper industry in 1919 a production of some 45,000,000 lbs having been secured in that year with a yearly increase of about 10 per cent. At the beginning of the year there were in existence 27 paper mills capitalized at yen 66,000,000.

Among the technical developments of the year in the United States were elaborate experiments to make paper from cotton linters which showed good progress and some studies undertaken at the Forest Products Laboratory in Wisconsin to seek means of destroying fungi and bacilli affecting American forest trees used for pulp.

During the year there were prepared by the Forest Service of the U. S. Department of Agriculture estimates of future supplies of pulp wood which were of special significance in view of the statement made that in less than 20 years 95 per cent of the pulp and paper mills of the country, mainly those in the East, would have practically exhausted their supplies of spruce, hemlock and fir—the principal woods from which the paper on which newspapers are printed is made.

In 1919 the annual cutting of these woods in the New England States and New York was approximately 3,262,000 cords, and at this rate the supply would last approximately but 17 years. The estimated annual cutting in the Lake States was 3,030,000 cords and if continued would exhaust the supply in that region within 18 years. Pennsylvania, Maryland, Virginia, and North Carolina, with their smaller forest resources, were even worse off, the annual cutting being calculated at 1,470,000 cords, at which rate the spruce, hemlock, and fir would last but 10 years. Only in Alaska, Washington, Oregon, and California were the reserves in no immediate danger of exhaustion if the cutting continued at the rate of 2,218,000 cords a year as was the rate in 1919.

The forest service further was of the opinion that with the rate of cutting practiced in 1919 the entire supply of the United States of hem-

lock, spruce, and fir resources, including the vast forests of far-off Alaska, would be sufficient to meet the lumber and paper demands for less than three-fourths of a century. But, inasmuch as 95 per cent of the pulp and paper mills were located in the East the inaccessibility of raw material and heavy transportation cost after a while would be serious. These paper mills were very expensive establishments, often costing millions of dollars, and could not be moved conveniently to new locations nor could wood be shipped to them economically from great distances.

Up to 10 years previously the Forest Service stated the United States was self-supporting with regard to newsprint, but within the decade 1910-19 the consumption exceeded home production and promised to do so increasingly. In view of this situation two alternatives must be considered, according to forest service experts and representatives of large wood-using industries. The country must depend increasingly upon Canada, eventually abandoning many of its own mills, or the nation's policy with regard to its private forests must be radically changed. Canada now has 90 paper and pulp mills which produce approximately 2100 tons of paper a day, of which 89 per cent is available for export. Of all supplies of paper, wood and pulp used by the United States about one-third now comes from Canada.

The forest service pointed out, however, that whether paper interests relied increasingly upon Canada, or upon increased use of Western resources, in either case these were temporary expedients. In the long run the country must solve the paper problem on the basis of a permanent wood supply. To this end it is urged that sawmill waste be utilized for paper making and that the forests of this country be regenerated and administered on a more productive basis.

Even more important than the utilization of mill waste was the regeneration of the forests for the perpetuation of the paper industry in the United States. The policy of wastefully cutting the forests and making little provision for future growth must be abandoned speedily, the forest experts urged. In the future operations should be so conducted as to secure increasing production of trees valuable for lumber and pulp.

In Canada paper and pulp represented an important industry and in the census for 1918 it was stated the capital investment amounted to \$241,708,223. The product for the year was valued at \$119,309,434 and the number of people employed exclusive of woodsmen, was 25,863 to whom the total of wages and salaries paid amounted to \$26,944,226. The exports for the fiscal year 1919-20 were estimated at approximately \$100,000,000 and of this amount some 75 per cent was imported by the United States. The exports from Canada in 1918 were 185,427 tons, and in 1919, for 10 months were 143,421 tons as compared with 151,711 tons in a corresponding period of 1918. Government regulation and restrictions continued in Canada and were to be in force until June, 1920. Towards the end of the year these restrictions gave rise to some slight friction and in December shipments to the United States were held up until the shippers should agree to supply Canadian consumers experiencing a shortage. In fact there was discussion of an export tax on paper

and pulp but up to the end of the year nothing definite was done in the matter.

PAPUA. A territory in the southeastern part of the island of New Guinea, formerly a colony of New Guinea, but since November, 1905, administrated by the Australian Commonwealth. The territory includes also a large number of small islands. The total area is 90,540 square miles, of which 87,786 are on the Island of New Guinea. The population was estimated on June 30, 1918, at 200,000 Papuans; 963 Europeans, and 311 colored other than Papuans. Other estimates place the total population higher, varying all the way to 400,000. Capital, Port Moresby. The chief products are coconuts, rubber, sago, and timber, but agriculture has not been developed. On June 30th, 1918, 42,675 acres of coconuts were under cultivation and at the same time the total area of plantation was placed at 57,593 acres. The four ports of entry are Port Moresby, Samarai, Daru, and Bonagai. Large steamships ply between Port Moresby and Sydney. In 1919 the railway between Port Moresby and Laloki River was under construction. Financial and commercial figures are as follows:

	1915	1916	1917	1918
Imports	£202,055	£223,040	£271,640	£283,792
Exports	84,714	125,428	156,535	220,599
Revenue	51,961	49,311	62,920	72,594
Expenditure	82,535	77,913	83,710	103,176
Shipping, tons	328,007	247,887	231,008	121,727

PARAGUAY. A republic of South America. Capital, Asuncion.

AREA AND POPULATION. Paraguay proper, which lies between the rivers Paraguay and Alto Parana has an area estimated at 65,000 square miles. The so-called Chaco, that is to say, the region between the rivers Paraguay and Pilcomayo, with an area of more than 100,000 square miles, is claimed by both Paraguay and Bolivia. The total population was estimated in 1917 at about 1,000,000 exclusive of about 30,000 Chaco Indians. In Paraguay proper the population is mainly of Guaraní Indian stock. Those of European descent are mainly of Spanish blood, but there are some of mixed European and negro race. The foreigners in 1917 were placed at 60,000, of whom from 20,000 to 30,000 were from Argentina. Asuncion (founded in 1537) has an estimated population of 120,000. Other large cities are Villarrico (26,000); Concepcion and Carapegua with 15,000 each. The Roman Catholic religion is the established religion of the State. Education is free and so far as schools are available is compulsory. The primary schools in 1917 numbered 1046 with 62,657 pupils. For higher education there are national colleges or high schools at the principal cities and there are also universities.

PRODUCTION. Forests prevail throughout the country, the area of the woodland being placed at over 11,250,000 hectares, containing abundant building wood timber, dyewoods, and wood for paper pulp. Oil-producing plants are found in abundance, such as the coconut palm, copaiaba and spurge, which grow wild in certain parts of the country. Fibre-producing plants are also found, including cotton. One of the most valuable products is iron-wood from which tannin is obtained for export. It is found especially in

the Chaco region of the west where the forest produces about 30,000 tons of tannin extract each year. There is a considerable export of lumber and building timber to Uruguay and Argentina, ranging from 60,000 to 100,000 tons a year. Cotton cultivation was important in the past but suffered during the war. Afterwards, however, efforts were made to cultivate enough for home consumption. Tobacco is an important product, the normal output being about 220,000 hundredweights. Sugar production in 1918 was estimated at 1700 tons. Among the minerals found in abundance are iron, copper and manganese. Iron has been worked for more than 60 years.

COMMERCE. The exports in 1918 were 11,399,712 gold pesos and the imports 11,051,622. The exports for the first six months of 1919 were 6,662,231 gold pesos and the imports 6,006,660. A gold peso equals in the United States currency \$.9648. The most important agricultural product exported is tobacco of which in 1918 the exports amounted to 7010 tons. Foreign commerce for the five years 1914-18 was valued at 81,932,672 gold pesos of which 35,526,223 were imports and 46,406,449 exports. The normal orange crop is about 220,000,000 oranges. An important product used for food purposes but susceptible of yielding important materials for manufacture is mandioc which is cultivated throughout the country. Leading exports are hides, fruit, tobacco, timber, cattle, preserved and jerked beef, petit grain oil and quebracho extract, and the chief imports are food-stuffs, textiles and hardware. By far the largest sharer in the trade is Argentina.

COMMUNICATIONS. There is a railway from Asuncion to Alto Parana, extending 234 miles and from the latter point there is communication with the Argentine railway system by means of a train ferry. Steamships run between Asuncion and Concepcion and the ports of Argentina along the Paraguay River. In 1919 a new line was undertaken to connect the ports of the upper Paraguay with Montevideo, which was regarded as an important step in the development of commerce. Vessels entered at the port of Asuncion in 1917 numbered 3761 with a tonnage of 469,822; cleared, 3760, with 474,342. The chief company engaged in the river service was the Argentina Navigation Company under the control of British interests.

FINANCE. Paper has been the sole circulating medium with the exception of a few small nickel pieces and the currency has been subject to frequent fluctuations. In 1919 the paper peso passed current at less than one-tenth of its face value in silver. The currency of Paraguay was conducted practically on the bases of Argentine paper and gold. The revenue for 1918 according to a British authority was £523,311; expenditures £577,182; for 1919, revenue £1,105,911; expenditures £1,071,332. The internal debt Jan. 1, 1919 was 2,044,783 pesos gold and 33,133,445 paper; external debt, 5,612,701 pesos gold.

GOVERNMENT. Executive authority is vested in a President elected for four years with a cabinet of five ministers, and legislative authority in a Congress of two houses, a Senate and a Chamber of Deputies, both of which are elected directly by the people, the Senate in a ratio of 1 member to 12,000 inhabitants and the chamber in the ratio of 1 to 6000. The President at the beginning of 1919 was Dr. Manuel Franco.

PARDEE, DON ALBERT. Judge, died at Atlanta, Ga., September 26. He was born at Wadsworth, Ohio, March 29, 1837, and after four years at the United States Naval Academy (1854-57) he studied law and was admitted to the bar. He served during the Civil War and in March, 1862, was brevetted colonel of volunteers, and in March, 1865, brigadier-general of volunteers. After the war he practiced law at New Orleans; served on the bench, 1868-80, in the second judicial district, and was United States Circuit Judge from 1881 to the time of his death. In 1898 he removed to Atlanta, Ga.

PARK COLLEGE. A non-sectarian institution of learning at Parkville, Mo. In the fall of 1919 there were enrolled 434 students, and the faculty numbered 21. The productive endowment amounted to \$678,000 and the income for the year was \$297,969. The library contains 27,000 volumes. In 1919 a new men's dormitory, costing \$100,000; a dam for the water supply, \$25,000; and a new lighting and heating plant, were constructed. Park College was founded in 1875. President, Frederick William Hawley, D.D., LL.D.

PARKER, HORATIO WILLIAM. Musical composer, died at Cedarhurst, N. Y., December 18. Since 1894 he had been professor of the theory of music at Yale University. He was born in Auburndale, Mass., Sept. 15, 1863, and devoted himself to music while still a child. He was organist in Dedham and Boston churches for a time and then studied music at the Royal Conservatory in Germany, where he graduated in 1885. After serving as teacher of music and organist in St. Paul, Minn., Garden City, L. I., New York, and Boston, he became professor of the theory of music at Yale (1894). His first composition consisted of a setting to music of Kate Greenaway's poems under the title of *Under the Window*. He received a prize for his cantata in the competition instituted by the New York National Conservatory in 1893. He was the recipient of other prizes, and he wrote a large number of pieces both sacred and secular. Among his works may be mentioned the following: *Cantatas, King Trojan, The Kobolds*; oratorios, *Ilora Norissima* (1898), *St Christopher* (1898); *A Wanderer's Psalm* (given under his direction at the Hereford Festival, England, in 1900). He also wrote a number of textbooks for the use of schools and colleges and his work as an educator secured for him great influence not only in his university but in all educational circles.

PARKS, NATIONAL. In 1919 the tract of land in Maine bestowed by citizens upon the government of the United States in 1916 was named the Lafayette National Park. Its area was about 10,000 acres, and it differs from other parks in the national system in that it is not only situated in the extreme East, but combines seashore and mountain. The gift in 1916 amounted to 5000 acres, and President Wilson by proclamation gave it the name of The Sieur de Monts National Monument. It was increased by subsequent gifts and in 1918 Congress appropriated a sum for its maintenance and development. In February, 1919, Congress changed its name and status, and it became the Lafayette National Park. The national parks down to and including 1919 are summed up with leading features in the following table, published by the Department of the Interior:

<i>National parks in order of creation</i>	<i>Location</i>	<i>Area in sq. miles</i>	<i>Distinctive characteristics</i>
Hot Springs, 1832	Middle Arkansas	1½	46 hot springs possessing curative properties—Many hotels and boarding houses—20 bathhouses under public control.
Yellowstone, 1872	Northwestern Wyoming	3,348	More geysers than in all the rest of the world together—Boiling springs—Mud volcanoes—Petrified forests—Grand Canyon of the Yellowstone, remarkable for gorgeous coloring—Large lakes—Many large streams and waterfalls—Greatest wild bird and animal preserve in the world.
Sequoia, 1890	Middle eastern California	252	The Big Tree National Park—12,000 sequoia trees over 10 feet in diameter, some 25 to 36 feet in diameter—Towering mountain ranges—Startling precipices—Large limestone cave.
Yosemite, 1890	Middle eastern California	1,125	Valley of world-famed beauty—Lofly cliffs—romantic vistas—Many waterfalls of extraordinary height—3 groves of big trees—High Sierra—Waterwheel falls.
General Grant, 1890	Middle eastern California	4	Created to preserve the celebrated General Grant Tree, 35 feet in diameter—6 miles from Sequoia National Park.
Mount Rainier, 1899	West central Washington	324	Largest accessible single peak glacier system—28 glaciers, some of large size—48 square miles of glacier, 50 to 500 feet thick—Wonderful subalpine wild flower fields.
Crater Lake, 1902	Southwestern Oregon	249	Lake of extraordinary blue in crater of extinct volcano—Sides 1,000 feet high—Interesting lava formations.
Wind Cave, 1903	South Dakota	17	Cavern having many miles of galleries and numerous chambers containing peculiar formations.
Platt, 1904	S Oklahoma	1½	Many sulphur and other springs possessing medicinal value.
Sullys Hill, 1904	North Dakota	1½	Small park with woods, streams, and a lake—Is an important wild animal preserve.
Mesa Verde, 1906	Southwestern Colorado	77	Most notable and best preserved prehistoric cliff dwellings in United States, if not in the world.
Glacier 1910	Northwestern Montana	1,534	Rugged mountain region of unsurpassed Alpine character—250 glacier fed lakes of romantic beauty—60 small glaciers—Sensational scenery of marked individuality.
Rocky Mountain, 1915	North middle Colorado	398	Heart of the Rockies—Snowy range peaks 11,000 to 14,250 altitude—Remarkable records of glacial period.
Hawaii 1916	Hawaiian Islands	118	Three separate volcanic areas—Kilauea and Mauna Loa on Hawaii, Haleakala on Maui.
Lassen Volcanic, 1916	Northern California	124	Only active volcano in United States proper—Lassen Peak 10,465 feet—Cinder Cone 6,879 feet—Hot springs—Mud geysers.
Mount McKinley, 1917	South central Alaska	2,200	Highest mountain in North America—Rises higher above surrounding country than any other mountain in world.
Grand Canyon, 1919	North central Arizona	958	The greatest example of erosion and the most sublime spectacle in the world—One mile deep and eight to twelve miles wide—Brilliantly colored.
Lafayette 1919	Maine Coast	8	The group of granite mountains on Mt Desert Island.

The above table is taken from *The Book of the National Parks* by R. S. Yard, Chief of the Educational Division of the National Park Service, Department of the Interior (1919), which gives a full account of the members of the entire National Park system, including detailed descriptions of their leading features.

During the year ending in October, travel to the national parks, not including Hawaii and Mount McKinley, reached the total of 756,027 visitors, an increase over the year before of nearly 70 per cent. The comparison is misleading, however, because the total includes 101,745 visitors to the two national parks which were created during the year. Lafayette, on the coast of Maine, and the Grand Canyon in Arizona.

Deducting these, we have 654,282 visitors during the year to national parks which were in existence the year before and were then visited by 451,691 persons. The rate of increase for the same 14 national parks was 45 per cent during the current year. The figures, compiled by the Department of the Interior, to and including October 15th, follow:

FIVE YEARS' ATTENDANCE AT THE NATIONAL PARKS

<i>Name of park</i>	<i>1915</i>	<i>1916</i>	<i>1917</i>	<i>1918</i>	<i>1919</i>
Hot Springs	*115,000	*118,740	*135,000	*140,000	*160,490
Yellowstone	51,895	35,849	35,400	21,275	62,261
Sequoia	7,647	10,780	18,510	15,001	30,413
Yosemite	33,452	33,390	34,510	35,527	58,561
General Grant	10,523	15,360	17,390	15,496	21,574
Mount Rainier	35,166	28,989	35,568	43,901	55,232
Crater Lake	11,371	12,265	11,645	13,231	16,645
Wind Cave	2,817	*9,000	16,742	14,431	26,812

Name of park	1915	1916	1917	1918	1919
Platt	*20,000	*30,000	*35,000	*36,000	*25,000
Sullys Hill	*1,000	*1,500	2,207	4,188	4,026
Mesa Verde	663	1,385	2,223	2,058	2,287
Glacier	14,265	12,839	18,387	9,086	18,956
Rocky Mountain	*31,000	*51,000	*117,186	*101,497	*169,492
Lassen Volcano	*8,500	*2,000	*3,000
Grand Canyon	37,745
Lafayette	*64,000
Totals	334,799	356,097	488,268	451,691	756,027

* Estimated

The increases over the previous year for individual parks are: Hot Springs, Arkansas, 14 per cent; Yellowstone, 145 per cent; Sequoia, 100 per cent; Yosemite, 77 per cent; General Grant, 40 per cent; Mount Rainier, 26 per cent; Crater Lake, 25 per cent; Wind Cave, 80 per cent; Glacier, 97 per cent; Rocky Mountain, 67 per cent. Platt National Park in Oklahoma lost 30 per cent; Oklahomans were found in large numbers in other national parks and in California during the summer.

PAROLE SYSTEM. See PENOLOGY.

PASHITCH, NIKOLA. Serbian representative at the Paris Peace Conference. He was Serbian Prime Minister and a leader of the Radical party. In the tariff difficulty of 1905 with Austria-Hungary he led the Serbian resistance, and he directed the Serbian policy during the Bosnian crisis of 1908-09. During the late war he was the responsible head of Serbian affairs. His political aim was the amalgamation of the Serbians within the Austro-Hungarian Empire, and the building up of a greater Serbia.

PATTERSON, JOHN EDWARD. British author, died at Harrogate, England, in April. He was born in Deepcar, Yorkshire, England; ran away to sea when less than 13 years old, and passed 17 years in sea voyages and travels about the world. In 1897 he became a newspaper man in London and served for two years on the staff of the *Westminster Gazette* and edited or contributed to other periodicals. His publications include the following: *The Mermaid; The Lure of the Sea* (poems); *Ballads and Addresses; Fishers of the Sea; Watchers by the Shore; Tilters of the Soil; Love Lake the Sea; The Story of Stephen Compton; His Father's Wife; Hillary Martyn; Bond Slaves*, (novels); *My Lagabondage; Sea-Pie; Epistles of the Sea* (autobiography); *The Sea's Anthology*.

PATTI, ADELINA. Famous operatic singer, died September 27, at Craig-y-Nos castle in South Wales. She was born in Madrid, Spain, on Feb. 10, 1843, the daughter of Salvatore Patti, a tenor of some note. She was brought by her parents to New York at the age of four, and when still a small child showed unusual gifts for singing. At the age of 10 she appeared in concert with Ole and Maurice Strakosch. She sang frequently in public from 1852 to 1861, taking part in concert tours during the period. She made her debut in opera in New York on Nov. 24, 1859, but scored her first real success in London two years afterwards, where she appeared as Amina in *La Sonnambula*. This was followed by a triumphal tour throughout Europe. Her popularity was extraordinary and she was the recipient of the highest honors from the courts of European countries. From the first she was recognized as one of the greatest artists of the time, her voice being an unusually high, clear, and pure soprano, and her execution show-

ing great artistic finish. She made many tours in America, the latest ones occurring during the present century. She received extraordinarily high prices for her performances, and is said to have earned in the course of her life as much as \$5,000,000. She married first the Marquis de Caux (divorced in 1885); second, in 1886, Ernesto Nicolini, who died in 1898; third, in 1899, a Swedish nobleman, Baron Cederström. After 1890 she was seen almost exclusively on the concert platform. She was a sister of Carlotta Patti (1840-89).

Patti was one of the few opera singers whose promise in early youth was completely fulfilled. From her first appearance as a child it was predicted that she would have a great future, and her success continued without a break. Her voice in youth was a very high soprano, but later became lower in range and was even called by Clara Louise Kellogg, who wrote her memoirs, a mezzo. She had an extraordinary capacity for learning notes and retaining them in memory. It was said that she could learn a new part by humming it a few times, and that she often went on tours without taking any musical scores. The extraordinary feature of her career was the admirable preservation of her voice even down to late middle life. This was attributed to the rigid system under which she lived and to her careful economy in the use of her voice. She practiced daily only for a short period, and she stipulated in her contracts that she should not be obliged to rehearse unless she wished to. As a matter of fact she did not attend rehearsals. Criticism of her pertains exclusively to her acting which was limited in range by her small stature and by a lack of emotional expressiveness unfitting her for the deeper rôles. On the other hand in regard to the quality of her voice and the perfect finish of her art as a singer, there was no question. Interesting memoirs of her will be found in Krehbiel's *Chapters of Opera*, Luigi Arditi's *Reminiscences*, and the memoirs by Clara Louise Kellogg.

PAVEMENTS. See ROADS.

PAYNE, WILLIAM MORTON. Educator and literary critic, died at Chicago, Ill., July 11. He was born at Newburyport, Mass., Feb. 14, 1858, and after 1868 lived in Chicago where he taught in the high schools after 1876. He served on the staffs of Chicago newspapers and magazines and became known as a critic of modern literature, especially verse, including several of the Continental literatures. He lectured in some of the leading universities. His writings include the following: *The New Education* (1884); *Little Leaders* (1895); *Editorial Echoes* (1902); *Various Views* (1902); *The Greater English Poets of the Nineteenth Century* (1907); *Leading American Essayists* (1919); *Björnstjerne, Björnson* (1910). He translated Björnson's *Sigurd Slemba* (1888); Jaeger's

Henrik Ibsen (1890); Björnson's *Arnljot Gelline* (1917), from the Norwegian; and he edited *English in American Universities* (1895); *American Literary Criticism* (1904); *Select Poems of Swinburne* (1905); and *Swinburne's Mary Stuart* (1906).

PEABODY MUSEUM. The normal activities of the Peabody Museum of Harvard University which were interrupted by the war were gradually being reestablished during 1919. But little field-work, however, was carried on during the year, and this was mostly of a preliminary nature and confined to certain sections of New England. Several valuable collections have been received, perhaps the most notable being the Bates Collection from the Maine shell heaps, numbering several thousand specimens, the result of many seasons' work by the late Prof. Arlo Bates of the Massachusetts Institute of Technology. The usual amount of laboratory research work has been accomplished. The second volume of the Harvard African Studies has been published, and considerable time has been devoted to the preparation of reports on the antiquities of Costa Rica by Mr. S. K. Lothrop, and on the Museum work in Northeastern Arizona by Mr. S. J. Guernsey, which is soon to be issued as a part of Volume VIII of the Museum "Papers." Dr. Tozzer's Maya-English dictionary is nearly ready for publication. Additional cases are being made for the main hall of the first floor of the new section of the Museum in which will be installed the ethnological collections from the Northwest Coast. The director of the Museum is Mr. C. C. Willoughby.

PEACE MOVEMENT. See INTERNATIONAL PEACE AND ARBITRATION.

PEACE AND ARBITRATION, INTERNATIONAL. There was no happening of importance in the realm of international arbitration in 1919. The public mind was wholly taken up by the Treaty of Versailles (q.v.) and the embodied League of Nations. In the words of one long time supporter of international arbitration—

Arbitration, 1919? I thought the word had been forgotten. Has there been any arbitration of anything, outside the Paris Peace Conference, where it is very dubious if anything was really arbitrated? Seriously, has there been any case of real arbitration of international differences during the past year in South America or elsewhere? I have lost all track of it, I have been so interested in the League of Nations controversy

There was a wide-spread discussion of various phases of internationalism—especially in connection with economic, industrial, and political questions, but of the judicial arbitrament of international difficulties there was none. Perhaps this was due to the conviction that the League of Nations was an effective substitute. Of the discussion of peace in all its various aspects there was no end, not only in connection with the Treaty and the League, but in connection with military training, compulsory or arbitrary.

The peace movement during the year 1919 underwent changes destined to result in programmes consonant with the new order. The International Peace Bureau at Bern held a general assembly in the spring. A definite world movement among women developed during the year with headquarters at Bern and with numerous national organizations including one in the United States. League of Nations Societies were organized throughout Europe and other

countries. These societies are rapidly conforming their programmes to the conditions laid down by the Covenant of the League of Nations. The older societies have discovered that in large measure their former programmes have been realized in the Covenant. On the other hand there have arisen in various countries a series of League of Nations Societies of which the American League to Enforce Peace was first in point of time. These societies began life with a definite programme and show a disposition to continue to exist with programmes for improving and making better understood the present League of Nations. Several of such European societies held meetings at Paris in January, 1919, at London in March, 1919, and 16 of them participated in a Congress at Brussels, Dec. 1-3, 1919, under the auspices of the Belgian government. There was organized at that time the Union of League of Nations Societies, in which America was not represented owing to the failure of the Senate to advise ratification of the Treaty. The next Congress will be at Rome in April or May, 1920. The Dutch peace worker, B. de Jong van Beek en Donk, started a weekly periodical *The League of Nations* at Bern in April and is continuing it as a publication in which are printed official and other pronouncements respecting the League of Nations from all countries. The English League of Nations Union publishes a monthly service organ called *The League* since November, 1919, and a quarterly journal called *The Covenant*.

The official League of Nations started immediately after the signing of the Treaty of Peace with Germany on June 28, 1919. It has maintained its headquarters in London at Sunderland House and has collected not only a considerable library but much official data for its prospective duties. The Economic and Finance Section of the provisional organization of the League invited members of the International Institute of Agriculture and of the International Statistical Institute, together with leading statisticians, to a conference in London on Aug. 14 and 15, 1919. Seven suggestions were adopted relative to the organization and development of the work. The first International Labor Conference under the League of Nations and in virtue of Part XIII of the Treaty of Peace was held at Washington, Oct. 29-Nov. 29, 1919.

INTERNATIONAL PARLIAMENTARY UNION. There has been no meeting of the Inter-Parliamentary Union since 1913. There was a meeting October 7th and 8th in Geneva of the Council of the Inter-Parliamentary Union which Hon. James L. Slayden attended as a delegate from the American Congress. Its business was of an executive and confidential nature. It arranged to have a meeting of the Union itself some time during the year of 1920 at Stockholm. There were two members of Council present from Germany, Professor Eickhoff and Herr Schucking, who was one of the signers of the Treaty of Peace, who were courteously received, and both, being earnest pacifists were heartily in sympathy with the work in hand.

AMERICAN ASSOCIATION FOR INTERNATIONAL CONCILIATION. At the annual meeting of the association held on February 6th, Nicholas Murray Butler was reelected Chairman, Henry S. Haskell, Assistant to the Director of the Division of Intercourse and Education of the Carnegie Endowment for International Peace was con-

tinued as Acting Secretary. It was resolved that, in view of the obvious effort now being carried on through the press and otherwise, to sow the seeds of dissension among the Allied governments, systematic efforts should be undertaken to offset anti-British and Anti-French propaganda by furnishing the American newspaper press with articles and other material illustrating our friendly and cooperative relations with Great Britain and France.

During the year, the association published its usual long list of documents under the general heading *International Conciliation*. This year they dealt mainly with The League of Nations, and the Problems of the Peace Conference. Official material regarding the constitution, rules of procedure and general sessions of the Peace Conference was also published in considerable profusion. The demobilization of the Students' Army Training Corps and the resumption of normal student activities in the colleges and universities made it possible to stimulate through the International Polity Clubs the natural interest in the problems of the peace conference. The publications of the Association have been most helpful in this connection. Sundry important books were also distributed by the Association to these clubs. The set of large base maps of the continents, states and regions involved in the Great War published by The American Geographical Society have also been supplied to the International Polity Clubs upon request.

The trustees of the Carnegie Endowment have felt that the time has come when the educational work conducted throughout the summer schools of the country under their auspices should be carried by those institutions themselves, and it has therefore been decided to discontinue this undertaking. The Association, however, continued its work in the case of three special institutions: George Peabody College for Teachers, Nashville, Tenn., Lincoln Memorial University, Harrogate, Tenn., and New Mexico Normal University, Las Vegas, N. M. In the latter case, the Association sent Prof. John D. Fitz-Gerald, of the University of Illinois, not only to conduct a number of courses in the Spanish language, but also to assist President Roberts in organizing a conference of Spanish speaking teachers in the State. It is the hope of President Roberts and the Association in calling the conference to stimulate the study of Spanish throughout the State, and by the increased understanding which will result from the knowledge of a common language to foster better relations between the Mexicans and the people of New Mexico. The American Association for International Conciliation, which has in the past acted for the Division of Inter-course and Education in arranging for the courses, will act in close cooperation with the Institute of International Education, which has been opened recently in New York, with Dr. Stephen P. Dugan as director.

Three issues of *Inter-America*, two in Spanish and one in English, have been distributed. Newspapers and magazine comments and letters from all parts of the world indicate that the magazine is filling a need and making a distinct place for itself. A Spanish version of the United States Bureau of Education Bulletin No. 27, "Opportunities for Foreign Students at Colleges and Universities in the United States," by

Samuel Paul Capen, has been prepared by the Division and will be distributed by the Bureau of Education throughout the other American countries. The director of the Interamerican Division has accepted appointment upon Executive Council of the Pan-American Society of the United States, with a view to active cooperation with that organization. The Association undertook to issue the peace treaty, which, in view of its great length and the expense involved, will require a very careful adjustment of the other issues for the year accordingly. The demand was such that a second edition was printed. Its own publications are now printed in an edition of 35,000 and distributed to a subscription mailing list of some 27,000 names.

The unprecedented conditions prevailing in the colleges and universities during fall made it extremely difficult to continue to any extent the work with the International Polity Clubs, although lively groups were maintained at a number of women's colleges and at a few co-educational institutions. Although this work has been necessarily restricted, the Association has been able to assist in stimulating interest in the study of international problems by cooperating with the Committee on Education and Special Training of the War Department in the War Issues Course prescribed for the Students' Army Training Corps. Thousands of copies of the Association's documents were distributed to instructors and students, and a number of the most valuable official documents were reprinted for this purpose. The demobilization of the Students' Army Training Corps will make it possible to reorganize the Clubs; the proceedings of the peace conference will furnish field for discussion, and the widespread interest in the problems of the peace hold forth promise of the maintenance of active groups.

The Inter-American Division of the Association issued and distributed sundry bulletins, one in Spanish and Portuguese to a list of 15,000 names. The magazine *Inter-America*, in English and in Spanish, has been distributed. Six collections of North American works for South American libraries were gathered and shipped. The Inter-America Division entertained a number of Latin-American and Spanish guests, and has aided in placing a number of Latin-American students in educational institutions in the United States.

AMERICAN SCHOOL PEACE LEAGUE. It is the unanimous opinion of the Executive Committee of this organization that its annual essay contest is a most effective means of educating the youth of the country to the realization and responsibility of the unprecedented position in which the United States finds itself to-day in relation to other nations,—as a leader and as the hope of the world for the future of civilization. Therefore, the League conducted its essay contest, as usual, in 1918-19, the general subject of the essays being "The League of Nations." A record number of essays was received. Normal and high schools throughout the country expressed a genuine interest in the subject, and the principals and teachers cooperated heartily in planning for the study of this subject in their classes. In many cases, the essay writing was a required part of the year's work in history, civics, or English. Where an entire class competed, only the best essay was submitted to the judges.

SUCCESSFUL CONTESTANTS IN SEABURY PRIZE ESSAY
CONTEST, 1919*Normal School Set*

First Prize—Miss Agnes Irene Smith, State Normal School, Charleston, Ill.

Second Prize—Miss Lola Agnes Wood, State Normal School, Towson, Md.

Third Prize—Miss Mildred Lantz, State Normal School, Macomb, Ill.

1st Honorable Mention—Miss May Jackson Taylor, Normal Dept of State College for Women, Tallahassee, Fla.

2d Honorable Mention—Miss Merret Winegarner, State Normal University, Normal, Ill.

3d Honorable Mention—Miss Marion Tait, State Normal School, De Kalb, Ill.

4th Honorable Mention—Miss Lillian M Richards, State Normal School, De Kalb, Ill.

Secondary School Set

First Prize—Maurice M Mercer, High School, Bowling Green, Ohio.

Second Prize—Miss Adele Resegand, High School, Kearny, N. J.

Third Prize—Miss Juliette F Lyon, Central High School, Washington, D. C.

1st Honorable Mention—Robert L. Hershey, High School, Fitchburg, Mass.

2d Honorable Mention—Miss Irean Whitworth, High School, Poplar Bluff, Mo.

3d Honorable Mention—Milton Mead, High School, Cleveland Heights, Ohio.

4th Honorable Mention—Miss Ruth Rickarby, Barton Academy, Mobile, Ala.

The Secretary of the League, Mrs. Fannie Fern Andrews, has been working for the creation of an International Bureau of Education, which will coordinate much of the teaching in the various countries. Primarily for this purpose she spent five months in Europe during the Peace Conference, having been appointed by the United States Commissioner of Education and authorized by the Secretary of the Interior, to represent the United States Bureau of Education at the Peace Conference. She presented the plan for the establishment of an International Bureau of Education before the League of Nations Commission, of which President Wilson was chairman, with the request that the Bureau be an organ of the League of Nations. Although this was not done, the members of the Commission were much interested, and the Bureau will doubtless be established in the near future. The Secretary of the League, while in Europe, also wrote a Course of Study in Foreign Relations for the use of the army instructors in France. She lectured before the soldiers and other groups on the League of Nations and the educational work for peace. The League has also furnished hundreds of students throughout the country during the past year with literature to assist in debating on the subject of military training and the League of Nations. These subjects were chosen by many of the State debating leagues. Through the American School Peace League, therefore, the way is being paved for the education of children along lines tending to produce better international understanding and cooperation.

THE MID-EUROPEAN UNION (of which Thomas G. Masaryk is president and Professor H. A. Miller of Oberlin College was the first secretary), was associated for the following purposes:

(1) Of establishing a continuous barrier of free, cooperating, democratic nations against imperialistic aggression from the Baltic to the Mediterranean as a Bulwark of Freedom for the world. (2) Of helping toward the dismemberment of Austria-Hungary. (3) Of assisting

in the organization and protection of the new states.

Some of the accomplishments of the Union are: Presentation of resolutions to President Wilson urging the dismemberment of Austria-Hungary and pledging united support to the common cause. The awakening of the American people through insistent publicity to the solemn aspiration for freedom of the oppressed peoples of Mid-Europe and Asia Minor. Assistance in the preparation and publication of the Czecho-Slovak Declaration of Independence. The Union as a preliminary league of nations. In a four-days' conference in Independence Hall, Philadelphia, adopted principles of constructive international cooperation; of self-determination; of the rights of national minorities; of duty-free transportation for landlocked nations; and assumed the responsibility of seeing that the just claims of the nationalities concerned should be presented at the Peace Conference. Twelve nationalities signed a Declaration of Common Aims and proclaimed it with the ringing of the Mid-European replica of the Liberty Bell. A branch organization in Paris has been organized.

Conditions in Europe, however, have changed and do not seem as promising as they were a year since and Professor Miller has resigned. He was succeeded by Orlando Ducker.

The Poles, Jugoslavs, Czecho-slovaks, Russians, Armenians, Rumanians, and Zionists withdrew also, but the Lithuanians, Albanians, Greeks and Italians wanted to keep going for a while and they still have the name and office. President Masaryk is working in the direction of actually perpetuating the idea in Europe, and has made some progress. The Mid-European Liberty Bell has been taken to Prague with the condition that any of the countries concerned may have it for limited periods.

AMERICAN SOCIETY FOR THE JUDICIAL SETTLEMENT OF INTERNATIONAL DISPUTES has been inactive during the war and the immediate post-war periods.

LEAGUE OF FREE NATIONS ASSOCIATION formed in November, 1918, as the result of a series of weekly study conferences, participated in by 40 or 50 scholars, editors and publicists, during the summer and fall of that year, devoted its energies, up to the time of the final signing of the Treaty of Peace at Paris, to two lines of activities: (1) The popularizing in this country of the idea of a League of Nations; and (2) Urging upon the Paris Conference the creation of a real democratic league and also a treaty of peace which would be in essential harmony with the terms upon which the Armistice was based, that is, President Wilson's "Fourteen Points" and his subsequent addresses. On July 8th, as the result of a National conference of its members, this Association voted in favor of the ratification without reservation, the Treaty with Germany, including the League of Nations Covenant. Such ratification it contended would establish immediate peace, the world's most urgent need in the interest of order and progress; would abolish many international injustices which have proved prolific causes of war, and would create an agency for the ratification of remaining injustices and for the establishment of mutually advantageous and just relations between nations. It also voted that this ratification should be accompanied by a resolution declaring it to be the

purpose of the United States, as made possible by the League of Nations Covenant, to: (a) Press for the immediate restoration of Kiao-Chau and the German concessions in Shanghai to the Chinese Republic; (b) to hold that nothing in the Treaty or the Covenant shall be construed as authorizing interference by the league in internal revolutions; or as preventing genuine redress and readjustment of boundaries, through orderly processes provided by the league, at any time in the future that these may be demanded by the welfare and manifest interest of the people concerned; (c) to call for the inclusion of Germany in the council of the league as soon as the new republic shall have entered in good faith upon carrying out the treaty provisions; for the inclusion of Russia as soon as the Russian people establish stable government; and for the full participation of both Germany and Russia on equal footing in all economic intercourse as the best insurance against any reversion to the old scheme of balance of power, economic privilege and war; (d) to press for the progressive reduction of armaments by all nations, (e) to throw its whole weight in behalf of such changes in the constitution and such developments in the practice of the league as will make it more democratic in its scheme of representation, its procedure more legislative and less exclusively diplomatic—an instrument of growth invigorated and molded by the active, democratic forces of the progressive nations.

More recently, the Association, through a Committee on Mexico, has been very active in attempting to bring about better relations with our southern neighbor and particularly to counter-act the country-wide propaganda of misrepresentation and distortion of actual conditions in Mexico. In October, the Association also announced the beginning of a study of the diplomatic relations between the United States government and the various Russian factions since March revolution of 1917, to be made by William Allen White, of Emporia, Kan., Dr. John Ryan of the Catholic University of Washington, D. C., and J. Henry Scattergood of Philadelphia, Pa. In general the League of Free Nations Association, in New York and through its branches elsewhere in the country, has sought to be a medium for the discussion of significant phases of international policy with a view to forming a sound and liberal public opinion, particularly on questions affecting the interests of the United States.

THE CENTRAL AMERICAN COURT OF JUSTICE ceased to exist at the expiration of the constituent treaty in May, 1918. Since then the Central American Bureau of Guatemala has sought the diplomatic assistance of Costa Rica, Honduras and San Salvador to reestablish the Court under a revised convention. Disturbed conditions in the Central American countries and other reasons have, however, prevented the success of this movement. The Central American International Bureau continues to function. It submitted on Aug. 20, 1919, to the Central American States a project of treaty for free trade among them. Standardization of educational curricula and the calling of a Central American Conference are other projects which have been actively interesting to the Bureau.

THE AMERICAN UNION AGAINST MILITARISM continued its efforts in opposition to a permanent system of compulsory military training in

America. Bulletins about congressional action on military training have been issued and a press bureau maintained. The headquarters are 203 Westory Building, Washington, D. C. Its chairman was Oswald Garrison Villard, and its executive secretary, Charles T. Hallinan.

During the year 1919, the activities of the AMERICAN SOCIETY OF INTERNATIONAL LAW, in addition to the publication of the quarterly numbers of the *American Journal of International Law*, were confined to a meeting of the Executive Council of the Society held in April, 1919.

THE AMERICAN INSTITUTE OF LAW held no meeting during 1919.

CARNEGIE PEACE FOUNDATION. Beginning with the year 1919, this Foundation will hereafter publish an abstract of the Year Book in addition to the Year Book itself—the latter containing all the matters in detail in which students and librarians will be interested. The epitome is designed to meet the needs of the more casual inquirer and to spread more widely information about the work of the Foundation. The work of the Endowment has been augmented and complicated by the great volume of work undertaken for the Department of State by the Division of International Law. The results of the war have, according to the latest annual report, greatly widened the field of usefulness and broadened its opportunities to be of service in the world. The report says "International relations have undergone a transformation in a character which it is impossible to fully measure as yet, creating conditions which have never before existed, and which can never wholly revert to the old methods. The victory of the Allied nations over Germany and her vassal states has entirely changed the outlook upon internationalism, and the work of the Endowment presents possibilities of usefulness not anticipated when it was organized. We are confronting a newly awakened world. Under such conditions the Trustees are to be congratulated on their courage, their patriotism and their prescience, in an attitude which, as was stated in last year's report, met with the ardent approval of Mr. Carnegie. Permanent peace seems a long way off still, and this work will become of increasing value and importance during the interval of world reconstruction now before us."

The entire series of Preliminary Economic Studies arranged for the Division of Economics and History by Dean David Kinley of the University of Illinois, and American member of the Research Committee of the Division, has imposed a large amount of additional work upon the Secretary's office, but it has saved the expense of duplicating the trained force necessary to handle it, and has thus effected a considerable economy, as well as contributed materially to the standardization and technical perfection of these publications. As plans develop, the number of monographs included in this series has outgrown the original intention, but it has been amply justified by the wide general interest in the series. They have proved especially useful in colleges and universities where large classes have been engaged in studying the problems of reconstruction following the war. This demand has compelled second editions of many of the studies, and the liberal policy of the Executive Committee in distribut-

ing free paper bound copies and bound copies at the nominal price of \$1 each, has attracted wide attention and much favorable comment. A number of distinguished scholars in many lines of investigation have contributed studies of such a thorough and helpful character that they have already taken high rank as permanent contributions to the economic history of the world's greatest war.

THE WORLD PEACE FOUNDATION (40 Mt. Vernon Street, Boston), during 1919 supported so far as it was able the official effort at Paris to provide an adequate League of Nations and to secure ratification of the Paris Covenant by the Senate of the United States. The Foundation made available to the public both the first draft of the Covenant of February 14th, and the final draft of April 28th. The arrangements for the famous Lodge-Lowell Debate on Mar. 19, 1919, were handled by the Foundation. Throughout the period close collaboration was maintained with the League to Enforce Peace and by an arrangement with the Massachusetts Branches of the League to Enforce Peace and the League of Free Nations Association, the organization had an intimate connection with the popular propagandist work, like furnishing speakers, organizing meetings, securing resolutions, etc., throughout New England. The Foundation took over from the War Department, General Staff, Committee on Education and Special Training, the remaining stock of the publications of the Committee on Public Information when that Committee ceased its activities. A million and a half of these pamphlets were distributed. The Foundation publishes a periodical entitled *League of Nations*, the numbers of which consist of monographs on subjects in current affairs of an international character. These are fully documented and are being extensively used in colleges and elsewhere.

THE WORLD'S COURT LEAGUE (Educational Building, New York). In January, 1919, the officers of the World Court League voted to form an alliance with the officers of the New York Peace Society, so that the two organizations might conduct their propaganda in common, under the name League of Nations Union. The chief executive officers of the World Court League and of the League of Nations Union are the same, ex-Senator Theodore E. Burton having been chosen president and Dr. Charles H. Levermore, secretary. The magazine up to that time conducted by the World Court League, under the name *The World Court* became the chief vehicle of propaganda for the Union, and the title of the magazine was changed to *League of Nations Magazine*. The Union became virtually a publication agency maintained by the two societies for the support of this magazine, which devoted itself especially to the advocacy of a permanent court of international justice and to the idea of international cooperation as expressed in the League of Nations. The project finally brought out of the Paris Conference, as a part of the Treaty, was approved and supported by the Union merely as the beginning of a new world organization out of which something much better was expected to grow. The magazine was distributed widely throughout the country until mid-summer. The conditions which at that time befell the publishing business obliged the Union to suspend the publication. Moreover the World Court League and

the New York Peace Society had previously been materially assisted in their propaganda work by the Carnegie Endowment for International Peace. The decision of the Endowment not to give any direct aid to the plan for a League of Nations then under discussion increased very materially the burdens under which the Union was laboring. The result was that at the present time the World Court League may be said to have disappeared in the League of Nations Union, and the Union, having spent all its available funds in active propaganda for the idea of a League of Nations, is now marking time, and hoping that, after the Treaty and the Covenant have finally been ratified by the Senate, the Union will once more be able to engage in its educational work.

What has been said here about the World Court League is, of course, largely applicable to its partner the New York Peace Society. The Society is at present the active constituent member of the Union. It has devoted all of its resources this year to the support of the principle of a League of Nations by means of the magazine and a considerable amount of pamphlet literature. It is still continuing the work.

THE LEAGUE TO ENFORCE PEACE (130 West 42d Street, New York), devoted its energies during 1919 first to the adoption at Versailles of a League of Nations Covenant and later to securing the ratification of the Treaty and its League provisions by the United States Senate. It was unremitting in its endeavors in this behalf and utilized every available means: speeches, telegrams, the printed page, personal influence, to secure its end.

CHURCH PEACE UNION. By vote of the Union, and the World Alliance for Promoting International Friendship through the Churches, taken in December, 1918, these two organizations were combined with the same officers and a common office. Steps were taken early in the year to make effective this vote. The offices of the World Alliance at 105 East 22d Street, were vacated, and additional office space secured at 70 Fifth Avenue. Rev. Henry A. Atkinson, D.D., was appointed General Secretary, Rev. Frederick Lynch, D.D., Educational Secretary, Lindley V. Gordon, Associate Secretary, and Dr. Sidney L. Gulick, Secretary on Oriental Relations. Following the plans of the year 1918, the Church Peace Union has continued its fight for the League of Nations.

Early in the year the programme of education inaugurated by the vote of the Trustees in November, 1919, was continued. The National Committee on The Church and the Moral Aims of the War has met from time to time as one of the sub-committees and bore a large share of the responsibility for the propaganda in behalf of the League of Nations. After the Treaty of Versailles was signed, the Union began an active campaign throughout the country in its behalf, and sought by every possible effort to bring pressure upon the Senate to secure its ratification. For 12 months the Union pushed a vigorous literature campaign. Early in the year a Study Discussion Outline on the League of Nations was prepared, and distributed to 100,000 ministers. Churches, colleges, universities, libraries, high schools, and occasionally clubs have made use of the Outlines. Thousands of communities have used this course as a guide to their study of the subject. The

Union took poll of 80,000 ministers in the United States on the question of the Covenant. In response to this poll 16,125 men answered favorably and only 805 unfavorably. Of the 805, most were not opposed to the League of Nations, but were not quite sure as to the present Covenant. The favorable replies were grouped into a monster petition and presented by Vice-President Marshall to the Senate. The petition was read into the *Congressional Record*. The Church Peace Union cooperated with a Commission established during the war known as the Commission on the Interchange of Preachers and Speakers between Great Britain and America. Under the auspices of this Commission the Union sent to England, Drs. Percival Huet, Rev. Lyman Hough, Prof. William Adams Brown, Rev. Harry Foster Burns, Rev. George Gordon, Rev. Thurston Chase, Rev. Beverage Lee and Dr. Nehemiah Boynton. Dr. Lynch and Dr. Atkinson have also made two trips to Europe.

The World Alliance for Promoting International Friendship through the Churches is the functioning branch of The Church Peace Union, and as such called a meeting of the International Committee at The Hague, Holland, September 30th-October 2d. The meeting was marked by the spirit of good sense, and all actions taken showed a great deal of sound judgment. This was the first meeting since the signing of the Armistice in which German Protestants affiliated with delegates from the Protestant Churches of the Allies and America. During the last five months of 1919, Dr. George Nasmyth worked in Europe as International Organizer of the World Alliance, strengthening the National Councils already established, and organizing new ones. In the words of the Secretary "The year has been one of activity and at the same time of great perplexity, but we believe we have made a slight contribution to the cause of International Peace and Goodwill."

THE AMERICAN PEACE SOCIETY, an outgrowth of a peace society organized in New York City in 1815, and, therefore, the first peace society in the history of the world, itself founded at New York in 1828 and incorporated at Boston in 1848, continues its headquarters in Washington, D. C. Its general officers elected at its 91st annual meeting in May, 1919, were: President, Hon. James L. Slayden, San Antonio Texas; Secretary, Arthur Deerin Call, Colorado Building, Washington, D. C.; Treasurer, George W. White, President National Metropolitan Bank, Washington, D. C. This Society continues to publish its official organ, the *Advocate of Peace*, a magazine published regularly since 1834. In its annual report for the year 1919, President Slayden says:

"The Secretary has spoken many times under the auspices of the United War Work Campaign, the Liberty Loan Campaign, and the Four-Minute Men's organization. Under date of November 29th it was voted that Messrs. Theodore E. Burton, of New York, Jackson H. Ralston, of Maryland, and Secretary A. D. Call and President James L. Slayden should represent the Society in Paris during the Peace Conference. Mr. Call left Washington for France November 29th, and arrived in New York, May 10th. It was not thought wise by the other members of the committee to go to Paris. It may be said that there is nothing in the inter-

national situation which alters in any way the principles for which the American Peace Society stands. Our faith in the principles of justice between nations, in the necessity for recurring congresses of the nations, in the up-building of law and order among the peoples, in the ultimate substitution of the modes of peace for the modes of war is unchanged and undimmed. The world agitation for a new international order transcends anything of the kind heretofore. This constitutes the challenge and the hope of the supporters of the American Peace Society and of all right-minded men everywhere."

Referring to his work in Paris the Secretary reported:

"The work which your Secretary attempted to do in Paris falls into two classes, that relating to the ADVOCATE OF PEACE, and that relating to the reorganization of a Society of Nations. The latter, not so important or so effective as he hoped, found expression in two pamphlets, one entitled *Suggestive Memoranda for the Honorable Commissioners to Negotiate at Paris*, submitted by the American Peace Society of Washington, D. C., which pamphlet was widely distributed not only in Paris but elsewhere, both in English and in French; the other entitled *Thinking It Through in Paris*, a pamphlet which was distributed for the most part in France. It was in Paris that your Secretary was privileged to assist in the editing of the volume, *Judicial Settlement of Controversies between States of the American Union*, which 'Analysis' was delivered by the Oxford University Press in Paris, April 21st. Upon the suggestion of your Secretary, *James Madison's Notes and a Society of Nations* was translated by Professor de Lapradelle, technical adviser of the French delegation at the Peace Conference. It may be added that your Secretary was glad to extend the circulation of this little book with some diligence among the workers for peace in Paris. It may be added that he has also had many conferences with all grades of representatives of the governments at the French capital to the advantage, he hopes, of the cause which this society represents and aims to promote."

The Secretary in concluding his annual report said:

"Your Secretary, gentlemen, is naturally thinking of the ways along which the Society might profitably extend its services. He is of the opinion that the history of our own land epitomizes the message which the nations need, and which when once they understand they will wish to heed. What the nations have accomplished in their upward climb has been in the main because of their reach for that justice which promotes life and liberty and happiness. This justice expresses itself in law, and the law is vivified in the courts. That has been the course of political advance and indicates the direction along which the groping nations must inevitably pass. For these reasons he believes that the American Peace Society, buttressed upon this faith, must, through its officers, its publications and its cooperating groups, intensify its efforts and broaden its activities for the education of the peoples."

WOMEN'S PEACE PARTY. At a meeting of the Board of Officers, November 3d and 4th a formal statement to the following effect was adopted:

"This group of women came together to pro-

test in the name of Womanhood against the cruelty and waste of war, and to give united help toward translating the mother-instinct of life-saving into social terms of the common good. Its programme of principles then enunciated has been affirmed in substance by all the leading statesmen of the world, as they have come to see that civilization demands that this last war shall end War, and that the organization of the world in an effective League of Nations shall do away with the causes of war. Thus reinforced in our purposes, we pledge ourselves to renewed effort toward a better social order of peace and good-will. The entrance of our government into the world-war deprived our organization of its advantage as representing a neutral country and divided our membership in individual approach to present duty. The inner bond of a common devotion to securing permanent peace, and to make good women's share in that devotion has held firm all the while; and now the end of the war allows us to become wholly reunited, not only in ultimate convictions, but in every-day service."

Recognizing these facts the Board urged serious consideration of the following suggestions upon the incoming Board of officers, and upon the membership of the society at large: the necessity for changes in name, in organization of official Board, in form of group membership, and in organic affiliation with the Women's International League for Peace and Freedom of which this is the American Section, and certain other changes in the interest of a more effective mechanism. The Board urgently called attention to a crisis situation in the life of the countries devastated or crippled by the world-war, and to our special duty as regards that situation saying: "We organized for long-range educational propaganda toward a better common life. We are confronted at this hour with a common life so depleted by famine, disease, weakness and discouragement, that we perceive that all the forces of conservation must be freely used, and at once, if the fabric of that common life is to bear the weight of human progress. We, therefore, urge upon our constituency an immediate Fight-the-Famine propaganda and an heroic effort to help save suffering humanity. We have a special preparation for this task, for no human being in any land has ever been to our hearts an enemy alien, and every child, everywhere, has had an equal claim in our sympathy upon the fatherhood and motherhood of the world. We are also most fortunate in this that we know for what we wish to save and cherish the physical life—it is to give a chance for truly human personality to all the mass of mankind. And that faith in human progress, that sense of the value of common human experience, that unlimited sympathy, which are the possessions of all true internationalists, should enable us to feed the souls of despairing peoples with hope and courage, while we work, with others, to give them bodily sustenance.

"Already the International Headquarters at Geneva, with which we are affiliated, is becoming a clearing-house of information and a centre of stimulus for women's agencies in the Fight-the-Famine Campaign. Let our headquarters here in the United States be reorganized and supported that we can serve as medium of direction and as bond of inter-relationship for all groups of women, and individual women, who

want to help in the immediate relief of a stricken world."

THE INTERNATIONAL CONGRESS OF WOMEN held at Zurich, May 12th to 17th submitted to the Membership of the Women's International League for Peace and Freedom, Section for the U. S. A., as a basis for study and work an Educational Programme saying: "The Women's International League for Peace and Freedom seeks to establish a basis for a new human civilization. Properly to accomplish this, we must begin with the education of the peoples. Respect for human life, the sacred charter of the individual personality, must become fundamental in our thinking. Only men and women of high moral and intellectual standing can be trusted with so sacred a task. Believing that the basis for peace between nations and within nations is a fuller and wider education of the peoples, this Congress resolves that a *Permanent International Council for Education* be instituted for the purpose of promoting the idea of world organization and international ethics and citizenship. The Congress asks its officers to appoint an International Committee, which shall create the preparatory machinery of the Council, procure the financial support and draw up a programme indicating the general principles, upon which the work of the Council should be based. Everything which tends to hinder international understanding, to injure national pride, or to arouse hate and scorn for foreign peoples should be excluded from textbooks. The history of civilization should be fundamental to all instruction; the young should be made familiar with the evolution of peoples, and with the lives of great men of all times. Instruction in civics should develop a world consciousness and give an introduction to the duties of world-citizenship. Development of physical culture should take the form, not of military drill, but of a method of developing the strength and efficiency of the human race. The introduction to national literature should go hand in hand with acquaintance with the masterpieces of other countries. Especial attention should be paid to comparative studies of the psychology of peoples. The existing exchange of professorships and exchange of students should be extended. A period of residence in foreign countries should so far as practicable be required as part of preparation for teaching. . . . There should be established in all countries: Numerous clubs, unions and summer courses for foreigners without distinction of nationality; circulating libraries for foreign books; internationally organized associations of professors and students. Exchange lectures on the experience of various countries in special fields might become the basis of a permanent institute for international information.

"The International Congress of Women affirms that it should be the aim of all governments to replace coercion by consent and cooperation, and with this object in view to educate and strengthen the free will of the people by democratic institutions, and the safeguarding of the rights of minorities. . . . The world is facing widespread revolutionary changes at a time when the habit of violence has been fostered by a world-war. This International Congress of Women . . . declares its sympathy with the purpose of the workers who are rising up everywhere to make an end of exploitation. . . . Nev-

ertheless the women of the Congress reassert their faith in methods of peace and believe it is their special part in this revolutionary age to counsel against violence from any side. We delegates assembled at this International Congress of Women wish to record our deep sense of the heroism of those who have counted no sacrifice too great to serve the cause of peace. We recognize the devotion alike of those who believed that in offering their lives in war they were helping to end war, and of those who, with equal courage . . . fought war by refusing to take part in it. It fortifies our courage and our faith in the achievement of permanent peace, to know that in so many countries thousands of young men have for that end counted it worth the cost to bear the loss of health, fortune and friends and to face imprisonment, obloquy and death. We condemn the censorship of the press and governmental interference with private correspondence and declare to be both inexpedient and wrong all laws which prevent the expression of public opinion. Holding that no human being on account of his nationality, race or color should be deprived of education, or of civil and political rights, prevented from earning a living, debarred from any legitimate pursuit he may wish to follow, or subjected to humiliation, this International Congress of Women resolves to work for the abrogation of laws and change of customs which lead to such discrimination. This International Congress of Women deplores as of not merely national but international importance the fact that since 1914:

"(a) Several freedom-loving nations, for centuries distinguished as places of asylum for exiles and refugees, have reversed their age-long and enlightened policy, and

"(b) Mass deportation of thousands of people from the countries of their adoption have inflicted suffering and death in many forms upon innocent persons. It, therefore, recommends its National Sections to urge upon their respective governments the establishment or reestablishment, as the case may be, of the right of asylum and the repeal of all laws by which it is endangered or abolished."

WOMEN'S INTERNATIONAL LEAGUE FOR PEACE AND FREEDOM. The Women's Peace Party will hereafter be called the "Women's International League for Peace and Freedom, Section for the U. S. A." At the annual meeting held in Philadelphia, Dec. 3 and 4, 1919, it was decided that voting membership should be conditioned upon subscription to the object of the League and individual payment of one dollar a year. National membership secures voting privileges at annual and special meetings, receipt of referendum letters and other publications issued by the National office. All State and local organizations of similar purpose are invited to co-operate through the use of the National Office and the interchange of mailing lists. The platform was adopted in 1915 and contains provision for the limitation of armaments and the nationalization of their manufacture, organized opposition to militarism in our own country; education of youth in the ideals of peace; democratic control of foreign policies; further extension of suffrage to women; League of Nations to supersede balance of power and organization of the world to substitute law for war; removal of the economic causes of war. The Section for the U.

S. A., will send out frequent bulletins telling what the League is doing, to keep the members informed as to its activities. At the meeting of the Executive Board held in New York it was decided to send Mrs. Florence Kelley and Miss Jeannette Rankin, to Washington in coöperation with the Legislative Committee, to present to the State Department our protest against the blockades, our protest against the seizure for deportation and exile of those designated as 'reds,' our protest against universal compulsory military training as a feature of plans for the reorganization of the United States army, our appeal for the release of political offenders and 'conscientious objectors,' our appeal for the release and return to their homes of all prisoners of war in all countries."

THE PEOPLE'S COUNCIL OF AMERICA FOR DEMOCRACY AND PEACE throughout 1919 grew steadily less active. It continued its *Bulletin* from time to time and in the summer organized *The Peoples Print*, which published leaflets from time to time on such subjects as International Relations, Mexican Intervention, the Russian Blockade, Amnesty for Political Prisoners, etc. Its chairman, Scott Nearing, and executive secretary, Louis P. Lockner, have remained the same. On Washington's birthday, together with five other organizations, it participated in a "Liberties Conference" in New York which lasted for two days and concluded with a mass meeting at Delmonico's, addressed by Gilbert E. Roe, Edwin Markham and others. Toward the end of the year it turned over its organization to the newly-formed People's Freedom Union, of 138 W. 13th Street, New York City, which was organized with purposes akin to those of the Council.

THE LIBERTY DEFENSE UNION has been merged with the National Civil Liberties Bureau and its work carried on through one of its sub-committees. The Bureau carried on the work through the year, giving financial assistance to the defense of cases at law in which American civil liberty was involved as an issue.

THE LEAGUE FOR AMNESTY FOR POLITICAL PRISONERS continued its work through 1919. It has not been very active, however. It has also been interested in some of the Russian deportation cases. Its office is at 857 Broadway, New York City, and its secretary, Miss M. E. Fitzgerald.

FELLOWSHIP OF RECONCILIATION held a conference at Highland, N. Y., in September, 1919. It published *World To-morrow* throughout the year, with Norman M. Thomas as editor and Walter G. Fuller, assistant. The attitude of this and similar organizations can perhaps be best understood from the following statement of Mr. Thomas:

I am sorry I have no suggestion on the progress of international arbitration and peace. To be frank, I have not noticed any progress. Good pacifist that I am, I have reluctantly come to the conclusion that peace, international peace, is virtually unobtainable so long as capitalist-imperialist system holds its sway over us. That does not mean that I am not sympathetic with efforts that other men may make by arbitration agreements or otherwise to remove the terrible menace of war. To those I say that when I work for that fundamental economic change which men call the social revolution I think I am working for peace.

THE YOUNG DEMOCRACY has moved its offices to 50 Greenwich Avenue, New York City. It has not been active during 1919, although dur-

ing the latter part of the year it began the publication of a monthly known as *The Young Democracy*.

AMERICAN UNION AGAINST MILITARISM published a number of pamphlets analyzing the proposals for universal military training or service.

NATIONAL CIVIL LIBERTIES BUREAU continued its service of advice and defense of legal cases involving a civil liberty issue, including its service of cooperating lawyers throughout the country. It also handled and presented complaints in regard to the prison treatment of conscientious objectors and secured modifications of the harsher forms of prison discipline, and agitated for amnesty for political prisoners and conscientious objectors through the organization of mass meetings, the publication of literature and the arranging for speakers. It assisted in fighting the cases of men being deported for their political opinions, and opposed the enactment of sedition legislation for peace time, by means of representation in Washington, by publication of pamphlets and by a news service to the press. It published a series of pamphlets and leaflets dealing with the foregoing subjects.

NEW YORK BUREAU OF LEGAL ADVICE agitated for amnesty, stressing particularly the conscientious objector issue and did valuable work in opposing the cases of deportation for political opinion, as well as giving publicity to the issue. Its chairman is Dr. John Lovejoy Elliott and its secretary, Fannie M. Witherspoon. Charles Recht was counsel.

LEAGUE FOR DEMOCRATIC CONTROL, through its Civil Liberties Committee, did active work in bringing to light the civil liberties issue in the textile strike at Lawrence, Mass. Its secretary is Mrs. Gertrude L. Winslow. Its magazine *Forward* has been merged with the *Socialist Review*, published by the Intercollegiate Socialist Society.

Bibliography. An extended list of books dealing with reconstruction in its larger phases has been prepared by Aksel G. S. Josephson of the John Crerar Library and published by the Gary Library of Law, Northwestern University Law School. The purpose of these notes is to call attention to a number of books and pamphlets that have appeared since the outbreak of the war, discussing the problems of peace and pointing forward to a new era that is expected to come after peace. As Mr. Josephson says in his introductory notes: "In these books leading personalities and young journalists vie with each other to place before the public their views of what form this new society ought to take all filled with a desire to give words to their thoughts, to assist in the solution of this the most important and most difficult problem that has arisen for centuries."

PEARL HARBOR DRY DOCK. See DOCKS AND HARBORS.

PEARS, Sir EDWIN. British lawyer and publicist, died at Malta, November 27. He was best known as the newspaper correspondent who brought before the public the Bulgarian atrocities in 1876. He was born at York, 1835, graduated with honors at London University, was called to the bar and became general secretary of the Social Science Association which office he held from 1868 to 1873. He settled in Constantinople in the latter year where he practiced in the consular courts and became president of the European bar. He was correspondent of the

Daily News at the time of the Bulgarian atrocities and sent to his paper in May and June, 1876, letters on the subject which led to the protests of Mr. Gladstone and greatly aroused public sentiment against Turkish rule. He passed his later years in writing upon Turkish history. His publications include *The Fall of Constantinople* (1885); *The Destruction of the Greek Empire* (1893); *Turkey and its People* (1911); and *Forty Years in Constantinople* (1915).

PECK, JOHN HUDSON. Lawyer and former president of the Rensselaer Polytechnic Institute, died at Troy, N. Y., May 4. He was born Feb. 7, 1837, graduated at Hamilton College, 1859, and was admitted to the bar in 1861, practicing at Troy, N. Y. He was prominent in institutions for the public welfare and was president of the Rensselaer Polytechnic Institute from 1888 to 1900.

PECKOVER, ALEXANDER, Lord, First Baron of Wisbech. British financier, whose death was announced on October 22d. He was born at Wisbech, Aug. 16, 1830, and was for many years a banker in a well known banking house. From 1893 to 1906 he was Lord Lieutenant of Cambridgeshire. He was one of the best known among the Quaker financiers of England. After his retirement he took especial interest in the collection of manuscripts, and also in meteorology, and he belonged to many learned societies.

PENANG. One of the Straits Settlements (q.v.)

PENITENTIARY. See PENOLOGY.

PENNSYLVANIA. POPULATION. The population of the State in 1910 was 7,665,111, and on July 1, 1919, it was estimated to be 8,936,091, a gain during the year of 138,000.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acres	Prod. Bu	Value
Corn	1919	1,536,000	72,192,000	\$106,122,000
	1918	1,479,000	59,160,000	91,698,000
Buckwheat	1919	256,000	5,530,000	7,712,000
	1918	325,000	5,850,000	9,360,000
Oats	1919	1,189,000	36,859,000	29,487,000
	1918	1,210,000	47,190,000	37,752,000
Wheat	1919	1,664,000	29,055,000	62,758,000
	1918	1,530,000	25,551,000	54,679,000
Rye	1919	228,000	3,648,000	5,727,000
	1918	220,000	3,740,000	6,171,000
Tobacco	1919	41,000 a	54,120,000	9,200,000
	1918	45,600	64,752,000	9,665,000
Hay	1919	2,978,000 b	4,318,000	103,632,000
	1918	2,965,000	4,181,000	99,090,000
Potatoes	1919	254,000	25,400,000	39,116,000
	1918	275,000	22,000,000	33,220,000

a Pounds b Tons

MINERAL PRODUCTION. Production of anthracite coal in Pennsylvania in 1919 was the lowest in seven years. There were mined 86,200,000 tons, compared with 98,826,000 tons in 1918. Bituminous coal production reached the lowest level since 1915, with 458,063,000 tons, nearly 21,000,000 tons less than last year.

TRANSPORTATION. The operated railway mileage in the State in 1919 was about 13,139. The longest lines were the Pennsylvania, the Delaware, Lackawanna, & Western, and the Erie.

OFFICERS. Governor, William C. Sproul; Lieutenant-Governor, Edward E. Beidleman; Secretary of the Commonwealth, Cyrus E. Woods; Attorney-General, William I. Schaffer;

Auditor-General, Charles A. Snyder; Treasurer, Harmon M. Kephart; Adjutant-General, Frank D. Beary; Commissioner of Banking, John S. Fisher.

JUDICIARY. Supreme Court: Chief Justice, J. Hay Brown; Associate Justices, John Stewart, Robert von Moschizker, Robert S. Fraser, Emory A. Walling, Alexander Simpson, Jr., John W. Kephart.

See OLD AGE PENSIONS.

PENNSYLVANIA, UNIVERSITY OF. A non-sectarian educational institution for men, located in 1740 at Philadelphia, Pa. The enrollment for the summer session of 1919 was 935, and for the fall term, 9921. The faculty numbered in 1919 813, an increase over 1918 of 197 members. Productive funds for the year amounted to \$10,802,420, while the income for 1919 was \$472,886. The library contains 481,190 bound volumes and 50,000 pamphlets. Provost of the university, Edgar Fahs Smith, Ph.D., Chem.D., Sc.D., Litt.D., LL.D., LL.D.*

PENNSYLVANIA STATE COLLEGE. A co-educational State institution at State College, Pa. The enrollment of the summer session, 1919, was 1045; in the fall it was 3065. There were 350 members of the faculty. Productive funds for the year ending June 30, 1919, were \$567,000; the income for the same period was \$1,165,877. The library has 74,000 books. New engineering buildings have been constructed during the year. The college was founded in 1885. President, Edwin Erle Sparks, Ph.D., LL.D.

PENOLOGY. The past few years have been marked by the adoption of new liberal policies with respect to those convicted of lawbreaking. These changes in social policies have resulted largely from the investigation of prison conditions by professional workers in penology and students of criminology. To-day the first function of the prisons is the protection of society and the second function is the reformation of the prisoners. These ancient institutions, formerly instruments of punishment and retribution alone, now serve with increasing effectiveness to prevent crime by restoring convicts to useful citizenship. The mental and physical condition of prisoners is considered of first importance. The sanitary conditions of the prisons are being improved, better prisons are being constructed, and departments of psychiatry are increasing in number. The use of humane treatment toward prisoners in the application of scientific methods fitting the psychology of the individual is sometimes characterized as sentimental emotionalism and criticized on the ground that it causes an increase in crime. However, those who have studied the subject thoroughly are agreed that the new methods are of great benefit to society at large as well as to the individual prisoner. The most important changes in policy include the gradual abolition of the practice permitting private employers to contract for the use of prison labor at nominal sums; the adoption of the parole system under which deserving prisoners may be given freedom under supervision; and the wider use of the probation system which substitutes for prison the guidance of probation officers in cases meriting clemency.

CALIFORNIA. This year the Legislature of California passed an act for the establishment of a department of psychiatry and sociology at the State penitentiary at San Quentin. The act provides for a scientific examination of all pris-

oners by this board and requires it to submit a plan for the treatment of each case. The plan is to aim at preserving social security and restoring prisoners to society as useful members.

PRISON LABOR. It is a generally accepted fact among penologists that imprisonment in idleness is harmful not only to the individual but also to society. In the past the use of convict labor, within or without prison walls, under State supervision or under complete private control, was usually leased by private employers for nominal sums. This system of utilizing prison labor is fast being supplanted either by some form of the "public account" system by which industries are carried on by the State; or by the "public works" system whereby convict labor is used for public construction; or by the "State use" system under which the State alone uses the products made by the convicts.

Penologists believe that the best way to prevent the convict from resuming his "old trade" on regaining freedom is to let him work at some honest trade he once pursued or teach him an honest one if he had none before entering prison. Recognition of this principle has led to the formation of industrial units in many prisons. In some institutions the prisoners receive the profits accruing from the sale of the articles they have made. This money enables the prisoners to support families while in prison, or if they are single gives them a good start on being discharged. The National Committee on Prisons and Prison Labor favors the "State use" system and is opposed to the "public account" system. It criticizes the latter system on the ground that it makes the establishment of only one or two industries within a prison possible. Such a system prevents convicts from being employed in the various industries in which they were employed before conviction and thus causes them to deteriorate in ability. Under the "public account" system the prisoners may be exploited by the community instead of the contractor. In Minnesota, prison-made binder twine is sold to the farmers at a price guaranteed to be less than the price of binder twine elsewhere. New Jersey within the past year adopted the "State use" system. The "public works" system is increasing in popularity. New and greatly improved roads have been the most important result of the adoption of this system. The New York Legislature has passed a bill appropriating \$25,000 for the employment of prisoners in the construction of State and county highways. The annual messages of the governors of several States indicated the general tendency in prison labor reform. All approved the use of convict labor for road improvement. Governor Sleeper of Michigan recommended the introduction of various forms of industries in State penal institutions which would thereby make them self-supporting. He believes that each convict should be paid a fair wage and that the money he earns should be placed to his credit and given to him on his discharge. Governor Withycombe of Oregon favored the repeal of the law which prevents prison-made articles from competing in the market with those made by free labor. Governor Cornwell of West Virginia urged the repeal of the law requiring the leasing of prison labor. In Ohio industrial units have been established in prisons and the State receives the products. In Massachusetts \$571,356 was realized from the sale of prison-made articles used

in public institutions. Sales amounted to \$132,867 at the Women's Reformatory at Schermerhorn and at the Men's Reformatory at Concord \$220,016 was realized. The total was \$924,239 and the net profits \$218,817. Among the articles made were shoes, blankets, aluminum ware, bedding, furniture, hosiery, and clothing.

PAROLE. Parole laws aim to keep under the supervision of parole officers, deserving prisoners who have been released from prison. Although the operation of parole laws has caused an increase in the length of sentences, the parole system is sometimes criticized as a cause of crime waves. The supporters of the system claim that the majority of offenses are committed either by boys who have never served in penal institutions or by old offenders who have been discharged outright. The records (*Journal of Criminal Law and Criminology*) show that about 15 per cent of paroled men commit other crimes and that about 10 per cent fail to report or leave the State, making a total of 25 per cent who fail to fulfill the conditions of their parole. The prison authorities of Maine report that from 1913, when the law went into effect, to 1919, 210 paroles were given in that State. There have been 52 violations or about 25 per cent. Of 692 men given a special industrial parole in Chicago, only 57 failed to fulfill all the conditions of the parole. About 30 per cent of these either became intoxicated or failed to report. Parole laws have been in operation for 20 years or more in New York, Massachusetts, Indiana, and Illinois. In these States a systematic supervision of paroled men is maintained and good results are secured.

CANADA. Over a period of nine years 11,097 prisoners have been released under the Canadian Parole Act. Of this number 9647 completed their parole successfully and 733 are in the process of doing so.

PRORATION. The character of the offense for which probation may be given is usually provided for by law and does not permit the judge to use very much discretion. The value of the property stolen and limitation to first offenders are usually the determining factors under the law. The use of probation is very limited except in two or three States as New York and Massachusetts. In order to obtain the best results from this system the probation officer should have about 50 probationers under his

supervision. Nevertheless he is often placed in charge of 300 persons and this excessive burden materially lessens his opportunity for effective probation. This year the annual conference of the National Probation Association was held in May at Atlantic City. The subject for discussion was "Standards for Effective Probation Work." Some of the topics were: Limitation of the number of probationers assigned to a probation officer; preliminary investigation of the delinquent before he is probationed; medical and psychiatric examination of delinquents, and kindred subjects.

PENSIONS. See OLD AGE PENSIONS.

PERAK. The most northerly of the Federated Malay States (q.v.).

PERSIA. A monarchy of Asia extending from the Gulf of Oman to the Caspian Sea. Capital, Teheran.

AREA AND POPULATION. Estimates of area vary from 628,000 square miles to 635,135 square miles; and estimates of population from 9,500,000 to 15,000,000, of whom about 2,500,000 are nomads. The chief cities with their estimated populations are: Teheran, about 350,000; Tabriz, 200,000; Meshed, 60,000 to 100,000; Isfahan, 80,000. Of the nomads, 720,000 are Turks, 675,000 Kurds and Leks, 234,000 Lurs, and 260,000 Arabs. A vast extent of the country is desert land at a high altitude and the density is not more than 15 to the square mile. A salt desert occupies the central and eastern part. The Karun is the only navigable river. In the north and west are heavy forests.

PRODUCTION. The chief agricultural products are wheat, rice, barley, fruits, gums, drugs, wool, cotton, and silk. There is an increasing production of opium and tragacanth. The centres of the celebrated carpet industry are Tabriz, Sultanabad, Hamadan, and Kerman. There are considerable mineral resources in the province of Azerbaijan, in Khorassan and Kerman, in the region of the Persian Gulf, on the slopes of the Elbuz range, and in the vicinity of Isfahan and Nain. They include petroleum, coal, iron, copper, and lead, but development is retarded by lack of transport (see below).

COMMERCE. The chief products for export and import are shown in the following table (from the *Statesman's Year Book* for 1919) in thousands of kran in 1916-17 (the kran equaled about 9 cents):

Imports	1915-16	1916-17	Exports	1915-16	1916-17
	1000 kran	1000 kran		1000 kran	1000 kran
Cottons	139,000	188,370	Fruits	71,635	90,426
Sugar	124,755	81,908	Carpets	12,954	13,471
Tea	34,292	23,141	Cotton	71,389	53,475
Gold and silver bars	9,084	19,011	Fish	78,116	9,870
Do. coin	3,378	11,608	Rice	61,778	63,017
Petroleum	10,744	13,096	Gold and silver coins	5,049	2,186
Yarn	11,144	18,551	Gums	7,497	8,716
Flour	4,633	6,640	Opium	41,732	41,597
Woolens	1,731	2,773	Wool	15,867	19,290
Indigo and cochineal	244	4,072	Cocoons	3,418	2,092
Haberdashery	4,188	5,238	Skins	10,358	8,771
Rice	7,836	10,953	Animals	4,749	16,631
Spices	2,963	2,053	Silk stuff	3,873	3,004
Wool	1,824	1,869	Cottons	2,216	2,091
Animals	1,480	3,775	Hides	6,556	5,209
Silk goods	1,311	2,883	Silk	556	601
Tin, zinc, and lead	482	1,159	Wheat and barley	4,828	2,694
Tobacco	2,100	810	Pearls and other precious stones	...	887
Copper and nickel	345	309			
Iron and steel	7,529	2,839	Drugs	2,784	2,401
Do. manufactures	24,339	13,004	Timber	882	692
Silkworm eggs	1,162	835	Tobacco	1,774	5,356
Timber	4,713	3,759	Petroleum	21,758	66,740

The distribution of the foreign trade by countries in 1916-17 is shown in the following table from the *Statesman's Year Book* for 1919:

From or to	Imports 1916-17	Exports 1916-17
Afghanistan	£165,585	£48,208
Germany	42,428
Austria-Hungary	12,940
Belgium	39,242
China	100,536	500
Egypt	105,446	688,738
United States	279,954
British Empire	6,750,441	2,563,820
France and colonies	56,188	453
Italy	5,584
Netherlands and colonies	116,000
Russia	6,688,600	8,806,755
Switzerland	4,233
Turkey	27,833	201,258
Muscat	3,327	2,000
Oman	155,111	172,263

The following more recent account of trade conditions is from the *British Board of Trade Journal*: In the earlier stages of the war Persia does not appear to have suffered any great loss. There was naturally some dislocation of trade, and the Turkish incursions to Tabriz and Kermanshah inflicted local damage, but the disturbance to trade which occurred was probably fully compensated by the eager demand abroad for opium and foodstuffs, and by the high prices paid for supplies and transport by the foreign forces operating in the country. On the other hand, after 1917 the country suffered severely. The retiring Russian troops did great damage, and the later occupation of Azerbaijan and the rich plains of the Urumiah by the Turks caused these districts to be harried and depopulated. Much Russian paper money was accepted in payment for supplies and is still in Persia. The country, however, did not incur any unusual military expenditure during the war, and it received liberal assistance from Great Britain in meeting the loss of public revenue resulting from internal disorder. The greatest calamity was the drought and consequent famine throughout the country in the winter of 1917 and spring of 1918, followed by influenza in the autumn of 1918. The population was greatly reduced by hunger and disease, flocks and herds were much reduced in numbers, and through shortage of forage many beasts of burden were lost. The harvest of 1918 was excellent, and that of 1919 most promising, and though prices of foodstuffs remained high employment was active, and there was no longer real distress. Agriculture and a great number of trades lost heavily from interruption of commerce with Russia. Before the war imports from Russia amounted to 350,000,000 krans (at normal exchange the gold kran is worth \$0.17, the silver kran \$0.0875), of which one-third was sugar and nearly another third cotton tissues; exports to Russia amounted to 300,000,000 krans, raw cotton accounting for one-third and grain and dried fruits for another third. A great part of this trade was suspended in 1919.

The latest statistics available on the trade of Persia were those of the Persian Customs Administration for the year ending March 20, 1918, which indicate a decrease in foreign trade compared with the previous year. Seeing that so much of the foreign trade of Persia is with gold-standard countries the great increase in the exchange value of the kran ought to encourage im-

ports and decrease exports of commodities. The statistics, however, do not show that this has happened, probably because prices abroad have increased as much as the exchange has fallen; the ratio of imports to exports has been normal, imports being 58 per cent and exports 42 per cent of the total value of foreign trade. A great reduction in quantity of commodities imported is shown when one compares the figures for the years ending March 20, 1914 and 1918:

Articles	1914 Cwt.	1918 Cwt.
Sugar	2,500,000	960,000
Cotton tissues	420,000	235,000
Woolen tissues	8,700	2,200
Tea	90,000	30,000

The comparative returns on the trade of Great Britain and India with Persia for the years ending March 20, 1914 and 1918, were:

	1914 Krans	1918 Krans
Great Britain	130,000,000	170,000,000
India	104,000,000	253,000,000

The economic situation of Russia and the export prohibitions of the Russian government had their inevitable effect on the commerce of that country with Persia. The imports from Russia, which in 1916-17 reached 227,413,251 krans, fell to 107,482,215 krans in 1917-18. Russia, which always occupied first place in the list of countries in commercial relations with Persia, gave way to the British Empire, the imports from which actually became three times as great as those from Russia. Before the war they were no more than half. Egypt occupied third place in the list of countries solely because, commerce with other nations having been seriously affected by the war, large quantities of sugar were imported from Egyptian refineries, and petroleum was exported from Persia to Egyptian ports.

TRANSPORTATION. The importance of Persia as a link in the scheme of rail connection of India with Europe was actively discussed in 1919. This was a result of the development of the Bagdad Railway (q.v.) and the various military railways in Mesopotamia. In addition, a meter gauge line was operated between Bagdad and Quaritu on the Persian frontier, while construction was proceeding on an extension to Khermanshah which located between Bagdad and Hamadan is on the route to Teheran the capital of Persia. To the east there was manifested a tendency of the Indian lines to extend into Persia, so that there was every probability of a through rail line between Europe and India via Persia in a very short time. These projected lines when completed along with the proposed channel tunnel would afford England direct rail communication with her Far Eastern possessions.

The withdrawal of the British troops from the Caucasus and the consequent closing of that route removes for the time being what was in normal times the most important avenue for the transportation of goods into Northern Persia. All mails from Europe and America in 1919 were being sent by way of Kermanshah and Bagdad, requiring 90 to 100 days, as against 30 to 40 days when the Baku-Batoum route is open. On August 9th prominent merchants of Teheran formed a union to promote the commerce and

agriculture of Persia. The agreement with Great Britain signed at Teheran on August 10th promised to have a far-reaching effect on the economic and financial future of Persia. According to this agreement, advisers for the several ministries were to be furnished by Great Britain. It provided for the making of loans by that country to Persia, and Great Britain expressed its readiness to aid in improving the transport facilities of the country by the building of railroads, etc.

FINANCE. Gross customs receipts were given for 1916-17 at approximately £846,474. The latest available figures for the revenue date from 1913-14 when it amounted to £1,480,778.

GOVERNMENT AND HISTORY. The effort to secure constitutional government in 1906 having failed, the power is vested in the Shah and the cabinet. The Shah in 1919 was Sultan Ahmad (born Jan. 20, 1898), and the ministry at the beginning of the year was under the premiership of Vossough ed-Dowleh. The Persian Parliament addressed a memorandum to the Peace Conference on May 18th declaring it to be the desire of Persia to be completely independent and self-governing. It declared that the Anglo-Russian agreements of 1907 and 1916 had done much harm and begged that they along with all other illegal treaties and obligations be annulled; and at the same time the Persian government requested a loan of \$100,000,000 from the League of Nations in order to pay its debt and reorganize its government. (See WAR OF THE NATIONS.) An Anglo-Persian agreement was concluded at Teheran, August 9th, whereby England undertook to take part in the administration with a view to aiding in the maintenance of order and in the development of the country's resources. The Shah visited England, arriving in London, October 31st, for the purpose, he declared, of studying industrial methods, the systems of transport, and other aspects of economic life.

PERU. A republic of South America. Capital, Lima.

AREA AND POPULATION. The area is almost equal to that of Texas, New Mexico, Arizona, Nevada, and Utah combined, and is estimated at 679,600 square miles, though another estimate places it as high as 723,461. There has been no recent enumeration of population, but in 1919 plans were made for the taking of a new census. The number of inhabitants has been placed at 4,500,000. Lima had a population according to the estimate of 1913 of 143,500, but later estimates place it as high as 200,000. Other important cities are Callao, 34,346; and Arequipa, 35,000 to 40,000. The country is divided into 19 provinces including Tacna (possession disputed with Chile). Estimates of population do not include uncivilized Indians whose numbers are not known. For further details see preceding YEAR BOOKS. Efforts to promote immigration were made in 1919. On October 10th the government offered to pay the third cabin passage of any immigrant of white race (not a gypsy) and of three members of his family; to guarantee the payment of his lodging and maintenance for six days; and to impose no customs duty on his personal property, tools, etc. Elementary instruction is by law compulsory, but the law is not enforced, and it is free in the schools maintained by the government. Primary schools in 1916 numbered 2296 with 3304 teachers and

166,002 pupils; normal schools, 277 pupils; government high schools, 5202 pupils; and universities, 1791 students. The central university is at Lima and in 1918 had 1471 students and there are universities also at Arequipa, Cuzco, and Trujillo. Provision is made for the teaching of engineering and applied science in various technical schools and there are also military and naval schools.

PRODUCTION AND COMMERCE. The chief agricultural products are cotton, coffee, and sugar. The sugar production greatly increased after the beginning of the war, rising from an average annual output of 185,000 tons during the period from 1910 to 1914 to an output of over 820,000 tons in 1916-17. The acreage of good sugar cane land has been estimated at over 1,000,000, and about 100,000 have been planted with cane, but in 1919 efforts were being made to increase the planted area. The sugar production season is from October to February, and the output has been for the most part brown sugar with a polarization of 96 per cent or more. Cotton had about 140,000 acres with a production in 1916 of 27,603 tons. Efforts to develop the coffee industry by means of colonization have been made of late years and a concession to the Peruvian Corporation comprises 2,750,000 acres in Central Peru, but developments are retarded by labor and transport difficulties. There has latterly been considerable extension of cocoa cultivation and rice is grown extensively, its output in 1917 being 46,178 tons. Other products are tobacco, wines and spirits, wheat, olives, ramie, and corn. Cocoa-growing is an important industry and cocaine is manufactured in Lima and other cities. No later figures for mineral production were available than those given in the 1918 YEAR BOOK.

COMMUNICATION. Railway mileage in 1916 was 1724, of which 1117 were under the control of the Peruvian Corporation. In 1917 vessels entered at Callao in the foreign trade numbered 493, with tonnage of 1,070,885; cleared, 451, with 969,358. During 1919 the project was still in process of realization for the development of a railway system which would unite the three countries of Peru, Bolivia, and Argentina. A railway runs north from Oroya to Cerro de Pasco and the Central Railway, regarded as one of the most daring engineering constructions in the world, unites Lima with Callao, the port on the Pacific. Still another line runs south to Huancayo. The first section, therefore, comprising 350 kilometers, from Callao to Lima and Oroya to Huancayo was completed and the second section of the Pan-American from the last named point to Cuzco was under construction in 1919. A government resolution of August 20th, stipulated that the gauge of the Huancayo-Ayacucho-Cuzco Railway shall be 1 meter, and this aroused considerable discussion and criticism. Some of those interested in the project argued that the standard gauge of 4 ft 8½ in., the same that has been used on the Central and Southern Railroads, should have been adopted. It was claimed by others that the cost of construction entailed by the standard gauge would be prohibitive. A uniform gauge was recognized as desirable, but since this is impossible the adoption of the meter gauge would make it possible to link up the government roads of Bolivia, Chile, Argentina, and Uruguay. The Ayacucho-Cuzco Railroad was one of the most important

projects planned by Peru, for it aimed to open up a rich interior region and also put the capital in railroad communication with the southern part of Peru making unnecessary the ocean trip from Callao to Mollendo. Profits of railways and steamships in 1917-18, 12,869,337 soles (sole—50 cents U. S. currency), an increase of 1,511,170 soles over 1916-17.

FINANCE. The Peruvian budget for 1919 estimated the receipts and expenditures at £5,169,147, distributed as follows: Ordinary receipts, £3,972,997; extraordinary receipts, £1,196,150; total ordinary expenses, £2,680,767, distributed in the following manner: Government, £634,690; foreign relations, £52,765; justice, £314,732; treasury, £454,304; war and navy, £806,064; industry, £418,209. Extraordinary expenses, to the amount of £2,286,570, distributed as follows: Government, £22,414; foreign relations, £19,955; justice and public instruction, £469,065; treasury, £1,386,103; war and navy, £34,444; industry, £355,587; and expenditures for the national Congress, £201,809. The estimated revenue for 1918 according to a British authority was £3,972,997; the expenditure, £2,680,767. The total receipts for the year 1918 were £1,675,767, an increase over 1917 of £91,065. In 1919 the President was authorized to obtain a loan of £300,000 gold at 7 per cent interest to be used in the construction of the Jatunhuasi Railway. The standard of currency is the libra, which is equivalent to the pound sterling, \$4.8665 in United States money. The libra is divided into 10 soles and the sole into 10 centavos. Silver by 1919 had gone out of circulation or was circulated at a premium and the Peruvian silver sole which represents $\frac{1}{10}$ of a libra in gold was worth outside Peru nearly $\frac{1}{16}$ of a libra. The paper circulation consists of bank notes. In 1919 the President was authorized to issue at par bonds of the international consolidated debt with a face value of £2,000,000.

Provision for the withdrawal of the paper currency issued in Peru during the war and for the transfer to Peru of the gold deposited abroad as a guaranty for this paper currency was made in the mandatory decrees authorizing the issues of paper currency. These provisions have been modified by an act recently passed by the Assembly and approved by the President. The following is a translation of this act and the provisions of former decrees which it affects. Article 1. When the international financial situation caused by the recent war shall have returned to normal, the President shall confer with the Junta de Vigilancia (the government organization created to superintend the issue of the paper currency to the banks and to take charge of the guaranties required of them), and shall determine in what manner and at what times the following operations shall be carried out: (a) The withdrawal of the paper currency issued during the war. The original act sanctioning such issues provided for their retirement within six months after the end of the war. (b) The transfer to Peru of the gold deposited in foreign banks as guaranty of this paper currency. The act authorizing such deposits abroad decreed that they were to be transferred to Lima as soon as the gold-export embargo should be lifted by the United States and England, and that said gold was to be deposited in the Junta de Vigilancia to increase the gold guaranty of the paper currency. (c) The control of the de-

livery to the Junta de Vigilancia by the banks issuing paper currency of either gold or paper currency which would enable them to withdraw equal amounts from the gold guaranties deposited abroad. Such delivery had been sanctioned by the original act authorizing the deposit of the gold guaranties abroad.

GOVERNMENT. The executive power is vested in a President elected for four years by direct vote, and a cabinet of six ministers; the legislative power in a Senate of 52 members and a House of Representatives of 116, also elected by direct vote. In each chamber one-third of the members as decided by lot retire every two years. The President, Dr. José Pardo, was succeeded by Señor Augusto B. Leguia, chosen for the term 1919-23. On August 12th the new President organized his ministry as follows: President of the council of ministers and minister of foreign relations, Dr. Meliton F. Porras; minister of the government and police, Dr. Alejandro Maguina; minister of justice and public instruction, Dr. Arturo Osorio; minister of the treasury, Don Fernando Fuchs; minister of war and navy, Gen. J. Ramonizorro; minister of industry, Dr. Matias Leon. Labor troubles disturbed the country throughout the year. On July 4th President Pardo as a result of the disputed election of May 18th was made prisoner by the Peruvian troops and police and Augusto B. Leguia was proclaimed President. The new President advocated a plan for federalizing the state.

See LABOR LEGISLATION.

PESSOA, EPITACIO. Brazil's representative at the Paris Peace Conference; president-elect (1919). He was a high authority on economic questions in Brazil and had been minister of agriculture and of finance, and one of the associates of Rio Branco when he was minister for foreign affairs. He represented Brazil at the third Pan-American Congress.

PETROLEUM. The petroleum industry was active in 1919, and not only were new fields opened and developed to satisfy the increased demands but additional marketing and refining facilities were being provided. In these attempts the general public became largely interested through the promotion of various schemes of greater or less merit which appealed to investors and speculators. As will appear from the accompanying table some 377,719,000 barrels of petroleum were marketed from wells and field storage in 1919, or an average daily production of over 1,000,000 barrels, the year being the first in which that figure was attained or exceeded.

PRODUCTION OF PETROLEUM IN THE UNITED STATES

PRELIMINARY SUMMARY OF PETROLEUM STATISTICS FOR 1919 AND FINAL FIGURES FOR 1918

(Exclusive of petroleum consumed on leases and of producers' stocks, except in California)

(Barrels of 42 gallons)

Field	Preliminary estimates, 1919	Final figures, 1918
Appalachian	29,232,000	25,401,466
Lima-Indiana	3,444,000	3,220,722
Illinois	12,436,000	13,365,974
Mid-continent:		
Oklahoma-Kansas	115,897,000	148,798,087
Central and North Texas	67,419,000	17,280,612
North Louisiana	13,575,000	18,304,399

Field	Preliminary estimates, 1919	Final figures, 1918
Gulf Coast	20,568,000	21,207,620
Rocky Mountain	13,584,000	12,808,898
California	101,564,000	97,531,997
Total production	377,719,000	*355,927,716

* Including 7,943 barrels produced in Alaska and Michigan

The demand for domestic crude petroleum in 1919 apparently was less than in the previous year for the consumption by refineries and other consumers was slightly below that of 1918, as will appear from the accompanying table. This curtailment was due to a lessened demand for fuel oil for both marine and industrial purposes which in the beginning of the year showed a noticeable slackening as a result of the suspension of hostilities in the previous November

CONSUMPTION OF DOMESTIC CRUDE PETROLEUM IN UNITED STATES
(Petroleum delivered to consumers)
(Barrels of 42 gallons)

Field	Preliminary estimates, 1919	Final figures, 1918
Appalachian	28,922,000	25,605,519
Lima Indiana	8,442,000	4,098 155
Illinois	10,165,000	11,559,444
Mid-continent	198,901,000	199,715,878
Gulf Coast	17,417,000	24,424,032
Rocky Mountain	13,696,000	12,409,503
California	103,016,000	99,420,679
	375,559,000	*380,242,153

* Includes 7,943 barrels consumed in Alaska and Michigan.

On Dec 31, 1919, the stocks of domestic petroleum held by pipe lines and marketing companies and by refineries that receive oil directly from the wells through their own pipe lines amounted approximately to 129,022,000 barrels. This marked a decrease of 2,579,000 barrels, as compared with the stocks of Nov. 30, 1919, and a decrease of 11,071,000 barrels from the maximum for the year on July 31st. Stocks on Dec. 31, 1919, were only 7,295,000 barrels more than on Dec. 31, 1918

STOCKS OF DOMESTIC CRUDE PETROLEUM
AT END OF 1919
(Barrels of 42 gallons)

Source of oil	December, 1919
Appalachian	4,014,000
Lima-Indiana	1,158,000
Illinois	4,471,000
Mid-Continent	78,037,000
Gulf Coast	11,889,000
Rocky Mountain	811,000
California	29,142,000
	129,022,000

It will appear from the above that the reserves of petroleum maintained in the United States were somewhat less than five months' consumption.

In practically all grades of petroleum there was an increase in price during the year. Pennsylvania grade increased from \$4 per barrel for high grade crude to \$5 at the end of the year. Other grades maintained about the same propor-

tional advance. Fuel oils of the North Louisiana and Gulf fields opening the year at \$1.25 and \$1.80 a barrel respectively, touched low points of 75 cents and \$1 respectively, but closed the year at \$1 and \$1.25

During the year there was considerable drilling and development work ranging from systematic activity in prospecting and the renovating of old wells to wild cat exploitation. The Illinois field and the Gulf field had reduced production but in Texas new wells were opened while others that figured in the boom of the previous year showed exhaustion. Oklahoma showed important discoveries as well as large production while drilling in the Louisiana field was productive both of promise and immediate results.

During 1919 the United States exported 2,492,754,000 gallons of mineral oil valued at \$343,776,000 as compared with 2,714,619,000 in 1918 valued at \$344,265,000. The comparative figures for the leading products in the two years were as follows.

	1919	1918
Crude mineral oil, gallons	248,874,000	205,829 000
Do., value	\$14,825,000	\$12,084,000
Illuminating oil, gallons	976,305,000	491,109,000
Do., value	\$118,796,000	\$50 354,000
Lubricating oil, gallons	277,591,000	257,317,000
Do., value	\$85,451,000	\$75,603,000
Gasoline, naphtha, gallons	372,133,000	559,368,000
Do., value	\$92,049,000	\$139,593,000
Residuum, fuel oil, gals	617,849,000	1,200,994,000
Do., value	\$32,653,000	\$66,630,000

The imports of crude mineral oil in 1919 amounted to 2,214,099,848 gallons, most of which came from Mexico.

Considering the imports and exports of crude petroleum the U. S Geological Survey reported the excess of imports over exports

	Bbls of 42 gallons
Jan 1, 1919, to Dec 31, 1919 (preliminary figures)	46,854,950
Jan 1, 1918, to Dec 31, 1918 (final figures)	32,827,491

The biggest development during the year took place in Central and Northern Texas and Northern Louisiana, and in the Elk Hills of California. The production of Texas increased considerably, and the new field at Homer, La., showed great promise. Recent development in the Elk Hills pointed to the possibility of obtaining large supplies of light, refinable oil from that district if it were opened to development on a large scale.

The production of gasoline in August, 1919, was 326,000,000 gallons, as against 330,000,000 for 1918 and 254,000,000 for August, 1917. Stocks on hand were respectively 434,000,000, 285,000,000, and 298,000,000 gallons at the end of August for the years 1919, 1918, and 1917.

Gasoline specifications, for the purchase of gasoline by government departments, were adopted during the year. For the use of the specifications committee, 836 samples of gasoline on the market in the various parts of the United States were collected by the Bureau of Mines and analyzed. This survey indicated comparatively little change in the character of gasoline in the past year.

The production of kerosene in August, 1919,

was 219,000,000 gallons, as against 148,000,000 gallons during August, 1918. Stocks were 296,000,000 gallons in August, 1919; 424,000,000 gallons for the same month in 1918, and 511,000,000 gallons for the month of August, 1917. Decreased stocks in the face of increased production indicated an upward trend in the kerosene market.

There was a considerable overproduction of gas and fuel oil after the signing of the armistice because the demands of peace did not require the excessive output of war times. Stocks increased from 600,000,000 gallons in August, 1917, and 569,000,000 gallons in August, 1918, to 830,000,000 gallons at the end of August, 1919.

The gas and fuel oil situation seemed more satisfactory than it was earlier in the year, and markets apparently had been extended to take up the overproduction following the armistice.

Production of lubricating oils remained practically constant during the past year, the production of August, 1919, being 72,000,000 gallons, which was the same for the year previous; the production of August, 1917, was 64,000,000 gallons. Stocks increased from 115,000,000 gallons at the end of August, 1917, to 137,000,000 gallons for the corresponding month of 1918. Stocks of 110,000,000 gallons at the end of August, 1919, signified reduced consumption.

The consumption of petroleum and allied products in the United States has increased tremendously in recent years. Whereas in 1908 the country's production of oil was 178,500,000 barrels, and there was a surplus above consumption of more than 20,000,000 barrels available to go into storage, in 1918, only 10 years later, the oil wells of the United States yielded 356,000,000 barrels—nearly twice the yield of 1908—but to meet the demands of the increased consumption more than 24,000,000 barrels had to be drawn from storage. The annual fuel oil consumption of the railroads alone increased from 16½ to 36¾ million barrels in that time; the annual gasoline production rose from 540,000,000 gallons in 1909 to 3,500,000,000 gallons in 1918.

The domestic production of gasoline for the first nine months in 1919 increased approximately 10 per cent over that for the same period in 1918; the foreign demand decreased 36 per cent and the domestic consumption increased 8 per cent; but the stocks on hand at the refineries on Sept. 30, 1919, were 38 per cent larger than the amount on hand Sept. 30, 1918.

The production of kerosene during 1919 was 26 per cent larger than the production of 1918, owing to the demand of foreign countries that were unable to obtain their supply during the war. Due to the release of tankers after the armistice, exports of kerosene increased 97 per cent over the exports of 1918; shipments to Alaska, Hawaii, Porto Rico, and the Philippine Islands were 43 per cent larger than the year before. Domestic consumption remained about the same.

In the first nine months of 1919 the production of fuel oil was 21 per cent larger than during the same time in 1918. Exports and shipments of fuel oil, during this period, decreased 26 per cent because of a smaller demand on the part of the Allies. Stocks at the refineries on Sept. 30, 1919, were 48 per cent greater than on the same date in 1918. Domestic consumption increased 29 per cent in 1919, probably due to the new con-

sumers of fuel oil for manufacturing purposes rather than to increased industrial activities.

In the first nine months of 1918 242,417,070 barrels of crude oil were run to the stills as compared to 263,195,814 barrels run during the corresponding period of 1919, an increase of 20,778,744 barrels, or approximately 9 per cent.

On Nov. 1, 1919, there were 220 steam tankers flying the American flag. The United States Shipping Board had 45 of 414,759 deadweight tonnage and a capacity of 2,903,000 barrels. The Standard Oil Company of New Jersey also had 45 ships of a deadweight tonnage of 448,355 and a capacity of 2,763,000 barrels. Approximately 250,000 deadweight tons owned by American interests were under foreign flags, with a capacity of 1,950,000 barrels. According to the Atlantic Coast Shipbuilders' Association there were 33 steam tankers under construction.

The 10 large pipe lines running from Eastern oil fields to tidewater were estimated to have conveyed over 200,000,000 barrels of oil in 1919, a substantial increase over the previous year.

The following table shows the number of barrels of petroleum produced in the United States from 1856 to 1919 with the value of the product.

PETROLEUM PRODUCTION IN UNITED STATES
FROM 1856 TO 1919

Year	Barrels	Value
1856	2,000	\$32,000
1860	500,000	4,800,000
1861	2,113,000	1,035,000
1862	3,056,690	3,209,525
1863	2,611,309	8,225,663
1864	2,116,109	20,896,576
1865	2,497,700	16,459,853
1866	3,597,700	13,455,398
1867	3,347,300	8,066,993
1868	3,638,117	13,217,174
1869	4,215,000	23,730,450
1870	5,260,745	20,503,754
1871	5,205,234	22,591,180
1872	6,293,194	21,440,503
1873	9,893,786	18,100,464
1874	10,926,945	12,617,527
1875	8,787,514	7,368,133
1876	9,132,669	22,982,822
1877	13,350,363	31,788,466
1878	15,396,868	18,044,520
1879	19,914,146	17,210,708
1880	26,286,123	24,600,638
1881	27,661,238	23,448,339
1882	30,349,897	23,631,165
1883	23,449,633	25,790,252
1884	24,218,438	20,595,966
1885	21,858,785	19,198,243
1886	28,064,841	19,996,313
1887	28,283,483	18,877,094
1888	27,612,025	17,947,620
1889	35,163,513	26,963,340
1890	45,823,572	33,365,105
1891	54,292,655	30,526,553
1892	50,514,657	25,906,463
1893	48,431,066	28,950,326
1894	49,344,516	35,522,095
1895	52,892,276	57,632,296
1896	60,960,361	58,518,709
1897	60,525,516	40,874,072
1898	55,364,233	44,193,359
1899	57,074,850	64,603,904
1900	63,620,529	75,989,313
1901	60,389,194	66,417,335
1902	88,766,916	71,178,910
1903	100,461,337	94,694,050
1904	117,080,960	101,175,455
1905	134,717,580	84,157,399
1906	126,493,936	92,444,735
1907	166,095,335	120,106,749
1908	178,527,355	129,079,184
1909	183,170,874	128,329,487
1910	209,557,248	127,899,688
1911	220,449,891	134,044,752
1912	222,935,044	164,213,247
1913	248,446,230	237,121,388
1914	265,762,535	214,125,215

Year	Barrels	Value
1915	281,104,104	179,462,890
1916	300,767,158	
1917	335,315,601	
1918	342,000,000	
1919	356,000,000	

MEXICO. In Mexico there was increased production in 1919 over the previous year and careful estimates published recently by the Oil City Derrick, put the 1919 production at 92,402,055 barrels, an increase over 1918 of 27,797,433 barrels. Production by fields: South Fields, 72,656,713; Panuco, 16,808,435; Topila, 1,348,769 and Ebano and miscellaneous, 1,588,138. Vessel shipments totaled 80,701,780 barrels; 23,936,384 increase over 1918. Movement by ports: From Tampico, 43,537,793 barrels; Port Lobos, 20,913,563; Tuxpam, 16,250,424. Approximately 77,703,289 barrels was exported (inclusive of bunker deliveries to tankers). Distribution of movement follows: United States and possessions, 56,937,393 barrels; South America (both coasts), 6,642,985; Mexican coastwise (50 per cent eventually exported as fuel oil and refined products), 5,996,982; Great Britain, 3,054,357; Canada, 2,558,496; Cuba, 2,004,184; Central America, 553,694; Egypt, 272,513; France, 277,591; Netherlands, 239,985; Portugal, 110,510; Malta, 95,794; Gibraltar, 66,767, and to bunkers (to balance) 1,890,529. Oils shipped may be tabulated as follows: Crude, 60,433,595 barrels; topped crude (prepared fuel), 15,393,400; distillates, 2,984,256, and bunkers (to balance), 1,890,529.

PEYTRAL, PAUL French senator, died at Marseilles, December 1. He was born in that city, Jan. 20, 1842, and was, during his early career, the head of a large drug establishment. In 1876 he was elected to the municipal council and in 1881 to the Chamber as representative from Marseilles. From that time on he was regularly reelected to the Chamber until 1894 when he was elected to the Senate. He remained in the Senate until 1912, being a member of the democratic Left. He was under-secretary of state in 1886; minister of finance in the Floquet cabinet in 1888-89; in the first Dupuy cabinet, 1893; in the second Brisson cabinet, 1898; and in the fourth and fifth Dupuy cabinets, 1898-99, and was president of the Senate committee on finance in 1914. From 1906 on he was a member of the higher committee of education for the decorative arts.

PHILADELPHIA. See CITY PLANNING; MUNICIPAL GOVERNMENT.

PHILHARMONIC ORCHESTRA (of Los Angeles). See MUSIC, *Orchestras*.

PHILIPPINES. AREA AND POPULATION. The area of the islands totals 114,420 square miles according to the statistical bulletin of 1918. The last official census, that of 1903, placed the population at 7,635,426. The estimated population in 1918 was 10,010,810. As classified according to religions in 1915 it was: Christian, 8,413,347; Mohammedan, 315,980; pagan, 618,637; unclassified pagan, 81,941. The foreign born in that year were placed at 73,366. In 1917 the immigrants numbered 6939, and the emigrants 762. For the first six months of 1918 the immigrants numbered 4187 and the emigrants 428. The population of Manila was 280,460 of whom 245,500 were Filipinos. Of the foreign population the Americans exclusive of the army and navy numbered about 5000.

EDUCATION. The following table gives statistics for education in the years 1917 and 1918.

Year	Primary	Intermediate	Secondary	Total
1918	4,276	423	48	4,747
1917	4,288	368	46	4,702
Annual enrollment.				
1918	592,563	64,306	14,529	671,398
1917	607,682	56,884	11,432	675,998
Average monthly enrollment.				
1918	499,986	56,592	12,897	569,475
1917	507,226	50,306	10,093	567,625
Average daily attendance.				
1918	455,754	53,232	12,391	521,377
1917	457,383	47,230	9,650	514,263

As a result of the 20 years continued teaching of English, many thousands of young men and women now entering the activities of life in government and commerce possess a good knowledge of the English language.

AGRICULTURE. The following information is supplied from the official reports. A comparison of statistics compiled by the bureau of agriculture for the past six years shows conclusively that the year 1918 was a banner year for agriculture in the Philippines, all records being surpassed, not only in the money value of the crops produced, but also as to the number of hectares in cultivation and the amount of crops produced. In round numbers the total value of the six leading crops of the islands, namely, rice, abaca, sugar, coconuts, corn, and tobacco, jumped from the previous high record of 241,000,000 pesos for 1917 to 350,000,000 pesos for 1918, a net gain for the year of 109,000,000 pesos, and the highest total ever attained for Philippine agricultural products since the statistical division was established in the bureau in 1913. Compared with the average annual production for the previous five-year period, the 1918 record shows an even greater gain of 181,000,000 pesos in value. Compared, likewise, with the averages for this previous five-year period, there is an increase of 371,000 hectares planted to the six leading crops mentioned above, and an increased yield in kilos and liters of 1,434,000,000. Only one crop of the six fails to show an increase in hectareage, in yield, and in value of the product. Corn showed a slight decrease in hectareage and in yield, but the value of the crop produced even then showed a satisfactory gain.

COMMERCE. The unprecedented figures in the foreign trade of 1918 were exceeded in the trade for the year ending June 30, 1919. The high prices, however, made the values less trustworthy indications of development than in former times. The imports reached the sum of \$107,774,263 or about 30 per cent more than those of the previous year and about double the pre-war average. While the advancing prices accounted largely for these figures it was to be noted that machinery imports more than doubled in value and consisted of oil-extracting and sugar-making machinery which represented values of great importance in the future development of industries. The trade in cotton textiles, however, fell far below the quantity of 1918. Rice imports showed an increase of over \$2,000,000 in value despite the shortage in production of the great rice exporting countries.

At the end of the fiscal year, rice sold at double the price that it had received at the beginning.

The exports were valued at \$122,729,238, also an increase over 1918. There was a slowing down of the exports in the latter part of the year owing to the withdrawal of the war stimulus. The following table of exports and imports is supplied by the United States Bureau of Insular Affairs:

ments of foreign merchandise more than doubled in value and exceeded four and a half million dollars, a sum serving on the one hand to discount the import total, and on the other to emphasize the growing importance of Manila as a distributing centre—chiefly for American goods. The proportion of the United States in the trade of the islands for the year did not materially differ from that of 1918, constituting

Countries	Imports		Exports	
	Twelve months ending June 1918	1919	Twelve months ending June 1918	1919
United States	\$49,799,229	\$64,655,144	\$77,010,233	\$79,332,548
Hawaii	202,679	629,806	182,613	169,494
United Kingdom	3,065,146	2,767,293	15,666,764	15,055,104

Spain	643,554	628,835	3,233,201	2,564,411
Switzerland	350,092	651,305	202,038	66,028
Other countries	1,958,496	4,760,260	458,572	1,822,262
Total	\$83,763,290	\$107,774,263	\$116,614,611	\$122,729,238

The following information in regard to foreign trade and other economic activities is supplied by the Bureau of Insular Affairs:

The remarkable development of the coconut oil manufacturing industry was the outstanding activity of the year and touched the foreign trade figures at various points. Imports of oil mill equipment furnished the leading item in the machinery total, while exports of oil became a close rival of hemp for leadership in the islands' trade. This reacted upon the important copra trade of the past, which virtually disappeared in the latter half of the year, while in the same period the islands, with a pre-war record of one of the largest copra producers for export in the world, passed into the ranks of the importers. Imports during the closing six months amounted to 17,093 long tons—chiefly from Dutch East Indies, while shipments at the end of the year had dwindled to merely nominal amounts from the outlying southern ports to the neighboring market of Singapore.

The armistice proved highly beneficial to the sugar trade. Distance from the important markets operated unfavorably to the participation of Philippine sugar in the general high prices of the war period, but with the release of tonnage and declining freights following the armistice, local prices reflected an increasingly larger share of the continued high prices of the great consuming centres. The average figure realized was 4.3 cents as compared with 2.6 cents for the earlier half of the year, but unfortunately the estimated outturn of the new crop, owing to weather conditions has been reduced very low, and shipments in the latter half of the year at these higher prices were exceptionally light. Another and a permanent factor in Philippine sugar prices is the increasing output of high-grade sugars. Centrifugals comprised 27 per cent of the quantity of sugar exported during the year and realized an average price of a cent and three quarters a pound above the open-kettle product that it is steadily supplanting.

Trade in both cigars and tobacco continued active and at higher prices, with exports of each in much larger quantities than ever before, ship-

60 per cent of all imports and 65 per cent of the export total.

Reduced quantities and declining prices of hemp and coconut oil, the two leading exports, virtually explain this reduced total of the latter part of the year. Of the reduced hemp shipments for the year as a whole, the unprecedented quantity of 96,380 long tons was exported during the first six months and only 36,268 long tons in the closing six months, with the price movement generally downward throughout, following the termination of government-fixed prices. There was also a marked decline in production in the latter half of the year, attributable to a typhoon in the hemp-producing districts late in December and to unsatisfactory market conditions. A further element in reduced exports is to be found in exceptionally heavy accumulations of stocks in the islands, and the close of the year found this—the leading Philippine export industry—still under the depression of the armistice period, and awaiting the arrested world demand for raw materials and the resumption of normal trade with the final coming of peace.

HEALTH AND SANITATION. The year 1918 was characterized by the appearance of serious epidemics. Of smallpox there were registered in Manila 1326 cases and 869 deaths, and in the Provinces 40,126 cases and 12,951 deaths. The spread of this disease was due to two causes—the bringing over to Manila, in December of 1917, of two native sailors who had been rescued from shipwreck and happened to develop smallpox upon their landing; in that same month an English sailor from Nankin, China, arrived in Manila and developed smallpox the next day. A vaccination campaign was at once undertaken, but due to lack of vaccine virus it did not accomplish the desired result. Influenza occurred twice during the year, in May and June and in October and November. Deaths were due to complications of pneumonia and of diseases of the heart and other organs. Cholera also appeared in the Provinces during the year, but its effects were less disastrous than those of the previous year.

Six provinces were organized into sanitary divisions during the year, so that only seven provinces at its close remained to be organized. Considerable activity has been displayed in health, education, and publicity, which consisted chiefly of lectures given by health officers and nurses in public gatherings, such as carnivals, exhibitions, "ferias," and garden days. District nurses continued their visits from house to house, treating the simple cases of diseases and giving advice, especially to mothers and parturient women, on sanitation, housekeeping, and balanced diets, demonstrations of which were given. The work for infant welfare was carried on more vigorously. About 150,000 houses were visited by the district nurses, who gave instructions in hygiene, nursing, and diet. That the value of this work was rapidly being realized is shown by the numerous calls for nurses and midwives and by the increased number of deliveries in the hospitals. Attendance in the dispensaries also increased, thus showing the greater confidence of the people in scientific treatment. One of the most important features of sanitary work was the medical inspection of schools, which gave the children considerable relief from their ailments particularly toothache, skin diseases, and tonsillitis.

FINANCE. The following table shows the balance receipts and expenditures in pesos during the years 1915-1918, inclusive.

	<i>Balance</i>	<i>Receipts</i>	<i>Expend</i>
1915	8,559,228	29,558,626	27,883,738
1916	10,234,116	45,704,855	40,906,813
1917	15,032,159	54,781,241	45,408,717
1918	24,404,683	68,690,105	57,496,043

The budget system was introduced in 1917. It was characterized as tending toward greater clearness and publicity of the appropriations and toward the best coordination of the system of finance. The recent constitution of the council of state has a special significance to the financial system. That institution is called upon to outline the financial policy of the country, and the fact that the presidents, the people's representatives of both legislative houses are members of said body gives assurance as to the permanent soundness of the budget system.

The circulation at the end of the year 1918 reached 131,151,883 pesos, which, compared with 102,580,313 pesos for the previous year, gives an increase of 28,571,570 pesos in a year, and compared with 51,284,906 pesos for 1915, gives an increase of 79,866,977 pesos in three years. Based on the population as shown in the census of 1903, the circulation per capita was 17.36 pesos on Dec. 31, 1918, while on the same date of former years it was 13.44 pesos in 1917, 8.58 pesos in 1916, and 6.72 pesos in 1915.

LAW AND ORDER. The following account of internal conditions is taken from the official report: Five years ago the United States inaugurated a new policy in the administration of the affairs of the Philippine Islands. Radically differing from the one theretofore pursued in that it practically placed in the hands of Filipinos the reins of interior government in the islands, the new policy was condemned by some as the beginning of internecine troubles. During that period, however, a state of peace has existed throughout the islands.

Hardly nine months had elapsed after the an-

nouncement of the new policy was made, when the world was shocked by the news of war. The severe pinch of war began to be felt throughout the Philippines. The prices of articles of prime necessity began to soar so high that in 1918-19 they were almost beyond the reach of the common people. But the abnormal conditions were borne with patience. The inhabitants gave no concern or embarrassment to the government even in those moments of extreme national crisis. Undoubtedly this was due in the main to the change in policy which resulted in the intelligent understanding between the people and the government. Occasional and insignificant breaches of the peace occurred, such as Negrito unrest in the Province of Zambales, but such incidents were merely of local significance.

HISTORY. The principle of self-determination of nationalities set forth in President Wilson's addresses aroused among others the people of the Philippines to demand independence. A bureau of propaganda was established by them in Washington and devoted itself to meeting American objections to Philippine independence, and advancing arguments on its behalf. Its activity was in no way directed against the policy of the United States in the past. In fact the benefits of American protection were freely acknowledged and it was admitted that the United States had introduced measures of self-government in a liberal spirit. The whole question turned upon the readiness of the people for self-government. General American opinion while favorable to ultimate independence did not believe that the moment for it had come. The arguments of the Filipinos were to the effect that the country had already shown its ability to direct its own affairs, because a very large part of its administration had been for some time in the hands of natives. They pointed out the fact that all provincial governors except four were natives; that the municipalities were administered by elected native officers; that the two houses of legislature were composed exclusively of natives who were elected by direct popular suffrage, and that out of the seven members of the cabinet there was only one American. As to education the primary teaching was almost exclusively in the hands of the natives, and 44 per cent of the teachers in the secondary schools were natives. In the judiciary there were 19 Filipinos out of 26 judges of first instance and in the Court of Appeals there were four Filipinos to five Americans, and the President had always to be a native. To the question whether the islands were ready for self-government Governor-General Harrison had replied in the affirmative, but the main body of the American opinion still remained unfavorable. The arguments urged against Philippine independence were based according to the Filipinos on information derived largely from sensational motion pictures and newspaper reports which had to do with such matters as head hunting and the customs of the Moros and Igorrotes of the mountains, savage peoples who made up only 500,000 out of the 10,000,000 population. The Filipinos denied that they were to be regarded as a miscellaneous collection of unrelated tribes and said on the contrary that they formed a very homogeneous people speaking a common language and having common customs. There was neither race nor class antagonism among them.

They appealed to ex-President Taft in support of this view. The real objection in the United States was the fear of Japan. This the Filipinos derided as the "Japanese scarecrow." Nevertheless it was a view seriously held in the United States, where though there was no hostility to the Japanese there was a strong distrust of their imperialistic tendencies. As to the administration the Secretary of War, Mr. Baker, had said officially on April 4, 1919, that he knew he was expressing the opinion of the President when he declared that the moment had almost if not actually come when the Philippines should be made independent. Thus the promises of independence were renewed but in 1919 there was no indication that it would take a practical form at an early date. See ANTHROPOLOGY.

PHILOLOGY, CLASSICAL. In view of the conditions still obtaining in the foreign book trade, this article must be confined almost wholly to American and English work in classical philology.

To the *Loeb Classical Library* (see YEAR BOOKS for 1911, 1912, 1913, 1914, 1915, 1916, 1917, 1918) were added, on the Greek side, translations of Aeschines, *Orations*, by C. D. Adams; *Clement of Alexandria*, by G. W. Butterworth; Homer, *Odyssey* (the first of two volumes), by A. T. Murray; *Pausanias* (the first of six volumes), by W. H. S. Jones; *Plutarch* (the sixth and seventh of 11 volumes), by B. Perrin; *Procopius* (the third of six volumes), by H. B. Dewing, on the Latin side, of Boethius, *Theological Tractates and Consolation of Philosophy*, by H. F. Stewart and E. K. Rand; Cicero, *Letters to Atticus* (the last of three volumes), by E. O. Winstedt; Vergil, *Aeneid VII-XII and Minor Poems*, by H. R. Fairclough. Of the authors of these translations, Messrs. Adams, Dewing, Fairclough, Murray, Perrin, and Rand are Americans, the rest are Englishmen.

To the *Oxford Library of Translations* has been added a second volume of *Selected Essays* of Plutarch, translated by A. O. Prickard (reviewed in the *Classical Review*, xxviii, by A. C. Pearson). Mention may be made of a metrical translation of Plautus, *Mostellaria*, by H. T. Schmittkind, which appeared in the *Stratford Journal* (1917), and a translation of Plautus, *Rudens*, by C. K. Chase, published by Hamilton College, at Clinton, N. Y. Plato, *Republic*, was translated by A. Kerr. A translation of Plotinus's complete works, chronologically arranged, was issued by the Comparative Literature Press (Grantwood, N. J.).

In the *American Journal of Philology*, xxxix, edited by Professors B. L. Gildersleeve and C. W. E. Miller, were published "An 'Inspired Message' in the Augustan Poets," Elizabeth H. Haight (the author finds in the Latin poetry of the Augustan Age a "message," possibly coming directly from the Emperor, perhaps through Maecenas, his right-hand man in civil affairs, i.e. a deliberate attempt of the poets, especially Vergil, to emphasize the Apollo cult and the prestige of the Sibylline oracles, and more especially to identify Augustus with Apollo, and to interweave the exaltations of Apollo-worship with the Imperial theme); "The Date of the Vatinian Law," E. T. Sage (an attempt to arrange, in chronological order, the principal events of the year 59 B.C., the year of Caesar's consulship: the author holds that the Vatinian Law was passed late in this year); "The

'Thought' Motif of Wisdom Versus Folly in Greek Tragedy," L. Van Hook; "Curtius and Arrian," R. B. Steele (a study of the extent to which the Latin author Curtius, historian of Alexander the Great, used the Greek writer Arrian as a source); "References to Literature in Plautus and Terence," C. Knapp (a study of the allusions in the two great Roman comic writers, more especially Plautus, to the stories which figure so largely in Greek literature, particularly Greek dramatic literature—such stories as those of Io, Jason, Hercules, and the whole array of stories of the Trojan cycle: the allusions involve, at times, parodic reference to Roman playwrights, especially Ennius); "The Use and Range of the Future Participle," E. B. Lease; "Problems in Delphian Chronology," A. C. Johnson; "Satura Rediviva," Margaret C. Waites (another discussion of Livy vii. 2, the passage that figures so largely in the discussion of the dramatic satura among the Romans: see YEAR BOOK for 1912).

Reviews of special importance in these volumes are those of Ettore Bignone, *I Poeti Filosofi della Grecia Empedocle* (an elaborate critical study of Empedocles, and a translation, with abundant commentary, of the remains of the two works of the poet-philosopher), by W. A. Heidel; of C. W. Mendell, *Latin Sentence Connection*, by T. D. Ruth. Further, useful summaries were given of the contents of several foreign classical periodicals. of *Glotta* ix, 1 (1917), 2-4 (1918), by C. W. E. Miller; of *Hermes*, xlix, 3-4 (1914), 1 (1915), and liii (1918), by H. L. Ebeling; *Philologus*, lxxiv (1917-1918), by C. W. E. Miller; *Rheinisches Museum*, lxii, 1-2, by C. W. E. Miller, *Revista di Filologia*, xlvii, 1-2 (1918), by K. F. Smith, xlvii, 3-4 (1918), by W. P. Mustard.

From *Classical Philology*, xiv, edited by Paul Shorey, may be mentioned "Words for 'Battle,' 'War,' 'Army,' and 'Soldier,'" C. D. Buck (a very interesting paper, discussing the etymologies of 59 classical and other Indo-European words for battle, war, army, and soldier, and setting forth the wide extent to which some of the classical words have been appropriated by different modern nations); "Παραγραφὴ and Arbitration," G. M. Calhoun; "On the Use by Aldus of his Manuscript of Pliny's Letters," E. T. Merrill, (the author maintains, with Keil, that Aldus's readings are due far more to conjecture than to faithful reproduction of the lost Paris manuscript); "References in Plautus and Terence to Plays, Players, and Playwrights," C. Knapp; "The Number Three, Mysterious, Mystic, Magic," E. B. Lease; "The Columna Rostrata of C. Duilius," T. Frank (a discussion of the column set up by C. Duilius, in 260 B.C., to commemorate his naval victory over the Carthaginians, off the north coast of Sicily, near Mylae. This column, it may be noted, is the prototype of the Columbus column in New York City. The style and the orthography of the inscription on this column have both given trouble. Professor Frank thinks that Duilius, in the absence of Roman models, adopted the style of the Greek honorific inscriptions to be seen in every city in Sicily: he believes also that about 150 B.C. some one filled out, in the orthography of that day, certain places in the inscription which had become illegible, and that our extant version is due to a later restoration made in the Early Empire); "Scheria-Corcyra, II,"

by A. Shewan (see YEAR BOOK for 1918: this paper supports and supplements Mr. Shewan's paper, "The Scheria of the *Odyssey*," in the *Classical Quarterly*, xiii, see below); "The Antecedents of Hellenistic Comedy, Parts V and VI," H. W. Prescott (see YEAR BOOK for 1918: this paper criticizes the methods of modern students of Roman comedy, Plautus and Terence, questioning in particular the processes by which they seek to prove the dependence of that comedy on Euripides); "Some Tests of the Relative Antiquity of Homeric Books," J. A. Scott; "The Method of Arrian in the *Anabasis*," R. B. Steele; "The Development of the Irrigation System of Egypt," W. L. Westermann; "On δὲ γὰρ in Retort," P. Shorey; "The Importance of Hellenism from the Point of View of Indic-Philology, I," W. E. Clark; "Rome's First Coinage," T. Frank; "Abstract Nouns in Homer," G. M. Bolling; "Athenian Magistrates and Special Pleas," G. M. Calhoun; "Athenian Casualty Lists," Gertrude Smith; "The Expulsion of Jews from Rome under Tiberius," E. T. Merrill; "The Coincidence of Accent and Ictus in the Roman Dactylic Poets," E. H. Sturtevant; "Greek and Latin Constructions in Implied Agreement," E. S. McCartney; "The *Παλινωδία* of Cicero," Catharine Saunders (the author holds that Cicero, *Ad Atticum*, v, 5, was a letter to Pompey, for Caesar, or even to Caesar directly, pledging Cicero to forego opposition to Caesar, especially in connection with the Campanian land law); "Versus Tetracolos," S. E. Bassett; "The Coincidence of Accent and Ictus in Plautus and Terence," E. H. Sturtevant; "Greek and Latin Etymologies," F. A. Wood; "Local Color in Ben Jonson's 'Catiline' and Historical Accuracy of the Play," L. H. Harris ("it is a cruel paradox that this tragedy, on which such vast pains were spent for absolute accuracy, should be after all, so largely mistaken"). An important review in this volume is that of R. C. Flickinger, *The Greek Theatre and Its Drama*, by J. T. Allen.

From *The Classical Journal*, xiv-xv, edited by F. J. Miller and A. T. Walker, we mention "The Disobedience of Clearchus at Cunaxa," J. W. Hewitt (a fresh discussion of the statement made by Xenophon, *Anabasis* 1, 8, 13, that Clearchus had failed to obey an order of Cyrus to lead the main Greek force against the centre of the Persian army, where King Artaxerxes, brother of Cyrus, was. Professor Hewitt seeks to prove that to obey this order was a practical, if not an absolute, impossibility): "Julius Caesar in the English Chronicles," F. S. Dunn; "The Choice of Paris in Homer," J. A. Scott (the one reference in Homer, *Iliad* 24, 29-31, to Paris's choice of Venus as the most beautiful goddess is generally ejected by editors from the text of Homer, on the ground that, had Homer really known the story of the choice, he would have referred to it oftener. Professor Scott argues that the Homeric audiences knew the story of the choice of Paris, so that the poet could mention it or not, according to his own poetic feeling); "Puns and Plays on Greek and Roman Proper Names," E. S. McCartney; "The Myth of Io Viewed in the Light of the East Aryan Conception of the Earth," W. F. Warren; "The Value of the Traditions Respecting the Early Kings of Rome," W. Ridgeway (Mommsen's view, that the traditional Roman account of the period of the kings must be rejected, in part because the State archives were burned in

390 B.C., in part because the traditional stories of that period contain supernatural elements, Ridgeway combats: he lays stress upon the power of memory in oral traditions, and urges, by citing very modern instances, that the supernatural elements may well have attached themselves to what were at first reasonably accurate accounts of actual happenings); "Latin Word-Order," B. L. Ullman; "The Origin of the Roman Forum," N. W. DeWitt (an argument that the Forum was once the private property of the king—the royal courtyard); "Was Athens in the Age of Pericles Aristocratic?" L. Van Hook (the author maintains that it was not); "Representative Government in the Ancient Politics," T. Frank (the "Politics" considered are the Boeotian League, of 397 B.C., the Hellenic Confederation established by Philip after the battle of Chaeronea, the Aetolian League, experiments in Greece by Roman generals, and the Italian alliance that fought Rome in the Social War, 90-88 B.C.); "Rome and Her Subject Peoples," G. A. Harter; "The Structural Similarity of *Iliad* and *Odyssey* as Revealed in the Treatment of the Hero's Fate," S. E. Bassett; "Atrocities in Greek Warfare," Helen H. Law (the author maintains that the Greeks, in the days before Christianity and international law, showed on the whole remarkable enlightenment and humanity); "The Sea in Roman Poetry," Mona E. Hodnett; "The Second Phase of the Battle of Cunaxa," J. W. Hewitt.

Some reviews in this volume may be mentioned: of A. C. Clark, *The Descent of Manuscripts* (see below, and YEAR BOOK for 1918), by E. T. Merrill; E. H. Heffner, *The Sequence of Tenses in Plautus*, by F. H. Fowler; A. Della Seta, *Musco di Villa Giulia, I*, by E. D. Van Buren; A. T. Robertson, *A Grammar of the Greek New Testament in the Light of Historical Research*, 3d ed., by W. Petersen.

From *The Classical Weekly*, xii-xiii, edited by C. Knapp, may be mentioned "Irrigation Among the Greeks and the Romans," C. Knapp; "The Place of Winckelmann in the History of Classical Scholarship," W. W. Hyde; "Alcidamas Versus Isocrates: the Spoken versus the Written Word," L. Van Hook (the paper includes a translation, the first in English, of Alcidamas's treatise, *On the Writers of Written Discourse*); "The Role of the Concept of the Infinitive in the Work of Lucretius," C. J. Keyser (a reprint of a paper that appeared originally in the *Bulletin of the American Mathematical Society*, xxiv); "The Graeco-Roman Civilization of Syria and Palestine," J. A. Montgomery; "Juvenal 8, 154," C. Knapp; "The Ancients and the War Adenda," E. S. McCartney (a study of soldier humor, as exhibited in the terms applied, by the fighters in the Great War, to friend or foe, humor in many respects parallel to that exhibited by the ancients under like circumstances); "On Vergil, *Aeneid* 1, 466-493," E. Riess and C. Knapp; "Caesar, B. G. 2, 8 Again," C. Knapp; "The Functions of Repetition in Latin Poetry," H. M. Poter; "The Vestal Virgins of Ancient Rome," E. L. White; "Latin Adjectival Clauses with the Subjunctive," F. H. Fowler; "Remarks on Roman Poetic Diction," A. L. Wheeler (of special interest to students of Catullus); "Analysis of Lucretius, *De Rerum Natura* I-III," C. Knapp (the main purpose is to help readers to follow Lucretius's thought: by-products are light upon the extremely logical

and orderly cast of the poet's mind, and proof that editors needlessly have shifted, repeatedly. Lucretius's verses from the order in which they appear in the manuscripts); "Horace on the High Seas," R. G. Kent (the author offers a new interpretation of Horace, Odes 1, 28, holding that Horace, who had once narrowly escaped death by shipwreck, represents himself there as shipwrecked and his lifeless body cast upon the shore. His spirit, while bewailing its fate, sees a mariner sailing along by the shore, and appeals to him to cast upon the body the three handfuls of earth which constituted formal burial); "Carlyle as a Classicist," T. Flint; "Analysis of Horace, Sermones 2, 3," C. Knapp.

Reviews of special importance in these volumes are those of W. S. Messer, *The Dream in Homer and Greek Tragedy*, by E. S. McCartney; of J. L. Hancock, *Studies in Stichomythia*, by S. E. Bassett; of T. Dempsey, *The Delphic Oracle: Its Early History, Influence, and Fall*, by J. W. Hewitt; of P. V. N. Myers, *Ancient History*, by A. E. R. Boak; of W. W. Blancké, *The Dramatic Values in Plautus*, by E. S. McCartney; of Bessie R. Burchett, *Janus in Roman Life and Cult*, by J. W. Hewitt; of J. P. Postgate, *M. Annaei Lucani De Bello Civili Liber VIII*, by Gertrude M. Hirst; of Mary Emma Armstrong, *The Significance of Certain Colors in Roman Ritual*, by G. D. Hadzsits.

In vol. xlix of the *Transactions of the American Philological Association*, we find, besides other papers, these: "On the Authenticity of the Hercules Œtaeus," A. S. Pease; "The Accusative of Exclamation: Lucretius to Ovid," R. C. Fleckinger; "The Suitors of Penelope," S. E. Bassett; "Augustus as a Letter-Writer," Ella Bourne; "The Roman Farmer and the Moon," E. Tavenner; "The Similes in Latin Epic Poetry," R. B. Steele; "Two Thousand Years of Latin Translation from the Greek," D. P. Lockwood; "The Synthesis of the Romans," Ethel H. Brewster (a discussion of a composite garment or costume mentioned frequently in Roman writers, especially in Martial); "Lucretius as a Student of Roman Religion," G. D. Hadzsits.

As in the YEAR BOOKS for 1917 and 1918, attention is called to the fact that in the *Bulletins* published under the auspices of various universities, papers appear that fall within the field of classical philology. We may name here, from the *University of North Carolina Studies in Philology*, the following: "The Cadence of English Oratorical Prose," M. W. Croll (of interest to students of rhythm in Greek and Roman prose); "Roman Actors," K. G. K. Henry (a collection of references in Latin literature to actors, as an aid to understanding their individuality and their services to the Roman theatre). Of special interest is *University of Wisconsin Studies in Language and Literature*, Number 3, a volume of 190 pages, entitled "Classical Studies in Honor of Charles Forster Smith by His Colleagues," a collection of 10 papers written when Professor Smith, long professor of Greek at the University of Wisconsin, retired. The papers are as follows: "The Hercules Myth and its Treatment by Euripides," G. L. Hendrickson; "The Source of Herodotus's Knowledge of Artabazus," A. G. Laird; "Seneca and the Stoic Theory of Literary Style," C. N. Smiley; "The Plain Style in the Scipionic Circle," G. C. Fiske (a discussion of certain phases of the style of the *Satires* of Lucilius and Hor-

ace, and of the theories of humor held by these writers: of interest to students of Cicero also); "The Olive Crown in Horace, *Carm.* 1: vii, 7," A. R. Anderson; "The Eternal City" (a sketch of certain phases of the history of Rome from the sack of 1527); "Britain in Roman Literature," Katharine Allen; "A Study of Pindar," Annie M. Pitman; "Lucretius—The Poet of Science," M. S. Slaughter; "An Egyptian Farmer," W. L. Westermann (a description, based on the letters of a certain Gemellus, of life on an Egyptian farm about 100 A.D.).

In the *University of Illinois Studies in Language and Literature*, iv, appeared "Index Verborum Quae in Senecae Fabulis Neeon in Octavia Praetexta Reperiuntur, Parts 2 and 3," by W. A. Oldfather, A. S. Pease, and H. V. Canter. (See YEAR BOOK for 1918.) This index will prove of great importance in the settlement of questions relating to the authenticity of certain of the tragedies ascribed to Seneca, in particular, the Octavia. Such use of the Index has already been made by A. S. Pease, in his article on "The Authenticity of the Hercules Œtaeus," in *Transactions of the American Philological Association*, xlix (see above). It is worth while in this connection to call attention to two similar indexes prepared by an American Classical scholar, M. N. Wetmore: *Index Verborum Vergilianus*, (see YEAR BOOK for 1911), and *Index Verborum Catullanus*. For the importance of these indexes see *The Classical Weekly*, vi, 110, 124.

In the *University of Michigan Studies: Humanistic Series*, xiv, appeared "The Master of the Offices in the Later Roman and Byzantine Empires," A. E. R. Boak (reviewed in the *American Historical Review*, xxiv).

From the *University of California Publications in Classical Philology*, v, may be mentioned "Notes on the *Silvae* of Statius, Book II, and "Notes on the *Silvae* of Statius, Book III," W. A. Merrill.

In the YEAR BOOK for 1918 emphasis was laid on the attention paid in recent years by students of English to the classical elements in English literature. For a discussion of a number of works of this sort, see "English Literature and the Latin Classics," C. Knapp, in the *Classical Weekly*, xii. For 1919 the following may be noted: "English Translations from the Greek: A Bibliographical Survey," F. M. K. Foster (the period covered is from the establishment of Caxton's printing press in London, in 1476, to the beginning of 1918); "Vergil and the English Poets," Elizabeth Nitchie.

As in the YEAR BOOKS for 1917 and 1918, attention must be called to the fact that in periodicals which are in no sense especially devoted to classical matters, a wide variety of papers, of real interest and importance to students of the classics, is to be found. A variety so wide, in fact, that it is impossible to take adequate account of it. Partial surveys of this field are to be found in contributions to the *Classical Weekly*, labeled "Classical Articles in Non-Classical Periodicals," by C. Knapp, W. S. Messer, and H. H. Yeames (account is taken of American, English, French, German, Italian, and Spanish periodicals), and in contributions, under the caption "General Comments," in the *Classical Journal*, by G. C. Scoggin. Each number of the *American Historical Review* contains references to books and articles in the field of ancient history; a bibliography of books within

this field is given in each issue of the *Historical Outlook*. In the paragraph above in which reference was made to the *Bulletins* published under the auspices of various Universities may be found entries which, with equal propriety, might have been recorded here. Here we may note "Lawyers of Ancient Rome," E. J. White, in *American Law Review*; "Agriculture in Early Latium," T. Frank, *American Economic Review* (a very suggestive paper); "Classical History and in its Trend in America," F. F. Abbott, in the *Historical Outlook*.

In the *University of California Chronicle*, xx, appeared "Hellenic Standards for the Modern World," W. K. Prentice.

In the *Texas Review*, iii-iv (1918), appeared "Pan-Germanism in the Age of Pericles," W. J. Battle (a study of the attempt of the Athenians in the age of Pericles to transform their leadership among the Greek States into an Empire).

In the *University of Pennsylvania Law Review and American Law Register*, lxxvi (1918), appeared "The Homicide Courts of Ancient Athens," W. W. Hyde, and "The Basilica—a Ninth Century Roman Law Code which Became the First Civil Code of Greece a Thousand Years Later," C. P. Sherman.

In the *Alumni Bulletin* of the University of Virginia appeared the "Letters of Thomas Jefferson concerning Philology and the Classics," edited by T. Fitzhugh.

The classical periodicals published in England still show the effects of the Great War (see the *YEAR BOOKS* for 1917 and 1918). The *Classical Quarterly* and the *Classical Review*, the two most accessible repositories of the writings of classical scholars in England, continue much reduced in size. From the former, xiii, we name "The Scheria of the Odyssey," A. Shewan (an argument that there is nothing supernatural about Scheria, the land assigned in the *Odyssey* to the Phæacians, or about the Phæacians themselves. This paper is supplemented by one in *Classical Philology*, xiv, in which Mr. Shewan argues that Scheria was an actual place, inhabited by a real people, and that it can be fitted into the Mediterranean world of the latest Minoan or Mycenaean period: in fact, Scheria was a Minoan settlement on the island of Coreyra, the modern Corfu); "Notes on the *Ecclesiazusae* of Aristophanes," T. L. Agar; "The Analogist and Anomalist Controversy," F. H. Colson; "Notes on Martial," A. E. Housman; "Phædrina," J. P. Postgate; "Ennius and the Punic Wars," Ethel Mary Stewart, "*Mulier Arves*, and other *Cruces* in Catullus," O. L. Richmond; "The Greek Adjectives ending in *ης*," R. McKenzie; "Notes on the *Birds* of Aristophanes," T. L. Agar. In each issue of this periodical there are "Summaries of Periodicals" (American, Dutch, French, German, Italian), which are very useful, though in 1919, as in the three or four years preceding, these "Summaries" were far less full than they were before the Great War began (see the *YEAR BOOKS* for 1917 and 1918).

From the *Classical Review*, xxxiii, we may name "The Homeric Hymns, XII," T. L. Agar; "Some Notes on the Religious Character of Apollo," S. Eitrem; "In Propertium *Retractiones Selectae*," J. S. Phillimore; "Livy and the Name Augustus," Lily Ross Taylor; "A Noble Anatolian Family of the Fourth Century," W. M. Ramsay ("a glimpse into the life of one of those Anatolian provincial families on whose impor-

tance in the development of Byzantine Asia Minor I have for many years been collecting information from scattered and inadequate sources"); "The Art of Euripides in the *Hippolytus*," J. A. S. Of the many reviews published in this periodical, we may single out for mention those of J. VanLeeuwen, *Enchiridion Dictionis Epwac*, by A. Shewan; of A. O. Prickard, *Selected Essays of Plutarch, Vol II*, by A. C. Pearson; of H. Sjogren, *M. Tullii Cicerois Epp. ad Atticum, I-IV*, by A. C. Clark; of G. de Sanctis, *Storia dei Romani*, by Adela Marion Adam; of A. C. Clark, *The Descent of Manuscripts*, C. F. Walters (the reviewer heartily approves Mr. Clark's book, and seeks to reinforce its position by evidence purporting to show that Mr. Clark's principles had been applied by him successfully to the restoration, in various places, of the text of Livy. It may be noted here, however, that in a review in the *Classical Journal*, xiv, E. T. Merrill, an American scholar who has worked much on manuscripts, especially the manuscripts of Pliny the Younger, is decidedly critical, not to say skeptical, of Mr. Clark's methods and results. For the book itself, see the *YEAR BOOK* for 1918, its contents are well outlined in the two reviews).

In the *YEAR BOOK* for 1918, mention was made of the fact that there had been successfully launched, in Italy, a new series of texts of Latin authors, meant to take a place by the side of the famous Teubner series of texts in Greek and Latin, and the Oxford Classical Texts series. During the year the following additions to this series have been made. Vergil, *Æneid I-IX* (three volumes); Cicero, *Orationes Pro Sex. Roscio Amerino* and *De Imperio Cn. Pompeii* (one volume); Plautus, *Miles Gloriosus*; Tacitus, *Historiae I-II*; *Carmina Iudicra Romanorum*; *Pervigilium Veneris*, *Carmen De Rosis*, *Priapeorum Libellus* (one volume); Seneca, *De Ira*.

Attention may be called here to the fact that much valuable classical work is done in Italy. Important classical periodicals are *Atene e Roma*; *Athenaeum*; *Rassegna Italiana*; and *Rivista di Filologia e di Istruzione Classica*. Summaries of all four appear in the *Classical Quarterly* (see above); summaries of the *Rivista di Filologia* are to be found in the *American Journal of Philology* (see above).

Though the writing of Greek and Latin verse has never had the place in American classical scholarship that it long held, and to some extent still holds, in English classical scholarship, a fair amount of Latin verse at least is published in the United States, for example, in the *Classical Weekly*. In 1919, Anthony F. Geyser, S.J., gathered together his scattered pieces, into a pamphlet entitled *Musa Americana, First Series*. The 12 pieces in the volume include translations of the "Star-Spangled Banner," "America," "Battle Hymn of the Republic," "Just Before the Battle, Mother."

Of books that have come to the writer's attention, the following may be mentioned: E. Cochia, *Il Tribunato della Plebe la sua Autorità Giudiziaria Studiata in Rapporto colla Procedura Civile* (1917); T. Codrington, *Roman Roads in Britain* (3d ed.); T. L. Compartment, *Aes Signatum* (a study of early Roman coinage); R. S. Conway, *The Venetian Point of View in Roman History* (1918: in this lecture the author, emphasizing Livy's power of painting

pictures instinct with dramatic imagination and colored with lively human sympathy, connects it with the fact that he was born in Padua, a city of the Venetians, who, from earliest times, have been remarkable for artistic ability, ability which culminates in the great painters of the Renaissance); A. W. deGroot, *A Handbook of Antique Prose Rhythm, I. History of Greek Prose Meter: Demosthenes, Plato, Philo, Plutarch, and others*; G. Ferrero and C. Barbagallo, *A Short History of Rome, Vol. II, The Empire, 44 B.C.-476 A.D.*; W. W. Fowler, *The Death of Turnus: Observations on the Twelfth Book of the Aeneid*; C. H. Herford, *The Poetry of Lucretius* (a lecture); W. Inge, *Philosophy of Plotinus*, 2 vols (the Gifford lectures at St. Andrews, 1917-1918); Louise E. Matthaël, *Studies in Greek Tragedy*; G. Maurras, *Athènes Antique*; E. Meyer, *Cæsars Monarchie und das Principat des Pompejus: Innere Geschichte Roms von 60 bis 44 v. Chr.*; Gilbert Murray, *Aristophanes and the War Party: A Study in the Contemporary Criticism of the Peloponnesian War*; M. Niedermann, *Essais d'Etymologie et de Critique Verbale Latines* (reviewed by E. H. Sturtevant, in the *Classical Weekly*, xii); F. M. Nicholls, *Erasmus, Epistles, Vol. III* (a translation of Erasmus's correspondence, arranged chronologically, with commentaries, confirming the chronological arrangement, and supplying further biographical matter); Elizabeth O'Neill, *Rome: A History of the City from the Earliest Time* (a volume belonging to The Nations' History Series, praised in the *American Historical Review*, xxv, 531); Sir William Osler, *The Old Humanities and the New Science* (a lecture containing interesting remarks on Aristotle and Lucretius); L. Pareti, *Storia di Sparta Arcadia* (a discussion of the pre-Greek and pre-Dorian period, with further treatment of the history down to the conquest of Messenia, with an Appendix on Cyrene); M. Platnauer, *The Life and Reign of the Emperor Lucius Septimius Severus* (for a review of this book, by A. E. R. Boak, see the *Classical Weekly*, viii); J. E. Sandys, *Latin Epigraphy: An Introduction to the Study of Latin Inscriptions* (the first manual of this sort published in England: a very excellent book for beginners in this field); C. Zander, *Versus Saturni* (3d ed.); L. M. Sweet, *Roman Emperor Worship*; U. V. Wilamowitz-Moellendorf, *Platon, Leben und Werke*, vol. 1.

PHILOLOGY, MODERN. The study of Modern Languages in the United States suffered a severe loss in the death of Professor Calvin Thomas of Columbia University, who passed away suddenly on Nov. 4, 1919. Born in Lapeer, Mich., in 1854, he became, after studying in Leipzig, instructor in German in his Alma Mater, the University of Michigan in 1878. He was called to Columbia University in 1896 as professor of German language and literature. He found time, amidst other duties, to write, and his numerous publications include a *Practical German Grammar*, (1895); *Life and Works of Schiller*, (1901); a *History of German Literature*, (1909); and *Goethe*, (1917). Because of his profound scholarship as well as his sound judgment—so well shown by the attitude he maintained during the war—Professor Thomas will always hold a high place in the esteem of his American confrères. His prudent counsel will be sadly missed now that the question has arisen of reestablishing Germanic studies on a sane

basis in American universities. (See *NECROLOGY*.)

As for Kuno Meyer, who also passed away during the year (see *NECROLOGY*), it is unfortunate that his high standing as a scholar has been impaired by the contentious and erratic opinions he expressed at frequent intervals during the great war. But notwithstanding the fact that he became the butt of ridicule of the laity, as a Celtist his contribution has been prodigious as well as accurate.

An interesting development in philological research is the establishment of the Euzko-Ikas kuntza, or Society of Basque Studies, at Guipúzcoa on Nov. 22, 1918. This society set at once for its task the publication of a review printed in Basque, Spanish and French, and devoted to studies of the language, literature and history of the Basque people. Courses in the Basque language will be instituted in all the leading universities of Spain. Though we have frequently called attention to studies on Basque in our contributions to the *YEAR BOOK*, we have expressed as often the wish—*ζῆλον*, fortunately, on the point of being realized—that this most interesting language might receive more serious attention. (For Basque, see *NEW INTERNATIONAL ENCYCLOPEDIA*, 2d ed., col ii, pp. 746-747).

During the past few years there has been noted among our students a marked growth of interest in the universities of France. Thanks to the influence of the more serious men of the A. E. F., all of the Latin countries are seeking to attract students of our nationality. For the purpose of rendering assistance to those who contemplate spending some time abroad the Institute of International Education has been established at 419 West 117th St., New York. The director of this bureau, Prof. Stephen P. Duggan, has at hand complete information, as far as obtainable, regarding all foreign universities. In the same office is to be found the American representative of the Office National des Universités, who hopes to serve as an educational intermediary between France and the United States. And in order that we may better appreciate the aims of the French university, F. Buisson, former minister of public instruction, and F. E. Farrington have issued a volume entitled *French Educational Ideals of To-day* (Paris*), which consists of an anthology of articles by some of the molders of French educational thought of the present time. Likewise M. Caulléry, former exchange professor at Harvard, seeks to explain to his compatriots *Les Universités et la vie scientifique aux Etats-Unis* (Paris). In Belgium also educational reform is receiving most serious attention, as is obvious from L. de Pauw's *La Réforme de l'enseignement populaire en Belgique* (Paris).

But it is probably in Spain that most active attention has been given to the needs of the American student. During the past academic year the ministry of public instruction sent to the United States a delegate, Prof. José Castillejo, who, after visiting our leading educational institutions, prepared a report on the character and functions of the Board of Extension of Studies (Junta para ampliación de estudios) of Madrid. This body not only seeks to place at the disposal of the foreign student its sem-

* When no date is given it is understood that the work was published in 1919.

inaries, laboratories and libraries, but also plans to open its residence halls to those who desire lodging. Furthermore it aims to encourage Spaniards to pursue studies in our universities. At the University of Salamanca, whose environment, it seems, is as yet virgin to the incursions of the demon of the high-cost-of-living, special attention is given to courses for foreigners. At Madrid a regular summer session—the courses of which are especially designed for students from foreign lands—has been installed. Finally the requirements for the *doctorado en letras*—which, in the past, was, like the French *doctorat ès lettres*, beyond the reach of foreigners—have been so modified that an American student with the A.M. degree can now enter the Spanish universities on an equality with natives who hold the degree next below the doctorate—that of *licenciado*. One can only regret that in France a similar reform was not made, for the more or less hybrid *doctorat de l'université*, will never prove popular with our students. A booklet containing complete information on all educational institutions in Spain, will soon be issued under the title *Anuario de la Enseñanza* (Madrid).

As for the universities of Italy we have the brief guide of Prof. K. McKenzie, *Italian Universities and their Opportunities for Foreign Students* (Rome).

Finally, in Great Britain, the government, realizing the vast importance of modern language instruction, appointed a committee to enquire into the position of modern languages in their educational system. The report of this committee was issued in the last months of 1918 (London).

In order to complete our list of war manuals, begun in 1917, we may note the following:

FRENCH:

(1) *General*—E. Saillens, *Facts about France* (English text of *Choses de France*, Paris, (1918)).

(2) *Manuals*—E. Gourio, *My French Companion* (Paris, 1918); D. A. MacLean, *Easy French for Amer. Soldiers* (id.); A. Palacios, *Guide for the Use of the Cortina Phone-Method in Classes* (Fr. Military Course, id.); E. E. Pattou, *Conversations militaires* (id.); A. Rudy, *French Key for Soldiers and Sailors* (Houston, Texas, 1918).

(3) *Dictionaries* — (a) *Artillery*: Lieut Gondry, *French and Eng Artillery Technical Vocabulary* (Paris, 1918); (b) *Aviation*: J. Lyce, *Aviation Technical Dictionary, Eng.-Fr. and Fr.-Eng.* (id.); R. M. Pierce, *Fr.-Eng., and Eng.-Fr. Dictionary of Aviation* (N. Y., 1918). (c) *Medical*: J. Marie, *English-French-Italian Medical Vocabulary* (Phila., 1918). (d) *Commercial*: J. P. Hervas, *Diccionario de Correspondencia comercial, castellano, francés, inglés y alemán* (Barcelona, 1917); J. McLaughlin, *Dictionnaire français-anglais et anglais-français des termes commerciaux* (Paris, 1919); F. W. Smith, *Fr.-Eng. and Eng.-Fr Commercial Dictionary* (London, 1918). (e) *Telegraphic*: L. Tissot-Dupont, *Dictionnaire des termes techniques de télégraphie-téléphonie franc-anglais et anglais-français* (Paris, 1919). (f) *General*: Ch. Cestre, *Dictionnaire franco-anglais* (Paris, 1918). English: P. W. Long, *Military English* (id.). Rumanian: P. Axelrod, *Elements of Rumanian* (id., 1919); G. Weigand, *Praktische Grammatik der rumänischen Sprache* (2d

ed., Leipzig, 1918). German: C. F. Atkinson, *Dictionary of English and German Military Terms* (London, 1915-16). Arabic: Com. Lafaille and Lieut. Lafaille, *Vocabulaire français-arabe* (Paris). Greek: G. Petrinis, *Manuel de conversation française et grecque* (Paris). Moroccan: Sicard, *Vocabulaire franco-marocain* (Paris).

Another interesting tendency, due to the war, is the revival of interest in slang, especially that of soldiers. Thus, the new edition of Cassels' *English Dictionary* (London) contains a number of neologisms most of which are borrowings from the language of the A. E. F. As for French, we have already called attention to several valuable studies of this sort—for was it not the poilu who popularized *boche* and *camouflage*? To that list may be added F. Déchelette, *L'Argot des poilus* (Paris, 1918), and G. Esnault, *Le Poilu tel qu'il se parle* (Paris). In German we may note T. Imme, *Die deutsche Soldatensprache der Gegenwart und ihr Humor* (Dortmund, 1917).

Before turning our attention to the Indo-European languages, it behooves us to mention two works on the languages of Africa, the first, by Alice Werner, being an *Introductory Sketch of the Bantu Languages* (N. Y.), which consists of text-book and essay on the family of languages spoken throughout the Central and Southern part of the continent (for Bantu, see NEW INTERNAT. ENC., 2d ed., ii, p. 641), and the other, by L. Reallon, entitled *Premiers éléments de la langue douala* (Paris), spoken at Duala in Cameroon. And for those interested in the science of signs as well as Germanics, C. S. R. Collin's *Bibliographical Guide to Sematology* (London), should not be overlooked.

GENERAL INDO-EUROPEAN. While activity in this extensive domain of research was, to a great extent, stifled by the war, yet several works of value may be noted. The Finnish scholar, A. Aarne, issued the first part of his *Vergleichende Ratsforschung* (Helsingfors, 1918). H. Miller made an effort to solve a problem, in his *Die Semitsch-vorindogermanischen laryngalen Konsonanten* (Copenhagen, 1917), that baffled the elder Delitzsch more than 30 years ago. Why the Danish scholar thought it necessary to add *un résumé, en français* is not very clear. Does he mean to imply that German will become a dead language? K. Brugmann issued two works: *Der Ursprung des Scheinsubjects "es" in den germanischen und den romanischen Sprachen* (Leipzig, 1917); and *Verschiedenheiten der Satzgestaltung nach Massgabe der seelischen Grundfunktionen in den indogerm. Sprachen* (ib., 1918). The first volume of W. Streitberg's *Erforschung der indogermanischen Sprachen* (Strassburg, 1916), is devoted to Greek, Italic, Popular Latin and Celtic. Mention should also be made of M. Deutschbein, *Sprachpsychologische Studien* (Cöthen, 1918).

INDO-IRANIAN. In Sanskrit we have two characteristic works, one by H. Oldenberg, *Zur Geschichte der altindischen Prosa* (Berlin, 1917), giving special consideration to the prose-poetic tale; and the other by T. W. Rhys-Davids, *Cosmic Law in Ancient Thought* (Oxford). S. Paramananda has issued the first volume of a new translation of the *Upanishads* (Boston). V. A. Smith has prepared a new edition of his *History of India from the Earliest Times to the End of 1911* (Oxford).

CELTIC. In Irish the last works of Kuno Meyer, although very brief, are yet deserving of note as being characteristic: *Nordisch-Irisches* (Berlin, 1918); *An Crinog em altirische Gedicht an eine Synaisakte* (with translation, id.); *Ein mitttelirisches Lobgedicht* (from the *Ul Echach*, id.); *Zur keltischen Wortkunde* (section IX, id.); and *Cormac's Glossar nach der Hs. des Buches der Ul Maine* (id.). A useful manual is J. Neuhaus, *Einführung ins Irische* (Halle, 1918). Of general interest to Celts is F. Lot, *Etude sur le Lancelot en prose* (Paris, 1918).

SLAVIC. A fairly well-selected bibliography of the Slavic languages—though with many omissions—may be found in R. J. Kerner, *Slavic Europe* (Cambridge, Mass., 1918); H. Baric, *Beitrag zur slavischen Sprachgeschichte* (Vienna, 1918), is probably deserving of mention. Bulgarian is represented by two dictionaries, prepared, it is needless to say, when the inhabitants of that country were more popular in Germany than at present: G. Weigand, *Bulgarisch-deutsches Wörterbuch* (2d ed., Leipzig, 1918); and A. Doritsch, *Deutsch-bulgarisches Wörterbuch*, revised by G. Weigand (ib.). In Czech there is one contribution: R. Trautmann, *Die alttschechische Alexandris* (Heidelberg, 1917), with introduction and glossary. (For Czech, see NEW INTERNAT. ENC., 2d ed VI. pp. 421-2.)

ENGLISH. The most important publication in the somewhat meagre list of studies on English is the third edition of O. Jespersen's monumental *Growth and Structure of the English Language* (Leipzig). A H. Gilbert's *Geographical Dictionary of Milton* (New Haven, Conn.), contains data of interest to the philologist. H. L. Mencken notes characteristic developments in style and usage in *The American Language* (N. Y.). S. Moore's *Historical Outlines of English Phonology and Middle English Grammar* (Ann Arbor), is a college text. In syntax we have M. Deutschein, *System der neuenglischen Syntax* (Cöthen, 1917). The following German doctoral dissertations may be of interest to specialists: Hertha Brandenburg, *Gulfrid von Monmouth und die frühmittelenglischen Chronisten* (Berlin, 1918); Olga Gevenich, *Die englische Palatalisierung von k-ch im Lichte der englischen Ortsnamen* (Halle). N. von Glahn, *Zur Geschichte des grammatischen Geschlechts im Mittelenglischen* (Heidelberg, 1918); A. Leitzmann, *Walthar und Hilgunt bei den Angelsachsen* (Halle, 1917); E. Steinhoff, *Ueber den Gebrauch des Artikels in den englischen Werken John Gowers* (Kiel, 1916); W. Phoenix, *Die Substantivierung des Adjektivs, Partizips und Zahlwortes im Angelsächsischen* (Berlin, 1918). As for Beowulf we have the edition, with glossary, of M. Heyne, revised for the 12th time by L. L. Schücking (Paderborn, 1918). Of the Oxford English Dictionary, the following parts appeared: *Sweep-Symkite and Stratus-Styx*.

GERMAN. New editions of standard texts consist of A. Bachmann, *Mittelhochdeutsches Lesebuch mit Grammatik und Wörterbuch* (8th ed., Zurich, 1918); M. Lexer, *Mittelhochdeutsches Taschenwörterbuch* (14th ed., Leipzig, 1918); and H. Paul, *Mittelhochdeutsche Grammatik* (11th ed., Halle, 1918). L. Sütterlin's *Die deutsche Sprache der Gegenwart* attained its fourth edition (Leipzig, 1918). To B. Delbrück's Germanic syntax was added part IV entitled

Die Wortstellung in den älteren westgotischen Landrecht (Leipzig, 1918). The third section of the fourth volume of J. Hoops, *Reallexikon der germanischen Altertumskunde* (Strassburg, 1918), appeared. H. Paul has made a very interesting contribution in *Ueber Kontamination auf syntaktischen Gebiete* (Munich). In 1918, E. Sievers began the publication of his *Metrische Studien IV* (Leipzig). Other works worthy of mention are: C. B. van Haeringen, *De germaanse inflexieverschijnselen ('umlaut' en 'breking') phonetisch beschouwd* (Leyden, 1918); M. Pauly, *Peilen aus dem Sagenschutz des Reinlands Sagen, Legenden, und Gebräuche* (Cologne, 1918); L. Spitzer, *Fremdworterschätze und Fremdvölkerhass* (Vienna, 1918), in which the author opposes the efforts of purists; and E. Wasserzieher, *Woher? Etymologisches Wörterbuch der deutschen Sprache* (Berlin, 1918). Of Grimm's *Deutsches Wörterbuch* parts of vol. X, edited by B. Crome; vol. XI, ed. by V. Dollmaye and K. Euling; vol. XIII, by K. von Bahder and H. Sichel; and vol. XIV, by L. Sütterlin (Leipzig, 1916-18), were published. Of the *Schweizerisches Idiotikon*, dictionary of Swiss-German, the 83d Heft of vol. VIII was issued (Frauenfeld, 1917). Along the same lines is K. Stucki's *Schweizerdeutsche Sprichwörter* (Zurich, 1918). The following doctoral dissertations, many of which deal with dialects, will close the list: L. Brun, *Die Mundarten von Obersaxen im Kanton Graubünden* (Frauenfeld, 1918); A. Gotze, *Familienamen im Badischen Oberland* (Heidelberg, 1918); O. von Greyerz, *Schweizerdeutsch, Proben schweizerischer Mundart aus alter und neuer Zeit* (Zurich, 1918); K. Hessel, *Altdeutsche Frauennamen* (Bonn, 1917); H. Larsson, *Lautstand der Mundart der Gemeinde Altingomme bei Hamburg* (Hamburg, 1917); A. Schreiber, *Beiträge zu Ortsnamenkunde* (Böhmen); M. Szadowsky, *Nomina agentis des Schweizerdeutschen* (Frauenfeld, 1918); and W. Wiget, *Die Laute der Toggenburger Mundarten* (id., 1916).

DUTCH. The *Middelnederlandsch Woordenboek*, edited by E. Verwijs and J. Verdam, has now reached the word "waterman". The following parts of the great *Woordenboek der Nederlandsche Taal* were issued: 3d deel, 28th aflevering, "eunjer-fatsoeneren" by J. A. Knuttel; 8th deel, 14th and 15th aflevering, "Laef-Lijkverbranding" by J. Heinsius, and 13th deel, 6th aflevering, "Roeroggetcuns" by R. Van der Meulen.

SCANDINAVIAN. From the prolific pen of A. Kock we have the brief *Altnordischer u-Umlaut in Ableitungs- und Beugungsendungen* (Lund, 1918). The 7th ed. of L. A. Wimmer's *Oldnordisk Laesebog*, with notes and glossary appeared at Copenhagen (1916). The only other contribution of note is F. R. Schröder, *Halfdanar Saga Eysteinnssonar* (Halle, 1917).

ROMANCE. The *Romanisches etymologisches Wörterbuch* of W. Meyer-Lübke reached its 19th *lieferung* (Heidelberg, 1916). In Popular Latin we have F. Slotty's brief *Vulgarlateinisches Übungsbuch* (Bonn, 1918). A very important bibliography is that of M. Wasenius, *Liste des travaux sur les langues et littératures romanes et germaniques publiés par des auteurs finlandais ou parus en Finlande au cours des années 1909-15* (Helsingfors, 1917). Another valuable contribution to the history of the verb in Romance is that of B. Mendizábal, *Monografía his-*

tórico-morfológica del verbo latino (Madrid, 1918). The following three works are deserving of mention: H. Bayer, *Origines des verbes andare, andar, annar, aller* (Prague, 1917); W. V. Wartburg, *Zur Benennung des Schafes in den romanischen Sprachen* (Berlin 1918); and L. Spitzer, *Aufsätze zur romanischen Syntax und Stilistik* (Halle, 1918). Of special interest to teachers is E. C. Kittson, *Theory and Practice of Language Teaching, with special reference to French and German* (London, 1918).

FRENCH. While the title of C. S. R. Collin's *Etude sur le développement de sens du suffixe-ata* (Ital.-ata, Prov., Cat., Esp., Port.-ada, Franç.-ee-ade) dans les langues romanes (Lund, 1918), is general, yet the author informs us that it is studied spécialement au point de vue du français. The 4th *lieferung* of A. Tobler, *Altfranzösisches Wörterbuch*, edited by Lommatzsch (Berlin, 1918), made its appearance. C. Voretzsch, *Einführung in das Studium der altfranzösischen Sprache* (Halle, 1918), was republished for the fifth time. Of a more special nature are E. Brall, *Lat. foris, foras im Galloromanischen besonders im Französischen* (Berlin, 1918); G. Guillaume, *Le Problème de l'article et sa solution dans la langue française* (Paris); P. Larousse, *Miettes lexicologiques* (id., 1918); and E. Lerch, *Die Bedeutung der Modi im Französischen* (Leipzig). In French dialectology we have J. Gilliéron, *Généalogie des mots qui désignent l'abeille d'après l'Atlas linguistique de la France* (Paris); and Margot Henschel, *Zur Sprachgeographie Südwestgalliens* (Berlin, 1917). In Old French the following are the most important contributions that have come to our notice: G. B. Fudenburg, *Feudal France in the French Epic* (Princeton); R. T. House, *L'Ordene de Chevalerie, an Old French poem* (Norman, Okla.); P. Prêteux, *Chez les Trouvères normands* (Vécamp, 1918); A. Stimming, *Buere de Hantone*, (vol. ii, Halle, 1918); and K. Vossler, *Der Minnesang des Bernhard von Ventadorn* (Munich, 1918). A Vicard, in *Les Fantômes d'une danse macabre* (Le Puy-en-Velay, 1918); discusses the funereal art of the Middle Ages as shown by the fresco of the Chaise Dieu. K. J. Riemens, *Esquisse historique de l'enseignement du français en Hollande du XVIe au XIXe siècle* (Leyden) is an interesting historical study. The Académie des Inscriptions et Belles-Lettres issued the 40th vol. of the *Notices et Extraits de la Bibliothèque nationale et autres bibliothèques* (Paris, 1918).

ITALIAN. A 2d edition of Polcari's translation of F. D'Ovidio and W. Meyer-Lübke's *Grammatica storica della lingua e dei dialetti italiani* (Milan) was published. The contributions to dialectology are as follows: A. Levi, *Le palatali piemontesi* (Turin, 1918); L. Pascale, *Il dialetto Manfredoniano ossia dizionario dei vocaboli usati dal popolo di Manfredonia* (Rome, 1918); and O. C. L. Vangenstein, *Leonardo da Vinci's Sprog* (Christiania, 1917); a stylistic and linguistic study of the language of the great artist. Of value to students and others are the following grammars and dictionaries: F. Hunziker, *Sommaro di grammatica italiana* (Zurich, 1918); C. Frisoni, *Dizionario moderno italiano-spagnol* (Florence, 1918); and A. Hoare, *Short Italian Dictionary* (2 vols., Cambridge), a disappointing work.

SPANISH. The 4th edition of R. Menéndez Pidal's excellent *Manual de gramática histórica*

española (Madrid, 1918), will be welcomed by scholars. The 11th vol. of J. Cejador y Frauca, *Historia de la lengua y literatura castellana* (Madrid), is devoted to the regional and modernist epoch (1888-1907). An interesting contribution to the early history of Spanish is E. de Hinojosa, *Documentos para la historia de las instituciones de León y de Castilla* (Madrid), which extends from the tenth to the thirteenth century. In dialectology mention should be made of the Royal Galician Academy's *Diccionario gallego-castellano* (Coruña) of which the 12th *cuaderno* was issued; and J. de Santiago y Gomez, *Filología de la lengua gallega*, (Santiago, 1918). In Chilean we have S. de Saunière, *Cuentos populares araucanos y chilenos* (Santiago de Chile); the 5th vol. (R-Z) of M. A. Roman, *Diccionario de chilanismos y de otras locuciones viciosas* (ib., 1916-18), which contains a supplement; and P. A. Valenzuela, *Glosario etimológico de hombres, animales, etc., y de vocablos incorporados en el lenguaje vulgar, aborígenes de Chile y de algun otro país americano* (Vol. i, ib). To this list belongs also J. Jungfer and A. M. Pajares, *Estudios sobre apellidos y nombres de lugar hispano-marroquies* (Madrid, 1918). An odd little study is G. M. Vergara, *Apodos que se aplican a los habitantes de algunas localidades españolas de los pueblos próximos a ellas* (Madrid). Of a popular nature are J. Alemany y Bolufer, *Diccionario enciclopédico ilustrado de la lengua española* (Barcelona); and J. Prado, *El genio de la lengua y literatura castellana* (Lima, 1918), with special reference to the intellectual history of Peru. As a contribution to semantics we may mention F. Restrepo, *El alma de las palabras* (ib., 1918). Of interest to teachers are J. Rodríguez García, *Noiones de gramática castellana* (Habana), P. H. Ureña, *Antología de la versificación rítmica* (Mexico); J. S. Molina, *Enseñanza cultural de idiomas extranjeros* (Santiago, 1916); and L. Villon, *Dictados ortográficos y reflexionados sobre la ortografía* (Valladolid, 1917). M. R. Navas y Carrasco, *Diccionario general y técnico hispano-americano* (Madrid, 1918) is said to contain more than 138,000 words.

PORTUGUESE. Only two works are to be noted in Portuguese: W. Meyer-Lübke, *Beiträge zur Kenntnis der altportugiesischen* (Vienna, 1917), and F. da Silva, *Diccionario bibliográfico português* (vols. xx and xxi, Lisbon).

CATALAN. Jacme Conesa's fourteenth century translation of *Les historics troyanes* has been edited by R. Miguel y Planas (Barcelona, 1917). L. Spitzer, *Katalanische Etymologien* (Hamburg, 1918) contains some interesting etymologies.

RETO-ROMANCE. P. J. Andeer, *Rhetoromanische Elementargrammatik* (3d ed. Zurich, 1918) considers especially the Latin dialect of Lower Engadine. The 32d vol. of the *Annals della società reto-romantscha* was issued at Chur (1918).

PHONETICS. Important general works in German which have just reached us are M. Leky, *Grundlagen einer allgemeinen Phonetik als Vorstufe zur Sprachwissenschaft* (Cologne, 1917); R. W. Schulte, *Abriss der Lautwissenschaft* (Leipzig, 1917); an introduction into the problems and methods of Phonetics; E. W. Selmer, *Satzphonetische Untersuchungen* (Christiania, 1917); and A. Hüppy, *Die Phonetik im Unterricht der modernen Sprachen* (Zurich, 1918); with special reference to English. A

most valuable contribution is G. P. Krapp, *Pronunciation of Standard English in America* (N. Y.). Other useful works in English are Theodora U. Irvine, *How to pronounce the Names in Shakespeare* (N. Y.); and R. P. Utter, *Every-Day Pronunciation* (N. Y., 1918). In French we have L. Bascan, *Manuel pratique de prononciation et de lecture françaises* (N. Y., 1918), useful for beginners; J. Broussard, *Elements of French Pronunciation* (ib.); P. Passy, *Lectures françaises phonétiques* (London, 1918); and R. M. Pierce, *Chart of the French Alphabet* (N. Y., 1918). A standard work in Spanish is T. Navarro Tomás, *Manual de pronunciación española* (Madrid, 1918). Mention should also be made of R. M. Pierce, *Chart of the Spanish Alphabet* (N. Y., 1918). And O. Brenner, *Deutsche Lautlehre* (Leipzig, 1918) closes the list for the present year.

PHOSPHATE. From figures compiled by the United States Geological Survey it is shown that 2,490,760 long tons of phosphate rock were marketed in this country during 1918, having a total value of \$8,214,463. This compared with 2,584,287 long tons in 1917 with a value of \$7,771,084. Florida, Tennessee, South Carolina, and certain Western States, in the order named, produce the phosphate rock of the United States, several thousand tons of that attributed to Tennessee being mined in Kentucky. In 1918 Florida yielded 2,067,230 tons of a value of \$6,090,106 as compared with 2,022,599 tons in 1917 which sold for \$5,464,493. In South Carolina there were sold 37,040 tons for \$164,650 as against 33,485 tons in 1917 sold for \$138,482. Tennessee marketed 374,535 tons in 1918 at a price of \$1,917,546 in comparison with 513,107 tons valued at \$2,126,353 the previous year. The Western States showed 11,955 tons in 1918 worth \$42,161, whereas the figures for 1917 were 15,096 tons of a value of 41,756. In 1918 there were exported from the United States 143,891 long tons of phosphate rock which was 6 per cent of the domestic production--the same percentage as was shown by the figures for the previous year when 166,385 long tons of phosphate rock left the country.

PHOSPHATIC FERTILIZERS. See FERTILIZERS

PHYSICAL CHEMISTRY. See CHEMISTRY, GENERAL PROGRESS OF.

PHYSICS. The year 1919 is notable in physics for events of unusual novelty and importance, three of them of almost sensational interest--the confirming of Einstein's quantitative prediction of the effect of gravity on light, the success of Rutherford in disintegrating the nucleus of the nitrogen atom, and correlation of atomic number, structure, and properties by the Langmuir postulates.

To confirm Einstein's prediction that gravity affects light would alone have made the year memorable. That the precise magnitude of that deflection as predicted by him should also have been verified was especially astonishing since it is in strict accord with Einstein's own revolutionary theory of relativity but more than twice the value to be looked for from classical physical conceptions. At the solar eclipse of May 29, 1919, light from the stars observed near the sun was found to be deflected 1.75 seconds of arc. This event combined with Einstein's success in accounting for the discrepancy in the orbital period of Mercury, have given new strength to

his theory which demands a recasting of current cosmic philosophy and physical conceptions. The ether theory seems untenable, fruitful as it has been, and time and space become derived abstractions of a secondary order. Doubtless the universal units of mass and action will soon command the dominant place they deserve in physical theory. It will be remembered that Einstein computed that the orbital ellipse of Mercury should undergo a rotational shift around the sun at the rate of 43 seconds of arc per century greater than Newton's laws would require. The actual shift was really observed and found to accord with Einstein's prediction within 1 second of arc--a striking support to Einstein's theory.

It will be of keenest interest to note with what ingenuity and promptness our physicists will make use of the deviation of light, for this newly-found phenomenon may easily become a tool of research of the utmost importance. In any event, Einstein's theory, in the words of Planck, "surpasses in boldness everything previously suggested in speculative philosophy and even in the philosophical theories of knowledge," and that "the revolution introduced into the physical conceptions of the world is only to be compared in extent and depth with that brought about by the introduction of the Copernican system of the universe."

Hardly less interesting and significant is the success of various authors, notably Langmuir, in correlating atomic number, structure, and properties. Langmuir's postulates are perhaps the most complete correlation ever attempted. He makes a series of assumptions, based partly upon the ideas of Kossel and Lewis, and gives a simple formula based on the atomic number, from which the atomic structure may be derived. From this structure many properties follow naturally, being especially successful from the chemical point of view. The Bohr atom is brought into question, and the issue is raised acutely between the satellite-electron and the fixed-position-electron theories. Langmuir, following others, takes the cube as type form, its eight angles as loci for the electrons, giving the octet of the periodic system. Valency is uniquely accounted for as the linking power of incomplete atoms operating to complete their octaves. The inert gases with all bonds satisfied, have no combining power. This is neatly derived from the postulates. Chemical combinations are made beautifully graphic by his principle of convalency. Altogether his theory throws such new light on the periodic system, on unique properties of certain elements and groups of elements, and gives such a workable grasp of the periodic system in terms of atomic number that it will doubtless command much attention from physicist and chemist. Its success has been unique in predicting similarity of properties between elements which have merely the external layer of electrons, in similar structural grouping. Not only may new compounds be freely predicted but it is possible to predict the crystalline form of compounds not yet synthesized.

A third event which may prove of strategic importance in atomic research was Rutherford's apparent success in breaking down the positive nucleus of the nitrogen atom. Using the alpha particle (helium) from Radium C, Rutherford had a projectile with a velocity of 19,000 kilo-

meters per second, 20,000 times that of a rifle bullet. With this projectile he bombarded hydrogen atoms, and in a relatively few of the total encounters between the alpha particle and the hydrogen atom, a head-on collision occurred, in which the momentum of the former was transferred to the latter, giving it a range four times that of the alpha particle. This was quite in accordance with theory. Unexpectedly, however, he found that in pure nitrogen the particle produced ranges as long as those produced in pure hydrogen. The nitrogen atom has several times the weight of the helium atom. Control experiments eliminated all explanations except that the nucleus of the nitrogen atom had been broken up by the swift alpha particle and a hydrogen nucleus detached from the nitrogen nucleus. The latter presumably consists of three helium and two hydrogen atoms (making the total atomic weight 14, that of nitrogen). The long range atoms were detected by absorbing screens of metal which stopped the alpha particles but permitted the higher speed hydrogen atoms to pass to the scintillating screen. Rutherford hopes to find a projectile more energetic than the alpha particle to disintegrate the structure of other light atoms. In any case, a new method of research has met with success and for the first time the positive nucleus has by intent and under control broken up. Further results will be awaited with interest.

Harkins summarizes his periodic system based on the H and He atoms with respect to building up the positive nuclei. Elements of even atomic number (carbon, oxygen, neon, magnesium, silicon, sulphur, argon, calcium, scandium, chromium, iron) all have atomic weights divisible by 4 (the atomic weight of helium). The positive nucleus of helium is the most stable next to hydrogen, hence well fitted as a stable building unit for more complex atoms. Almost direct dynamic confirmation that helium is such a building unit is found at the other end of the periodic table in uranium (atomic number 92) which disintegrates by losing one alpha particle. Radium and its successors progressively disintegrate by ejecting helium atoms, reducing from time to time the atomic weight by four with each ejection. So much for elements of even atomic numbers. Elements of odd atomic numbers, according to Harkins, are probably compounds of helium and hydrogen, computable by a simple formula. The even numbered elements are, however, naturally more stable, as evidenced by the fact that 10 elements of even atomic number make up over 97 per cent of the meteorites, and that the atoms of the even numbered (helium) series are 127 times more abundant in the iron meteorites than the atoms of the odd-numbered (helium-hydrogen) series. In building up atomic nuclei electrons may be found (in N, 1; in Ge, 4; Th, 26). These binding electrons are given off in the disintegrations of the radio-active elements. Difficulties are recognized by Harkins but his system is of much interest.

The number of electrons in the outer layer of the atoms of the lighter elements are the same for the elements in any given column of the periodic system. This conclusion, stated by Auren, from a study of the absorption of X-rays is consistent with the periodicity of the properties of the chemical elements. Sarvassi uses the quanta theory in a statistical study of the

Bohr atomic model, discussing the mystery of a stable electronic orbit which emits no radiation, why a change between two stable orbits gives homogeneous radiation, and why the change of energy in such transition is equal to the quantum h times the frequency of the emitted radiation. Debye and Scherier have developed a method of determining the effective size of the planetary system of electrons in the atom, and using only classical data find no case to invalidate their method. In considering the branch of mechanics to which active quanta belong Ratnowsky assumes an inner connection between atoms and electrons of a condensed body as shown by Haber in the special frequency relation of infra red and ultra violet. He holds that more than one electron may be displaced with respect to the nucleus setting free some of the energy of the nucleus electron system. This the author uses as basis for the existence of a special intrinsic energy in a body, developing an hypothesis holding for any system.

The shape of the electron and the distribution of unit charge have been under discussion. Lorentz conceives a spherical electron contracted in the direction of its motion by an amount involving the electron's velocity and the velocity of light. This is consistent with the Lorentz Fitzgerald hypothesis of the contraction of matter in bulk. The contractile electron, so-called, gives a variation of mass with velocity agreeing well with the data from Beta particle movements and high-speed cathode particles. Physicists are seeking an atom structure to account for the most diverse phenomena—the series laws of the spectrum, the Zeeman effect, ionization, magnetism, radiation, cohesion, chemical combination, and valency. The nucleus theory of Rutherford wins its way, in spite of the difficulty of explaining by it the instability of electron orbits and Newton's laws. In fact Langmuir, as mentioned discards the orbital theory in his searching inquiry into the distribution of the electrons in the atom.

Foote and Mohler continue their interesting work on ionization and resonance potentials for electrons in vapors of magnesium and thallium, deducing Planck's constant as 6.55×10^{-27} ergs per second. Davis and Goucher study the ionization and excitation of radiation in nitrogen giving the ionization potential as 18 volts and finding intense radiation also at 9 volts.

Tutton makes a careful study of the X-ray analysis and the assignment of crystals to symmetric classes. X-ray analysis of crystals, according to A. W. Hull, is a climax of a series of brilliant steps of progress to the winning of the secret of atomic structure. These include the kinetic theory of gases, streaming electrons, weighing the atom and electron, counting individual atoms, basing the composition of the atom on the magnitude of the positive nucleus as determining how many electrons it can hold in its system, and the brilliant discovery of Bragg of means to determine the position of the atoms in solids. Hull himself with a much simpler method (using powdered crystal) has found the atom positions in the crystals of a score of elements and a number of compounds—classifying them into face-centred cubic, cubic close-packed, centred cubic, hexagonal (close-packed), tetrahedral, and simple cubic. For each element and compound are also given, in Angstrom units, the length of the unit cube, (4.05 for aluminum) and

the distance between centres of nearest atoms (3.86 for aluminum)

As a result of the determination of the intra-crystal orientation of the atoms, the crystal forms arrived at give simple and natural explanations of certain physical properties of these substances. For example, aluminum and other face-centred cubic arrangement of atoms (an atom at each angle and at each face centre) are soft and ductile. The reason is simple. There exist four planes in such a cube in which the atoms are so closely packed that one plane slips easily over the one below without elevating it, hence with minimum change in the attractive distances between the atoms. Less ductile are the centred cubic metals (an atom at each angle and one at the centre) since they are more fully interlocked and the interatomic attractive distance must change during gliding. This group includes such metals as iron and tungsten. The hardness of the diamond is quite naturally attributable to the tetrahedral arrangement in which gliding is impossible since the atoms in this type are interlocked in the most stable manner. Shore has found that the diamond under good conditions can support a load of 2,000,000 pounds per square inch. Hull states that simple cubic salts such as lithium fluoride or sodium chloride do not permit gliding since the atoms are bound electrostatically, each ion being surrounded by six of opposite charge. Gliding is not possible since it would bring together ions of like charges, hence repulsion and cleavage. Burdick and Owen have studied the structure of carborundum crystals, and show that silicon and carbon atoms are each arranged on face-centred rhombohedral lattices nearly cubic, resembling somewhat the diamond. Dr. Hull hopes soon to add the evidence of X-ray measurements to the problem of the exact size of the atoms, that is the position of the electrons in the atoms.

Vegard discusses the X ray spectra and their bearing on the constitution of the atom. He assumes that recombination takes place from secondary systems and that the angular momentum of the remaining electrons is constant during explosion and recombination.

Honda contributes an explanation of fusion, assuming that atoms may possess small dependent rotational vibration about their centres of mass which increases in amplitude until continuous rotation results, and intermolecular spacing breaks down, disorder begins, and the rotation becomes independent of translation. As intermolecular distances are about equal in solids and liquids, the rectilinear motion of the liquid molecules is also vibratory, its amplitude remaining the same.

The fruitful merging of the sciences permits the direct comparison of phenomena on vast and on infinitesimal scales. Vast dynamic systems are reduced to moving points, and temperatures, velocities, and other phenomena are available in magnitudes which baffle the imagination. For example, Rutherford in using the alpha particle (helium) as projectile had available in a single particle a stress-producing energy of five kilograms of weight at the closest approach to the nuclei encountered. The momentum at the high velocities is such that a gram of helium at such velocity would have a striking energy equal to that of a 300-ton projectile at a velocity of a kilometer a second. Another ex-

ample is the large scale example of light pressure which Boll has observed and described in Saturn's rings. The rings are thin strata of bodies of meteoric size, surrounded and permeated by dust invisible except through deep layers. This dust is wind-driven by gravitational waves and the pressure of radiation which moves the particles back and forth through the sunlit side to be seen below when light filters through. The acceleration due to solar radiation is, for particles of micron size, nearly 350 kilometers a day, a demonstration of Maxwell's theorem on a colossal scale.

Another interesting example of cosmic analogies is that between the asteroids and the atom. This is discussed by Kester and Alter who find several points of agreement by the use of the formula for the spectral series—a similarity between the atomic phenomena and that of orbital systems. The Rydberg formula devised to represent spectral series, that is, presumably atomic orbits also, therefore shows certain aspects of astronomical orbits. Relatively in a millionth of a second the atomic orbits described are more numerous than the asteroids have described during their entire existence.

Jeffreys accepts the tidal theory of the origin of the solar system, showing that mere condensation could not produce the system. His results agree well with the age of the earth as determined by its radioactive constituents. He also shows that no satellite less than 1000 kilometers could have been gaseous since the mass could not hold itself together in gaseous form. He assumes that the asteroids were formed from a primitive planet broken up by the tidal action of Jupiter. Belot undertakes to account for the 11-year sunspot period on the theory that it is the remains of the oscillation of its original nucleus. Under certain conditions a reciprocal polar and equatorial expansion and contraction results in the primitive mass, satellites being formed at the time of equatorial expansion. The same author describes an hypothesis assuming that four satellites were formed of which the inner three fell to the earth at an early period thus accounting for the great periods of mountain building.

Soddy has published a series of interesting papers summarizing the transmutation in radioactive changes, the disintegration of radioactive material, ultimate products, radiations, average life, branch series, chemically non-separable elements. He concludes that radioactive changes are quite distinct from the usual chemical changes, that the concept of a chemical element has real significance but gives the conclusion that the atoms of the same chemical element need be no more than chemically alike. Soddy also suggests that we know of radiation only between bodies and cannot vouch for any such phenomena as radiation "into space." This possibility would reduce the difficulty of accounting for the conservation of solar and stellar heat. The contraction theory can account for the present solar radiation for only about 20,000,000 years whereas 1,000,000,000 years is estimated as the period during which solar radiation has been at its present rate.

Hackh in developing the periodic system suggests a scheme for the radioactive group which harmonizes the changes in relative electromotive force and valency, during disintegration, with the total charge of the subject. He approves the

completeness of the uranium-radium series and suggests structural formula and logical symbols for the radioactive elements. These indicate the atomic weight, valency, and place in the periodic system.

The energy of magnetic storms is derived according to Chapman, from the streams of electric corpuscles emitted from the sun, since the heat energy of the atmosphere is inadequate and the rotational energy of the sun is not available on any existing theory of transformation. Chapman outlined a theory of magnetic storms treating data from different stations for 40 storms. Krogh gives new results on the composition of the atmosphere and a programme of research. He lowers the hydrogen percentage to less than 0.0005, shows that nitrogen is remarkably constant, that oxygen varies inversely with the carbon dioxide. He regards nitrogen as a geophysical constant, measurable to within 0.001 per cent. Veronnet, working from the kinetic theory of gases, finds the limit of the atmosphere for oxygen to be 145 kilometers and 166 kilometers for nitrogen, and gives the general theory for other planets. Gourgéois gives a new method of registering wind velocity and direction, using explosions from material carried by a balloon one meter in diameter, weighing 200 grams. The explosions can be recorded at distances of 15 kilometers.

Much interesting work has been done on the properties of materials which cannot even be summarized. The most striking general result is the rapid closing-in on the problem of correlation of structure with properties. When properties can be predicted from form (as with Langmuir and Hull) we begin a new period of progress which appeals to the imagination in the most vigorous manner. So advanced is our knowledge of the structure of matter becoming that systematic researches in the field of such correlations would be of the utmost practical and theoretical value. Fehrlé calculates the place of the chemical elements in the periodic system using only the atomic weight and density. Unwin finds the work of indentation in hardness testing proportional to the volume of indentation, and that indentation is proportional to the area normal to its application. Bassett and Davis correlate hardness measurement with grain size for brass, showing excellent agreement when heat treatment and rolling are standard. Richards and Bover have purified gallium and determined its density and compressibility. Bates has found gallium well adapted for use in the cadmium vacuum lamp, as a substitute for mercury. Gallium alloys well, makes the cadmium workable, has very few lines in the visible spectrum, so that the vapor lamp made with gallium-cadmium electrodes has proven to be a brilliant and useful source of monochromatic light in optical research.

The increased sensitiveness of radiation-detecting instruments during the war permitted some interesting experiments, for example the use of the human face, shielded and unshielded, at distances as great as 600 feet. The painted and unpainted sides of a piece of sheet iron could easily be detected. It was also possible, by means of a thermopile, to follow the path of an invisible airplane at night at a distance of more than a kilometer. Such results were made possible by the pioneer work of Coblentz in developing radiation detecting instruments of the

supersensitivity required for measuring the heat of the stars. In this connection the physics of the war is just beginning to be published and so great has been the value of applied physics that there is little doubt that a new era of research has begun and will be sustained by the increased recognition given by public and private agencies. The Bureau of Standards, our national physical laboratory, applied the interference of light waves to the production of munitions gauge standards of a perfection and accuracy about 100 per cent better than the best hitherto produced on a commercial scale. The same laboratory devised two sound-ranging systems for locating enemy batteries, the latter system being so well arranged that 3-inch guns could be located at a distance of several miles within the length of the gun.

Among the many branches of applied physics which have experienced a rapid development since the close of the war, radiocommunication may be mentioned. Kolster developed a practical method by which automatic radio waves are sent out from lighthouses in fog or storm, and by use of direction finders the position of vessels with respect to the lighthouses may be ascertained on shipboard. Recent tests have been very successful and equipment for vessels has been ordered from manufacturers. It was found that radio signals of long-wave length are at times deflected as much as 90 degrees from their course. Fortunately shorter waves show only slight changes of this sort. The causes of the variation in course were investigated by a number of observers, including Taylor, Kinsley, and Kolster. The over-ocean record breaking trip of the NC-4 was successfully terminated by the use of the radio compass (direction finder) after the magnetic compass had been thrown off its gimbals by the rough weather. The plane was headed 60 degrees off course toward Africa when the radio compass gave bearings which enabled the plane to pick up the guiding destroyer.

On the whole the year has been quite remarkable for the vision which calls for the breadth and sweep of conception of the astrophysicist in his cosmic philosophy as well as the logical penetration of Rutherford, Hull, Langmuir, and others who armed with logical insight experimentally analyze and synthesize atomic structure, molecular structure, and crystal structure and find so much of the secret of the properties of the elements and compounds. But doubtless to Einstein with his revolutionary conceptions is to be accorded the central position for his ideas may give a new turn to physical thought and experiment.

PICHON, STEPHEN. French representative at the Paris Peace Conference. He held the office of Minister of Foreign Affairs. He was born in 1857 and had a varied career as a diplomat, representing France in one capacity or another at Haiti, in South American countries, in China, etc. He was appointed foreign minister and held that position in several successive ministries. He was a radical in politics and after 1878 closely allied with Clemenceau.

PICKERING, EDWARD CHARLES. Astronomer, died February 3. At the time of his death he was professor of astronomy in Harvard University and director of the Harvard College Observatory. He was born at Boston in 1846 and graduated at Harvard in 1865. He became pro-

fessor of physics at the Massachusetts Institute of Technology where he established the first laboratory in which students employed directly the instruments of measurement and observation. In 1877 he became director of the Harvard College Observatory which position he held for nearly 42 years. His observations and his pioneer work in visual photometry, stellar photography and stellar spectroscopy had important results and a brief description will be found in an appreciation written by Prof. Henry Norris Russell in *Science*, February 14th.

PILLSBURY, JOHN ELLIOTT. Rear Admiral in the United States navy, died at Washington, D. C., December 30. He was born at Lowell, Mass., Dec. 15, 1846, graduated at the United States Naval Academy, 1867, and in 1892 became lieutenant-commander, and in 1898 commander. During the Spanish-American War he commanded the *Vesuvius*, a dynamite steamer. He served a year in the hydrographic office and 10 years in coast survey service, and he was commander of the Coast Survey steamer *Blake*, 1884 to 1891, engaged in investigating the Gulf Stream currents. In 1895 he was made chief-of-staff of the North Atlantic Fleet and he was chief of the Bureau of Navigation from 1908 to 1909 when he was relieved from active duty. He was one of the leading naval authorities in hydrographic and geodetic work.

PINES, ISLE OF. An island off the western end of Cuba, comprised within the province of Havana. Area 986 square miles.

PIRSSON, LOUIS VALENTINE. American geologist, died at New Haven, Conn., December 8. He was born in New York City, Nov. 3, 1860; graduated at Sheffield Scientific School (Yale) in 1882, and studied in Germany and France. He began the teaching of geology at the Sheffield Scientific School in 1884 and held the professorship of physical geology from 1897 to the time of his death. He was an editor of the *American Journal of Science* for over 20 years and was author of a large number of scientific papers and textbooks. He was associated with the United States Geological Survey after 1904 and was a member of the important scientific bodies within his field.

PITTOCK, HENRY LEWIS. Newspaper publisher, died at Portland, Ore., January 28. He was born of American parents in London, March 1, 1835. He joined the staff of the *Oregonian* in 1853 and remained with it until his death, changing it from a weekly to a daily in 1861. He was prominent in the paper manufacturing industry in Oregon and Washington and in other important enterprises in the Northwest.

PITTSBURGH, UNIVERSITY OF. A non-sectarian educational institution, at Pittsburgh, Pa. Until 1908 it was known as the Western University of Pennsylvania, and had been founded under that name in 1819. The summer enrollment for 1919 was 603 and in the fall it was 4191. The faculty numbers 461. Productive funds in 1919 amounted to \$570,000, and the income for the year was \$700,000. The library contains approximately 35,000 volumes. Chancellor, Samuel Black McCormick, D.D., LL.D.

PIXLEY, FRANK. American dramatist and musical composer, death reported as probably December 30, at San Diego, Cal. He was born at Richfield, Ohio, Nov. 21, 1867, and he studied at the universities in the State. From 1887 to

1890 he was professor of history and English in Buchtel College and from 1892-1902 was editor of Chicago newspapers. Among his plays may be mentioned *The Carpetbagger* (1900); *Thoughts and Things* (1912); *Return of Eve* (1914); *Taming a Tartar* (1914); and *The Social Call* (1915); and he was the author of well known musical comedies, among which may be mentioned *The Prince of Pilsen* and *The Grand Mogul*.

PLANT BREEDING. See BOTANY.

PLANT DISEASES. See BOTANY.

PLATINUM. Reports gathered by the United States Geological Survey from refiners of platinum, gold bullion, nickel, and copper indicated that 38,831 troy ounces of refined new metals of the platinum group were recovered in 1917, of which about 7384 ounces were estimated to be of domestic origin. Statistics for 1918 are not yet available. The amount of new platinum and allied metals recovered by refiners, for the year 1917, in troy ounces, was: Platinum, 33,009, iridium, 210, iridosmine-osmiridium, 833; palladium, 4779.

Dealers and refiners reported sales in 1917 of 72,186 ounces of secondary platinum metals derived from refining scrap and sweeps. This total probably represented some duplication, as the same metal may be handled as scrap several times in a year. The secondary platinum and allied metals sold in 1917, in troy ounces, amounted to 59,007 for platinum; 9832 for iridium; 3347 palladium.

Though probably derived from the most reliable information obtainable, statistics of the world's production of platinum and allied metals are, at best, estimates. The statistics given in the table below are fairly accurate, though the figures for Russia are open to question, some estimates of the Russian production in 1917 being as high as 100,000 ounces.

ESTIMATED WORLD'S PRODUCTION OF CRUDE PLATINUM FOR TWO COMPARATIVE YEARS, IN TROY OUNCES

	1916	1917
Canada	60	80
Colombia	25,000	32,000
New South Wales and Tasmania	222	
Russia	63,900	50,000
United States	750	605
	89,932	82,685

A total of 56,656 troy ounces of platinum and allied metals, valued at \$5,167,908 were imported into the United States in 1918. Of this, manufactured products of platinum amounted to \$8597, while \$4,949,855 represented platinum in its various crude forms. In 1918, \$2,000,000 worth of unmanufactured platinum representing 21,000 troy ounces was imported from Russia in Asia and a total value of \$2,631,314 represented importations from Colombia.

Exports of platinum in 1918 included 119 troy ounces of unmanufactured platinum, valued at \$13,511, and manufactured articles of that metal to the value of \$23,562.

Utensils and other apparatus in chemical industries and many kinds of electrical equipment require platinum in their manufacture. Large quantities of pure platinum are employed in the "contact process" of making sulphuric acid and in plants for the fixation of nitrogen.

With the cessation of the war it was natural that platinum which had been in such demand for government purposes, should be more available for the arts and industries in 1919 than in the previous year, although conditions in Russia, ordinarily the chief source of supply, prevented mining and exports. The government stocks were released in the early part of the year so that a low price of \$99 an ounce was reached late in March. As the government's stocks became exhausted, which was about August, the price rose to \$110 an ounce and continued to advance about \$5 an ounce a month until the end of the year when quotations were from \$150 to \$155 an ounce. In the first nine months of 1919 about 40,400 ounces of platinum were imported and this rate was practically maintained until the end of the year while in addition there was a domestic production of 7000 to 10,000 ounces. It was believed that unless new deposits were discovered the United States and Canada were not in a position to do much to relieve the world's shortage of platinum. Colombia, where the mining industry continued to flourish, had been looked upon to supply more platinum, but in 1919 the crude methods of washing the sands continued. However, important developments by large mining interests in this field were reported which doubtless would result in more efficient operation and increased production.

Another source of supply discussed was the osmiridium field of Tasmania, but it was stated that to stimulate large production higher prices would be required, and even then it was doubtful whether it could produce more than 2000 ounces a year, 697 ounces being the figure for the first six months of 1919, 1607 ounces for the year 1918, and 332 ounces for 1917.

The imports of platinum into the United States from Colombia during 1919 were in excess of 26,000 ounces and on May 8, 1919, an export duty of 5 per cent ad valorem was placed on the metal to take effect June 15, 1919, but it was not felt that this duty would have any effect on mining. Active prospecting was taking place in Spain during the year but mining had not been established on a paying basis though unquestionably there were deposits of platinum within the country. The accompanying table from *Engineering and Mining Journal* (New York) shows the platinum situation as reflected in monthly prices from 1915 to 1919.

AVERAGE PRICES OF PLATINUM, 1915-1919 (b)
(Dollars per troy ounce in New York market)

	1915	1916	1917	1918	1919
January	41 10	90 05	87 83	105 92	104 85

PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA. Established in

1906, this organization has been active in helping communities throughout the United States to establish year-round municipal recreation systems. During 1919 the association sent field workers into communities desiring their services to help plan the work, and to secure municipal appropriations, published a number of pamphlets and a monthly magazine, *The Playground*, answered through correspondence and personal conferences thousands of inquiries regarding various phases of community recreation, and maintained an employment department for the service of recreation officials and workers throughout the country. It also inaugurated the National Physical Education Service to help States secure adequate compulsory physical education laws, and to work for federal physical education laws. Officers during 1919 were as follows: President, Joseph Lee; treasurer, Gustavus T. Kirby; secretary, H. S. Braucher. Headquarters are at 1 Madison Ave., New York.

PLAYGROUND ASSOCIATION OF AMERICA. See SOCIAL HYGIENE.

PLAZA, VICTORINO DE LA. Former President of Argentina, died at Buenos Aires on October 1. In his political career he rose to the position of Minister of Foreign Affairs, and was holding that office when the fourth Pan American Conference was held at Buenos Aires in 1910. He opened the proceedings of the Conference, strongly supporting the Monroe Doctrine in his address to the delegates. Subsequently, having been chosen Vice President, he succeeded to the presidency on the death of President Pena in 1914, holding office until the end of the term in 1916. In the next election, after a sharp contest, he was defeated by the Radical candidate, Dr. Hipolito Yrigoyen. During his administration Dr. de la Plaza narrowly escaped assassination by an anarchist when he was reviewing the troops from the balcony of a government building.

PNEUMONIA. See BUBONIC PLAGUE, INFLUENZA.

PODOLIA. Formerly a government of the Russian Empire, but after the revolution comprised within the territory of the Ukrainian Republic. It is situated to the east of Galicia and between Volhynia and Bessarabia. Area, 16,224 square miles, population estimated Jan. 1, 1915, 4,127,600. Capital, Kamenets Podolsk, with a population before the war estimated at 52,000, of whom one-half were Jews.

POETRY. See LITERATURE, ENGLISH AND AMERICAN; also articles on French, German, Spanish, and Scandinavian literatures.

POLAND. A European state reconstituted after the War of the Nations and comprising territory formerly divided among the great Powers of Austria-Hungary, Russia, and Prussia as a result of the wars in the latter part of the eighteenth century, boundaries still undetermined at the close of 1919. The area according to a Polish estimate in 1919 was 135,367 square miles and the population 36,234,727. Of what had been Russian Poland the area was 43,946 square miles, with a population estimated, Jan. 1, 1915, at 12,247,600, of whom, according to the Russian census of 1897, 71.8 per cent was Polish. Roman Catholicism is the religion of about three-fourths. The capital is Warsaw with a population before the war of 909,491. A more recent estimate places it at 764,054.

PRODUCTION AND INDUSTRIES. The following information in regard to production and economic conditions is derived from the United States Bureau of Foreign and Domestic Commerce, Dec. 15, 1919. Whatever may be the difficulties which have arisen out of the war and are incidental to the new system of an independent Poland, there can be no doubt about the vast resources of the country. In the first place the forest lands occupy a total area of 31,200 square miles. Secondly, agriculture gives employment to the majority of the Polish population, 50 per cent of the total area of Poland being under cultivation. In 1914 the output of the main agricultural products was as follows: Wheat, 1,640,000 tons; rye, 4,100,000 tons; barley, 1,500,000 tons; oats, 2,900,000 tons; beet root, 1,585,000 tons. In the production of sugar beets Poland occupied the third place in the world's output and in the production of potatoes the second place. As a by-product from the potato surplus Poland has developed the starch industry, half the production of which was exported to Great Britain and Scandinavia. As regards live stock prior to the war, according to the official Russian, German, and Austrian statistics, United Poland possessed the following numbers: Horses, 7,000,000; cattle, 14,000,000; goats and sheep, 7,000,000. Poland possessed 2,000,000 more pigs than France. In 1914, 1,000,000 pigs valued at \$21,413,000, and cattle valued at \$4,088,000, were exported from Galicia alone to Austria.

Mineral wealth is next in importance. The opening up of the rich oil wells at Boryslaw (Eastern Galicia) in 1898 was another milestone in the evolution of the oil industry in Galicia. Gradually the oil lands at Boryslaw were covered with a forest of drilling derricks and a multitude of new companies, and Polish and foreign petroleum ventures came into existence. The production of crude oil soon exceeded the requirements of the whole of Austria-Hungary. New refineries were erected and Galician petroleum, gasoline, paraffin, and lubricating oils invaded the European markets. Rock salt is found in the district of Wieliczka, near Krakow, and in the district and round the city itself of Hohensalza (Inowroclaw). In 1907 the mine of Wieliczka produced 110,260 tons of salt, i.e. 60 per cent of the total output of Galicia. Poland also possesses at Kalusz mines of potassium salt, which are the only ones known in the world, with the exception of those in Germany. Zinc and lead were exported in large quantities to Russia, Hungary, Germany, the United Kingdom, and the United States. The production in 1913 amounted to 2,455,000 tons of zinc ore, 86,775 tons of zinc powder, 415,300 tons of lead, and 29,000 tons of white lead.

As regards the state of Polish industries before the war it is necessary to mention them in their order of importance. The textile industry occupied by far the most important position in late Russian Poland; compared with other industries its percentage was 50 both in value of output and in the number of workmen employed. The chief centres of manufacture are Lodz, Czenstochowa, and Sosnowice, with an aggregate of 1,925,405 spindles and 46,761 looms. This industry was reviving in 1919 owing to large consignments of raw cotton and wool received from the United States and the United Kingdom. The Polish linen industry is concentrated in the

Zyrardow factories near Warsaw, turning out all kinds of linen goods, including underclothing, stockings, jersey goods, etc. Besides the linen spinning and weaving, there are cotton-spinning mills, with about 35,000 spindles, and wool-spinning mills, with 800 looms. The value of the total output in 1913-14 was about \$10,560,000. In late Russian Poland the production in the metal industry was as follows: Cast iron, 418,360 metric tons; black steel, 629,860 metric tons; rails, sheet iron, etc., 466,715 metric tons; and wire-drawn pipes, 84,450 metric tons. The output of zinc represented 80 per cent of that of the whole of Russia. Other branches of the metal industry consisted of factories producing engines, boilers, materials for building bridges, foundries, wire manufactories, tool-making factories, etc. There were 17,200 men engaged in the wood industry in the Warsaw and Czenstochowa districts in 880 works; their annual output was valued at \$11,728,000. High-class furniture was produced. Before the war 53 sugar mills were operating in late Russian Poland, working exclusively sugar beet, amounting in 1913 to 13,280,000 tons. The alcohol, like the sugar, industry is under government control. In 1913, 45,000,000 gallons were obtained in distilleries and 10,000,000 gallons in breweries. Before the war alcohol was shipped principally to Russia, Lithuania, Finland, and Great Britain. The clothing industry occupied an important part of the Polish industrial production, its principal branches being boot making, ready-made clothing, hats, fancy goods, etc. The annual output in 1910 was estimated at \$24,000,000. The production of starch was carried on in 53 starch factories in 1913, and its output was to a great extent exported. The chemical industry has been very little developed. This was due chiefly to the prohibitive duty on salt and other imported products such as coal tar and lead, which are indispensable for the chemical industry, and also to the high railway tariff for the transport of Russian salt. For this reason Russian Poland was obliged to import large quantities of chemicals from abroad and from Russia. In reunited Poland the development of the chemical industry will be simplified, because many of the essential raw materials—the absence of which in Russian Poland greatly hampered the growth of the chemical industry—such as salt, potassium salts, coke, coal tar, and many by-products of the petroleum industry, are abundant in other parts of reunited Poland.

ECONOMIC CONDITIONS. Unemployment continued to be one of the most difficult problems in the internal affairs of Poland, and the danger arising from it was seriously aggravated by the action of certain political parties, which sought to take advantage of the circumstances for their own purposes. The shortage of coal caused serious interruption in various industries; and even after the harvest there was a great scarcity of food and a general lack of the necessities of life. With regard to unemployment it is of interest to note that the government entered into an agreement with the French government to send 100,000 workers to take part in the work of reconstruction in the liberated regions. The eight-hour day, or week of 48 hours, was legally in force throughout Poland, and a bill was prepared with the object of establishing a general legal working day. Welfare committees for disabled soldiers were instituted by the War Minis-

try, for the purpose of looking after the welfare of the disabled, finding them employment, and generally rendering them useful members of society.

Poland and its annexed territories were said to require 13,000,000 tons of coal yearly, whereas the output, including that part of the Teschen district which was under Polish administration, was at the rate of only 5,500,000 tons per annum. Efforts were made by the government to obtain supplies from Upper Silesia (600,000 tons per month), but the output there in the autumn had reached only 40 per cent of its normal figure. In the Teschen district the production was estimated at 75 per cent of the last pre-war month, but political and transport difficulties hindered free supplies from either quarter. According to the Polish Minister of Industry and Commerce the Government of Poland required in the closing months of 1919 more than 1,000,000 tons of coal a month, which was twice as much as the production. It was at that time doing all in its power to increase the production and was meeting with success, owing chiefly to the co-operation of the workmen. Toward the close of the year it was reported that the mines of Dombrova coal basin were producing 75 per cent of their output before the war. See CHILD LABOR.

RAILWAYS. The railways are administered by the government. The total mileage was given at 7110 in October, 1919, and of these 5606 were operated under the civil authorities and 1504 under the War Department.

HISTORY

COALITION GOVERNMENT. As noted in the preceding YEAR BOOK the question was pending at the close of 1918 whether the Polish government would remain in the hands of the radical element under Pilsudski or pass over to Paderewski who represented the conservative groups presumably favored by the ruling classes in the Allied countries. Attempts to dispose of the Pilsudski element were unsuccessful and a compromise resulted in the formation of a coalition cabinet representing both the Pilsudski and the Paderewski parties. In this new government M. Paderewski became Premier and Foreign Minister. Other members were as follows: M. Wojciechowski, Minister of the Interior; M. Honeia, Minister of Commerce; M. Englegh, Minister of Finance; M. Janiszewski, Minister of Public Health; M. Eberhardt, Minister of Communications; M. Kinde, Minister of Posts and Telegraphs; M. Janicki, Minister of Agriculture; M. Przesmycki, Minister of Arts; M. Ivonovski, Minister of Labor; M. Minkiewicz, Minister of Food; M. Supinski, Minister of Justice; and M. Pruchnik, Minister of Public Works. Under this new ministry of the so-called Provisional Government of Poland a Constituent Assembly was elected by government decree and met at Warsaw, February 9. It was constituted as follows: National Democrats, 91; Polish Peasants, 51; Peasants' Union, 19; Socialists, 14; Workmen's Union, 7; Jewish party, 8; United Polish Peasants, 6; German Colonists, 2.

NATIONALIST POLICY. The chief feature of the Paderewski government was its nationalism and determination to carry the claims to territory as far as possible. This programme for an en-

larged Poland brought it into conflict with the Czechoslovaks who claimed Austrian Silesia with its rich mineral resources, but a temporary settlement of the dispute was reached as a result of the notice by the Peace Conference to both parties that Allied troops would occupy the disputed zone until the question was settled. The Poles also came into conflict in Eastern Galicia with the Ukrainians. The continued Polish successes forced the Ukrainians on May 19th to ask for an armistice. The Ukrainian National Committee said that 75 per cent of Galicia was Ukrainian and in a memorial to President Wilson on July 9th protested against the ratification of an arrangement that would give Eastern Galicia to the Poles. As to the rights of the question the reports were conflicting, the Polish propaganda advancing strong arguments on the other side. Again, the Poles were in conflict with the Bolsheviks on the one hand and with the Lithuanians on the other. Polish armies had seized a part of the territory of the Lithuanians who made vigorous protest against this occupation as violating their national rights. The Poles had trouble also with the Germans on the western frontier. Poland was unsatisfied with the treaty of Versailles and during the last half of the year the press was flooded with Polish propaganda complaining of the cruel injustice with which Poland was treated. Some of the specific objections were: The requirement that Poland should protect minorities against discrimination; that she should assume payment of a portion of the Russian debt that was to be attributed to her by the Inter-Allied Commission; and that she was to support international postal, railway, telegraphic, and other conventions that arose from the status of nationality. In regard to Lithuania the Polish Assembly on May 26th declared that there would be no annexation of Lithuania. Another unfortunate aspect of Polish affairs was the widespread belief that the Poles had been guilty of the worst atrocities in regard to the Jews. Reports of pogroms were frequent throughout the year. The Allies sent a mission composed of Mr. Henry Morgenthau, Gen. Edgar Jadwin, and Mr. Homer Johnson, who later made their report. Meanwhile the American Minister at Warsaw, Mr. Hugh Gibson, officially reported that the accounts of pogroms had been very much exaggerated. This whole matter was a subject of endless discussion throughout the year. Repeated statements appeared from the Poles arguing their innocence. The Prime Minister, Paderewski, in the summer issued a statement to the effect that practically no pogroms had been committed during his term of office. In December Mr. Morgenthau indicated that not as many murders had been committed in Poland as the Jews had claimed, but that the number of those deported was very large and a great number of dead bodies that were seen and that were shipped away in cars gave the impression that those who had been deported had been killed; and that although the reports of annual massacres were exaggerated the economic boycott of the Jews had had terrible results. He said that while he was among the Turks he saw how they sent the Armenians out into the deserts with released criminals who killed them on the way. In Poland, he said, the methods were more refined. They tried to eliminate the Jews by not doing business with them. They discharged Jewish

employees from the railways and from government, refused commissions in the army to any Jews; excluded Jews from the staffs of their universities, etc. He appealed for a fund of \$150,000,000 to finance the industries of Poland on behalf of the Jews.

UPPER SILESIA. The region whose political status was to be determined by plebiscite as between the claims of Prussia and those of the new state of Poland lies to the north of Czechoslovakia, the south of Poland, and the east of Prussia. According to the German census of 1910, which had certainly not overestimated the number of Poles, the races were divided as follows: Poles, 1,258,186; Germans, 884,045; but on the basis of the school statistics, the figures were still more favorable to the Poles, who numbered 1,548,500, while the Germans numbered only 558,000. It was largely on the basis of population and the alleged nationalist spirit of the Poles that the annexation to Poland was favored. The respective claims to the region were sharpened by economic interest, for it was one of the richest fields for coal and other minerals in that part of Europe. The coal beds extend beyond the limits of Upper Silesia and are connected with the coal basins of the Teschen region of Silesia, and of Galicia and Poland. The Upper Silesian coal basin in the district of Oppeln was said to contain an enormous quantity of workable coal within an area of 3025 square kilometers, though the production according to recent figures available had attained in 1911 only about 37,000,000 tons, and in 1914 about 44,000,000. It was especially adapted to the making of coke. In this same region zinc and lead have reached a total yearly value of from 45,000,000 to 50,000,000 marks. The control of the industry, with the exception of the mines and blast furnaces which belonged to the Prussian government, had been in the hands of certain noble Prussian families, but the manual labor was mainly Polish. Wages were low as compared to German labor. Workmen engaged in mineral industries were largely centred in the neighborhood of Tarnowitz, Beuthen, Hindenburg, Glewitz, Koenigshütte, extending even beyond Kattowitz and were almost exclusively Poles. On the east there is no natural frontier, the country forming part of the great Polish plain. The arguments for annexation to Poland were both racial and economic. It was said that the Polish workmen were strongly nationalist in their views and that most of them hardly spoke the German language, that socially and economically they formed their own groups apart from all German associations; that Poland was dependent upon neighboring countries for machinery and all modern appliances—in short for her industrial progress—and that of all Polish territory only Upper Silesia and the Teschen region had the necessary coal. At the Chamber of Commerce of Oppeln, Sept. 24, 1916, a communication from German industrial managers declared that the future of Upper Silesia depended upon the relations that should be established with Russian Poland, and that therefore the country should be united to Germany in the economic sense or at least the eastern part of it which borders on Silesia, and in June, 1917, the German imperialists had declared also at this same Chamber of Commerce that it was their duty to prevent the development of a movement for making Poland independent of Germany,

Austria-Hungary, and Russia. These were the views of the Germans in control of the industry and having under their orders some 400,000 Polish workmen. Military reasons appeared to underlie these demands. In the first of these communications the importance of the foundries of Upper Silesia for the making of arms and munitions was emphasized. Hence the champions of Polish annexation argued that it would be a guarantee against military aggression on the part of Germany in the future, for unless she had the mineral resources of this region at her disposal, she would be unable to wage a long war.

THE DANZIG QUESTION. The Polish side of this difficulty (see DANZIG and WAR OF THE NATIONS) was set forth by a member of the government in an interview in Paris and may be briefly summarized here. Poland must have means of existence and one of these means is the possession of a seacoast. The Polish element extends even so far as the sea to the west of the mouth of the Vistula, but this region would not suffice for maritime development. Poland requires the mouth of the Vistula; it must have Danzig. By way of Danzig she would send her products to western Europe the most cheaply, that is to say, by water, and would receive from Europe in the same manner all that down to the present time she has been receiving directly from Germany or by way of Germany. The Vistula united by canal to the Oder and Niemen, and joined to the Dnieper by the Pripiet, would continue the way straight to the heart of Poland. Now that the old lines dividing Poland were effaced, the river would recover its former importance. Danzig is the key to it, and it must be the great port of Poland. The Poles did not claim only the present province of West Prussia, but also the three districts of Butow, Lauenburg, and Slupsk in Pomerania, inhabited in large part by a Polish population which had never been Germanized, and toward the east they claimed the territory which belonged to them before 1772, where the district of Allenstein had a majority of Poles. The Poles declared that there was no basis for the pretense that Danzig was German, for the figures came from German sources, and naturally underestimated the number of Poles. Moreover, in the surrounding regions to the northwest as well as to the north, extending up to the very gates of the city, the population was Polish. The fine monuments of the city for the most part dated from the period of Polish rule and an entire quarter built in renaissance style was from that period. German merchants settled in the city under the Polish régime, spoke Polish. Before the war Danzig was the commercial outlet for West Prussia or a territory of 26,000 square kilometers, with a population of about 700,000. In future years commerce would spread over an area not less than 400,000 square kilometers, with a population greater than that of Italy. Moreover, Danzig would no doubt treble its population within the next 20 years and the majority of the people would be Polish. In the German population of Danzig the Poles declared that it was only the Prussian functionaries who had protested definitely against incorporation in Poland, and that the merchants did not altogether support these protests. The Poles declared that in the future the port of Danzig when detached from Prussia and enriched by the capital that would come in from the Altes would

be one of the great ports of Europe. See WAR OF THE NATIONS.

POLAR RESEARCH. Conditions of war, of finance, and especially of transportation, have discouraged current polar research. Prospective expeditions, both arctic and antarctic, are planned, in which the airplane is to be the principal means of transportation. Detailed reports of both Danish and Russian explorations of former years are now available, having been delayed by war restrictions.

ANTARCTIC. Great Britain has in view another south-polar expedition under Dr. J. L. Cope, of antarctic experience. Starting in June, 1920, the programme looks to a geological survey of Macquarie Island, the establishment of a wireless station on Scott Island, and the location of a permanent base at New Harbor, Ross Land, about 750 miles from the south pole. The journey in surveying the continent of Antarctica and of visiting the South Pole will be made by airplane. The antarctic ship *Terra Nova* will be fitted with supplies for four years, and after landing the party will make a circumnavigation voyage in order to determine the delimitations of the continent of Antarctica. Mawson, an antarctic scientist, thinks it possible that this voyage may open up another whaling centre like that of South Georgia. It is to be noted that the whaling industries of South Georgia hold first place in antarctic commercialism. England acquired possession of these regions by proclamation, and the fishing operations now cover the region known as the Dependencies of the Falkland Islands, and engage the labors of 21 companies. The annual output of these companies in whale-oil, bone, and guano now exceeds £2,000,000 sterling, the 500,000 barrels of whale-oil is more than half the world's output.

ARCTIC. The only arctic expedition in the field is that of Roald Amundsen, the first to reach the South Pole. Nothing further has been heard of his progress since he left Dickson Island, Siberia, on Sept. 4, 1918. He hoped to enter the ice north of the New Siberian islands and thence drift across the main Arctic Ocean. The Canadian expedition, under C. Ledén, for the exploration of lands north of Hudson Bay, ended with the wreck of the *Finback* at Cape Fullerton, in August, 1919. Fortunately the crew was saved. The final phase of the Canadian Arctic Expedition, under Stefansson, ended with the safe return in November, 1918, of S. Storkerson to the north coast of Alaska, after seven months' life on the main floe in an attempt to drift across the Arctic Ocean. He left Cross Island, Alaska, in March, 1918, with 9 whites, 4 Eskimo, and 8 dog sledges. When 200 miles distant from shore he sent back the last of his supporting parties, and proceeded with 4 natives and 2 sledges. The main ice-pack seems to have rotated rather than followed persistently the expected western course. The drift carried the party as far east as 144.5 degrees west longitude; the farthest north was in latitude 74 degrees north, in longitude 150 degrees west. Capt. H. T. Munn explored (1916-19) Southampton Island, the largest of the group in north Hudson Bay, about 20,000 square miles. His object was to determine its fitness as a whaling ground. Whales were very few in number, but walrus and land game were in quantities—caribou, foxes, and polar bears—of the latter no less than 100 were killed in the winter 1917-18. The island slopes

from mountain masses, of about 1500 to 2000 feet, on the northeast, to low plains—with numerous salmon lakes, to the southwest and towards Rowes Welcome. There are Eskimo inhabitants, though the tribe of Sead-lei-mee oo of Parry's day have all perished of disease. One large river, the Knchoffer, empties into South Bay, the headquarters of Munn.

The full report of the explorations of the Vilkitsky expedition (1914-15) have been delayed owing to interrupted communications between Petrograd and the outside world. Vilkitsky commanded the icebreakers *Taimur* and *Vaigatch* which navigated the Siberian Ocean from Bering Strait to Europe, passing to the north of the New Siberian Islands. An island about 20 miles in area, was discovered in about 76° 10' north latitude, 153° east longitude. They landed on Alex Heiberg and Fernley Islands, never before visited. The most important work was a further survey of Nicholas II archipelago. The main island slopes from mountainous masses on the eastern coast to low sandy and tundra plains on the west where they landed. The southwestern cape is in about 75° north latitude, 99° east longitude. From this cape the island trends sharply to the north. The discussions of the extensive observations in meteorology, hydrography, and biology are not yet available. Reports lately published in Denmark make known interesting results of the northwest Greenland expedition of Knud Rasmussen (1916-18) during which the west coast of Hazen Land, renamed Peary Land, was thoroughly explored. The most northerly runs in west Greenland were at Benton Bay, 80° north latitude, which causes Rasmussen to believe that the runs on the east coast 3 degrees farther north were of migrants from the natives of Southeastern Greenland. The new fiord north of Nordenskiöld is without much doubt the Chipp Inlet of Lockwood. The inland ice covers Hazen Land but withdraws far inland southwest of St. George fiord, the reverse of previous reports. Several of the fiords have live glaciers, which possibly may be the birthplace of the enormous floebergs of Robeson Channel. The geologist Koch discovered an unbroken chain of mountains of the paleocretaceous age, extending from Robeson Channel to extreme Northern Greenland. He found successively Archaean, Huronian, Cambro-silurian, and perhaps Devonian formations. That Greenland continues unbroken to the most northerly land of the earth is shown Rasmussen says. "With the mapping of De Long and of the intersecting fiords the expedition succeeds in proving that no channel exists leading from here towards Independence Fiord, in the direction of the formerly supposed Peary Channel. Dr. Wulff, the botanist, increased the recorded plant life of Greenland north of Humboldt Glacier from 29 to 66 species. It will be recalled that Wulff, insisting that his party go on, perished of starvation. His last written words were: "I will not be a hindrance to my comrades' rescue," a record of self-abnegation paralleled in polar work by Oates in Scott's antarctic expedition. The projects for arctic exploration by airplane from Alaska and from Etah have assumed no definite form. McMillan plans to explore Baffin Land at an early date.

The John Wanamaker Expedition of the University Museum of Philadelphia (1917-19) has completed its exploration of prehistoric dwell-

ings on the arctic coasts of Northwest Alaska. Several buried villages were excavated which cover various ages, as shown by construction, clothing, implements and utensils. The earlier villages showed no trace of civilizing influences. Some of the fauna varies considerably from the present fauna of the region.

POLITICAL AND SOCIAL SCIENCE. AMERICAN ACADEMY OF A society organized for the promotion of social and political studies, in Philadelphia, in 1889. During the year 1919 the following volumes were published: *A Reconstruction Labor Policy*, (January); *Industries in Readjustment*, (March); *International Economics*, (May); *International Reconstruction*, (July); *Modern Manufacturing—A Partnership of Idealism and Common Sense*, (September); *The Railroad Problem*, (November). The January and March, 1920, issues will discuss respectively, "The Development of Thrift," and "Bonds and the Bond Market." The following officers were elected at the annual meeting: President, Dr. L. S. Rowe; vice presidents, Carl Kelsey, Charles W. Dabney, David P. Barrows; secretary, J. P. Lichtenberger; editor of *The Annals*, Clyde L. King. Headquarters are in Philadelphia.

POLITICAL ECONOMY. Under various specific heads will be found a large number of articles relating to matters that come within the confines of this general subject. Under FINANCIAL REVIEW, LABOR, and SOCIAL ECONOMICS, will be found a discussion of the subject indicated as well as references to a variety of related topics. Other references to economic problems will be found in the YEAR BOOK under BANKS AND BANKING, OCCUPATIONAL DISEASES, OLD AGE PENSIONS, FOOD AND NUTRITION, INSURANCE, PRICES, SOCIOLOGY, TARIFF, TRADE UNIONS, TAXATION, and TRUSTS.

The American Economic Association held its 32d annual meeting at Chicago, Ill., on December 29th, 30th, and 31st. Prof. Henry B. Gardner of Brown University was president and Prof. Allyn A. Young of Cornell University was secretary and treasurer. Other associations meeting with the American Economic Association were the American Statistical Association, the American Sociological Association, the American Association for Labor Legislation, the American Association of University Instructors in Accounting, and the American Association for Agricultural Legislation. The meeting was divided into eight sessions of approximately two hours each during which a paper was read on an assigned topic and a discussion held after it. The papers were "British Experience with Excess Profits Taxation," by Robert M. Haig; "The Effect on International Trade of Germany's Indemnity Payments," by F. W. Taussig; "Our Foreign Investment Policy," by H. C. Adams; "The Nature of our Economic Problem," by H. B. Gardner; "A Working Democracy," by F. W. Blackmar; "A Balanced Economic System," by T. N. Carver; "Employees' Participation in Management," by R. Meeker; "Prices and Reconstruction," by W. C. Mitchell; and "Banking Policy and Price Situation," by H. G. Moulton. Some other topics discussed at the meeting were "Collective Bargaining in Agriculture," "The Policy of the Government with Reference to Competition, Cooperation, Monopoly, and the Issue of Securities," "Immigration and Immigration Problems," "The Teaching of Economics," "Is Large-Scale and

Centralized Organization of Marketing in the Interest of the Public?" and "The Railway Problem."

Bibliography. Below is given a classified list of some of the more important books published during the year. In addition, under various of the social topics, will be found references relating thereto.

GENERAL WORKS. T. N. Carver, *Principles of Political Economy*; W. R. Cooper, *The Claims of Labor and Capital*; C. Gide, *Principes d'économie politique*; W. H. Hamilton, *Current Economic Problems*, (revised); A. G. Laing, *An Introduction to Economics*; H. McJohnston, *The Brevity Book on Economics*; J. M. Robertson, *The Economics of Progress*; A. J. Koller, *The Theory of Environment*; H. C. Adams, *Description of Industry*; E. C. Ayres, *The Nature of the Relationship between Ethics and Economics*; E. B. Benjamin, *The Larger Liberalism*; M. Bennon, *Citizenship*; H. G. Brown, *The Theory of Earned and Unearned Incomes*; S. J. Chapman, *Outlines of Political Economy*; H. Clay, *Economics*; C. H. Cooley, *Social Process*; W. W. Folwell, *Economic Addresses*; J. S. Hecht, *A Challenge to Economics*; J. S. Mackenzie, *Outlines of Social Philosophy*; F. O'Hara, *Introduction to Economics*; W. S. Smith, *Economics*; L. Watt, *Elements of Economics*; J. F. Brown, *New Era Economics*; H. J. Hetherington and J. H. Murhead, *Social Purpose*; W. H. Kiekhofer, *An Outline of the Elements of Economics*; H. Segal, *The Law of Struggle*; L. Springer, *Some Aspects of Financial and Commercial After-War Conditions*; C. M. Thompson and M. H. Hunter, *Exercises and Problems in Economics*; A. Travers-Borgstroem, *Mutualism*; J. R. Turner, *Introduction to Economics*.

ECONOMIC HISTORY. E. Huntington, *World-power and Evolution*; J. F. Barker, *Modern Germany*; G. W. Bauerleim, *The Book of New Orleans and the Industrial South*; B. W. Bond, Jr., *The Quit-Rent System in the American Colonies*; T. E. Burton, *Modern Political Tendencies*; S. J. Chapman, *Labor and Capital after the War*; F. A. Cleveland, *Democracy in Reconstruction*; L. Esarey, *A History of Indiana*; G. Frank, *The Politics of Industry*; J. M. Goldstein, *Russia*; B. J. Hendrick, *The Age of Big Business*; A. D. McLaren, *Germanism from Within*; J. McLean, *One Hundred Years in Illinois*; G. O'Brien, *The Economic History of Ireland in the Eighteenth Century*; W. Page, *Commerce and Industry*; W. M. Sloane, *The Powers and Aims of Western Democracy*; E. G. Swem, *A Bibliography of Virginia*; F. A. Vanderlip, *What Happened to Europe*; C. G. Wade, *Australia, Problems and Prospects*; E. Abbott, *Democracy and Social Progress*; T. A. Co-hlan, *Labor and Industry in Australia*; E. F. Fisher, *Resources and Industries of the United States*; A. Hopkinson, *Rebuilding Britain*; I. Lippencott, *Problems in Reconstruction*; W. B. Munro, *The Government of the United States*; T. W. Overlach, *Foreign Financial Control in China*; J. Schafel, *A History of the Pacific Northwest*; Balkin-shina, *Industrial Decline in India*; H. Bradley, *The Inclosures in England*; A. P. Brigham, *Commercial Geography*; J. M. Clark, W. H. Hamilton, H. G. Moulton, *Readings in the Economics of the War*; F. Hackett, *Ireland*; M. R. Nims, *Women in the War*; S. K. Ratcliffe, O. Tead, *British Industrial Reconstruction*; A. Ruppim, *Syria*; C. E. Russell, *Unchained Russia*; A. H. Verrill, *Getting To-*

gether with Latin America; C. W. Wood, *The Great Change*.

TRANSPORTATION AND TRADE. J. B. Daish, *The Atlantic Port Differentials*; R. S. MacElwee, *Ports and Terminal Facilities*; F. S. C. Bradlee, *Boston and Lowell Railroad*; H. S. Haines, *Efficient Railway Operation*; A. S. Richey, *Traffic Operation*; S. Thompson, *Railway Statistics of the U. S. A. for the Year Ending Dec. 31 1917*; F. J. P. Benn, *Trade Parliaments and Their Work*; W. S. Culbertson, *Commercial Policy in Wartime and After*; G. G. Huebner, *Agricultural Commerce*; W. H. Koebel, *South America*; E. Pulsford, *Commerce and the Empire*; E. Saunders, *A Self-Supporting Empire*; G. C. Vedder, *American Methods in Foreign Trade*; W. C. Webster, *A General History of Commerce*; R. W. Kelley, *The Shipbuilding Industry*; M. L. Kissel, *Yarn and Cloth Making*; B. Benedict, *Express Companies in the United States*; E. B. Leigh, *Railway Buying and Industrial Readjustment*; Morawetz, *Solution of the Railway Problem*; M. G. Roberts, *Federal Liabilities of Carriers*; P. M. Warburg, *A Suggestion of the Main Principles on which the Solution of the Railway Problem Should be Sought*; W. H. Beable, *Commercial Russia*; A. W. Douglas, *Merchandising*; R. C. Rawley, *The Silk Industry and Trade*; N. C. Brown, *Forest Products*; A. F. Calvert, *Salt and the Salt Industry*; W. J. Abbot, *The Story of our Merchant Marine*; J. H. Collins, *Motor Transportation for Rural Districts*; A. B. Cummins, *The Railroad Problem*; E. R. Johnson, *Ocean Rates and Terminal Charges*; R. D. Paine, *The Old Merchant Marine*; L. E. Pierson, *What is Wrong with the Electric Railways?*; R. H. Bennett, *The Principles of Trade Cooperation*; J. T. M. Moore, *American Business in World Markets*.

ACCOUNTING AND BUSINESS METHODS. C. W. Gerstenberg, *Principles of Business*; S. Cody, *Commercial Tests and How to Use Them*; J. J. Coss and C. Outhwaite, *Personnel Management*; D. C. Eggleston, *Problems in Cost Accounting*; L. Galloway, *Office Management*; E. S. Lewis, *Getting the Most Out of Business*; F. Meron, *Manufacturer's Instruction and Advisor*; J. L. Nicholson, *Cost Accounting*; J. J. Tobin, *Highway Cost Keeping*; J. S. White, *Central Station Heating*; R. W. Kelley, *Living the Worker*; S. Webb, *The Works Manager To-day*; C. R. Aiken, *The Millinery Department*; W. R. Basset, *Accounting as an Aid to Business Profits*; J. H. Cohen, *Commercial Arbitration and the Law*; W. C. Funk, *Farm Household Accounts*; E. B. Godwin, *The Selection and Training of the Business Executive*; D. J. Hauer, *Modern Management Applied to Construction*; M. A. Lehman, *The Glassware Department*; W. Lilly, *Individual and Corporation Mortgages*; G. N. Nelson, *Income Tax Law and Accounting*; W. A. Paton and R. A. Stevenson, *Principles of Accounting*; R. W. Pomeroy, *Bond Investments*; W. J. Ross, *Price Reports*; M. Rollins, *Municipal and Corporation Bonds*; P. Schoch, *Elements of Business*; A. W. Atwood, *Putnam's Investment Hand-Book*; G. D. Bender, *Accounting and Business Secrets*; P. R. Cleary, *How to Figure Profit*; S. S. Dale, *Cost Finding in Woolen and Worsted Mills*; L. M. Gilbreth, *The Psychology of Management*; E. B. Godwin, *Developing Executive Ability*; M. W. Jenkinson, *The Worker's Interest in Costing*; R. B. Kester, *Accounting*; C. W. McKay, *Valuing Industrial Properties*; A. Marshall, *Industry and*

Trade; C. A. Meyer, *Mercantile Credits and Collections*; E. E. Purinton, *Personal Efficiency in Business*; W. E. Richards, *Trade-marks*; T. Russell, *Commercial Advertising*; P. M. Warburg, *Investment of American Capital Abroad*; P. M. Warburg, *Some Problems of the Investment Banker*; J. F. Whiteford, *Factory Management Wastes*.

MONEY, BANKING, AND CAPITAL. H. J. Carmen, *Street Surface Railway Franchises of New York City*; A. S. Dewing, *The Financial Policy of Corporations*; M. R. Thompson, *Trust Dissolution*; T. Burton and G. C. Seldon, *A Century of Prices*; H. G. Estey, *Cost of Living in the U. S.*; A. K. Fiske, *The Modern Bank*; R. G. Hawtrey, *Currency and Credit*; C. E. Leshar, *Prices of Coal and Coke 1913-1918*; W. C. Mitchell, *International Price Comparisons*; J. S. Nicholson, *Inflation of the Currency*; R. L. Owen, *The Federal Reserve Act*; R. L. Owen, *Foreign Exchange*; I. W. Sylvester, *The Evolution of Money*; W. Thompson, *Dictionary of Banking*; J. A. Todd, *The Mechanism of Exchange*; A. Wall, *The Banker's Credit Manual*; E. Cannan, *Money*; H. A. Blodgett, *The Art of Saving*; J. F. Ebersole, *Elementary Banking*; E. H. Gaidner, *New Collection Methods*; W. Guggenheim, *Our Republic Triumphant*; E. W. Kemmerer, *The A B C of the Federal Reserve System*; J. E. Pope, *The Federal Farm Loan Act*; C. H. Sabin, *Banking Evolution*; G. F. Shirras, *Memoandum of Banking*; P. Zaldari, *Trade Acceptance Discount Tables*; H. F. Twyeffort, *Business Corporations in New York*; M. W. Harrison, *Bank Law and Taxation Digest*; E. Levy, *Exchange Tables*; G. E. Roberts, *A Creditor Country*; M. Rollins, *The Banker at the Boarding House*.

PUBLIC FINANCE, TAXATION, AND TARIFF. R. C. Adams, *Taxation in Nevada*; H. C. Black, *Income and Other Federal Taxes 1919*; F. A. Fitzpatrick, *Budget Making in a Democracy*; E. A. Fitzpatrick, *Experts in City Government*; W. H. Glasson, *Federal Military Pensions in the U. S.*; J. H. Hollander, *War Borrowing*; Holmes, *Federal Income and Profit Tax*; H. L. Huang, *The Land Tax in China*; F. L. McVey, *The Financial History of Great Britain 1914-1918*; E. R. A. Seligman, *Our Fiscal Difficulties and the Way Out*; J. Armsden, *The Financial Crises of August, 1914*; H. S. Chase, *Governmental Sinking Funds*; A. B. Gilbert, *American Cities*; J. M. Robertson, *The New Tariffism*; H. H. Smith, *How to Pay for the War*; W. E. Snelling, *Coal Mines Excess Payment*; A. E. Stilwell, *The Great Plan*; K. W. Woodward, *Taxation of Woodlots*; H. S. Foxwell, *Papers on Current Finance*; J. A. Hobson, *Taxation in the New State*; W. E. Snelling, *Inhabited House Duty*; F. G. Underhay, *Income Tax Act 1918*; P. M. Warburg, *Government Loans and Taxation*; S. Webb, *National Finance and a Levy on Capital*.

POLITICAL SCIENCE, ACADEMY OF. A society organized in New York, in 1880, for the promotion of social and political studies. The semi-annual meeting was held at Columbia University, New York City on June 5, 1919, the subject under discussion being "The League of Nations Covenant." About 1000 persons attended this meeting. An extensive volume on *The League of Nations Covenant* was published, composed of addresses by many statesmen. About 5000 copies of this volume have already been distributed. Mr. George W. Pepper was the principal speaker at the meeting. The 35th annual National Con-

vention was held in New York on Nov. 21, 1919, the principal speech being given by Mr. Howard Elliot, president of the Northern Pacific R. R. on "Railroad Legislation." About a thousand persons attended the convention. The Academy publishes the *Political Science Quarterly*, the *Annual Record of Political Events*, and the *Proceedings* of each meeting. During the year 300 new members were admitted to the Academy, making a total of about 3700. It was expected that the membership would reach the four thousand mark early in 1920. The officers in 1919 were: Board of Trustees, president, Samuel M. Lindsay; vice-presidents, Albert Shaw, Thomas W. Lamont, secretary, Roswell C. McCrea; treasurer, George G. Plimpton; and editor of *Political Science Quarterly*, Henry R. Massey. Headquarters at Kent Hall, Columbia Univ., New York.

POLITIS, M. Greek representative at the Peace Conference. He was the Foreign Minister of Greece. Like Venizelos with whom he was a close ally, he aided in the formation of the provisional government at Salonika. He shared the views of Venizelos as to the liberation of the Greeks from foreign rule, and their union to Greece. On the downfall of Constantine, he returned with Venizelos to Athens.

POLK, RUDOLF. See MUSIC, Artists, Instrumentalists.

POLLAK, GUSTAV. Editor and author, died at Cambridge, Mass., Nov. 1. He had been known for many years as a writer and editor with an encyclopedic range of knowledge. He was born in Vienna, Austria, May 4, 1849, and educated in Vienna, but came to the United States as a young man, and after 1874 was a frequent contributor to the *New York Nation*, and after 1881 to the *New York Evening Post*, chiefly on foreign politics and literary subjects. He was associated in one way or another with the most important encyclopedic enterprises in the United States, showing a very unusual combination of minute with comprehensive knowledge. Among the works with which he was editorially associated may be mentioned the *New International Encyclopedia* and *Nelson's Encyclopedia*. He was lecturer on Austrian dramatists at Johns Hopkins, 1905. He also interested himself in politics and was several times delegate to the Democratic State conventions during his residence at Summit, N. J., 1895-1901, and was candidate of the Gold Democrats for State senator in 1896. He was one of the founders of the German American Reform Union during the presidential campaign of 1892. Among his writings may be mentioned the following: *The Century Book for Mothers* (with Dr. L. M. Yale), (1901); *Franz Grillparzer and the Austrian Drama*, (1907); *The Hygiene of the Soul*, (1910); *Michael Heuprin and His Sons*, (1913); *International Perspective in Literary Criticism*, (1914); *Fifty Years of American Idealism*, (1915); *The House of Hohenzollern and the Hapsburg Monarchy*, (1917).

POLO. No international polo matches were held during 1919, the American players feeling that they should not challenge the Britons for the trophy now held by the Hurlingham Club of England until pre-war conditions once more obtain. There was a dearth of ponies abroad as the result of the war and the exponents of the sport in Great Britain had had no opportunity to take the necessary practice. It was

generally understood among those interested in the sport in the United States that a challenge would be sent to the Hurlingham Club in 1920 although the matches themselves might not be played until the year following.

The War Department of the United States in an endeavor to increase interest in polo made an offer to the colleges of mounts and equipment providing they would take up the game in 1920. Yale, Cornell, Princeton and Harvard are expected to accept the offer, with the possibility that other colleges will fall into line later.

As for the season of 1919 several tournaments were held in California, on Long Island and at Philadelphia, as preliminary tests for the title events which were staged later in the year. The national senior championship took place under the auspices of the Philadelphia Country Club and was won by the Rockaway four after the home team had been forced to default in the final match because of the inability of some of their players to compete.

The open championship was contested at the same place, the Rockaway, Cooperstown and Meadowbrook clubs being the competitors. After an exciting struggle the title honors finally went to Meadowbrook. In the opening clash Cooperstown triumphed over the Rockaway players by a score of 6 to 3½.

Cooperstown then faced Meadowbrook in the title match and went down to defeat by the close tally of 5 goals to 4. It was a real battle from start to finish, first one team and then the other gaining the lead. In the final chukker Meadowbrook battled its way into the van and by magnificent work on the defense managed to hold its advantage until the end. The winning four were: F. H. Prince, Jr., J. W. Webb, F. S. Von Stade and Devereux Milburn.

PORTO RICO. AREA AND POPULATION. The area of the island is placed at 3435 square miles. In 1898 the population was 953,243; in 1918-19 it was 1,263,474.

EDUCATION. The total enrollment for 1919 was 160,794 an increase of 18,000 over the previous year. The total number of children of school age, that is to say, between the ages of five and 18 years was estimated at 441,465. The per cent of the school population actually enrolled was 36.4 per cent. The number of pupils enrolled in the rural schools was 97,995 and in the elementary city schools 54,442. It was pointed out that while only a beginning had been made in the great task of educating the people of Porto Rico much had already been done. Popular interest had been drawn to education and a foundation was laid for the building up of an adequate school system.

AGRICULTURE. The following table shows the acreage and value of the principal crops in 1918.

	Area Acres	1918 Quantity Tons	Value
Sugar cane	256,431	453,796	\$55,726,025
Coffee	147,612	18,809	5,505,316
Tobacco	23,981	8,598	8,982,130
Pineapples	3,286		695,325
Citric fruits	5,843		1,351,581
Coconuts	9,387		572,600
Total	...		\$72,832,977

According to 1919 reports the output of sugar in 1918 was 453,796 tons valued at \$55,726,025; of coffee, 18,809 tons, valued at \$55,505,316; and of tobacco 8598 tons, valued at \$8,982,130.

COMMERCE. The commerce of the year 1918-19 was active and showed a tendency to increase. The total trade was \$141,896,400, an excess of \$4,223,096 over the figures for the preceding year, which had broken the record. The total exports increased in value about a million and a half over the previous years. Sugar still retained its supremacy as an article of export but seemed to be losing somewhat of its relative importance for while in 1916 sugar exports were 69 per cent of the total they were only a little over 60 per cent in 1919. The imports were slightly less than during the preceding year although there were several articles of foreign source in which there were large increases, namely vegetable oils, rice, and unmanufactured tobacco. There was a large increase in breadstuffs imported from the United States. Other important items seemed to have increased. The following table shows the growth of trade during the previous 20 years:

MERCHANDISE SHIPPED FROM PORTO RICO TO THE UNITED STATES AND FOREIGN COUNTRIES

Years	To the United States	To foreign countries	Total
1901	\$5,581,288	\$3,002,679	\$8,583,967
1902	8,378,766	4,055,190	12,433,956
1903	11,051,195	4,037,884	15,089,079
1904	11,722,826	4,543,977	16,265,903
1905	15,633,115	3,076,420	18,709,565
1906	19,142,461	4,115,069	23,257,530
1907	22,070,133	4,926,167	26,996,300
1908	25,891,281	4,753,209	30,644,490
1909	26,394,312	3,996,913	30,391,225
1910	32,095,645	5,864,574	37,960,219
1911	34,765,409	5,152,958	39,918,367
1912	42,873,401	6,832,012	49,705,413
1913	40,538,623	8,561,942	49,103,565
1914	34,423,180	8,679,582	43,102,762
1915	42,311,920	7,044,987	49,356,907
1916	60,952,768	5,778,805	66,731,573
1917	73,115,224	7,855,693	80,970,917
1918	65,514,989	8,779,633	74,294,622
1919	71,015,351	8,480,689	79,496,040

MERCHANDISE SHIPPED INTO PORTO RICO FROM THE UNITED STATES AND FOREIGN COUNTRIES

Years	From the United States	From foreign countries	Total
1901	\$6,965,408	\$1,952,728	\$8,918,136
1902	10,882,653	2,326,957	13,209,610
1903	12,245,845	2,203,441	14,449,286
1904	11,210,069	1,958,960	13,169,029
1905	13,974,070	2,562,189	16,536,259
1906	19,224,881	2,602,784	21,827,665
1907	25,686,285	3,580,887	29,267,172
1908	26,677,376	3,148,289	29,825,665
1909	23,618,545	2,925,781	26,544,326
1910	27,097,651	3,537,201	30,634,855
1911	34,671,958	4,115,039	38,786,997
1912	38,470,963	4,501,928	42,972,891
1913	33,155,005	3,745,057	36,900,062
1914	32,568,368	3,838,419	36,406,787
1915	30,929,831	2,954,465	33,884,296
1916	35,892,515	3,058,641	38,951,156
1917	49,539,249	4,005,975	53,545,224
1918	58,945,758	4,443,524	63,389,282
1919	57,898,085	4,502,275	62,400,360

HEALTH AND SANITATION. The epidemic swept over the entire island in 1918-19, raising the death rate to 31.75 as compared with 27.71 in the preceding year. The total deaths from influenza and its complications were 10,888.

Besides deaths from this cause there was during the year a total of 29,086. The excess of births over deaths in 1918-19 was 13,374.

FINANCE. The income of the insular treasury for the fiscal year 1919-20 was estimated at \$7,121,347, an increase of about \$1,100,000 over the estimates of the preceding year. The available cash balance in the treasury, June 30, 1919, was \$838,386. During the year 1918-19 the total bonded indebtedness of the government was reduced by \$251,000 but increased by \$617,000 as a result of loans for public improvements. It was estimated that the limit of indebtedness under the Jones Act on the basis of assessed valuation in 1918-19 was a little more than \$17,780,000.

LEGISLATION. Among the important measures passed during the fiscal year 1918-19 were the following: A new election law changing the methods and machinery of elections, a new municipal law providing for a larger degree of self-administration; a grand jury law, introducing the system into the country, labor laws amending the homestead act, providing for aid to workmen in the purchase of homes, and establishing a minimum wage.

OFFICERS. Governor, Arthur Yager; Executive Secretary, Ramón Siaca Pacheco; Treasurer, Jose E. Benedicto; Auditor, J. W. Bonner; Acting Attorney-General, Salvador Mestre; Commissioner of Education, Paul G. Miller; Commissioner of the Interior, Guillermo Esteves; Commissioner of Agriculture and Labor, Manuel Camuñas; Commissioner of Health, Alejandro Ruiz Soler.

JUDICIARY. Chief Justice, José C. Hernández; Justices, Emilio del Toro, Adolph G. Wolf, Pedro de Aldrey, and Harvey M. Hutchison; U. S. District Judge, Peter J. Hamilton; U. S. District Attorney, Miles M. Martin. See MINIMUM WAGE.

PORTLAND CEMENT. See CEMENT.

PORTUGAL. The most westerly of states on the continent of Europe; a republic occupying the western part of the Iberian Peninsula. Capital, Lisbon.

AREA AND POPULATION. Area, 35,490 square miles; population (1911), 5,957,985, of whom 2,828,691 were males, and 3,131,365 females. For details see 1917 and preceding YEAR BOOKS.

PRODUCTION. Waste land is estimated at 43.1 per cent of the total, and forest land at about 19 per cent. The chief products are corn, wheat, rye, oven, pigs, and sheep. The following information in regard to production, commerce and business conditions in 1918 was supplied by the United States Bureau of Foreign and Domestic Commerce, Nov. 4, 1919. Portugal's agricultural industry centres about the production of wheat. All conditions were favorable for planting of the winter variety in November and December of 1917, and the high prices paid for this grain caused an increased area to be planted. The spring sowing also was favorable, but the abnormal weather of May and June prevented the harvesting of a record crop. The 1918 yield was the largest in the past six years, amounting to 6,051,000 bushels, as compared with 5,560,000 bushels in 1917. The area planted to the grain was 326,000 hectares (805,560 acres), an increase of 49,300 hectares (121,822 acres) over the previous year. It was estimated that the crop would supply the country for eight months. The deficit was

made up by imports from the United States and Argentina. The corn crop in 1918 was almost a complete failure and great hardship resulted, prices advancing to exorbitant figures. A part of the deficit was supplied from the Portuguese colonies. The rye crop was superior to that of 1917, and this grain was used with wheat for making bread. The 1918 vintage was inferior in quantity and quality to that of the previous year. The production was estimated at 91,298,600 gallons. In 1916 it was 143,964,399 gallons and in 1917, 109,811,200. Owing to lack of labor, there was little change in the area of the vineyards, which is approximately 781,000 acres. Prices of wines were higher than ever before, owing to the demand from France and Brazil. The export trade in port wine was seriously affected by the import regulations of England and the United States and by lack of cargo space from Oporto. Figs and almonds are an important source of revenue, especially to the farmers of the southernmost province of the country, the Algarve. The production of figs in 1918 was 16,556,000 lbs. and of almonds, 2,208,000 lbs. Mining enterprises were badly crippled during 1918. Several of the copper mines were shut down as the result of high cost of operation and prohibitive freights. The one concern engaged in dredging tin was seriously affected by a decree of the government prohibiting the exportation of tin. The local demand was not sufficient to absorb the output. Tungsten mines operated under difficulties, and several were closed. The production has been from 900 to 1500 tons a year, as near as can be ascertained. The wolfram averaged from 55 to 65 per cent tungstic acid and in some mines, by careful washing, the percentage obtained was 70 to 72. Tungsten is found in the provinces of Minho, Trás-os-Montes, and Beira. There is no use of tungsten in the country.

ECONOMIC CONDITIONS. Business and commercial interests in Portugal passed through a series of financial and political crises in 1918. During the early months raw materials could be procured only with difficulty and at high prices. Cotton, gasoline, tin plate, and coal could not be obtained in quantities sufficient to meet the demand. Consequently, many of the factories and mines were crippled in their operations or forced to shut down altogether. Strikes were of frequent occurrence and affected all the railroads of the country, the telephone system, the shipping companies, the metallurgic industry, and many other industries. As a result, wages were advanced 50 to 100 per cent. Added to these difficulties was the low rate of exchange of the escudo, which depreciated to a minimum of 51 cents, contrasted with a pre-war rate of almost \$1. This affected the prices of imports, which were practically doubled in value by a government decree providing that duties should be increased by 40 per cent, a part being collected on a gold basis. After the armistice many of the textile factories which had been working on war orders closed their doors; only a few continued in operation. Meanwhile considerable stocks of raw material (especially cotton) accumulated, and the holders of these stocks found themselves in a difficult situation with material bought at high prices and no market. Sufficient coal was received to permit the railroads, which had been using wood, to return to this fuel, and the train service was improved. Some orders

for new rolling stock were placed in the United States.

Several important projects, such as the electrification of the Lisbon-Cascaes Railway and the building of hotels and a casino at Estoril, were revived after a period of idleness due to the war. Many of the steamship lines which had abandoned their Lisbon service, or at least greatly curtailed it, resumed their schedules to South America. This was of great assistance to the foreign commerce of the country, which at the end of the year showed signs of a speedy revival.

COST OF LIVING. Prices of all articles of necessity advanced in 1918, and the cost of living was as high in Lisbon as in many of the large capitals of Europe. The percentages of increase between August, 1914, and November, 1918, for some of the ordinary commodities were as follows: Rice, 285; sugar, 140; oil, 135; lard, 260; sausage, 164; ham, 122; bacon, 263; beans, 283; butter, 140; macaroni, 300; codfish, 420; soap, 225; candles, 208; potatoes, 970; eggs, 300; biscuits, 270; tea, 233; beef, 218; mutton, 335; pork, 290; milk, 140; bread, 450; matches, 100; men's suits, 200; shoes, 220; and hats, 150. The average increase was 263.3 per cent. Railway and street car fares, carriage and automobile hire, and telephone and telegraph charges have all advanced materially. House rents are in some instances more than three times the normal amount.

COMMERCE. A comparison of the foreign trade of Lisbon for 1917 and 1918 is given below:

<i>Foreign trade</i>	1917 <i>Escudos</i>	1918 <i>Escudos</i>
Imports	54,057,000	90,152,000
Exports	32,017,000	45,813,000
Reexports		
Colonial	16,316,000	9,222,000
Foreign	9,400,000	11,164,000
Total	111,790,000	156,351,000

The principal articles exported during the two years, with their values, were as follows:

<i>Articles</i>	1917 <i>Escudos</i>	1918 <i>Escudos</i>
Beverages	241,080	413,812
Copper ore	424,063	821,783
Cork		
Plugs	621,993	809,586
Shavings	126,170	
Squares	66,716	1,576
Wood	1,593,622	1,187,855
Cotton		
Raw	1,010,886	1,606,350
Manufactures	382,826	376,315
Flour	42,746	76,085
Lumber	162,367	110,300
Olive oil	611,989	823,103
Potatoes	24,395	
Salt	81,528	122,474
Vegetables	514,586	175,614
Vinegar	40,818	51,210
Wine	6,182,458	10,851,173

Commerce between the United States and Portugal in 1917 and 1918 assumed important proportions. In many lines American merchandise dominated the market, and there were few stores in Lisbon and the larger cities of the country which did not have American goods on sale. In former years Portuguese import trade was largely with German and English manufacturers and exporters, but in 1919 the United States was the sole source of supply in many

lines and the Portuguese were forced to turn to that market. Many new agencies to handle American goods were established, and the business relations between the two Republics were broadened in various ways. One noteworthy feature of this trade was that a much larger proportion than ever before was carried in American ships. Freight rates were much higher between the United States and Portugal than between Great Britain and Portugal, but these may be equalized with beneficial results to the growing American trade. Value of exports from Lisbon to the United States in 1918, \$3,477,172; in 1917, \$5,901,445.

FINANCE. The following table showing the budget estimates for 1918-19 is taken from the *Statesman's Year Book* for 1919:

<i>Revenue</i>		<i>Escudos</i>
Direct taxes		13,610,590
Registration and stamps		15,035,000
Indirect taxes		21,860,000
Port dues		55,110
National property and income on investments		19,671,183
Revenue earning, administration, etc		5,085,398
Total ordinary		78,317,631
Extraordinary		3,671,900
Grand total		81,980,531
<i>Expenditure</i>		<i>Escudos</i>
Public debt		31,594,331
Presidency, Congress		2,597,542
Ministry of Finance		5,158,257
Ministry of Interior		6,743,397
Ministry of Justice		1,556,378
Ministry of War		13,658,515
Ministry of Marine		5,200,436
Ministry of Colonies		501,269
Ministry of Foreign Affairs		659,326
Ministry of Instructions		3,506,850
Ministry of Labor		182,370
Ministry of Commerce		5,461,069
Ministry of Agriculture		1,685,338
Ministry of Food		812,941
Total ordinary		79,618,019
Extraordinary		5,792,581
Grand total		85,410,602

The question of the colonies was much discussed in 1919 with a view to the necessity of making them more profitable. The income and expenditures on the account of the colonies for the year 1917 and 1918 were as follows:

<i>Colonies</i>	<i>Income Escudos</i>	<i>Expenditures Escudos</i>	<i>Surplus (+) or deficit (-) Escudos</i>
Cape Verde Islands	729,000	774,000	- 45,000
Guinea	666,000	666,000	—
San Thomé and Príncipe	1,368,000	1,282,000	+ 86,000
Angola	3,483,000	16,416,000	-12,933,000
Mozambique	9,441,000	8,041,000	+ 1,400,000
India	1,575,000	2,010,000	- 435,000
Macao	1,917,000	1,737,000	+ 180,000
Timor	481,000	481,000	—

GOVERNMENT. Down to 1910 Portugal was a monarchy. In that year after a brief revolution a republican form of government was set up and on Aug. 20, 1911, a new constitution was adopted. This vests the executive power in a president elected by the legislature for four years and the legislative power in two chambers of which the upper is elected by the municipal councils and the lower by direct suffrage. Presi-

dent in 1919, Joao do Canto e Castro Silva Antunes; Ministry as constituted Mar. 30, 1919, was as follows: Premier, Domingos Pereira; Minister of War and Minister of the Interior (Ad Interim), Colonel Antonio Maria Baptista; Minister for Foreign Affairs, Xavier Silva; Minister of Labor, Dias da Silva; Minister of Justice, Senhor Granjo; Minister of Finance, Ramada Curto; Minister of Marine, Macedo Pinto; Minister of Commerce, Julio Martins; Minister for the Colonies, Jorge Nunes; Minister of Agriculture, Joao Soares; Minister of Food and Transports, Brito Guimaraes; Minister of Education, Leonardo Coimbra.

HISTORY. After the murder of President Paes Dec. 14, 1918, described in the preceding YEAR BOOK Admiral Canto y Castro succeeded as president and the Ministry was reorganized under the premiership of T. Barbosa. In January a royalist revolution broke out under the celebrated monarchist Henrique de Paiva Couceiro, who had previously made several attempts to restore monarchial government, as recorded in preceding YEAR BOOKS. At the beginning of February it was learned that the monarchist movement had failed. They had made a great mistake in enforcing the decision by arms at this time. They began immediately after the assassination of Paes to try and gain the upper hand in the government, as against their rivals, the Nationalists or new Republicans. The old Republican parties united against them. Among the monarchists themselves there were different shades of opinion, and they could not present a united front against their enemies nor did they realize that republican feeling had developed in the last few years. It has been said that whoever owns capital owns the country in Portugal. As soon as the monarchists rose in arms and certain of the military began to desert, the people rallied to the government. The places of deserters were promptly filled and the people in Lisbon took arms themselves at the call of the government. Within a few hours some 3000 citizens of all conditions had responded and by the afternoon of Wednesday, January 22d, the number of these volunteers had risen to 15,000. The marines had remained faithful. Thus the situation appears to have been saved by the people of Lisbon and by the marines. On February 15th it was officially announced from Lisbon that the royalist leader, Colonel Paiva Couceiro, had been taken prisoner. A new ministry was formed, June 28th, under Señor Cardoso. Portugal was represented at the Peace Conference by Egar Moniz, a friend of the late President Paes.

See LABOR LEGISLATION

PORTUGUESE EAST AFRICA. A Portuguese colony on the east coast of Africa, with a total area of 428,132 square miles, comprising three parts: (1) the province of Mozambique (about 295,000 square miles); (2) the territory under the Mozambique Company (59,840 square miles), and (3) the district under the Nyassa Company (73,292 square miles). The total population is estimated at about 3,000,000 natives, 105,000 whites and 1100 Asiatics and half-breeds. The capital and chief port is Lourenço Marques with a population in 1912 of 13,154. Other ports are Mozambique, Ibo, Beira, Inhambane, and Chinde. The chief products are sugar, coconuts, rubber, bees-wax and minerals. Imports in 1916, 10,628,392 escudos; exports, 3,

SIR OLIVER LODGE

JAMES H. HYSLOP

LEADERS IN PSYCHICAL RESEARCH IN ENGLAND AND AMERICA

604,745; reexports, 7,107,647; transit, 15,935,830.

In the Beira district of Portuguese East Africa the railway from Beira to Macequece and Umtali, known as the Beira and Mashonaland Railway, was the only line in operation in 1919; being under the direction of British employees. Surveys had been begun, however, for a line about 200 miles in length to connect Beira with Chindio on the Central African Railways, the junction point being about 20 miles from Beira on the Beira and Mashonaland Railway. The gauge was to be 3 ft. 6 inches, the customary gauge for most of the South African railways. The only serious feature in the construction of this line would be a bridge over the Zambezi River, and it was thought that it could be put through in two years. The new line would afford an important outlet for the sugar factories in the Sena district as once loaded at that point it could be shipped direct to destination without transshipment. During 1919 sanction of the Portuguese official authorities was obtained for certain modifications of the original concession for the construction of the Beira-Zambesi railway. This line, which was to be about 170 miles in length, was designed as a portion of a great trunk route, which would be an alternative means of travel to the Congo route, between Cape Town and Cairo. To complete this route it will be necessary to extend the Shire Highlands railway to the southern end of Lake Nyasa, the construction of a connecting line between Lakes Nyasa and Tanganyika and the building of the proposed Tabora-Mwansa branch of the Central Railway. All these lines it was hoped to construct between 1920 and 1930. The number of changes from train to boat and vice versa would be 10 in both cases between Cape Town and Cairo. The new lines will be about 170 miles long and will be owned and operated by a separate company which was to be known as the Trans-Zambezia Railway Company. The line was to be constructed by an English company, whose debentures would be guaranteed by the British Nyasaland Protectorate. It was hoped that the line could be built in two years. The link to be known as the Trans-Zambesi Railway, would connect the Nyasaland Railway with the South African and Rhodesian systems, so that it will be possible to travel by train from Cape Town via Salisbury and Beira to Blantyre.

PORTUGUESE GUINEA. A Portuguese colony on the western coast of Africa, including the adjacent archipelago of Bijagoz along with the island of Bolama, on which is situated the capital, Bolama. Area, 13,940 square miles; estimated population, 289,000. Imports, 1917, 2,058,161 escudos; exports, 2,881,181.

POST OFFICE. See UNITED STATES.

POTASH. In few American industries in 1919 were conditions more disturbed than in those having to do with the importation or production of potash salts, so essential in agriculture. It will be recalled that normally large supplies are produced in Alsace, and Germany, and with these cut off during the war, efforts were made to develop in the United States production from various natural sources. There was of course during the war a continued demand for potash salts which stimulated production, but with the ending of hostilities it was

believed that there would be a renewal of imports from Alsace and domestic stocks accumulated to the financial concern and in some cases embarrassment of their producers, as the 1918 product had been developed at high cost. The stocks held on Jan. 1, 1919 were estimated at about 100,000 tons gross weight of potash salts or the equivalent of about 25,000 tons of pure potash. These stocks were mainly those of Nebraska producers and were slow of disposal until it was announced that the imports of Alsatian potash would be long in coming and of small quantity. As a result in Nebraska all the plants closed and some operators in California and Utah ceased production in April, as the demand was meagre and unsatisfactory. In the autumn conditions became somewhat clarified as it was realized that only small quantities of potash had come from Germany and Alsace, and that especially with the prevailing coal shortage little was to be expected from the former country. Furthermore, of the 15,000 to 20,000 tons on hand in Alsace in July, it was reported that most of this was required for domestic use. An estimate of 50,000 tons of pure potash that might be available from Alsace up to the middle of 1920 was made, and also a similar quantity from Germany might be expected under favorable conditions, but such total imports to America would not meet the needs as they existed before the war.

The Congress of the United States sought to relieve conditions in the domestic industry and control imports but in spite of bills proposed and discussed, no legislation was enacted. An executive order provided that "On and after Aug. 7, 1919, potash may be imported from every source except Hungary and those parts of Russia under Bolshevik control," irrespective of its origin. This did not lead to any extensive imports in view of industrial and transportation difficulties in Germany and uncertainty as to a future national policy towards the industry. At the end of the year it was thought that arrangement might be made to exchange American coal for German potash but conditions at both ends were not altogether favorable for such traffic.

Under such conditions and in view of the establishment of an American industry made possible by shortage of supply and high prices it was not strange that the future needs and possibilities in regards should be vigorously discussed during the year. Going back to pre-war days it was stated that during 1913, consumption of potash in the United States amounted to 270,000 tons, pure potash, at an average price per unit of 75c. During 1918, there was consumed about 52,000 tons, at an average price of \$4.50 to \$5 per unit. The estimated consumption in the United States was placed, say at a price of \$2 to \$2.50 per unit, at approximately 150,000 tons. To meet the above requirements, however, the newly established industry even under very favorable conditions would not afford a production in excess of 100,000 to 125,000 tons per annum. Accordingly even on a lower basis of requirements than prevailed in the United States prior to the war importation of potash would be needed, but if a governmental policy was established which assured a market for domestic potash at approximately \$2 per unit for a few years, there would result in all probability an industry which could ultimately stand on its own feet in competition with foreign salts.

In 1919 it was stated that the American potash industry involved invested capital variously estimated at from \$20,000,000 to \$30,000,000. Part of this represented research and part had been spent on the construction of plants and equipment. As a result of this total production of available potash which could be expected during two years, with an assured market at \$2 per unit, was estimated by A. E. Wells, of the Bureau of Mines, at 126,000 tons, classified as follows:

Source	Estimated capacity
Natural brines	
Nebraska	55,000
California	50,000
Organic sources	
Waste molasses, beet sugar, molasses, wood ashes, kelp	6,000
Cement industry	8,000
Blast furnace industry	1,000
Silicate rocks and alunite	6,000
Total	126,000

Many of the American byproduct factories, including the California plants, doubtless would be in a position to compete with foreign salts at a price of \$1.25 to \$1.50 per unit within a few years, unless costs should increase abnormally. At the end of 1919 foreign potash was quoted at from \$1.50 to \$1.70 a unit with resales as high as \$2.75 a unit and on this basis the American industry could hold its own. On the other hand, if there were a return to anything approaching pre-war prices, or even 50 per cent increases over these, the American industry could not hope to produce more than 15,000 to 20,000 tons, or it might become totally extinct.

POTASSIUM. See CHEMISTRY, INDUSTRIAL.

POTATOES. Data regarding the world's potato production in 1919 were extremely meagre. Provisional estimates of the yields of only six important potato producing countries including the United States, were published by the International Institute of Agriculture, Rome. The aggregate production of these countries as estimated was about 706,646,000 bushels or less than one-seventh of the world's average production for the years 1905 to 1915 inclusive which was over 5½ billion bushels. The yields reported for the different countries were as follows: Spain, 99,211,000, Canada 97,416,000, the Netherlands 93,231,000, Scotland 31,831,000, and Switzerland 27,056,000 bushels.

The potato production of the United States in 1919 was estimated by the Department of Agriculture at 357,901,000 bushels as compared with 411,860,000 bushels in 1918 and 366,016,000 bushels, the average yield for the five years 1913-1917. The area in potatoes was 4,013,000 acres or 282,000 acres less than the area of 1918 but 201,000 acres above the average for the five-year period. The average yield per acre was 89.2 bushels while in the preceding year it was 95.9 bushels and for the 5-year period 96 bushels. The average farm value on Dec. 1 1919, was 161.4 cents per bushel, an increase of 42.1 cents above the corresponding price in 1918 and of 73.4 cents above the average for the five years 1913 to 1917. On this basis the crop of 1919 represented a total value of \$577,581,000, a figure unequaled. In 1918 the total value was reported as \$491,527,000 and for the 5-year period as \$322,292,000.

The potato crop in western Canada suffered serious injury through early frosts on October 8th, which resulted in a loss of about 1,000,000 bushels through freezing in the ground before harvest. In British Columbia nearly 50 per cent of the crop was lost in this way.

Potato flour production, formerly a German industry, was begun in Great Britain during the war, and during the past year a large factory at King's Lynn was using 2000 tons of potatoes per week for this purpose. It is estimated that four factories of this capacity would be able to supply the country's requirements.

In the United States the Iowa Agricultural Experiment Station published during the year an improved method for the treatment of seed tubers for the prevention of certain diseases carried over on the tubers. It was found that by heating the solution of two pints of formaldehyde in 30 gallons of water to 118° to 122°F the time of immersion could be reduced to 2 minutes from 1½ to 2 hours when the solution is used at ordinary temperatures. The hot solution acts quicker and does not affect germination injuriously.

The results of studies on the cost of producing potatoes in New York, published during the year by the agricultural experiment station of Cornell University, showed a range from \$51.13 per acre or 42 cents per bushel to \$113.51 per acre or 61½ cents per bushel for the several localities in which the studies were made. The principal factors causing the variation in the cost of production were the differences in the grades of seed used, the quantities of fertilizers applied, and the amounts of land rent paid.

POYNTER, Sir EDWARD JOHN British painter, died in London, England, July 26. He was president of the Royal Academy after 1896. He was born in Paris, Mar. 20, 1836, and studied there from 1856 to 1859 under Gleyre. He was professor of art in University College, London, 1871-75, and he was director of the National Gallery 1894-1905. Many of his paintings are well known throughout the world. Among them may be mentioned the following "Israel in Egypt," (1867); "Perseus and Andromeda," (1872); "Atalanta's Race," (1876); "The Fortune Teller" (diploma picture), (1877); "A Visit to Esculapius," (1880); "The Meeting of Solomon and the Queen of Sheba," (1891); "Horae Serenae," "Idle Fears," (1894); "The Ionian Dance," (1899); "The Cave of the Storm Nymphs," (1903); "The Nymphs' Bathing Place," (1904); "The Cup of Tantalus," (1905); "Lesbia and her Sparrow," (1907); "Brewing a Storm," (1909); "A Naval Disaster," (1912); "At Low Tide," (1913); "The Sea Bath, or the Champion Swimmer," (1914); portraits of King Edward VII; The Duke and Duchess of Northumberland, and others, and many water colors, figure and landscape.

PRAIRIE PROVINCES. The name applied to the three Canadian provinces of Manitoba, Saskatchewan and Alberta, separated from the United States on the south by the 49th parallel of latitude. Area estimated at 758,817 square miles; population according to census for June 1, 1916 was 1,698,220, as compared with 1,328,725.

PRESBYTERIAN CHURCH. In the United States there are many branches of the Presbyterian denomination, all united under

what is called the Presbyterian Alliance. Statistics for 1919 show that in the whole system there were 2,767,473 communicants with about 5,000,000 adherents. This compares as a distinct setback from the marked increase of last year, namely 2,800,398 communicants. Besides about 5,000,000 in the Reformed Lutheran Church, there are under this system in the world over 35,000,000 adherents and communicants.

In the United States the largest of the branches of the church is the Presbyterian Church in the United States of America. This denomination in 1919 had 1,603,033 communicants, a noticeable decrease from 1918; 9918 ministers, and 9805 churches. For purposes of administration, etc., 40 synods have been formed with 292 presbyteries distributed all over the country. The Presbyterian Church in the United States is a separate denomination, which in 1919 had 364,230 communicants as compared with 363,241 in 1918. This denomination is sometimes called the Southern Presbyterian as most of its churches are in the South. The Welsh Calvinistic Methodist or Presbyterian Church in the United States of America had about 15,000 at the end of the year.

There are two branches of the church in Canada. The largest of these is the Presbyterian Church, which in 1919 had 336,822 communicants. The other is the Church of Scotland which had about 10,000 communicants. The adherents of these churches number about 600,000.

In England and Wales there are three branches, the largest being the Calvinistic Methodists or Presbyterian Church of Wales which has 200,000 communicants and about 400,000 adherents. The Presbyterian Church of England has 85,551 communicants and the Church of Scotland in England has 4000 communicants. These two churches combined have about 400,000 adherents. In Ireland in 1919 the Presbyterian Church in Ireland had 104,194 communicants, the Reformed Presbyterian Church in Ireland had about 4000 communicants and other churches had about 2000 communicants. These churches have a combined number of adherents of about 200,000. In Scotland the Church of Scotland had 721,158 communicants, the United Free Church of Scotland had 522,028 communicants, the Free Church of Scotland had 10,000 communicants and other churches had about 10,000 communicants. These combined have about 2,000,000 adherents. The following are the approximate number of adherents in the various countries: Bohemia and Moravia, 300,000; France, 1,000,000; Germany, 5,000,000; Holland, 2,500,000; Hungary, 3,000,000; Italy, 250,000; Switzerland, 1,700,000; other countries in Europe, 500,000; Africa, 1,000,000; Asia, 600,000; Australasia, 900,000, and South America, 100,000.

In 1919 there were in the Presbyterian Church in the United States of America 1,319,416 Sunday school members which again shows a decrease over the previous year when there were 1,386,928. Budgets voted for 1919-1920 were as follows: Home missions, \$1,759,415; Foreign Missions, \$3,324,493; general education, \$915,000; publication and Sunday school work, \$495,000; church erection, \$467,010; relief and sustentation, \$894,900; freedmen, \$268,122; temperance, \$80,000, evangelism, \$70,000, men's

work, \$34,000; fund for soldiers and sailors and women, \$500,000; fund for churches of Europe, \$500,000, New Era Movement, \$212,200; New Era Movement (special), \$400,000; budget of self supporting synods, \$1,392,135 50; Woman's Board of Home Missions, \$900,000. Women's Boards of Foreign Missions, \$962,186; Woman's Department of Freedmen's Board, \$131,878; and men's work (special), \$14,000; making a grand total of appropriations of \$13,045,339. Home missionary work is carried on under the direction of the Board of Home Missions, which has done extensive work in the United States, Alaska, Porto Rico, and Cuba; especially the latter. The Board of Foreign Missions conducts 27 missions, 166 stations, 1364 missionaries, not including those sent out under short term, or associate and honorary missionaries, 6806 native helpers, 1003 organized churches, 177,766 communicants, 2122 schools, with 83,723 pupils, 265,960 pupils in Sunday schools, 189 hospitals and dispensaries where 356,134 patients were treated during the year. Pages of Christian literature printed in more than 20 languages during the year numbered 102,179,396. There are 60 Presbyterian colleges and academies in the United States, the largest of which are New York University which had in 1919 an enrollment of 8239 students, James Millikin Univ., Decatur, Ill., with 1111 students, Coe College, Cedar Rapids, Iowa, with 891 students, Maryville College, Maryville, Tenn., with 748 students; Grove City College, Grove City, Pa., with 698 students, and Wooster College, Wooster, Ohio, with 566 students. There was a total of 23,388 students in all the colleges and academies in the country. There are 12 theological seminaries, the largest being the McCormick Theological Seminary in Chicago which had in 1919 an enrollment of 143 students, and the Princeton Theological Seminary at Princeton, N. J., which had 114 students. Hospitals are maintained in the following cities: New York, Philadelphia, Chicago, Pittsburgh, and Newark. These are in addition to the dispensaries and small hospitals maintained by the Board of Home Missions which number 200 and through which more than 1,135,000 patients were treated during the year.

The controlling body of the church, known as the General Assembly, held its annual meeting as usual in May, 1919, with the Rev. John Willis Baei as moderator. Among other things passed by the Assembly were resolutions approving the League of Nations; endowment plan for ten million dollars to be vigorously prosecuted for ministerial relief and sustentation; additional endowment for one million; national prohibition to be aggressively prosecuted including opposition to the repeal of war-time prohibition; Board of Temperance to cooperate in the fields of morals and health, to go forward with work in foreign fields, to take notice of the alarming and deplorable increase in the use of cigarettes; the establishment of two new presbyteries, Toledo and Duck River. For other branches of the denomination, see REFORMED PRESBYTERIANS.

PRICES. In spite of the country-wide propaganda for price control and regulation the prices of practically all commodities continued to rise in the United States during the year 1919. This situation was indicative of the general trend of prices throughout the world, steady increases in commodity costs being reported in all

the European nations as well as India, Japan, Australia, and Africa. Price-fixing regulations instituted by the government relieved the situation slightly for some commodities and prevented much outrageous profiteering, but the rise in prices was so general that little could be accomplished by this means. The inflation of the currency of all the belligerent nations and many of the neutrals was largely responsible for the upward tendency of prices, inasmuch as large bond issues and loans had been made by the respective governments and considerable additions had been made to the paper currency. Industrial irregularities such as labor disputes helped to intensify a situation already acute because of the actual scarcity of various commodities.

UNITED STATES. The index numbers of the Bureau of Labor Statistics for wholesale commodities show concretely the rise in prices. Considering 1913 as a base year with the average level of wholesale prices at 100, there was little permanent change until 1916, when the index number rose from 111 in January to 134 in October of the same year. The following year the price level continued to rise steadily till it reached 187 in July but declined to 183 in December. During 1918 prices maintained their pace standing at 207 during the last quarter of the year. In January, 1919, the index again declined to 203 and in the following month going as low as 197. In March it came up again to 201 and in April to 203. During the months of May and June the index stayed at 207, a calm which pre-saged the storm that raised it to 219 in July and 226 in August, easily the high water mark of the decade. In September prices eased off to 221 and promised to continue to decline slightly for October. The indexes of the various commodities from which the above composite index was derived are as follows for August, 1919: farm products, 243; food, 228; cloths and clothing, 303; fuel and lighting, 175; metals and metal products, 161; lumber and building materials, 209; chemicals and drugs, 172; house furnishing goods, 259, miscellaneous, 225. This price level was very much higher than any previous level except for fuel and lighting, metals and metal products, chemicals and drugs, all of which reached their highest point in the summer of 1917.

While retail prices have not risen as quickly as wholesale prices, yet the figures for the various levels of the retail price of foods and dry goods show substantial increases. The index number for the combined retail prices of 22 articles of food stood at 101 in August, 1913, at 107 a year later, and in 1915 went down again to 100. In 1916 the steady climb of prices started, the index being 113 for August of that year, 149 for the following year, and 171 for 1918. During July, 1919, the index number had risen to 190 and in August to 192. October saw a slight decline in the general price level of these articles of food.

COMPARISONS. Statistics of the retail prices of foods in the United States and a number of other countries as shown by index numbers weighted according to the importance of the articles chosen, indicate the world-wide extent of the rise in prices. Considering July, 1914, as the base month with an index number of 100, the retail price of 22 foodstuffs averaged from 45 cities in the United States was 98 in 1915,

109 in 1916, 143 in 1917, 164 in 1918, and 182 in July, 1919. In Australia the index number of 46 foodstuffs in 30 towns was 131 in 1915, 130 in 1916, 126 in 1917, 131 in 1918, and 151 in 1919. In Austria the weighted index number of 18 foodstuffs in Vienna was 179 in 1915, 222 in 1916, and 337 in July, 1917, the last year for which figures are available. In Canada the index number is of 29 foodstuffs in 60 cities, standing at 105 in 1915, 114 in 1916, 157 in 1917, 175 in 1918, and 185 in 1919. The cities of France of over 10,000 population except Paris have an index number of 123 for 1915, 141 for 1916, 184 for 1917, 238 for 1918, and 264 for June, 1919. Great Britain's index for 21 foodstuffs in 600 towns is 132 in 1915, 161 in 1916, 204 in 1917, 210 in 1918, and 204 in 1919. In Italy for 7 foodstuffs in 40 cities the figure is 120 in 1915, 132 in 1916, 188 in 1917, the last date for which figures are available. In New Zealand for 5 foodstuffs in 25 towns the index is 112 in 1915, 119 in 1916, 127 in 1917, 139 in 1918, 143 in 1919. In Norway 22 foodstuffs in 20 towns were taken, the index being 129 in 1915, 161 in 1916, 214 in 1917, 279 in 1918, and 276 in April, 1919. Finally Sweden has 21 articles in 44 towns with an index number of 124 in 1915, 142 in 1916, 175 in 1917, 270 in 1918, and 319 in 1919.

COST OF LIVING. A careful analysis has been made of the cost of living in the United States, the statistics being taken first in 18 shipbuilding centres where industry was most stimulated and population most congested, secondly another group of cities both large and small, not so open to rapid price fluctuations, and thirdly, the country as a whole, excluding agricultural commodities. These figures show that there was a 2 per cent increase in the cost of living in these three groups uniformly in June, 1915, a 9 per cent increase in 1916; a 30, 27, and 28 per cent increase, respectively in 1917; 60, 53, 56 per cent in 1918, and an 80, 70, and 75 per cent increase in June, 1919. These figures of the various groups when combined and weighted properly give an estimated index number of 100 for July, 1914, of 102 for June, 1915, of 109 for June, 1916, 129 for June, 1917, 156 for June, 1918, and 175 for June, 1919. The above statistics on the cost of living would tend to show that while there was a general increase of 75 per cent in the whole country, the actual increase varied considerably in different communities, those most affected being the new industrial centres created by the war.

PRINCE EDWARD ISLAND. One of the Canadian Maritime Provinces, the smallest province in the Dominion, situated at the mouth of the Gulf of St. Lawrence, separated from the mainland by Northumberland Strait. Area, 2184 square miles; population, 1911, 93,728. The capital and largest town is Charlottetown with a population (1911), of 11,198. Prince Edward Island is under a lieutenant-governor and legislative assembly of 30 members elected for four years. The lieutenant-governor at the beginning of 1919 was A. C. Macdonald.

PRINCETON UNIVERSITY. An educational institution for men, non-sectarian, founded in 1746 at Princeton, N. J. The enrollment for the fall of 1919 was 1815, while there were 154 members in the faculty. The library contains 430,000 volumes. President, John Grier Hibben, LL.D, Litt.D.

PROTESTANT EPISCOPAL CHURCH.

One of the largest single denominations in the United States, this organization in 1919 had 1,085,068 communicants with 5960 ministers. There were also 412,450 Sunday school pupils taught by 47,979 teachers. Lay readers numbered 3106.

Missionary work is carried on by the Board of Missions in Anking, Cuba, Haiti, Hankow, Kyoto, Liberia, Mexico, Shanghai, Southern Brazil, and Tokyo. Some work is carried on in Europe, but it has been impossible to get statistics due to the war. For the year ending Dec. 1, 1918 (the latest available statistics), \$1,450,403.25 was received by the board from 7184 parishes and missions upon an apportionment of \$1,590,376. The total receipts include \$151,079.07 received from the One Day's Income Plan and \$78,961.61 from the Missionary Reserve Corps. Legacies received total \$203,546.51, of which \$137,627.37 were not designated. A General Convention was held in Detroit, Oct. 8, 1919, where reports from the various missions were received. During the year a Council of Domestic Missionary Bishops was formed to expand the home missionary work. Outstanding facts in Latin America were the beginning of work in the Dominican Republic and the taking over in March, 1919, of work in the Virgin Islands. The work in Haiti was expanded, Dr. Grey, the secretary for Latin America, having paid it an official visit. In the winter and spring of 1918-19, Dr. Wood, the foreign secretary, paid a visit to China, Japan and the Philippines, and reports very marked progress. A new hospital was completed at Christ Church Mission, Anvik, Alaska, and also a new church.

The report of the Woman's Auxiliary showed that that organization had done valuable work during the war in raising money for relief work, and in enlisting women for various forms of social service. Two movements, the *Advent Call* and *A Call to Service*, were managed very successfully by the Auxiliary. Also \$70,000 was secured for Saint Agnes' School, Kyoto. The *Spirit of Missions* is the official organ of the Board of Missions.

Chief among the organizations of men is the Brotherhood of St. Andrew, with its 1143 chapters and 8062 members. The organizations among the boys are the Knights of St. Paul, with 160 chapters in various dioceses, and the Knights of St. John. Among the special organizations for mission work are the Church Mission to Deaf Mutes, Society for the Promotion of Church Work among the Deaf Mutes, the Mid-Western Deaf Mute Mission; Conference of Church Workers among the Deaf; the Seabury Society of New York. Among the national organizations for women and girls are the Girls' Friendly Society in America; the Order of the Daughters of the King; organizations for the Increase, Aid, and Better Sustenance of the Ministry; Clergymen's Mutual Insurance League; the Clergymen's Retiring Fund, and the Church Pension Fund. Organizations for edu-

cational purposes, church defense, and propagation are: The Protestant Episcopal Society for Promotion of Evangelical Knowledge; the Clerical Union for the Maintenance and Defense of Catholic Principles; the American Church Union; Albany Cathedral Summer School, Society for the Home Study of Holy Scripture and Church History; Cambridge Conference; the Church Periodical Club, New York Bible and Common Prayer Book Society; the Church Historical Society, the Church Missions Publishing Company; American Society of Church Literature, and the Joint Diocesan Lesson Board. Organizations for social amelioration and advancement are: the Church Association for the Advancement of the Interest of Labor; the Church Socialist League; the Church Temperance Society, the Church Mission of Help, and the Society for Social Advance. There are many other local societies established for promoting church unity, various guilds for devotional purposes, and religious orders for both men and women.

PRUSSIA. Down to the October revolution (1918), a kingdom of the German Empire (see GERMANY and WAR OF THE NATIONS). Capital, Berlin. Area in the German Empire, 134,644 square miles; population according to the census of Dec. 1, 1890, 40,165,219. For details of population, see preceding YEAR BOOKS.

PRYOR, ROGER ATKINSON. Judge, died at New York, March 14. He was born in Dinwiddie County, Va., July 19, 1828, graduated at the University of Virginia in 1848, and was admitted to the bar in 1849. After several years passed in editing southern journals, he was appointed special minister to Greece in 1855. He was elected to Congress in 1859 and served until 1861; reelected to the next Congress but did not serve. He was a member of the first Confederate Congress in 1862 and meanwhile had entered the Confederate army (1861). On Apr. 16, 1862, he was raised to the rank of brigadier-general but soon afterwards resigned his commission and reentered the service as a private soldier. He was taken prisoner and held at Fort Lafayette, N. Y., 1864-5. In 1866 he was admitted to the New York bar and he practiced until 1890. He was Judge of the Court of Common Pleas 1890-4 and Justice of the Supreme Court from 1894-99.

PSYCHICAL RESEARCH. In the reviews of the past two years, an increase of interest in psychical research, as indicated by the number of published books, has been noted. The reason advanced was the war. J. H. Hyslop (*Jour. A.S.P.R.*, xiii, 197), thinks, however, that in addition to the wholesale loss of life, the skepticism of the age must also be taken into account, that man is now seeking for demonstrations of the future life, whereas in former times his faith was sufficient. However this may be, signs of a return to the pre-war condition are not wanting. The books of the year are not of the Conan Doyle or "Raymond" type, they are for the most part either summaries of the history and present status of Psychical Research, or reports of experiments which have been in progress for a number of years. To the first group J. H. Hyslop contributes two books, *Life after Death* and *Contact with the Other World*. The former is a discussion of certain problems which grow out of results obtained, the latter is a survey of the evidence for a future life. Other books are: II.

Carrington, *Modern Psychic Phenomena*, which deals with the history of psychical research, and with recent experiments and theories; J. A. Hill, *Spiritualism*, its history, doctrine and phenomena, and L. Denis, *Life and Destiny*, an argument for the importance of scientific spiritual research in view of its bearing upon the problem of life. Books belonging to the second group are: H. T. Smith, *Voices from the Void: Six Years' Experience in Automatic Communication*, a report of experiments with the ouija board; W. J. Crawford, *Experiments in Psychical Science*, an account of further experiments in support of the theory developed in *The Reality of Psychic Phenomena*; and M. Cameron, *The Seven Purposes*, an experiment in psychic phenomena.

The presidential address of the British Society for Psychical Research was delivered by Lord Rayleigh only a few weeks before his death (*Proc. S. P. R.*, xxx, 275). The address was principally reminiscent, and was marked by expressions not only of interest in the problems but also of the difficulties in the way of scientific experimentation in this field, and of the need for great caution in the explaining of results. The major papers published by the English Society are: J. G. Paddington, *Fresh Light on the "One-Horse Dawn" Experiment*, (ib., 115); Sir W. Barrett, *Evidence of Supernormal Communications through Motor Automatism* (ib., 251); and W. W. Smith, *The Reality of Psychic Phenomena* (ib., 306). The *Proceedings* of the American Society contain four papers: J. H. Hyslop, *Chance, Coincidence, and Guessing in a Mediumistic Experiment* (*Proc. A. S. P. R.*, xii, 1), an examination of the author's first report on the trance-phenomena of Mrs. Piper; W. F. Prince, *A Critical Study of "The Great Amherst Mystery"* (ib., 89), in which it is shown that the incidents in W. Hubbell's book of that title were, apart from Hubbell's constructions, based upon a case of double personality; J. H. Hyslop, *A Case of Pictographic Phenomena*, an instance in which visual imagery (apparently of the "habitual" type) is interpreted as a sign of incipient mediumship; and W. Mackenzie, *Rolf of Mannheim, a Great Psychological Problem*, a translation (with notes by J. H. Hyslop) of an article formerly published in *Arch. de Psychol.*, on the well-known educated dog Rolf. Leading articles in the *Journal* of the American Society are: W. F. Prince, *Indicia of Fraud in a Document* (*Jour. A. S. P. R.*, xiii, 412); *Experiments for Alleged Clairvoyance* (ib., 451); W. G. L. Taylor, *The Scope of Immortality* (ib., 137, 210); and J. H. Hyslop, *Supernormal Physiology and the Phenomena of Ideoplasty* (ib., 229); *Recent Experiments in Communication* (ib., 10, 94, 157, 518). C. E. Cory, in a paper on *Patience Worth* (*Psychol. Rev.*, xxvi, 397), gives a brief discussion of the co-conscious personalities of Mrs. Curran, one of which is "Patience Worth" (see YEAR BOOK, 1917).

PSYCHOLOGY. The year in psychology has been a year of readjustment, of the reorganization of departments, as instructors and research students who had been engaged in war-activities returned to their academic work. The close of the year came, however, for many institutions, before this readjustment was complete; and the publications at hand are therefore in part a measure of psychological activities carried on during the war, and only in part an index of restored conditions. The review of the year in-

cludes, moreover, as that of the past two years did not, the contents of a number of German psychological periodicals recently received. Not all of the files are available (many issues of the year 1917 are reported as destroyed by fire in Leipzig); but it is evident that a large amount of substantial work was done in German psychological laboratories throughout the war.

Psychology has lost by death in 1919 J. W. Baird, professor of experimental psychology at Clark University, February 2, at the age of 50 years; and P. Carus, editor of *The Open Court* and *The Monist*, February 11, at the age of 68 years. There died in 1918 E. Abramowski, Polish psychologist, founder of the psychological laboratory at Warsaw, June 22, at the age of 48; T. H. Elsenhans, professor of philosophy and pedagogy at the Technical High School in Dresden, January 23, at the age of 56; J. Grasset, professor of clinical medicine at Montpellier, author of books on hypnotism, occultism, etc., July 7th, at the age of 68; E. Yung, professor of zoology at Geneva, a contributor to the psychology of sleep, hypnotism, and suggestion, February 2, at the age of 64; and P. Dubois, Swiss psychopathologist, November 4, at the age of 60.

The annual meeting of the American Psychological Association was held at Cambridge, Mass., December 29-31, under the presidency of W. D. Scott. The American Association of Clinical Psychologists was organized at Baltimore, Dec. 28, 1918.

GENERAL PSYCHOLOGY. *Text-Books and Treatises:* J. R. Angell's *Introduction to Psychology* is a revised and abridged edition of the author's well known text-book, without change in point of view; J. B. Watson's *Psychology from the Standpoint of a Behaviorist* is an extension from the animal to the human organism of the programme outlined in *Behavior*. H. C. Warren's *Human Psychology* and W. S. Hunter's *General Psychology* are two text-books which attempt to combine in a single system the facts of consciousness and of behavior. The former defines the subject-matter of psychology as the mental life of the organism, the activities involved in its interaction with environment through stimulation, adjustment, and response. Psychology thus becomes a branch of Biology. The latter frankly disregards the systematic difficulties involved, because it appears that the two classes of phenomena are, in empirical fact, intimately related, and together make up the science "as it is actually developing in our laboratories." E. Baudin's *Psychologie* (1917) is a general treatise in the sense that it aims to utilize facts "obtained by all methods and from all points of view"; the interest of the author is, however, primarily philosophical, and his point of view biological. H. H. Goddard's *Psychology of the Normal and Subnormal* is written in the interests of practical psychology, of mind in use; it is enriched throughout by the author's long experience with mental defectives. C. C. Peters's *Human Conduct* is another text-book in applied psychology, designed for high school students and the general reader. E. A. Kirkpatrick's *Studies in Psychology* is a series of essays on psychological topics, compiled and written by students under the author's direction. J. A. McGeech's *The Present Status of Psychology* (Colorado College Pub., No. 103) contains a report of a questionnaire on the teaching of psychology in the

United States, an analysis of the sequence of topics in current text-books, and tests of information in psychology. Books for general reading are: H. R. Marshall, *Mind and Conduct*, Moise Lectures delivered at Union Theological Seminary; W. Lay, *The Child's Unconscious Mind*, an application of the Freudian principles set forth in *Man's Unconscious Conflict* to the pedagogy of the child; W. K. Bradby, *Psycho-analysis and its Place in Life*, another interpretation of Freudianism for pedagogy; P. C. Bose, *Introduction to Juristic Psychology*, a syllabus of studies on the subject for law-students and other interested persons; and H. G. Lord, *The Psychology of Courage*, a book based on the theories of McDougall and Shand. A. Besant, the author of *Theosophy and the New Psychology*, has written a brief *Psychology*; and J. T. Scott publishes a popular *Psychology Simplified*.

The systematic discussion of the year has centred about the subject-matter of psychology and the concept of consciousness. J. Laird (10,261) contends for a descriptive psychology of sense-data (or sense presentations) without regard to their significance or meaning, but at the same time argues against the notion that sense-data are "congeries of apparently disconnected heterogeneous entities". J. B. Pratt (18,596), on the other hand, objects to the view that perception may be analyzed into sensational elements, because it ignores meaning and outer reference. J. Ward (15,257) points out the importance of distinguishing "sense-data" from sensation, which latter involves both subject and object. H. A. Reyburn (15,19), writing from the standpoint of a metaphysical psychology, criticizes the theory of mental process put forth by S. Alexander. C. A. Strong has published *The Origin of Consciousness*, a sequel to *Why the Mind has a Body*; discussions of Strong's pan-psychic theory are written by J. E. Turner (18,428), D. Drake (18,433), L. J. Russell (15,471), and M. F. Washburn (20,613). Other definitions of consciousness are offered by L. L. Thurstone (18,561), who regards every psychosis as an unfinished act in the process of definition into an overt response, and by E. G. Spalding in *The New Rationalism*, who like other neo-Realists defines consciousness as relation. H. H. Bawden (18,603) protests against definitions of psychology in terms of consciousness, and substitutes a behavioristic formula. H. H. Wieman (16,230) likewise gives a behavioristic definition of mentality; and A. P. Weiss (18,626) points out differences in assumptions, method, and subject-matter between physiological and behavior psychology. Other articles of interest are: J. R. Kantor, *Psychology as a Science of Critical Evaluation* (16,1); A. Lalande, *La psychologie, ses divers objets et ses méthodes* (21,177); J. Laird, *Introspection* (15,385); C. Read, *The Unconscious* (10,28); H. J. Mullford, *What is the Unconscious?* (2,253); W. R. Wells, *The Biological Foundations of Belief* (18,259); and G. A. de Laguna, *Emotion and Perception from the Behavioristic Standpoint* (16,409).

EXPERIMENTAL PSYCHOLOGY. In visual sensation H. Bender (28,1) confirms the result of former investigators that in spectral photometry the flicker method is superior to the method of visual-acuity, and C. H. Griffiths & W. J. Baumgartner (16,75) assert that visualization (acu-

ity) cannot be conditioned solely upon visual sensitivity, although the correlation of the two is slightly positive. C. E. Ferree and G. Rand (16,16 and 150) have determined the chromatic limens of the four principal colors in terms of physical energy from centre to periphery of the retina. Their results differ widely from those of Hess, Baird, and others, who employed physiological stimuli. C. O. Roelofs & W. P. C. Zeeman (8,174), in a study of visual-acuity in twilight vision, conclude that night-blindness is due to a number of different factors. W. V. Lempicka (28,217) has investigated the conditions and results of the mixture of narrow strips and mosaics of gray and colored papers seen at a distance. The results are of interest not only to the theory of vision but also to the technique of impressionistic painting. Other papers in this field are: G. L. Collins, *Color Blindness, Its Relation to Other Ocular Conditions, and the Bearing on Public Health of Color Acuity* (*Pub. Health Bull.*, No. 92); M. Cowdric & M. Winfield, *The Adjustment of the Hering Color-Blindness Apparatus* (2,418); J. von Kries, *Ueber einen Fall von einseitiger angeborener Deutungsanomalie* (28,137); and G. J. Rich, *The Daylight Mazda Lamp in the Psychological Laboratory* (2,313). M. Luckiesh's *The Language of Color* is a book on vision for popular reading.

M. Gildemeister (28,161) reports that the terminal limen for pure tones is conditioned upon age as well as upon the intensity of stimulus, the limit varies from 20,000 vs. in childhood to 13,000 in middle age. In a second paper (28,253), on the basis of his own experiments and those of M. Wien, he constructs a chart showing the limens of intensity for tones between 50 and 12,800 vs. The resulting curve is approximately bell-shaped, with greatest sensitivity within the octave of 1600 vs. H. Schole (6,242), in an experimental investigation of vowels, seems to confirm W. Kohler's view that simple tones within certain limits have a characteristic mark which may be defined as vowel-like (*vocalisch*), but regards the spoken vowel, in Helmholtz's way, as a combination of harmonic partials. G. J. Rich (2,121), however, in a study of tonal attributes, concludes against Kohler that vocality is not an attribute. On the basis of the numerical limens and his observers' reports he accepts only the attributes of pitch-brightness, volume, and tonality. At the same time, his concept of tonality is nearer to Köhler's *Tonhöhe* than to Révész's *Qualität*. Other experimental papers in sensation are: H. H. Straus & R. F. Uhlmann, *Adaptation of Superficial Pain* (2,422), and L. Gibson & T. Hartman, *The Comparative Sapidity of Hydrochloric, Sulphuric, and Acetic Acids* (2,311). H. Henning has written a general summary of the physiology and psychology of smell for Asher u. Spiro's *Ergebnisse d. Physiol.* (xvii, 1919, 572).

In the experimental investigation of attention H. Lehmann (18,260) finds that the range of attention for successive visual stimuli corresponds with that for sounds without rhythmization; i.e. the maximum is six impressions. J. Wagner (27,41), on the other hand, reports that the range of cognitive attention for simultaneous presentation of words and letters may embrace as many as 20 units, provided that attention is spread over the entire field and not concentrated upon a point. H. S. Liddell (2,241) concludes from experiments that fluctua-

tions of visual attention with minimal stimuli cannot, as Ferree had urged, be conditioned upon eye-movement.

In experimental investigations of perception, A. Kirschmann (19,239) finds that one of two geometrical stereograms may be rotated in the frontal plane as much as 12° and still permit of binocular fusion and tridimensionality; a result that should, however, be brought into relation with those of L. Enjalran (see YEAR BOOK, 1917). E. Kaila (27,f,129) proposes a physiological as against an attentional explanation of the fact that double images are normally localized at the distance of the object. C. O. Roelofs & W. P. C. Zeeman (8,79) confirm Hering's account of the conditions of rivalry of contours, and decide that attention in Helmholtz's sense is not a condition but merely an accompaniment of the physiological processes which are effective for the perception. The same authors (2, xcii, 527) report that, in binocular mixture of grays with contours, there is a summation of sensations but not of stimuli. M. Jacobsson (27,a, 77) discovers that small and near objects are in general more readily cognized than large and distant objects (the visual angle being the same), though there are individual differences. P. Wingender (27,f,21) shows that, if the main lines of a geometrical illusion are visually presented, the secondary lines which condition the illusion may be flashed in and out with persistence of the illusion, provided that the rate of alternation is not less than a quarter of a sec. F. Rusche (19,265) investigates the incorporation of new visual impressions into a previously ideated geometrical form. H. Weiner (27,f,198) argues that in both visual and auditory rhythms the perceptive experience varies according to the disposition of the observer. In the interest of theory, K. Koffka (27,f,257) determines formulae for the expression of the relations of the three variables (intensity, distance, and duration of stimuli), which, as found by Korte, condition the tachistoscopic perception of movement. T. Ziehen (28,79) reports that the more peripheral of two cutaneous extents on the forearm tends to be underestimated, and suggests visual-association as the probable explanation; R. W. Seulte (19,339) investigates the maximal interval of successive pressure-stimulations that will allow for the summation of pressure intensities found by Bruckner with simultaneous stimulations; O. Klemm (6,71) confirms the results of former studies as regards the relative unimportance of differences in intensity for the binocular localization of sound; M. von Frey & O. B. Meyer (26,301) and M. von Frey (ib., 339) conclude, in opposition to Goldscheider, that the perception not only of passive movement but also of the position of the bodily members is conditioned upon pressure sensations from the skin. An important theoretical work is P. F. Linke's *Grundfragen d. Wahrnehmungslehre*, in which the author investigates the significance for experimental psychology of the *Gegenstandstheorie* of the Meinong School and the *Phänomenologie* of Husserl. The former is disparaged, the latter approved.

L. Lindworsky (27,d,201) is unable to find any attributive difference between perception and idea. It is possible, however, that in some cases there may be an absolute impression of the one or the other, based upon the collocation of attributes. The influence of imaginal factors

upon verbal expression has been studied by E. E. Shaw (17, No. 112), and upon aphasic disturbances by S. W. Fernberger (2,327). R. Hennig (27,c,228) traces to its origin the visual imagery aroused in his own experience by the reading of novels, etc. In the psychology of learning, three papers are concerned with the optimal spatial arrangement of visually presented material: R. Priantl (27,f,293) determines the relative ease with which words are read when rotated like the hands of the clock about the sagittal axis of the two eyes; H. H. Gehreke (27,c,1) the effect of spacing and rate of succession upon the apprehension of certain vowels in three letter syllables, and P. Meyer (27,f,1) the influence of spatial position upon the reproduction of previously perceived figures. S. Witasek (communicated by A. Fisher; 27,c, 161) asserts that the complex which appears in the apprehension of nonsense syllables and artificial words is due to the emergence of a form (*Gestalt*); he is therefore unable to accept G. E. Müller's theory of the formation of complexes in learning. L. L. Thurstone (17, No. 114) sets forth a statistical method for the treatment of the data of learning, and C. L. Kjerstad (ib., No. 116) studies the various factors which influence the form of the learning curve. Other papers of interest are G. M. Stratton, *Retroactive Hypernesia and Other Emotional Effects on Memory* (16,174); J. E. Downey, *The Psychology of Figures of Speech* (2,103), and J. K. von Hoesslin, *Das Gesetz der spontanen Nachahmung* (6,1).

In the psychology of action little work has been done. F. Angell (2,224) reports further results of his endeavor, by aid of a trigger reaction-key, to determine the relations of the length and strength of pull to other factors entering into the reaction. T. Toppein (19,156) studies the succession of two simple bimanual reactions with variable stimulus intervals, and E. B. Titchener (2,62) reports an anomalous case of simple reaction.

The only paper on emotion is a behavioristic account by J. B. Watson (16,165), who regards emotion as "an hereditary pattern-reaction involving profound changes of the bodily mechanism as a whole, but particularly of the visceral and glandular systems." The original emotions, he thinks, are fear, love, and rage.

The experimental investigation of the thought-processes is being enriched by the activities of the Göttingen laboratory. G. E. Müller has (27,f,102) criticized from his associationist point of view the recent book of O. Selz, *Ueber die Gesetze des geordneten Denkverlaufs*, and H. Henning (27,c,) has published the first of a series of experimental studies undertaken from the standpoint of Müller's theory. K. Bühler (27,f,97) reacts sharply in defense of the Külpeans, and Henning (ib., 218) in reply discusses the relation of the *Assoziationslehre* to the current psychology of the thought-processes. J. M. Gleason (2,1), in an experimental study of "Feelings of Relation," is unable to verify Bühler's earlier results; she finds no pattern of content-processes which can be designated as the "relational complex." The latest publication of the Külpean school is C. Bühler's *Ueber Gedankenentstehung* (27,d,129). M. F. Bassett and C. J. Warne (2,415) have studied the lapse of verbal meaning with repetition.

PHYSIOLOGICAL PSYCHOLOGY. The most im-

portant book of the year is T. Wrightson's *An Inquiry into the Analytical Mechanism of the Internal Ear*. On the basis of new histological researches he argues against the tenability of Helmholtz's resonance theory, and advocates the substitution of a pressure-balance theory of hearing. R. H. Goldschmidt (19,101) and H. K. Schjelderup (27,d,226) deal with theories of reversible retinal processes which are to explain the corresponding phenomena of vision. G. Bohn (21,a,451) discusses not only these reversible processes, but also certain periodic phenomena, on the analogy of depolarization. C. W. Bock (23,a,277) and (2,377) and P. F. Swindle (28,a,257;b,1) are concerned with the rhythmical nature of the instinctive responses of human subjects in free tapping experiments. H. C. Warren (16,197) publishes tentative tables of human reflexes, instincts, instinctive tendencies, emotions, and dispositions. A similar attempt at classification is to be found in W. E. Hocking's *Human Nature and its Remaking* (51ff.). Other papers in this field are: V. Hazlitt, *The Acquisition of Motor Habits* (10,299); P. F. Swindle, *The Peristaltic Nature of Organic Responses* (2,187); C. E. Ferrie & G. Rand, *The Speed of Adjustment of the Eye for Clear Seeing at Different Distances* (2,40); and W. R. Miles, *The Effect of Alcohol on Psychophysiological Functions*.

APPLIED PSYCHOLOGY. Psychology and the War. Final summaries of the special activities of American psychologists in the war are: R. M. Yerkes, *The Measurement and Utilization of Brain-power in the Army* (*Science*, N. S., xlix, 221, 251), a review authorized by the Surgeon General's Office; *Report of the Psychological Committee of the National Research Council* (16, 83), a summary of the activities of the 17 subcommittees (see YEAR BOOK, 1917, 1918); K. Dunlap, *Psychological Research for Aviators* (*Science*, N. S., xlix, 94), a report of the work done under the direction of the author; E. L. Thorndike, *Scientific Personnel Work in the Army* (1b,53); and W. V. Bingham, *Army Personnel Work* (3,1). Two studies prepared for students of the Army Training Corps are: G. M. Whipple, *The Obtaining of Information: Psychology of Observation and Report* (9,217); and G. S. Hall, *Morale in War and After* (1b, 361).

EDUCATIONAL PSYCHOLOGY. Three new text books in this field have appeared: D. Starch's *Educational Psychology*; E. K. Strong's *Introductory Psychology for Teachers*; and R. R. Rusk's *Experimental Education*. The two former deal principally with such topics as the learning process, individual differences, etc.; the latter is a re-issue, with many alterations and additions, of the author's *Introduction to Experimental Education*. Books on special topics are: R. F. Richardson *The Psychology and Pedagogy of Anger*; F. Watts, *Echo Personalities: A short Study of the Contributions of Abnormal Psychology to the Problems of Normal Education*; Th. Erisman, *Angewandte Psychologie*, a book which briefly discusses, beside educational problems, juristic psychology, vocational selection, and hypnosis. Articles of interest in periodicals are: G. S. Hall, *Some Relations between the War and Psychology* (2,211); *The View-point of the Psychologist as to Courses of Study which will meet the Future Demands of a Democracy* (22,90); *Practical Applications of*

Psychology as Developed by the War (22,76); J. Dauber, *Zur Entwicklung der psychischen Leistungsfähigkeit* (14,70); M. M. Nice, *A Child's Imagination* (22,173); G. V. N. Dearborn, *The Psychology of Clothing* (17, No 112); O. Kupky, *Beobachtung ueber die Entwicklung der Formen* (25,a,179); M. Lobsien, *Prüfung d. Aufmerksamkeit an Kindern mit der Munsterberg'schen Schlittenmethode* (1b., 392; b,40); I. Spielrein, *Ueber schwer zu merkende Zahlen u. Rechenaufgaben* (25,b,146).

The year's discussion of mental tests centres about their reliability and significance. E. L. Thorndike (24,b,189) points out certain weaknesses, but believes that with foresight and care in interpretation the tests are and may continue to be reliable as general measures. M. Schmitt (14,217) concludes from experiments that children from the upper classes score higher on the average than those of the lower classes not only because of environmental conditions but also because of a larger proportion of high intelligence. A. L. Ide (12,204) divides tests into two groups, those that measure capacity, and those that measure accomplishment. Intelligence-tests are not as successful as is to be desired in excluding accomplishment, while the requirement-test always includes capacity as part of the complex which it measures. J. J. B. Morgan (24,247) gives proof of the validity of intelligence-grades by statistics taken at Camp Hancock; and S. L. Pressey (12,236) discusses the irregularity of results in a Binet examination as a measure of reliability. O. Lipmann (25,a,102) debates from the point of view of Stern's definition a new concept of intelligence, which derives from W. Köhler's *Intelligenzprüfungen an Anthropoiden*, I (Abhandl. d. Kgl. Sachs. Akad. d. Wiss., Phys.-Math. Klasse, 1, 1917). Köhler seems to define intelligence as the ability to solve problems presented to sense (*anschaulich gegeben*). Lipmann regards this mode of intelligence as practical or natural, and contrasts it with the theoretical or intellectual intelligence referred to in Stein's view. Other papers are: B. W. James, *Intelligence, Scholarship and Vocabulary* (24,427); O. Lipmann, *Intelligenzmessungen zum Problem d. schulischen Differenzierung* (25,a,354); G. Arthur, *The Application of Intelligence Tests to the Problem of School Retardation* (24,613); and W. Stern, *Zur Anwendung des Intelligenzquotients* (25,a, 259). L. W. Terman has written *The Intelligence of School Children*, a book designed for the use of the grade-teacher, and as an introduction to his *Measurement of Intelligence*; H. Woodrow, *Brightness and Dullness in Children*, a book on the psychology of intelligence for educators and others interested in children; and L. Witmer, *Performance and Success* (12,145), an outline for diagnostic testing and teaching. S. I. Franz's *Handbook of Mental Examinations* has appeared in a new and revised edition. D. Mitchell & G. J. Ruger have published *Psychological Tests; Revised and Classified Bibliography*, which contains 1428 titles.

New tests have been proposed by C. E. Myers & G. C. Myers, *A Group Intelligence Test* (24, b,355); G. Rossolino, *Zur Intelligenzprüfung d. Zurückgebliebenen* (25,a,202); H. J. Humpstone, *Memory-Span Tests* (12,196); E. A. Lincoln & K. M. Cowdery, *An Abbreviated Mental-Age Scale for Adults* (24,b,709); E. Morgan,

H. K. Mull, & M. F. Washburn, *An Attempt to test Moods or Temperaments of Cheerfulness or Depression by Direct Recall of Emotionally-toned Experiences* (2,302); and M. A. Walker & M. F. Washburn, *The Healy-Fernald Picture Completion Test as a Test of the Perception of the Comic* (2,304). Results of tests of college students, principally with the Army Alpha test, have been reported from the University of Illinois by D. S. Hull (24,a,542), from Brown University by S. S. Colvin (24,b,27), from Hamline University by G. D. Walcott (ib., 57), from Dickinson College by M. G. Filler (ib., 208), and from Southern Methodist University by H. T. Hunter (ib., 437), of high school students, by I. N. Madsen and R. H. Sylvester (ib., 407). The general result of these tests is that college students as a whole are a highly selected group, as compared with the rank and file of the population represented in the U. S. army. M. F. Washburn, in *A Note on the Terman Superior Adult Tests as Applied to Vassar Freshmen* (2,310), finds however that instructors assign about average ability to "superior adults." As regards Educational Tests, D. Stauch has published *A New Scale for Handwriting* (24,a,184) and *A Revision of the Starch Writing Scale* (24,b,498); F. R. Cawl, *Practical Uses of an Algebra Standard Scale* (ib., 88); S. A. Courtis, *Measuring the Effects of Supervision in Geography* (ib., 61); and J. E. W. Wallin, *The Achievement of Mental Defectives in Standardized Educational Tests* (ib., 250).

Of the year's studies based on the method of correlation, G. H. Thomson has published *The Proof or Disproof of the Existence of General Ability* (10,247) and *The Hierarchy of Abilities* (10,337). In the former paper he holds that the interpretations based on the partial correlation coefficient are for the most part unwarranted, and in the latter he shows other ways in which an hierarchical order may be produced among mental tests than by the action of the hypothetical general ability. J. C. M. Garnett, in *General Ability, Cleverness, and Purpose*, (ib., 345), discovers a new factor which gives low correlations with Spearman's "general ability" and with Webb's "persistence." This trait he calls "cleverness."

In the field of individual differences, H. A. Troops & R. Pintner (3,33) report further studies of the differences in education of men in the industrial world; E. A. Doll (24,a,187) gives a general statement of the problem of mental defectives; G. W. Frazier (3,151), in a comparative study of the variability of boys and girls, shows that the greater variability frequently asserted of boys does not exist; and O. Lipmann, in a book entitled *Psychische Geschlechtsunterscheide*, surveys the whole problem of sex differences.

In the field of vocational selection and vocational guidance, H. C. Link has written *Employment Psychology*, the "application of scientific methods to the selection, training, and grading of employees"; O. Lipmann, *Die Berufseignung der Schriftsetzer* (25,a,105); W. Stern, *Ueber eine psychologische Eignungsprüfung fur Strassenbahnfahrerinnen* (ib., 91); and W. Heintz, *Exp. Untersuchung u. das Metrum: Ein Beitrag zur Prüfung d. musikalischen Beanlage* (25,b,90). E. K. Strong, in *War Psychology and Education* (24,a,697), pleads for the introduction

into educational institutions of the "personnel" classification used in the U. S. army.

New books in Social Psychology are: E. S. Bogardus's *Essentials of Social Psychology*, an elementary book suitable for high schools and popular reading; G. E. Partridge's *Psychology and Pedagogy of Nations*; W. B. Pillsbury's *Psychology of Nationalism and Internationalism*; and H. W. Dresser's *A History of the New Thought Movement*. In the magazines W. Wundt (19,189) vigorously defends his concept of *Völkerpsychologie* as against F. Krüger's *Entwicklungspsychologie*; J. Sargeret (31,a,455) argues from the social effects of the war that the higher sentiments fuse the individuals of a people in a collective unity. H. E. Barnes (2,337) expresses his belief that, of the various methods of interpreting historical facts, the psychological is gaining ground most rapidly. Other titles are: E. S. Conklin, *Superstitious Belief and Practice among College Students* (2,83); J. H. Leuba, *The Yoga System of Mental Concentration and Religious Mysticism* (18,197); H. Henning, *Geruchsspiele in Japan: Ein Beitrag zur Psychologie des Japaners, d. Spiels, u. d. Zerebronomie* (25,b,323), and B. Sidis, *The Source and Aim of Human Progress: A Study in Social Psychology and Social Pathology* (1,91).

In Abnormal Psychology there are two books of a general nature: J. W. Bridges's *Outline of Abnormal Psychology*, designed as a text book, and P. Janet's *Les médications psychologiques*, the first volume of an extensive work which will bring together the author's many contributions to this subject. In the field of psychoanalysis, E. Jones's *Papers on Psychoanalysis* is a revised edition with 21 new chapters, H. Coriat's *What is Psychoanalysis?* is a small book for general reading, and H. von Hug-Hellmuth's *A Study of the Mental Life of the Child* is based on Freud. C. J. Jung's *Studies in Word-Association* is a collection of papers previously published by Jung and his followers in the *Journal of Psychology and Neurology*, and now translated by M. D. Eder. Other books are: A. Mordell, *The Erotic Motive in Literature*; H. Brown, *Advanced Suggestion*, a study in psychotherapy; and H. C. Marr, *Psychoses of the War*. E. J. Kempf, *Verre. d. Ment. Disease Monog.*, Vol. 28), in a study of the autonomic functions and personality, contends for a physiological interpretation of the facts of psychoanalysis; and A. A. Roback (2,274) shows that typical Freudian lapses may be explained by reference to secondary laws of association. J. B. Kantor (18,236) thinks that the concepts of behavior and disposition are ample for the explanation of human personality and its pathology. T. Schroeder (2,260), on the other hand, makes an ardent defense of Freudianism. G. Heymans & E. Wiersma (27,d,76) point out a type of normal character which shows the fundamental traits of epilepsy. Other papers are: W. H. R. Rivers, *Psychiatry and the War* (*Science*, N. S., xlix, 367), C. Russel, *The Management of the Psychoneuroses in the Canadian Army* (1,27), T. A. Williams, *The Emotions and their Mechanism in Warfare* (1,15); H. Flournoy, *1. Symbolismes en psychopathologie; II. Quelques remarques sur le symbolisme dans l'hystérie* (5,187); and L. H. Horton, *Leitmotif Dreams, their Physiology* (1,145). F. L. Wells, under the title *Psychological Parerga*

(16,360), publishes a group of papers from the laboratory of McLean Hospital on the general subject of psychotic performance in mental tests and association reactions. A. Gesell, H. H. Goddard, and J. E. W. Wallin (3,81) discuss in a symposium the subject of clinical psychology as an applied science.

PSYCHOTHERAPY. The death during 1919 of Bernheim, the celebrated authority on suggestive therapeutics, justifies a brief outline of the evolution of scientific psychotherapy. It is usually held to date from the publication in 1847 of James Braid's essay on the power of the mind over the body. This author founded our modern scientific knowledge of hypnotism, which word he also coined. In 1866 Liébault gave the subject a rebirth by writing a monograph with the same title. This physician was at the time an obscure professor in the University of Nancy and founded the so-called Nancy school of hypnotism and suggestive therapeutics, of which Bernheim became the most distinguished exponent. The late Mrs. Eddy founded her cult of spiritual healing about 1865. In 1872 Tuke, the well known alienist, published his celebrated monograph on the influence of the mind over the body, but it is not primarily a therapeutical work. Bernheim published his book on suggestive therapeutics in 1884. During the 80's and 90's a craze for hypnotic healing swept over the world and not a few medical men, some of whom had been eminent in drug therapy, came out boldly for hypnotism as a resource which could "cure everything that surgery could not reach." The great service of Bernheim appears to have been this—he showed that suggestion could accomplish all that could be effected by hypnotism without making it absolutely necessary to denature temporarily the consciousness. Bernheim was a general practitioner, physician in chief to the General Hospital of Nancy, and professor of general medicine in the local university. He was an all-round therapist, neglecting nothing which could benefit his patients, and using suggestion in a certain class of cases only. Given the proper type of patient there was no symptom which could not be reached. The long train of startling phenomena which could be caused in the hypnotic state has been duplicated in the waking state. Various investigators have been able to change the blood formula by suggestion, to cause blisters to ap-

pear on the skin and similar feats, as well as to cure such artifacts by counter-suggestion. Psychoanalysis, originally applied to a limited class of cases, also appears to be widening constantly its therapeutic field.

QUEBEC. A Province of Canada extending from Ontario, the United States, and New Brunswick northward to Hudson Strait, including most of the Labrador peninsula. Capital, Quebec. Estimated area, 706,834 square miles; population (1911), 2,003,232, of whom 1,605,339 were of French origin. Montreal, the largest city, had a population estimated in 1917 of 700,000, and Quebec, the capital, of 103,000. It is under a lieutenant-governor appointed for five years by the Governor-General, who acts through an executive council. The legislative power is vested in a legislative council of 24 members appointed for life and the legislative assembly of 81 members elected for five years. Quebec's representation in the Canadian House of Commons is 65 members. Lieutenant-Governor at the beginning of 1919, Sir Charles Fitzpatrick. Prime Minister and Attorney-General, Sir Lomer Gouin.

QUEENSLAND. A state of the commonwealth of Australia, situated to the north of New South Wales, next to the largest of the Australian states. Area, 670,500 square miles; population (1911), 605,813; estimated (June 30, 1918), 705,588. Capital, Brisbane, with a population estimated in 1917 at 173,504. Legislative power is vested in a parliament of two houses. The legislative council of 38 members appointed by the Crown for life and the legislative assembly of 72 members elected for three years by universal suffrage. Executive power is vested in a Governor appointed by the Crown, who acts through a responsible ministry. The Governor at the beginning of the year 1919 was Sir Hamilton Goold-Adams; and the Prime Minister and Attorney-General was K. J. Ryan. See AUSTRALIA.

QUICKSILVER. The output of quicksilver in the United States from April 1 to June 30, 1919, according to figures compiled by the United States Geological Survey, was 3940 flasks of 75 pounds net, a decrease of 2020 flasks, or of nearly 34 per cent, as compared with the output in the first quarter. Only 16 mines were producing in the second quarter of the year as against 23 in the first quarter. California produced 2632 flasks, Texas 1244, Nevada 34, and Oregon 30.

The quicksilver on hand at the mines or in transit to market at the end of the second quarter totaled 1635 flasks, 2784 flasks less than the quantity on hand or in transit at the end of the first quarter.

The average monthly prices of quicksilver in San Francisco during the second quarter of 1919, were quoted at \$73.12 for April, \$84.80 for May, and \$94.40 for June. The price increased from \$72.80 in March, the lowest price since the beginning of the war. Production diminished at the beginning of the second quarter owing to the high cost of operation, falling

prices, and the scarcity of available ore. Several mines ceased operation early in the year.

With the cessation of the great war some quicksilver producers expected an immediate influx of foreign quicksilver and a fall in prices approximately to the level of those that prevailed early in 1914. Conditions were taken in other quarters, however, as indicating little likelihood of immediate disaster.

QUIGG, LEMUEL E. (1862). Editor and politician, died July 2 in New York City. He was born Feb. 12, 1863; was educated in the common schools, and engaged in journalism. He was editor of the Flushing, N. Y., *Times*, 1883-84, a member of the N. Y. *Tribune* editorial staff, 1884-94, was for three terms member of Congress, beginning in 1893, but resigned during his third term to give all his attention to the New York *Press* of which he had become editor and publisher. He was prominent in the Republican party, having been president of the Republican County Committee of New York, 1896-1900, chairman of Republican State conventions, 1896 and 1902, and delegate to the Republican national conventions of 1896, 1900, 1904. In 1900 he took up the study of law and was later admitted to the bar and became the representative of several public service corporations. After 1906 he was out of politics.

QUINCY, JOSIAH. Former Mayor of Boston, died September 8. He was born at Quincy, Vass., Oct. 15, 1859, graduated at Harvard in 1880, was admitted to the bar in 1884, and practiced at Boston. He was prominent in State politics and was chairman of the Democratic State Committee in 1891-92 and in 1906. In 1893 he was First Assistant Secretary of State (United States), from 1895 to 1899 was mayor of Boston, and from 1906 to the time of his death was member of the Boston Transit Commission. He was a candidate for attorney general of Massachusetts in 1917.

RACEWINITE. See MINERATOLOGY.

RACING. The "sport of kings" had the most successful year in its history in 1919 as far as the United States was concerned. In Europe and Canada, however, the effects of the war were of such a nature as to make the turf season far from profitable as compared with pre-war times.

The feature of the year in America was the astonishing record made by Man o' War who proved king of the two-year olds. This horse went to the post 10 times and was the victor on nine occasions. His last appearance of the season was in the Futurity which he won, gaining for the Glen Riddle Farm \$26,650. Man o' War's total winnings for the year were \$87,876. The leading winner of 1919 was Sir Barton, owned by Com. J. K. L. Ross, with an aggregate of about \$90,000.

The question of supremacy among the three-year olds was a matter of much dispute between Sir Barton and Purchase, owned by Sam C. Hildreth. Purchase it is true defeated Sir Barton in the Dwyer Stakes but it was maintained by the followers of the latter that the great horse had gone stale after his strenuous campaign and was not therefore at his best.

The winners of the more important stakes in 1919 were Brooklyn Handicap, Eternal; Saratoga Handicap, Purchase; Suburban Handicap, Corn Tassel; Saratoga Cup, Exterminator; Futurity, Man o' War; Latonia Derby, Be Frank;

Kentucky Derby, Sir Barton; Brooklyn Derby, Purchase.

C. Robinson was the leading American jockey. He had 783 mounts, finished first 169 times, second, 124, third, 110, and was unplaced on 380 occasions. T. Murray piloted 145 winners and finished second 95 times. The most successful English jockey was S. Donoghue who scored 111 firsts, 87 seconds, and 60 thirds. The leading English owner was Lord Glanely with 23,746 pounds, 10 shillings. Lord Glanely's Grand Parade won the English Derby.

Trotting and pacing had an exceptionally successful season in the United States, especially along the Grand Circuit. Tommy Murphy once more proved the leading driver, winning 56 events having a total prize value of \$84,265. C. Cox won 32 events and \$78,098, and E. F. Geers captured 22 events valued at \$41,199. No new records of note were made during the year.

RACQUETS and COURT TENNIS. No racquet championships were contested during 1919 but plans were made for their resumption in 1920. Squash and court tennis flourished and some of the colleges organized teams in these branches of sport for the first time. John W. Appel of the Harvard Club won the national squash championship while the Harvard Club team captured the title in the Metropolitan Association tourney.

Jay Gould again reigned supreme in the court tennis world even Walter Kinsella, the professional champion, falling before his prowess in seven out of 11 sets.

RADCLIFFE COLLEGE. A non-sectarian institution for the education of women, at Cambridge, Mass. It is affiliated with Harvard University. In the fall of 1919 the enrollment was as follows: undergraduates, 499, graduates, 124, total, 623. One hundred twenty-five members of the faculty of Harvard teach at the college. Productive funds total \$1,700,000, the income for 1919 from the funds was \$80,000, and from tuition, \$82,000. Radcliffe was founded in 1879. President, LeBaron Russell Briggs, LL.D., Litt.D.

RADIUM. The production of radium in 1919 was believed to be less than in 1918 but rather more than in 1917. This was due to the fact that the war uses of the material had ceased, and in fact in 1918 practically all of the metal produced was used for war purposes either direct or indirect. In 1919 carnotite was the principal source of radium along with a small amount of uranophane, no pitchblende being used during the year. There was some demand from Europe for radium as stocks there had been depleted during the war. The leading uses of radium during the war, some of which naturally continued and were extended, were for luminous paint for dials of watches, airplane and other indicating instrument, and also for gun sights. In luminous paint phosphorescent zinc sulphide is the basic constituent and usually carried one-tenth to two-tenths of a milligram of radium in the form of a salt, such as sulphate, chloride, or bromide, to one gram of the zinc sulphide. This latter substance being as important as the radium for this purpose, was under careful study during the year and the processes employed were kept secret. There was continued and possibly increased use of radium as a therapeutic agent during the year with some success reported in the treatment of cancer. Here it was found convenient to use

the radium emanation rather than the radium itself. A substitute for radium especially in luminous paint, though having a much shorter life, was developed extensively during the year in the form of mesothorium, a by-product in the manufacture of the thorium nitrate from monazite sands used in incandescent mantles. In luminous paint it lasts only about five or six years.

RAGSDALE, JAMES WILLARD. Former Congressman, died at Washington, July 23. He was born at Timmons ville, S. C., Dec. 14, 1872, and practiced law at Florence, S. C. He was president of the Farmers & Mechanics Bank. He served in the South Carolina House of Representatives and Senate and he was a member of Congress from 1913 to 1919. In politics he was a Democrat.

RAILWAY ACCIDENTS. The Interstate Commerce Commission in its annual report published in the autumn of 1919 summarized the casualties on steam railroads in connection with the operation of trains during the calendar year 1918 as follows:

<i>Class of persons</i>	<i>Number of persons</i>	
	<i>killed</i>	<i>injured</i>
Trespassers	3,255	2,805
Employees	2,928	47,556
Passengers	471	7,316
Persons carried under contract, such as mail clerks, Pullman conductors, etc.	48	766
Other non-trespassers	1,995	5,701
Total of above classes	8,697	64,141

In addition there were 589 persons killed and 110,431 injured in non-train accidents in the year 1918. The number of employees killed and injured on American railways continued high, and during the same period there were 164 employees killed and 23,32 injured in coupling and uncoupling cars, and 630 killed and 14,533 injured in casualties due to employees coming into contact with overhead and side obstructions, in falling from and getting on and off cars. As compared with 1917 there was a decrease of two in the number killed and 176 in the number injured in the former class of accidents, and an increase of 3039 in the number killed and a decrease of 1851 in the number injured in the latter class of accident.

The Interstate Commerce Commission during the year ending June 30, 1919, investigated 79 train accidents, which included 53 collisions, 25 derailments, and one that was classed as a miscellaneous accident. The collision resulted in 261 deaths and 1083 injuries. The derailment resulted in 55 deaths and 231 injuries, while the other accidents resulted in 20 deaths and 19 injuries, a total of 336 persons killed and 133 persons injured. Of the 53 collisions, 28 occurred on lines operated by some form of block signal system, 19 on the lines operated by the time table and train order system, and 6 were yard accidents. Of the 28 collisions on the block signal road 18 occurred in automatic block signal territory, of which 12 were rear end collisions, 5 were head-end collisions, and 1 was a side collision. In 11 of the accidents in automatic block signal territory, the failure of enginemen properly to observe and obey signal communications was responsible, though in some cases improper performance of duty by flagmen was the con-

tributing cause. Two of the collisions investigated were caused by lack of proper maintenance of signals. Of the 10 collisions which occurred in non-automatic block signal territory, 4 were rear-end and 6 were head-end collisions. One was due to improper flagging, and in 4 collisions train orders were involved, disobedience figuring in several cases and improper orders in others.

Three of the 25 derailments were due to defective equipment, and 14 derailments were due to track conditions, including broken rails, switches open or partly open, washouts, the malicious removal of rail connections, and poor condition of tracks. Five derailments were due to excessive speed, 1 was caused by an obstruction maliciously placed on the track, and 1 resulted from an arrangement of signal lights at the end of double track so that the engineman thought the signal was clear when the contrary was the case.

The human failure especially that of enginemen to observe and obey signal communications and the failure to provide adequate protection for trains continued to be the principal causes of collision, and once again the Commission reported that the only remedy which appeared to be adequate to afford protection against the occurrence of disastrous accidents of this character was the adoption of some form of automatic train control system for the purpose of compelling obedience to automatic block signal communications. In many cases it was clear that if the flagmen had adhered strictly to the rules, accidents would have been avoided, and the adoption by railroads throughout the country of uniform operating rules, specific and definite in their requirements, embodying the best operating practices of the railroads, was recommended.

On Jan. 1, 1919, the total length of railroad in the United States operated by the block signal system was 99,897.7 miles, of which 36,989.4 miles were equipped with automatic block signals, and on 62,908.3 miles the nonautomatic block system was in use. This represented an increase of 1796.3 miles equipped with automatic block signals and a decrease of 1,430.3 miles in nonautomatic block signal mileage, the net increase in block signal mileage being 366 miles. The investigation of railroad rails and their causes of failure continued. No extraordinary developments were noted in this important question.

In the Esch Bill for the further regulation of railroads, which passed the House of Representatives on November 17th, the Interstate Commerce Commission was authorized after investigation to order any carrier by railroad subject to its powers, within the time specified in the order, to install automatic train stop or train control devices which comply with specifications and requirements prescribed by the Commission, on the whole or any part of its railroad. Such order was to be issued and published one year before the date specified for its fulfillment, and provides penalties for neglect or refusal to obey. This committee states in its report, referring to this section:

"Automatic train control devices have passed the experimental stage and in the interests of the public as well as of the safety of employees, your committee believes that some action should be taken by Congress which would hasten the installation of such safety devices. In the end the installation of such devices would be an

economy to the carrier. The annual losses, by reason of collisions, which would be prevented by the installation of automatic train-stop and train-control devices, would equip many miles of roads. The saving of lives as well as property should be a sufficient justification for the enactment of this section."

AUTOMOBILE ACCIDENTS AT CROSSINGS. The large number of automobile accidents at grade crossings which had been noticeable for several years did not abate in 1919, although vigorous methods of solving this trouble were taken by the railways themselves. An interesting discussion of this topic was presented by R. J. Clancy, assistant to the general manager of the Southern Pacific, the Western Pacific, and the Tidewater Southern. He stated that the average time that an ordinary passenger train struck a crossing was less than seven seconds, and notwithstanding this fact, many automobile drivers would misjudge its speed or would not wait until the train had passed. As shown by his investigations, covering the first six months of 1919, 18 persons were killed, 81 were injured, and 233 automobiles were damaged or destroyed in grade crossing accidents, compared with 26 killed and 110 injured during a corresponding period in 1918. An analysis of the 233 accidents revealed the fact that 30 stalled on the crossing, 111 attempted to cross almost immediately in front of the train, 59 ran into trains, 1 skidded into a train, 19 ran into and broke down crossing gates lowered to protect them from passing trains, 3 ran into and injured crossing flagmen, 4 ran into cattle cars or crossing signs, and 6 ran over end of track or were not sufficiently in to clear. In the two latter instances the accidents resulted from attempts to escape being struck by train after it was observed that the crossing could not be effected. The result of this exhaustive examination of the serious condition seemed to indicate that in the great majority of cases no precaution or warning signals were of avail, as the drivers of automobiles failed to exercise reasonable judgment and precaution.

SERIOUS ACCIDENTS IN 1919. In the year under review there was a number of serious accidents on American railways resulting in fatalities and injuries. Some of the more important of these accidents are summarized in the following paragraphs.

On Jan. 12, 1919, a serious rear collision of passenger trains occurred on the New York Central at South Byron, N. Y., when west-bound passenger train No. 11 ran into the rear of west-bound passenger train No. 17, second section, at 3.42 o'clock in the morning, killing 22 passengers and injuring as many more. Train No. 17, second section, was standing at the station in order to have attached a helping engine on account of the steep grade westward to Batavia, and this engine was moving backward to its position when train No. 11 struck, so that a double collision resulted. No. 11 was running at about 60 miles an hour, and in the opinion of the inspector who investigated the accident, the brakes were not applied until within about 700 feet of the standing train. The accident apparently was due to the failure of the engineer to notice the signals and the possible failure of the trainman protecting the standing train to carry out effectively all the various measures of safety called for, though both of these matters

were not proved conclusively. The report of the New York State Public Service Commission on this accident also contained a strong argument for an automatic train stop, and the testimony of Frank J. Sprague, the electrical engineer, regarding efforts made in this direction. Certain steps had already been taken for extensive experiments in this field on actual track prior to the war, but the general condition of the railway industry prevented further activity in this field.

On the Bethlehem branch of the Philadelphia & Reading at Fort Washington, Pa., 5 miles north of Jenkintown, and 16 miles north of Philadelphia, on the night of January 13th, 14 passengers were killed and 22 were injured, when northbound local passenger train No. 381, which had been stopped by an obstruction on the line ahead, was run into from behind by express No. 319, and the rear car of the standing train was completely crushed. It was stated that there were enclosed-disk automatic block signals, both distant and home, to protect the standing train, and also a flagman with red light. It was claimed, on behalf of the engineman of train No. 319, that the signal indicated clear.

Four passengers were killed outright, 2 fatally and 20 less seriously injured when a northbound passenger train was derailed near Chick Springs, S. C., on February 8th. The rear coach ran off the track on a high trestle and fell to the ground about 90 feet below. The car was demolished and every person within it was injured. The cause of the derailment was the failure of a steel brakebeam which was caught in a guard rail.

A northbound yard train of the Lehigh Valley running on the track of the West Shore was derailed at Jersey City, N. J., on the night of February 8th. Three trainmen were killed, the engine badly damaged, and one freight car was wrecked.

At Pittsburgh, Pa., on the evening of February 22d a serious wreck occurred where freight locomotive, without train, derailed at a point where the track was being repaired and fell against the Versailles local passenger train. The passenger train was moving at about 40 miles an hour, and three of its coaches were wrecked. Nine passengers were killed, and several were injured.

A collision of two eastbound freight trains at Heaton, Pa., on March 6th, about 5.30 A.M., resulted in a loss of some \$200,000. The leading train, consisting of a locomotive and 85 cars, was at a standstill, the locomotive taking water, and the other train, consisting of a locomotive and 76 cars, ran into it at fair speed, making a bad wreck. A westbound freight was passing on the track to the left; and there were standing freight cars on side tracks both north and south of the two main tracks. Flames burst from the wreckage, and, fanned by a strong wind, spread among the cars on all tracks and also to a bridge above the tracks, the fire not being subdued for 17 hours. Five trainmen were killed and one was injured. The bodies of four of the dead were entirely consumed in the fire. The collision occurred on a straight line, in clear weather. This line, the Trenton cutoff, was operated by the manual block system. This collision occurred in a block section 6 miles long, and the rear of the standing train was 2885 feet east of the entrance to the block section.

A somewhat singular accident occurred near

Cresco, Pa., on March 21st, to a westbound freight, drawn by three locomotives, two ahead and one pushing, while moving at low speed up grade. Due to low water the boiler of the leading locomotive exploded and the engineman, fireman, and one brakeman were killed. The train consisted of 72 cars, and two cars near the rear end were thrown off the track, obstructing the eastbound track.

In a collision near Locust Summit, Pa., on the 10th of April, 18 cars were badly damaged, and the conductor, one brakeman, and the fireman were killed. The train was a through freight, consisting of a locomotive and 35 loaded cars. On account of a defective drawhead the engine and eight cars were moved forward and set off at Gordon, and the engine, returning to its train, collided with the rear portion, which had been left standing on a grade but had started down the grade because of the leaking of the air cylinders.

Near Memphis, Tenn., on April 26th, about 7 A.M., a butting collision occurred in a heavy fog between an employees' train, carrying men to work, and a locomotive without train. Five employees were killed, and six were injured.

One of the most serious as well as much discussed collisions of the year was that occurring at Dumkirk, N. Y., July 1st, when New York Central westbound passenger train No. 41, second section, while standing at the station about 2 A.M., was run into at the rear by westbound passenger train No. 7, consisting of a locomotive and 12 heavy cars, moving at about 40 miles an hour. 12 persons, 8 of whom were passengers, were killed, and 111 injured. It was believed that the accident was due to a trespasser riding between the tender and the first car closing the angle cock in the air brake pipe, with the idea that he could stop the train at his home town. A thorough investigation of this accident was made and testimony of trainmen and other witnesses was being taken, but the general results were unsatisfactory, and no conclusion could be reached except that the closing of the angle cock was the cause of the collision. The important question was whether the brakes were applied, either by hand or by pulling the conductor's valve, and whether a signal was given by the engineer when he realized that his train was not under control. It was brought out that in many respects the conditions of operation were unsatisfactory, and need of additional caution was felt in railway operation.

On August 20th a butting collision occurred on the Pere Marquette at Sabin, Mich., 4 miles south of Traverse City, between a southbound passenger and a northbound freight. Both locomotives were wrecked, and six trainmen killed, and 34 passengers were injured. The crew in charge of the freight, which was extra, had neglected to consider the schedule of the passenger train.

On October 10th a derailment occurred on the Erie Railroad at Belmont, N. Y., where a first class train westbound, No. 9, consisting of a locomotive, 16 express cars, and a car at the rear in which the train crew were riding, was derailed while running at a speed of about 60 miles an hour. The engine was thrown off the track by passing over a misplaced switch and into a side track, and the engineman and fireman were killed. The accident was due to the fact that track repairers working near the scene of

the accident had left the switch open, and though the switch target was visible, and the track repairers were on the spot, the speed of the train was too great to obviate the accident.

Another derailment occurred on October 29th on the South Pacific near Vincent, Cal., when eastbound passenger train No. 50 left the track, and the locomotive, tender, 2 baggage cars, and 5 coaches fell down the bank. One passenger, 2 trainmen, and 2 trespassers were killed and 143 passengers were injured. The train left the track at a curve of 8 degrees 10 minutes on a descending grade of 2.2 per cent, and the cause was unquestionably excessive speed, for all evidence indicated that the track was in perfect condition. The estimated damage to engine, cars, and roadway was \$40,000. This was the first serious train accident in which a passenger had been killed on the Pacific System of the Southern Pacific in 7050 miles since July 4, 1908, or over 11 years.

A rear collision of electric cars occurred near Fredonia, N. Y., in which 5 persons were killed and 13 injured. On October 21st 3 persons were killed and 14 injured in a rear collision on the Interborough Elevated Line in the Borough of the Bronx, New York City. Two passenger cars were badly crushed, but there were only a very few passengers in them.

A grade crossing accident at Clarksboro, N. J., on the night of November 1st was responsible for the death of 16 persons and injuries to about 20 when an automobile truck occupied by 30 men and four women, was struck by train No. 1926 of the West Jersey & Seashore Railroad. The automobile truck, containing a number of pleasure seekers, was approaching a crossing which was without warning signals but afforded an unobstructed view. The men in charge of the train were exonerated by a coroner's jury on November 3d.

A disastrous butting collision between an immigrant train and a freight, occurred on the Canadian Pacific, near Onawa, Me., at 7.15 on the morning of the 20th of December, and 19 passengers and four trainmen were killed, and 35 passengers were injured. Fire following the wreck, some of the victims were burned to death, and some of the injured severely burned before they could be rescued. The enginemen and firemen of both trains were killed.

The immigrant train, with about 300 passengers, formed the fourth section of westbound passenger train No. 39, while the freight was an eastbound extra. Both locomotives were wrecked and the freight engine crashed through the first two coaches of the passenger train. The freight, which had met the third section of the passenger train at Bodfish, 1 mile west of Onawa, should have waited there for the fourth section. The temperature at the time of the collision was about 20 degrees below zero.

FOREIGN ACCIDENTS. The accident record for the British railways forms a striking contrast to that of the United States. During the year 1919 there were three fatal accidents to passenger trains in each of which one passenger was killed. On the London and Northwestern Railway a train was derailed at Acton Bridge Junction on July 16th, and one passenger about three hours later died from the effects of injuries received. On the Caledonian Railway, on October 6th, the day after the strike ended, a passenger was killed at Carstairs Station in a collision be-

tween a moving and a standing passenger train. On November 15th an accident resulting in the death of a passenger occurred at Haverhill on the Great Eastern.

During the year there were several serious accidents on the French railways. At Montieramey, near Troyes, on February 3d, a troop train collided with standing locomotives. Eight United States soldiers were killed and 30 were injured. On Sept. 4, 1919, a train from Bordeaux at St. Sory between Montauban and Toulouse, ran into the Toulouse express, which had stopped, owing to want of steam due, it was said, to bad coal, and 15 passengers were killed and many injured. On November 3d a collision occurred on the P. L. M. Railway at Pont-sur-Yon, about 60 miles southeast of Paris, in which 26 passengers were killed, caused by the Simplon express, which was halted for the same cause, being run into. Several serious collisions on the French railways led towards the end of the year to a further discussion of supplying automatic signals, which have never been extensively employed in France.

Other disastrous collisions in Europe were reported during the year. Late in October a collision between a passenger train and a freight occurred near Kranowitz, Silesia, in which 40 persons were burned to death and over 60 others were severely injured. In a collision at Vigerslev, Denmark, on the 1st of November, five coaches were wrecked, and 41 persons were killed, and many others were injured.

Among the accidents in Mexico, a collision, on January 28th, was reported as having resulted in the death of 25 persons, including 5 women and 3 children. It occurred at Laguna, 160 miles from the Texas border, and resulted from a passenger train running into the rear of a freight.

RAILWAY BROTHERHOODS. See TRADE UNIONS.

RAILWAYS. The second year of government operation of the railways was under abnormal conditions but the same might be said of the operation of the railways under private control in about four out of five years during the entire history of railways in this country. There was a large falling off in traffic in the first six months of 1919. There was no corresponding decrease in the demands for and of labor. There was no corresponding increase in the production of materials as compared with the supply. The steel industry, of which it is always difficult to say whether the depression in railroad earnings, and therefore expenses, is an effect or a cause for a slump remained at the high tide set by the war standards. On the other hand bituminous coal production fell off to a surprising extent. There is presented here a situation which, on its face, seems paradoxical. Transportation of goods is as fundamental in making them available for consumption as is manufacture itself, and manufacture is largely dependent on coal supply. Yet we have the phenomenon of no slackening, at least in domestic demands for goods, but a sudden great decrease in two fundamentals of production. By July 1st, however, business had begun to absorb a much larger part of the capacity of the transportation machine of the country, and in the four months, July to October inclusive, railroad business was at an unprecedented high level. November and December were not quite so good.

The railroads are being operated by a representative of the president—the director-general of railroads—at a fixed rental which is paid to the corporations which own the properties. This rental is the average annual net operating income for the three years ended June 30, 1916. Freight and passenger rates were much higher in 1919 than ever before in the history of the country and were higher by about 13 per cent than in 1918. Nevertheless the government was \$400,000,000 out in its railroad business after having paid the fixed rentals based on 1914-1916. This \$400,000,000 is, of course, an estimate figure based on the known earnings and expenses up to about the first of December. The actual deficit in 1918 after the payment of rentals was \$236,000,000.

The operation of the railways in 1918 by the government was a test only of what could be done with the transportation machine of the country used as an aid in carrying on a foreign war. Revenues and expenses were interesting only because the taxpayer had to make up the difference between the two, but as a test of the efficiency of government railway operation they were worthless. Passenger and freight service in 1918 as rendered to the individual not directly connected with the business of carrying on the war, were no measure of what could be done by government operated railways.

The question of whether or not government operation in 1919 was so overshadowed by war conditions as to also form no criterion of the economy or efficiency of government operation as compared with private ownership, is one which ought not to be answered dogmatically. Every class of service, hotel service, domestic service, service in industrial plants, in public utility plants, other than steam railways, show many of the same tendencies that were shown in railway service. One thing it is fair to say, the much talked about economies which were to follow the unification of all the railways of the country and other operation as a non-competitive whole failed utterly and completely to offset the general tendencies of increased cost of operation. Nowhere is this more strikingly illustrated than in general expenses. The general expenses of railways as defined by the Interstate Commerce Commission are the salaries of the officers not specifically assigned to some one department, the salary of their office forces and the expenses of these classes of railway men. If, under private operation, too much was being paid to the favored few, if railroad officers' salaries were too high, if appointment to executive offices went by favor, not merit, general expenses would reflect these facts. General expenses, however, in 1919, were 11.6 per cent higher than in 1918, and they were also higher than during the so-called test period, 1914 to 1916, when the roads were under private operation.

EARNINGS AND EXPENSES. It must be remembered in discussing railway earnings and expenses, that it was the United States government, through the United States Railroad Administration, which received all of the money paid by passengers and by shippers of freight, and it was likewise the government which paid the wages of railway employees, salaries of railway officers, and the cost of material such as fuel, etc., used in the operation of the railways. Julius H. Parmelee, of the Bureau of Railway Economics, estimates that total operat-

MEN PROMINENT IN RAILWAY AFFAIRS IN THE UNITED STATES
DURING 1919

ing revenues for 1919 will amount to about \$5,175,000,000, and that total operating expenses will amount to \$4,375,000,000. After the payment of taxes and rentals this leaves \$570,000,000 with which to pay the \$905,000,000 rentals which the government has guaranteed to the railway corporations. The increase over 1918 is 5.0 per cent for revenues, 9.2 per cent for expenses, and the deficit to the government after paying rentals is \$400,000,000 in 1919, and \$236,000,000 in 1918. The increase in revenues came from the large increase in business in the last half of 1919 and the high rates for both passenger and freight in effect during the entire year 1919. The higher expenses were due to some high rates of wages paid certain classes of employees; to the wider expansion of the application of the eight-hour day with the same rate of pay which was heretofore paid for a 10 hour day; the payment of overtime for work not heretofore paid overtime, and to a decreased amount of work done per hour per individual. No one of these causes of increased expenses can be laid unqualifiedly to government operation. Increased rates of pay have been almost universal for all classes of labor, and decreased efficiency has been likewise almost universal. All that can be said, however, is that government operation did not offset this tendency, which affected all classes of industry.

LABOR SITUATION. In 1918 the total payroll of the railways being operated by the government was \$2,593,000,000. This was very much more than the payroll in 1917—the estimated difference is \$583,552,000, but did not represent what would have been paid for the entire year on the basis of the wage schedule in effect Jan. 1, 1919. This is because the increases granted in 1918 were not effective for the full calendar year. In 1919, however, further general increases in the wage scale were made amounting to about \$151,000,000 a year. The trainmen were granted an increase of \$60,000,000 a year in wages. The railway police, the railway dining car employees and some other classes were granted an increase of \$5,000,000, and on May 1st a national agreement was made with the shop men which gave them \$50,000,000 additional wages for the remainder of the year. On December 1st, the trainmen were granted a further increase amounting to about \$36,000,000 a year and on December 16th, the maintenance of way employees were granted an increase, the total of which cannot be as yet estimated.

MAINTENANCE OF FACILITIES. A provision of the standard contract made between the government and the railways is that the roads shall be returned to their owners in as good condition as they were when taken over on Jan. 1, 1918. The Railroad Administration has interpreted this to mean that as much shall be spent for maintenance annually as was spent on the average annually during the test period, making allowance for the depreciated purchasing power of the dollar. In estimating this depreciation in purchasing power, however, no comprehensive analysis is made of the decrease in efficiency of labor. That is, a man hour of labor is taken at the same value, measured in work done in 1919 as in 1914-16. It is the consensus of opinion, however, not only of railroad men but of all other employers of labor, that a man hour in 1919 did not average as much work as a man hour in 1914-16. In the first nine months

of 1919, maintenance of way for class one (roads earning over a million dollars a year each), was \$575,122,000. Compared with \$311,096,000, the average for the corresponding nine months on the average in the test period, this is an increase of 85 per cent. Corporate officers of the railways claim that this has not been sufficient to keep the roads in as good condition as they were when the government took them over.

In 1919 about 1,350,000 tons of new rail have been laid in maintenance of way. This compares with 1,328,000 tons laid on the average annually in the test period. On the other hand, during nearly all of the test period, rail renewal was curtailed by the European demand for steel and during 1917, it was curtailed still further by the shortage of labor. In other words, rail renewal in the test period is not a true criterion of 100 per cent upkeep on American railway properties, although it would seem to be a fair enough criterion of the government's obligation in so far as rental and maintenance of rented property is concerned. In 1919 about 85,000,000 ties were used in maintenance. This compares with an average of 94,835,000 ties used in maintenance in the test period. It is not possible to accurately measure in figures the condition of locomotives and cars, but railway officers, both corporate and federal, are generally of the opinion that maintenance of this equipment has not been adequate during the past two years. The Railroad Administration, following the practices of most of the railroad companies, did not make extensive repairs to equipment when traffic fell off as it did in the first six months of 1919. On Aug. 16, 1919, there were approximately 229,000 bad order freight cars. That is, cars needing repairs so badly that they were not being used in service. By November 15th, however, this number had been reduced to 131,000. Even this figure, however, is an abnormally high one. On the best maintained roads under private operation, bad order cars do not average more than 5 per cent of the total number of cars owned.

INTENSIVE AND EXTENSIVE RAILWAY DEVELOPMENT. Only a small part of the amount which the government had decided upon spending on the roads for additions and betterments in 1918 was actually spent. This was due to the shortage in both labor and materials. When the let-up came, however, after Nov. 11, 1918, the Railroad Administration was somewhat hesitant about railway expenditures. The revolving fund, so called, which was in substance the working capital granted to the Railroad Administration by Congress, of \$500,000,000 proved inadequate and the director-general asked for an additional \$750,000,000 appropriation. This appropriation Congress failed to make before it adjourned. The total cost of additions and betterments to existing lines, exclusive of equipment which was authorized by the Railroad Administration, over 1918 was \$523,000,000 and for 1919, up to September 30th, \$154,000,000. The actual expenditures during 1918 were \$263,000,000, and during 1919, up to June 30th, \$185,000,000, a total of \$448,000,000 expended against an authorized expenditure of \$677,000,000. Of the various classes of work, the additions to shop buildings and engine houses came nearer actual expenditure to the authorization than any other. The total authorized from Jan. 1, 1918 to Sept. 30, 1919, was \$79,028,000, and the total actually spent

was \$71,060,000. This contrasts with an authorized expenditure of \$143,372,000 for additional yard tracks and sidings, and an actual expenditure of \$91,848,000.

The need in this country appears to be for intensive rather than extensive railway development. The *Railway Age* estimates that the railways of the country will need to spend \$6,000,000,000 in the next three years for making up delayed maintenance and arrested development, and for catching up with the needs of increased traffic. It is the writer's opinion that this is very considerably higher than will actually be spent regardless of what the theoretical needs may be. The fact remains, however, that in the East and on certain lines and in certain terminals in the West, the railway facilities are even with the present traffic, being strained to the utmost.

RAILWAY EXTENSION. In 1902 when railway extension was most rapid in this country, over 6000 miles of new line was built. Even as late as 1910, over 4000 miles was built and in 1919 only 686 miles was built, the smallest mileage in any one year since the Civil War. In no one of the three years since 1916 has as much as 1000 miles of new line been built. F. J. Lissman of F. J. Lissman & Company, New York bankers, specializing in financing of new railroad building, estimates that not over 2000 miles at most of new line will be built on an average in the next few years, even assuming that government regulation of railway rates is such as to restore the credit of existing railway companies. In no State in the United States was as much as 100 miles of track, which includes both first, second and third track, etc., built, in 1919. In Oklahoma 92 miles of new first track and seven miles of second track was built, and in Texas 82 miles of first track and a little over 10 miles of second track was built. In 1919, 636 miles of main line railway was abandoned. This makes a total of 3319 miles of main line railway abandoned in the years 1917 to 1919 inclusive, while during those years, only 2386 miles of extensions and new branch lines were built. It would appear, therefore, that Mr. Lissman's estimate of new mileage to be built in the future is rather the best that can be hoped for, than the amount that may actually be expected.

RECEIVERSHIPS AND FORECLOSURE SALES. Only 244 miles of railway was placed in the hands of receivers in 1919 and no part of this was government operated railway.* A few unimportant short line railways not under government operation were sold under foreclosure, the total mileage being 459 miles. One important railway, the Boston & Maine, was re-organized and taken out of the hands of receivers without foreclosure sale. At the end of 1919, there was a large mileage of railway in receivers' hands in the United States, having a total outstanding securities of approximately \$957,000,000. The most important of these roads, are the Denver & Rio Grande, 2610 miles; the Missouri, Kansas & Texas, 3536 miles; the Texas & Pacific, 1947 miles, and the International & Great Northern, 1160 miles.

DIVIDEND CHANGES. The rental paid the rail-

ways being the same in 1919 as in 1918, and fixed charges and dividends being paid out of this rental, it was to be expected that no changes would take place in the rate of dividends on government operated roads. There was one exception to this however. The Lehigh Valley, which had been paying annual dividends of 10 per cent on its stock, reduced its annual rate during 1919 to 7 per cent. This presumably was a conservative step taken in order to insure adequate working capital for the corporation when the road is returned to the owning corporation on Mar. 1, 1920.

INSTALLATION OF BLOCK SIGNALS. While the government, which for years has criticized private corporations in regard to their safety appliances and accident record, made experiments with unification of terminals, re-routing of freight, re-organization of managements, etc., it did less than the railways had been doing themselves toward the further installation of block signals as a preventive to railway accidents. In 1919, a total of 1880 miles of automatic block signals were installed and 144 miles of manual block signals. The government, which is to relinquish the roads on March 1st, is naturally not making any plans for the future installation of signals and the private corporations are apparently waiting the outcome of proposed federal laws regulating railways before formulating their plans. There are only 342 miles of additional automatic signaling proposed for 1920 and only four miles of manual block proposed.

RAILWAY LEGISLATION. The railway situation and proposed legislation providing for some modification of the existing Interstate Commerce Acts was the subject of discussion in both branches of Congress during the entire year. President Wilson, after he returned from the Peace Conference said that he would return the railroad properties to the owning corporations on Jan. 1, 1920. The Senate Committee on Interstate Commerce, of which Senator Cummins of Iowa is chairman, held a series of public hearings and formulated a bill known as the Cummins Bill S 3288. The House Committee on Interstate and Foreign Commerce, of which Representative Esch is chairman, also held a series of hearings and introduced a bill in the House known as the Esch Bill HR 10,453. The Esch bill was considerably amended before being passed by the House and the Cummins bill was passed by the Senate with no important changes. The two bills were referred to a joint committee of the Senate and House and this committee was at work at the end of the calendar year.

Before describing the two bills some mention should be made of the various proposals which were made to the two Congressional committees, but which were not acted upon.

William G. McAdoo, director-general of railroads in 1918, urged the passage of a bill extending the period of government operation for five years. The five-year proposal aroused immediate opposition in Congress and generally throughout the country, but Mr. McAdoo was given a full hearing before the Senate committee and was followed by Mr. Hines, who supported his recommendations. The committee, however, showed no disposition to accept the idea of the former director-general and proceeded with the hearing until near the close of the Congressional session with a view to considering plans for permanent legislation. It did not even report on

* It will be recalled that the government did not take over many of the short line railways when it assumed operation of the principal larger railways of the United States, Jan. 1, 1918.

the five-year proposal and the House committee finally gave up the idea of holding any hearings on it.

Both the shippers and the public were thoroughly dissatisfied with government operation; so were a great many railroad officers, but on the other hand the organized railroad employees put forward a plan, known as the Plumb Plan, for government ownership of the railroads. The Plumb Plan, fathered by Glenn E. Plumb, a lawyer in the employ of the railroad brotherhoods, would have provided for the government purchase of the roads and their operation under the joint direction of the employees, the government and railroad officers. The plan was not treated seriously by the Cummins committee before whom it was introduced. Nevertheless it received wide publicity, scornful discussion on the part of the majority of newspapers and secret or open approval on the part of a great number of railway employees.

The Cummins bill provides for: Ownership and operation of all the railroads in the United States by 20 to 35 separate competing systems; consolidation of all railroad properties into 20 to 35 systems in accordance with a plan previously adopted by the Railway Transportation Board and approved by the Interstate Commerce Commission—consolidation to be voluntary if accomplished within seven years, and if not, compulsory; federal incorporation of all railroads with a requirement that each corporation shall include in its board of directors two representatives of classified employees and two representatives of the government; exclusive regulation and control by the Interstate Commerce Commission of the issuance of railway stocks and bonds and of the purposes to which the proceeds thereof may be applied; initiation of rates by carriers subject to the approval of the Interstate Commerce Commission. Requirement that the Interstate Commerce Commission shall divide the country into rate districts and the carriers into rate groups for rate making purposes. Regulation of all rates that affect interstate commerce by the Interstate Commerce Commission under a statutory rule providing that in making rates for the several rate groups the Commission shall take into consideration the interest of the public, the shippers, the wages of labor, the cost of maintenance and operation, including taxes and a fair return on the value of the property; creation of a committee of wages and working conditions (four employees and four representatives of the companies) to settle disputes; with appeal to the Transportation Board in case of deadlock. Declaration that decisions of the board, i. e., of the government, shall be final, and that railroad strikes and lockouts are forbidden. A violation of this provision is made a misdemeanor punishable by imprisonment.

Continuance of the Interstate Commerce Commission with enlarged powers to regulate rates and security issues. Creation of a Railway Transportation Board with five members appointed by the President to perform many important executive and administrative functions, including some now performed by the Interstate Commerce Commission.

The Esch bill provides for: Ownership and operation of all railroads by private corporations under broad federal supervision; consolidation of existing railroad systems when approved by

the Interstate Commerce Commission; opposition to federal incorporation as a complicated, protracted and probably unconstitutional method; full control by the Interstate Commerce Commission over stock and bond issues and over the expenditure of the proceeds; regulation of rates by the Interstate Commerce Commission under the provisions of the Act to Regulate Commerce with amendments shortening the period of suspension of rates, authorizing the commission to determine the division of rates between carriers, to consider the cost of service principle in fixing rates, and to exercise other broad powers affecting the general rate structure; maintenance of the Interstate Commerce Commission with all of its present powers and in addition authority to regulate carriers by water; to control consolidations, joint use of facilities and the pooling of freight earnings; to authorize additions, extensions and the construction of new lines; to adjust conflicts between federal and state jurisdictions; and to control security issues and capital expenditures. It will be noted that no declaration is made in the Esch bill about wages and working conditions.

It will also be noted that the Esch bill contains no provision against strikes except the machinery for voluntary adjustment through boards of adjustment and commissions of labor disputes to which appeals may be taken, both composed of an equal number of representatives of the employees and of the managers, although some of the labor leaders are said to be suspicious of a paragraph which was left in the bill providing that "it shall be the duty of all carriers subject to this act and their agents, officers and employees to exert every reasonable effort and adopt every available and reasonable means to avoid interruption to the operation of a carrier," because another paragraph provides a penalty for violation of any of the provisions of the sections relating to labor disputes.

The Cummins bill as reported by the full committee and as passed by the Senate with comparatively little change is regarded as a great improvement over the bill, S. 2906, drafted by the sub-committee, which proposed to confiscate all earnings above a "fair return" and which contained many defects.

The principal point of contention involved in the entire discussion of the proposed railroad legislation during the past year, with the possible exception of the method of dealing with labor controversies, has been the question of a rule of rate making designed to insure an adequate income to the carriers by a more specific expression of policy than the old rule that rates shall be "just and reasonable." The House committee throughout its hearings seemed inclined to rely entirely on the Interstate Commerce Commission but after Commissioner Clark had indicated in a general way that the commission might welcome a legislative declaration of policy, the committee adopted the general rate making rule which was stricken out in the House.

The rule adopted by the Senate committee and later by the Senate is an evolution from the idea of a minimum guaranty, such as was proposed by Mr. Hines and others. The guaranty idea was discarded as being too liberal to badly located or poorly managed railroads, and as tending to promote lack of enterprise and efficiency. Both the Warfield and the transportation conference plans proposed the principle of a legis-

lative assurance of a definite percentage rate of return upon the aggregate value by districts and a limitation upon the excess, by various provisions for distribution. Both plans provided for a rate of 6 per cent. For a time a division of the excess earnings with labor was discussed and such a plan was included in the Senate sub-committee bill, but was discarded because of the expressed opposition of labor to the idea of profit sharing. The railroad executives through their association opposed a fixed percentage and also a limitation, although some of them favored both provisions.

The rate making provisions of the Cummins bill as passed are stated in Section 6, which under the ordinary interpretation of conference rules must be accepted or rejected as a whole or modified only in detail, are in part as follows:

In dividing the country into districts and the carriers into rate making groups, the commission shall have in view the similarity of transportation and traffic conditions therein. Rates of transportation shall at all times be just and reasonable and sufficient to produce a reasonable return upon the aggregate value of the property in each rate group used or held for the service of transportation.

It being impracticable to establish a level of uniform rates and charges within competitive areas which will sustain sundry carriers indispensable to the communities served by them, without enabling more favorably situated carriers to receive revenue from such rates, negligibly as to each service, but in the aggregate substantially and unreasonably in excess of the aggregate over a fair return upon their property, unless regulated in the interest of the commerce of the United States as a whole, it is hereby provided that, subject to the exceptions and conditions of this act, no carrier subject to the provisions of this act shall be authorized to receive and retain for the transportation services rendered such proportion of the rates and charges collected by it as may yield in the aggregate more than a reasonable return upon the value of its property held for and used in the service of transportation, determined as herein provided. In changing or modifying rates, fares, charges and classifications from time to time in the manner provided in the act to regulate commerce, as amended, and in viewing them from the standpoint of their effect in producing revenue in any rate making group as a whole, the commission shall initiate, modify, or adjust rates, fares, charges and classifications as nearly as may be, so that the railway carriers as a whole allocated to each district and subject to this act shall earn an aggregate net railway operating income equal, or nearly as may be, to $5\frac{1}{2}$ per centum upon the aggregate value, as determined in accordance with the provisions hereof, of the railway property of such carriers in the district held for and used in the service of transportation.

If, under the above provisions, any carrier shall receive a net railway operating income in any year of more than six per centum, after allowance, as aforesaid, by the commission for non-productive improvements, upon the said value of its property, one-half of such excess between six and seven per centum shall be placed in a reserve fund established and maintained by such carrier, and the remaining one-half of such excess between six and seven per centum

shall, within the first four months of the succeeding year, be paid to and recoverable by the board for the purpose of establishing and maintaining a general railroad contingent fund, as hereinafter described. Of any such excess above seven per centum, one-fourth thereof shall be placed in the reserve fund to be established and maintained by the carrier and the remaining three-fourths thereof shall, within the time aforesaid, be paid to and recoverable by the board as a part of said general railroad contingent fund as hereinafter described.

The President set Mar. 1, 1920, as the date on which the railways are to be returned to the owning corporations.

RAILWAYS, ELECTRIC. One of the outstanding facts of the year was the increasing deterioration in the financial condition of the majority of street and interurban railways in the United States. Continuous increases in the cost of labor and materials impelled the roads to seek permission to charge higher rates which in many cases were granted. In New York City, however, the Board of Estimate raised such violent opposition to granting increased rates of fare that several lines of surface cars discontinued operation, their place being taken by municipal (sic) bus lines, and after many unsuccessful hearings, the Interborough Rapid Transit Company, operating the subway and elevated lines, was seriously considering withdrawing its application. In other localities there were certain fare increases allowed, and at the close of the year it was generally believed that the worst part of the period of unprofitable operation had been passed.

The zone system of fares was tried in many large cities, but with varying degrees of success. In New Jersey, the lines of the Public Service Corporation put this system into effect in the district around the city of Newark and also at Camden, in the southern part of the State. The result was unsatisfactory, not only to the railways but also to the public, who seemed to be markedly averse to the zone system of fare collection. To such a degree was this the case that after several weeks' trial, the company discontinued the system, on permission of the Public Service Commission. On the lines of the Connecticut company, on the other hand, zoning proved not only satisfactory to the public but profitable to the company.

Owing to conditions prevailing on all traction lines, very few new cars were built during the year. A reliable authority estimated that 75 per cent of those actually constructed were, it may be noted, of the "one man" or safety type. The one man car, in addition to operating at a smaller cost for wages, provided greater freedom from accidents to passengers, since the entire operation, including the opening and closing of the doors was under the direct control of one man, whose work was rendered somewhat easier, however, by the ingenious devices provided and installed within easy reach.

The year was marked by the completion of about 200 miles of electrified line of the Chicago, Milwaukee, and St. Paul railway through the State of Washington to Seattle. The operation of the electrified line of 440 miles through Montana and Idaho mentioned in the 1918 YEAR BOOK had proved so satisfactory that the railway was building at the close of the year a number of new locomotives for service on these lines. The

ELECTRIC LOCOMOTIVE
3,000-volt Gearless Passenger Locomotive, Chicago, Milwaukee & St. Paul Railway

General Electric company and the Westinghouse Electric & Manufacturing company were supplying these engines, the largest and most powerful electric locomotives that had been put in regular service up to that time. Heavy electrification was also attracting a great deal of attention in other countries and it was expected that Italy, France, and England would begin extensive construction of this kind in a very short time. The suburban railways at Melbourne, Australia, were operated entirely by multiple unit trains at the close of the year, and several railways in England were extending service of this kind where traffic requirements rendered the change absolutely necessary.

RAINFALL. See METEOROLOGY.

RANDOLPH, ROBERT LEE. American oculist and professor of ophthalmology, died at Baltimore, Md., December 12. Since 1901 he had been professor of ophthalmology and otology. He was born at Fredericksburg, Va., Dec. 1, 1860. He studied chemistry and physics at Johns Hopkins University 1880 and received the degree of doctor of medicine from the University of Maryland, 1884; studied afterwards in Vienna, and was attending surgeon at the Presbyterian Eye and Ear Hospital, Baltimore, from 1887-92. In 1892 he joined the teaching staff of Johns Hopkins.

RAPID TRANSIT. During 1919 the many difficulties involved in urban and interurban transportation became if possible even more complicated. Increasing costs of material, decreased efficiency of labor coupled with higher wages and shorter hours, disagreements between local or other supervisory authorities and the traction companies all served to disturb conditions everywhere. Furthermore the connection with the daily and local life of the community was so intimate that traction difficulties figured in municipal politics and policies not infrequently with a lack of sympathy on the part of local governments toward the owning companies and their stock and bond holders. In most cases the companies were handicapped through their inability to charge more than the traditional five cent fare for the unit ride, and as in most cases in the large cities lines were being operated at nearly or quite full capacity there was but slight opportunity for increased gross returns. On the other hand the cost of fuel, equipment and supplies had mounted and labor claimed an increased return in the form of wages adjusted to living conditions. Increased fares and fewer transfers or a charge for this privilege were demanded by the traction companies, and in some cases were granted but often the local authorities refused or resisted such arguments and pleas, alleging that the roads were overcapitalized and that they had paid high dividends in previous years and that they should be operated more efficiently or that deficiencies should be met out of surplus. The result was that many street railway systems were forced into the hands of receivers and where they were made up of a number of leased lines often these were returned to the original owners as the guaranteed rents could not be met. This led to disruption of systems in many localities and universal inefficiency of service, as equipment often was permitted to run down and funds were not available for the purchase of new cars, which were required especially where the traffic increased. In New York the New York City Rail-

ways went into the hands of a receiver as did the Brooklyn Rapid Transit and a controversy with the municipal government was continuous during the year in which from time to time the United States courts participated. In New Jersey an increased fare was resisted and in other states lines were voluntarily abandoned. Each locality had its own difficulties and its own methods of dealing with them for better or worse. At the end of the year it could not be said that solutions had been reached in many instances or that extraordinary sagacity had been exercised in dealing with the problems.

Under such conditions it was not strange that there should be a lack of new projects proposed or undertaken for private capital was decidedly cautious about such undertakings and municipal ownership, especially in view of existing bonded indebtedness did not commend itself to the general mass of the voters.

Progress was made however on a few American projects, some of which are discussed herewith.

NEW YORK. While the city of New York was the scene of acrimonious discussion and dispute in regard to its passenger transportation, nevertheless rapid-transit facilities materially increased during the year 1919. Transit Construction Commissioner John H. Delaney, who had succeeded in 1919 to the construction functions formerly exercised by the Public Service Commission, reported that: Track mileage of the two operating companies increased 35.13 track miles during the year, and indications were, according to Commissioner Delaney's figures that 69½ track miles would be added during 1920. The Interborough facilities were increased by 15.77 track miles during 1919, and the New York Municipal (B. R. T.) system was expanded 19.36 track miles. Thirty-seven construction contracts, involving approximately \$46,000,000, were under way Dec. 31, 1919 and upon them work amounting to about \$10,000,000 was done during the year. Approximately \$10,000,000 worth of work remained to be done on these contracts.

PHILADELPHIA. During the year the City Hall section of the Broad Street subway in Philadelphia was virtually completed, and involved what was considered the largest single underpinning undertaking ever carried out, and also the most costly section of rapid transit construction in existence, as the expenditure was exceeding \$20,000,000 per mile. The work involved the undermining of the massive Philadelphia City Hall on an area of more than an acre and the construction of a four-track subway with stations, and also taking care of the two branches of the Market Street subway south and north of the City Hall. The total area of the work was about 700 by 100 feet, and the City Hall and old subways had to be supported at all stages and a new foundation to carry them without settlement, built in the course of the work. The original plan of the Philadelphia subway provided for a four-track line north and south along Broad Street, carrying the tracks directly under the City Hall instead of around it, with only sufficient divergence to avoid the large tower, which, rising to a height of 550 feet, is the city's distinguishing landmark. As there was already a subway east and west in Market Street which curved around the building, the new subway had to cross under both branches.

The difficulties of this work led in 1916 to a proposal to change the location of the subway, bringing it around the City Hall, but this was rejected by popular vote at a special election, and the original plans were proceeded with. As work of exploration was begun, it was found that difficulties not previously anticipated were to be encountered, and that it would require the underpinning of the building and the rebuilding of the foundation walls and a special form of construction for the tubes themselves. The old rubble footing walls of the building were reconstructed and reinforced concrete girders or steel girders were placed alongside of and integral with the foundation walls to carry the load between the future inter-track subway walls. In other words, the entire subway roof was constructed on the ground surface through or adjoining the footing walls of the City Hall, forming for the time being the lowest course of the building.

Once the roof structure of the subway was completed, supporting piers were constructed under the ends of all the girders by piles of steel pipe, which were sunk to bedrock in the bottom of the excavated pits. These piers were set very close, side by side, and formed continuous walls which are the enclosing and inter-track walls of the subway and take the place of the separate piers of the original design. In other words, when the piers were completed, the whole subway structure had been built except for floor details and interior finish, and the only excavation necessary was to dig out the core in order to bring it into active service as a support for the City Hall structure. This method of building the subway from the roof downward by continuous underpinning was one of the most elaborate ever required in such construction, and the underpinning and foundation work, as well as the steel girder construction, required engineering of no mean order. This interesting development is described at some length in *Engineering News-Record* for Aug. 14, 1919.

DETROIT. A system of downtown street car terminal loop subways was an important feature of rapid transit studies for Detroit prepared by Barclay, Parsons & Klapp and submitted to the city authorities in September, 1919. This involved a loop system with subways, intended to relieve street congestion by removing from the surface most of the cars that had been using the downtown streets and permitting an increase of street car service. The plan was provided that the new subway would be the initial element of a rapid transit system, and was so favorably regarded by the city officials and council that a popular vote on a bond issue to carry out its general features was proposed. The project called for two subway loops, one in Woodward Avenue extending from near Adelaide Street to a loop near Atwater Street, with five stations, and one in Fort Street, beginning west of Cass Avenue and passing under the Woodward Avenue subway and terminating in a loop at Cadillac Square, where would be located the transfer station for eastbound surface cars. A main transfer station would be located just north of the City Hall, where traffic would be interchanged between the two subways.

CLEVELAND, OHIO, RAPID TRANSIT. During 1919 a report made to the Rapid Transit Committee of the city of Cleveland by Parsons &

Klapp, consulting engineers, of New York City, recommended a system of group subways for street cars in the centre of the city in order to deal with the transfer traffic now using the public square and relieve the track and street congestion downtown, and also to create the nucleus of a future rapid transit system. This report deals with the question of complete transit facilities, which were not considered possible under prevailing financial conditions. While a future rapid transit system was outlined, yet the consulting engineers recommended the improvement of the existing street car facilities, and particularly the maintenance and increase by suitable subsurface routes free from vehicle and pedestrian interference. They also recommend the unification of street cars and rapid transit lines into a single system, and the elimination of interference by vehicle and pedestrian traffic with the street car lines by placing the latter underground in subways or looping back a large portion of the cars further from the city's centre.

LONDON. Here as elsewhere improvements and extensions of the electric underground railways of London, England, were found necessary by the several companies, and the plans adopted to relieve the situation were estimated to cost about \$25,000,000. It was proposed to connect the Central London line to the suburban system of the London & Southwestern Ry. to open up an alternative route from the Hammersmith district into the city, and also extend it parallel with the Great Western Ry. as far as the suburban district of Ealing. It was proposed to rebuild entirely the old City & South London line, the first and smallest of the "tube" lines, enlarging its tunnel to the same section as the other lines so as to accommodate the same rolling stock and permit the running of through trains. This line was to be connected with the Hampstead line for through traffic between the northern and southern districts of London.

MADRID. The first three miles of the Madrid subway was completed in November, and at the end of the year was operating from the northern part of the city to Puerta del Sol, the centre of the business district. In 1920 it was proposed to resume construction in order to carry the line to the station of the eastern and southern railways, Estación del Mediodía.

MARSEILLES. The Marseilles Municipal Council decided during 1919 to undertake the construction of an underground railway in the city, in order to relieve the ever-increasing congestion of the streets. This scheme had been under consideration for a number of years and the end of the war made possible the decision.

RAPPAPORT, JEROME. See MUSIC, *Artists, Instrumentalists*.

RAYLEIGH, JOHN WILLIAM STRUTT, Third Baron. Celebrated British physicist, died in the first week of August. He was born on Nov. 12, 1842, educated at Trinity College, Cambridge, where he became Senior Wrangler in mathematics in 1865, a fellow in 1866, professor of experimental physics, 1879-84. From 1887-1905 he was professor of natural philosophy in the Royal Institution, London. The work for which he was most famous was a discovery in connection with Sir William Ramsey of an element in the atmosphere subsequently called argon, for which discovery he received the Nobel prize in 1904. The two scientists had noticed that the

azote extracted from air was slightly greater in density than that formed by other mechanical processes, and then by a series of experiments they succeeded in isolating a gas with an unknown atomic weight which gave a new ray in the spectroscopic. Subsequent investigations along these lines led to the discovery by these and other investigators of three other new elements of the atmosphere, neon, krypton, and xenon. He also made important studies in electricity, magnetism, capillarity, the viscosity of liquids, and other branches of physics, especially in acoustics, all of which were characterized by great accuracy. He was president of the Royal Society from 1905-1908, and he was elected foreign associate of the American National Academy of Sciences in 1910. In 1905 he became a member of the Privy Council, and in 1908, chancellor of Cambridge University. In addition to many valuable papers in all departments of physics, he was author of a classic on acoustics, *Theory of Sound* (two volumes, 1877-8, 1894-96). His works were published in a collected edition of five volumes in London, 1899-1912. He left one son, Robert John Strutt Rayleigh, professor of physics in Kensington.

READE, PHILIP. American brigadier general, died at Boston, Mass., October 21st. He was born at Lowell, Mass., Oct. 13, 1844. He served as a young man in the eighteenth army corps during the Civil War; studied at West Point, (1864-5); was second lieutenant of the Third Infantry in 1867; first lieutenant 1878; and captain in 1889. On May 12, 1898, he became inspector-general of volunteers, and was honorably discharged from the volunteer service on June 30, 1901. He returned to the regular service and was retired in 1908 with the rank of brigadier-general. Besides service in the Civil War, he was engaged in the Spanish-American War in Cuba, and the Philippine Islands. He drew attention in the early part of his service for his great skill as a signal man. He was historian of the Massachusetts, Wisconsin, and Illinois Societies of Colonial Wars, and was a member of various other important social organizations.

REAVIS BILL FOR DEPARTMENT OF PUBLIC WORKS. See ENGINEERING.

RECLAMATION. The most conspicuous activity in land reclamation in 1919 was not in actual work but in propaganda for reclamation work as a means of providing work for discharged soldiers and sailors, and providing also opportunities for such men to acquire farms. Considerable legislation along this line was enacted but little work was done. While more than a year has passed since the close of the world war general readjustment has occupied the time of most countries and little reclamation work has been done.

IRRIGATION. United States. There was a very small amount of new irrigation construction in the United States in 1919, no large projects being constructed in any state, and very few large extensions of existing projects.

The United States Reclamation Service reports the total receipts from the sale of public lands from the passage of the act (1902) to June 30, 1919, as \$97,426,574.56 and from the sale of town lots as \$449,516.42. To this has been added a special appropriation of \$1,000,000 for the Rio Grande project and a loan of \$20,000,000, making a total fund for construction of

\$118,876,090.98. The gross expenditures for construction to June 30, 1919, were \$132,276,620.30. The total area in the projects is about 3,200,000 to 1,600,000 acres (just one-half) of which the Service was ready to supply water in 1919. Of the latter area about 1,120,000 acres was irrigated in 1919, leaving unused approximately 500,000 acres for which water was ready. The annual report of the Reclamation Service shows that investigations of many new projects are under way, but no new projects were undertaken in 1919.

The legislatures of all the States in which irrigation is extensively practiced were in session in 1919, and all passed more or less legislation affecting irrigation. The more important enactments were as follows: Arizona enacted a new water code modeled after that of Oregon. It created the office of State Water Commissioner and provided for public control of the water resources of the State. One hundred thousand dollars was appropriated to cooperate with the U. S. Reclamation Service in investigating new irrigation projects in the State. California amended its irrigation district law in several particulars, the most important being a provision decreasing the vote required to organize a district, thus making the organization easier. Colorado provided for a commission to study its irrigation district laws and investigate existing districts for the purpose of revising the laws and rehabilitating districts that have not succeeded. Idaho reorganized its whole system of water administration, by abolishing the office of State engineer and creating a department of reclamation, with a commissioner of reclamation and a director of water resources. The Idaho irrigation district law was amended in several details. Kansas provided for a commissioner of irrigation in its State board of agriculture, and appropriated funds to enable that official to gather data regarding existing irrigation plants. Funds were made available for the preparation of a systematic general plan for the development of the State's water resources. Securities issued to finance irrigation construction were made subject to the State's blue sky laws. Nevada enacted an irrigation district law. New Mexico repealed its irrigation district law and enacted two new ones, one a general law and the other providing for cooperation with the U. S. Reclamation Service. New Mexico provided also for an investigation of the State's water resources. Utah revised its irrigation laws in an attempt to make effective its provisions for the defining of rights to water. It also made an appropriation for the sinking of wells for irrigation. This is considered very important for the reason that a large part of the State must be supplied with water from wells if at all. Washington appropriated \$100,000 for the survey of a Columbia River project involving 2,000,000 acres. The Supreme Court of Texas declared unconstitutional that part of the State's water laws which gave to the State board of water engineers the power to determine the relative rights of claimants to water, on the ground that that is a judicial function which belongs to the courts. This review shows in general an extension of public control over water resources, with a backward step in Texas, where the defining of rights is thrown back into the courts. The question of jurisdiction over interstate streams, which involves to a considerable degree

the existing systems of State control of water resources, is raised in two cases pending in the Supreme Court of the United States, one involving Colorado and Wyoming, and the other Colorado and Nebraska. A third case, involving Colorado and Nebraska, is pending in the United States District Court in Colorado, and other interstate controversies are awaiting the decision of the cases referred to.

FOREIGN COUNTRIES. In Canada the Dominion government is making a thorough investigation of the irrigation possibilities in Alberta. The projects under study include a large one in the vicinity of Lethbridge, affecting more than 500,000 acres, one near Medicine Hat, and one proposing to take water from the North Saskatchewan River for irrigating land in eastern Alberta and western Saskatchewan. It is proposed to organize some of these projects under the Alberta irrigation district law.

In Mexico conditions are still so unsettled that there is practically no new irrigation development. In the Yaqui River Valley Americans are attempting to grow rice with some success.

In his message to Congress, delivered Sept. 19, 1919, the President of Brazil urged a reclamation scheme in Northeastern Brazil, affecting about 2,500,000 acres. He asked for an annual appropriation of \$11,000,000, with a total not to exceed \$55,000,000, to be expended for storage works, canals, etc. He advocated also the creation of a reclamation fund to be made up from a percentage of the income of the general government for a period of years, a percentage of the revenues of the states for the same period, the revenues from the works built, and gifts. The proposed plan includes control over the land and the manner in which it is cultivated to be exercised by the general government.

In Egypt plans for storage on the headwaters of the Nile and the reclamation of land in the Sudan are being discussed, and are arousing controversy as to the possibility of the depletion of the water supply for Egypt by the development proposed in the Sudan.

Before the beginning of the world war, ambitious plans for the construction of irrigation works in Mesopotamia were made, and construction was begun. A large dam was built near ancient Babylon, and canals for distributing water were begun. Little has been done since, and the canals built have filled with sand to a considerable extent. The war, however, resulted in improved navigation as well as land transportation by rail and highways, and it is expected that this will help in the successful utilization of the works already built, and in the extension of these works. The British military authorities are establishing model farms and dairies, and restoring and using canals in that connection.

In Australia the most important new development is the interstate project for storage on the upper Murray River, between Victoria and New South Wales. It is proposed to build a reservoir having a capacity of 1,000,000 acre-feet, which is to supply water to 1,000,000 acres. It will help, also, to control floods and maintain navigation in the river. The estimated cost is 4,500,000 pounds, and it is estimated that the work will extend over seven years.

In India many large projects are being urged, and it is expected that construction on some of

these will begin soon. In the aggregate, five of these schemes call for the expenditure of about \$110,000,000, to provide water for about 6,000,000 acres.

The Japanese are proposing large irrigation works for the growing of rice in Korea. The Japanese governor-general in Chosen estimates that 2,500,000 acres can be reclaimed for rice growing at an expense of about \$500,000,000.

DRAINAGE: United States. The year 1919 witnessed very little reclamation of swampy lands by drainage. There was, however, considerable activity in the drainage of irrigated lands. This work affects principally lands that have been farmed under irrigation which have become too wet to cultivate because of the rise of ground water as a result of irrigation. This work, it is evident, protects existing farms, instead of supplying new land for settlement. The financing of reclamation work is its most difficult phase, and in drainage reclamation the organizations of drainage districts is the almost universal method of financing. During 1919 there was a great deal of legislation dealing with this subject. Georgia, Idaho, Indiana, Iowa, Kansas, Nevada, New Mexico, Utah, and Washington amended their laws in various details. California enacted a new drainage district law, in addition to several already on its statute books. Indiana created a department of conservation, that is charged with compiling and disseminating information and making recommendations regarding the natural resources of the State and their conservation by drainage, reclamation and flood control. Kentucky enacted a new drainage district law. Massachusetts created a State drainage board, with power to make investigation and surveys, and form drainage districts. Minnesota created a Department of Drainage and Waters, having the power of its former State Drainage Commission, and also power to make drainage investigations, measure streams, regulate drainage engineers, and survey drainage districts and establish their boundaries. North Dakota created a Flood Control Commission with power to make surveys and plans for flood control on streams within the State and boundary streams. Boards of county commissioners were given power to form and manage drainage districts and to issue county bonds for the purpose of raising funds. In Oregon drainage districts were given authority to build irrigation works where needed.

Several important judicial decisions relating to drainage were handed down by Federal and State courts. The United States Supreme Court upheld the constitutionality of the Ohio conservancy act (248 U. S. 35). The Supreme Court of Florida held unconstitutional the drainage district law of that State (80 Southern, 300); and similar action was taken by the Supreme Court of Virginia as to the district law of that State (97 S. E., 362). A most important decision that will probably lead to changes in drainage laws throughout the West was rendered by the Supreme Court of Idaho (182 Pac., 847). This decision upholds the law of Idaho making "high lands" subject to assessment for the cost of drainage of low lands that are injured by water from the high lands. "High lands" are held to include all lands and canals that contribute to the water-logging of the low lands. Heretofore the prevailing rule in the West has been that the owners of canals were

not responsible for damage resulting from seepage unless negligence in their operation were proven. The Idaho court says that this immunity from responsibility has been in the nature of a subsidy to irrigation companies, but that the legislature has the power to abolish this immunity whenever it sees fits to do so. The result will be the shifting of the burden of draining wet lands from the owners of the wet lands to the owners of the lands and canals from which the damaging water escapes.

FOREIGN COUNTRIES. In Spain plans have been prepared for the drainage of the marshes along the left bank of the Guadalquivir River. The project includes about 93,000 acres. The land is being diked, and will be provided with interior drainage. It is also necessary to provide for washing out salts, and for irrigations. The land is part in public ownership and part private, and the cost will be divided between the government and the land owners. It is proposed to use this land for growing cotton. In northern Italy much of the land known as the "Little Holland of Italy," that had been diked and drained before the world war, was flooded. The river banks were broken by bombardments, and by both the Italians and the Austrians to retard the movements of their enemies. In this way about 125,000 acres of producing land was flooded. Since the close of the war the damages are being repaired and the land is being restored to cultivation. The land is used for grain, fruit, and live-stock. The Government of New Zealand is proposing large drainage enterprises as a part of its soldier settlement work. Two projects on the North Island, both within 100 miles of Auckland, include about 125,000 acres.

SOLDIER SETTLEMENT: *United States.* Many bills have been introduced in Congress with a view to providing work and homes for returned soldiers, sailors, and marines. The friends of such legislation have attempted to unite on a single bill, House Roll 487, known as the Mondell Bill, and embodying the ideas of the Secretary of the Interior. The purpose of the bill is "to provide employment and rural homes for those who have served with the military or naval forces of the United States during the war between the United States and Germany" and former American citizens who served with the Allies. The bill places the work in the hands of the Secretary of the Interior, and authorizes appropriations up to \$500,000,000.

The essential features of the plan are as follows: The lands are to be sold at prices that will repay the cost of reclamation; settlers may be "selected," and preference is to be given to those who have been employed in the development of the projects; applicants must make a first payment of 5 per cent of the purchase price, the balance to be paid in amortizing payments extending over a period to be fixed by the Secretary of the Interior not exceeding 40 years, with interest at 4 per cent; advances may be made for improvements and live-stock; the Secretary of the Interior may make regulations regarding residence and cultivation.

The bill contemplates cooperation with the States, and many of the States have enacted laws looking to such cooperation. Some have merely appointed commissioners to investigate while others have made appropriations, some conditional on the passage of similar legislation by

Congress, and others making the funds available without Federal action. The States which have passed some such legislation are: Alabama, Arizona, California, Colorado, Delaware, Florida, Idaho, Maine, Missouri, Montana, Nevada, New Mexico, Oregon, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Washington, and Wyoming.

California is the only State which has done any actual work in this line, and its settlements are not restricted to soldiers. California has one settlement in operation at Durham, and has made an appropriation of \$1,000,000 for additional work, and provided for submitting to the vote of the people of the State a bond issue of \$10,000,000 for similar work. A proposed bond issue of \$2,647,000 for settlement purposes was defeated by popular vote in Oregon. In his message to Congress at the beginning of the present session (December, 1919), the President urged upon Congress the enactment of legislation of the class described.

FOREIGN COUNTRIES. Practically all of the British dependencies have provided for aid to discharged soldiers in securing rural homes, but this legislation antedates 1919, and consequently is not reviewed here. The South American Republics are discussing land settlement along the lines urged in the United States, but have not as yet accomplished anything. The European countries have generally provided for such aid through existing societies, rather than through direct governmental channels.

RECONSTRUCTION. See AGRICULTURE; INDUSTRIAL RECONSTRUCTION.

RED CROSS, AMERICAN. A volunteer organization for the care of the army and navy of the United States, although during the war it administered relief on a large scale to the soldiers and families, and the civilian populations of allied countries. The administration is controlled by 14 divisional headquarters, one of which covers work in territorial, insular, and foreign places. In 1919 there were 3724 Chapters with 17,186 branches, embracing a membership of 20,000,000 adults and 11,000,000 junior members.

On July 1, 1917, President Wilson appointed the American Red Cross War Council to manage the affairs of the Red Cross for the government. On Mar. 1, 1919, this War Council was dissolved, and authority and responsibility were turned back to the Executive Committee with Dr. Livingston Farrand as chairman and several of the War Council as new members. At Washington Dr. Frederick P. Keppel was made Director of Foreign Operations. Various foreign commissions were successively closed out and in May a Committee on Liquidation began to make reducing adjustments, to sell off saleable supplies no longer needed in relief operations. Col. Robert E. Olds was placed in charge of the activities of the Red Cross throughout Europe. Late in 1919 there were still 1100 American Red Cross workers in Europe. In the middle of the year Congress authorized the Secretary of War to transfer to the American Red Cross such medical and surgical supplies and dietary foodstuffs in Europe as should not be needed by the army.

A programme has been formed for work at home contemplating the establishment of health centres in communities without adequate facilities.

ties of this sort, extension of the nursing resources of the country, extension of Home Service that was of vital assistance to service men and their families in the war, and more extended Junior Red Cross activities. That the American people approved this plan was evidenced by the Third Red Cross Roll Call on November 2d, when 10,000,000 adult Americans renewed their membership.

Following are certain round figures covering American Red Cross participation in the war, as revealed by the War Council's report:

Contributions received (material and money)	\$400,000,000
Red Cross members	
Adults, 20,000,000	
Children, 11,000,000	31,000,000
Red Cross workers	8,100,000
Relief articles produced by volunteer workers	371,577,000
Families of soldiers aided by home service in United States	500,000
Refreshments served by canteen workers in United States	40,000,000
Nurses enrolled for service with army, navy or Red Cross	23,822
Kinds of comfort articles distributed to soldiers and sailors in U. S.	2,700
Knitted articles given to soldiers and sailors in U. S.	10,900,000
Tons of relief supplies shipped overseas	101,000
Foreign countries in which Red Cross operated	25
Patient days in Red Cross hospitals in France	1,155,000
French hospitals given material aid	3,780
Splints supplied for American soldiers	294,000
Gallons of nitrous oxide and oxygen furnished French hospitals	4,340,000
Men served by Red Cross canteens in France	15,376,000
Refugees aided in France	1,726,000
American convalescent soldiers attending Red Cross movies in France	3,110,000
Soldiers carried by Red Cross ambulances in Italy	148,000
Children cared for by Red Cross in Italy	155,000

There remained on Feb. 28, 1919, a balance of \$127,000,000 of which \$41,000,000 was cash and \$53,000,000 worth of supplies held by national headquarters and \$33,000,000 in the hands of the Chapters. This will be used to carry on the work of reconstruction. In expenditure the ratio of "management" to "relief," the report shows, was 18 $\frac{1}{10}$ per cent.

The following resume shows how American Red Cross efforts continued abroad in 1919 among populations left helpless by the war:

ALBANIA. A personnel of 60 conducted hospitals, dispensaries, dental stations, child welfare, civic hygiene work and general relief from headquarters at Tirana and branch stations at various points throughout the country.

BELGIUM. Commission to that country brought its work to a close as rapidly as possible, assisting in the meantime large numbers of refugees returning to find their homes shattered and helping to lay the foundation of self-rehabilitation.

BOSNIA-HERZEGOVINA. A small unit was sent into this Balkan country in the early summer of 1919 to cooperate with the American Relief Administration in the work of child-feeding, later branching out to provide equipment and medical and surgical supplies in the hospitals.

CZECHO-SLOVAKIA. Unit at one time numbering 40 persons, to cooperate with the American Relief Administration in saving the lives of children who had been without proper food through-

out the conflict. The work gradually spread until it included the distribution of clothing to the needy, supplementary work in the hospitals, nurses' training and general relief for the Ukrainian refugees. The Red Cross also provided mountain vacations for 500 undernourished children.

FRANCE. As long as American troops remained in France in large numbers, the Red Cross maintained its canteens, hospitals and hotels for the troops, recreation for the sick and disabled, Home Service and various other activities for the veterans. It carried on also its work for French orphans, mutilated French soldiers, refugees in the devastated regions and victims of disease, particularly tuberculosis.

GREAT BRITAIN. The work of the American Red Cross in England, which had grown to such proportions during the war that at one time 2000 workers were engaged in it, was largely with and for American troops passing through and was curtailed as rapidly as the military and naval men were brought home.

GREECE. The work in Greece was largely devoted to care of children in the devastated areas of western and eastern Macedonia, refugee repatriation in Macedonia and the Greek Islands, assisting civil and military hospitals, combating typhus and other epidemics, child welfare, improvement of agricultural conditions, manufacture of artificial limbs and similar activities. About 50,000 refugees were cared for in eastern Macedonia alone.

GERMANY. In February the American Red Cross sent to Germany a commission to assist the American Relief Administration in the securing of the hundreds of thousands of Allied prisoners in the 75 prison camps and aid in their repatriation. In its work the Red Cross handled for the Inter-Allied Board 7360 tons of food, distributed 600,000 articles of clothing and provided several tons of medical and surgical goods for sick and wounded. The work ended in August but covered the most critical period for the prisoners, particularly the large number of Russians.

ITALY. During the first half of the year the Red Cross gradually contracted the enormous work of civilian and military relief by which it had bolstered Italian morale during the critical days of the war and finished up the year by conducting a limited programme of anti-tuberculosis work, nurses' training and home service work, in addition to which, however, it was able to perform notable emergency disaster relief in the Mugello earthquake, providing two train loads of barracks and tents for the homeless, food and clothing and personal assistance.

MONTENEGRO. Fifty workers engaged in relief work in Montenegro where the need for medical assistance particularly was very great. Four hospitals were operated at central points, a number of dispensaries, canteens and dental stations and American methods of health improvement and sanitation were introduced.

NORTH RUSSIA. In addition to providing for the comfort and welfare of American troops during their occupation of Archangel, the unit provided more than 2,000,000 hot lunches to school children, assisted needy civilians, contributed to hospitals and asylums and aided refugees far into the frozen wastes around the city, building up a local organization of relief which together with surplus relief supplies were turned over

to the government when the troops withdrew.

POLAND. The largest American Red Cross commission in Europe during the year was that which went into Poland to begin the fight against typhus that threatened to spread to western Europe, help succor the million refugees and the children whose plight was worse than that of any other European country. More than 100 workers were attached to this commission and several thousand tons of clothing and medicines, hospital equipment and supplementary foodstuffs were shipped into the country by the Red Cross. The Commission also co-operated with the government in coping with public health problems, particularly rehabilitation of the water supply.

RUMANIA. The Red Cross resumed operations in Rumania as soon after the armistice as a commission could be landed in that country. To deal with the terrible conditions left by the invaders the commission established relief units in all important towns and cities in the needy areas where it operated canteens, distributed food and clothing and provided medical attention and supplies, to fight the epidemics that raged. Thousands of lives were saved and the groundwork for self-help laid for the population.

SERBIA. The large Red Cross Commission to Serbia found medical relief the most important work during the year, there being only about a hundred native doctors to care for 4,000,000 population. At one time the commission had 30 doctors, 50 nurses, and five dentists working at various points.

SOUTH RUSSIA. Late in the summer of 1919 the Red Cross sent to the Russian Caucasus a commission taking nearly \$2,000,000 worth of supplies to carry on relief work in the four little republics in the rear of General Denikin's anti-bolshevik army for the large number of refugees.

SWITZERLAND. The Red Cross Commission to Switzerland, which had supplied food, clothing and comforts that American soldiers and sailors held in German prison camps credited with being all that stood between them and starvation, liquidated its work as rapidly as possible by assisting in the repatriation of these men and other allied captives.

SIBERIA. The work in Siberia grew to unprecedented proportions during the year, there being 600 workers in the field when the fall campaign against typhus, cholera and other epidemics got under way. In addition to caring for the American troops who helped hold the Trans-Siberian railway open, the Commission carried on relief work over a line stretching from Vladivostok to beyond Omsk until that city fell to the Bolsheviks. The work included succoring refugees, operating and aiding hospitals and anti-typhus trains, rescuing the lost Petrograd children who were wandering aimlessly in the Urals, and helping the government establish health agencies. A unit of doctors and nurses from the commission also helped wipe out the cholera epidemic that threatened Harbin.

The Red Cross took a leading part in the formation of the League of Red Cross Societies, which, with headquarters at Geneva and with the national Red Cross organizations of the United States, Great Britain, France, Italy and Japan as founder members, has undertaken a worldwide fight for the prevention of disease

and promotion of health. The headquarters of the Red Cross are at Washington, D. C.

REDWOOD, Sir BOVERTON. British chemist and engineer, died in London, England, January 4. He was especially known as a petroleum expert, his publications on the subject being of great importance. He was born in London, England, Apr. 26, 1846. He visited the chief centres of petroleum distribution in Europe, United States and Canada and gave important evidence before parliamentary committees. He was president of the International jury for lighting appliances and materials at the Brussels Exhibition in 1897 and he served on a large number of juries, committees, boards of research, etc., pertaining to his subject. In the latter part of his life he was on the war committees of the Board of Trade, Ministry of Munitions, and Admiralty Board of Invention and Research. The list of his publications includes the following: *Cantor Lectures on Petroleum and its Products*, (1886); *Petroleum, its Production and Use*, (1887); Report (with Sir Frederick Abel) on Accidents with Mineral Oil Lamps, (1890); also on the Transport of Petroleum through the Suez Canal, (1892); articles on "Petroleum" in Professor Thorpe's *Dictionary of Applied Chemistry*, (1893); *The Transport of Petroleum in Bulk* (Telford Premium, 1894); articles on the Petroleum Industry, and Lamps in Chemical Technology, (1895); *A Treatise on Petroleum* (2 vols., 1896; 3d ed., 3 vols., 1913); *The Detection and Estimation of Inflammable Gases and Vapors in the Air*, (1896, with Professor Clowes); *Handbook on Petroleum* (with Capt. J. H. Thomson, 1901; 2d ed., 1906; 3d ed., with Maj. A. Cooper-Key, 1913); *The Petroleum Lamp* (with Capt. J. H. Thomson, 1902); "Petroleum," in *Ency. Brit.* (supplement, 1902), and *Ency. Brit.* (11th ed., 1911); *Petroleum Technologist's Pocket-Book* (with Arthur W. Eastlake, 1915).

REED, VERNER ZEVOLO. Author and capitalist, died at Coronado, Cal., April 20. He was born in Richland County, Ohio, Oct. 13, 1863, and engaged in banking, mining, and other enterprises in the Western States. He passed nearly 15 years abroad. In this country he studied Indian customs, especially among the Utes and Pueblos. He was one of the first to make an automobile tour to the Sahara Desert; was a lecturer especially on international political subjects, and contributed to many periodicals. He also wrote the following books: *Lo-To-Kah* (1897); *Tales of the Sunland* (1897); *Adobe-land Stories* (1899); *The Soul of Paris* (1913).

REED COLLEGE. A non-sectarian co-educational institution, at Portland, Ore. The enrollment as of November, 1919, was as follows: men, 146, women, 139, total, 285. There were 22 members in the faculty. Productive funds amount to \$1,674,534. The library contains 15,216 volumes, and 1925 bound government documents. The President, William Trufant Foster, tendered his resignation to take effect Jan. 1, 1920.

REFORMED CHURCH IN AMERICA. (DUTCH REFORMED CHURCH.) The count made by the Federal Census Bureau as of Jan. 1, 1917, gives the following statistics, the latest available: Ministers, 756; organizations, 708; members, 144,166; Sunday schools, 790; Sunday school officers and teachers, 12,716; scholars, 122,111. There are four particular synods, and

35 classes, the latter corresponding to the presbyteries in the Presbyterian church. Three organizations carry on the missionary work of the denomination, the women's foreign mission board, the domestic missionary board, and the board of foreign missions.

REFORMED EPISCOPAL CHURCH. This denomination was founded in 1873 by Bishop Cummins as a separate denomination from the Protestant Episcopal Church because he thought that the latter denomination was becoming too ritualistic. The denomination maintains close relations with the Anglican Church, whose principles are very nearly identical, using the Book of Common Prayer as revised by the Protestant Episcopal Church in 1785. A convention meets triennially, the next meeting being scheduled for May, 1921. Statistics reported at the last convention, which are the latest available, show that the denomination had (1918) 11,217 communicants, an increase of 555 over the previous report; 9496 pupils in the Sunday schools; and contributions totaling \$529,147. The above figures include the United States, Canada, and missions in India. Church property, free of encumbrance, was valued at \$1,955,311. The Board of Home Missions employs 17 missionaries, doing much work among the negroes in the South. Foreign missionary work in India comprises eight stations, with six missionaries, and 20 native helpers. There are in that country 17 primary schools, two hospitals, in which about 45,000 persons received treatment during the year, and one orphanage, with 53 inmates. In the United States the church maintains a theological seminary in Philadelphia which in 1916 had but nine students. Christian Endeavor societies number 90 with a membership of about 2250. The denomination claims the oldest religious newspaper in this country, *The Episcopal Recorder*. Publishing house is maintained in Philadelphia. The presiding bishop is Rt. Rev. Samuel Fallows, Chicago, Ill., and the bishop of the Eastern synod is Rt. Rev. Robert L. Rudolph, Philadelphia, Pa.

REFORMED PRESBYTERIANS. There are six branches that come under this heading: The Reformed (Dutch), the Reformed (German), the Reformed (Synod), the Associate Reformed, the Reformed (General Synod), and the Christian Reformed Church in North America. Of these the largest is the Reformed (German) Church in the United States, which in 1919 had 330,155 communicants. The Reformed (Dutch) Church in America is the next largest, having in 1919, 133,783 communicants. The Reformed (Synod) had at the end of the year 8570 communicants, the Reformed (General Synod) had 3000 communicants; the Associate Reformed had 16,564 communicants. Besides these there is the Christian Reformed Church in North America which has Presbyterian principles. At the end of 1919 there were 40,768 communicants in this church. The Reformed (General Synod) maintains two churches in India, a theological seminary in Ohio, and Cedarville College, Cedarville, Ohio. At the last meeting of the synod in Philadelphia what is known as the *Forward Movement* was inaugurated—a campaign to raise the sum of \$50,000 which will be used as working capital for the Home and Foreign Mission Boards, and for the Board of Education.

RELIEF FOR WAR VICTIMS. The cessation of hostilities by no means ended the need for help in the various European countries. This was true of those countries in which relief work had been carried on as well as those which had received no help. In fact, the armistice gave organizations engaged in European Relief a real opportunity to furnish aid to the war-ravaged countries hitherto inaccessible. Though both France and Belgium continued to be in great need of help, the worst conditions were found in Armenia, Poland, Lithuania, and the Balkan States. In these countries, as well as the devastated areas of France and Belgium, emergency food relief was needed at least until the autumn of 1919. In addition various types of specialized work were necessary, such as: child welfare work, health work, rehabilitation of returning refugees and so forth. The conditions obtaining in Poland indicated that the need for assistance was urgent. One third of the population (38,000,000) were seriously ill; there were 250,000 cases of typhus, and approximately 4,000,000 suffering from tuberculosis. Moreover, a large part of the people had inadequate clothing, food, and medical supplies. The insufficiency of food, clothing, shelter, medical attention and supplies was common to all the war-stricken countries. In addition, there was great need in France for specialized preventive and educational work relief for individuals; and reconstruction work until at least the spring of 1920. The situation in Belgium was much the same as that in France. It was estimated that special food for children would be necessary through the winter in that country. In Italy also, there was great need for child welfare work. Milk in powder form was especially in demand there. In all countries it was necessary to provide for the war orphans and the blinded soldiers. The situation in the Balkans was not quite so bad as that in Poland. Food, health work, care of orphans, and general relief work were the chief needs. In the Near East the conditions were appalling. While the principal needs of the Near East were the same as those of the other countries, the absolute necessity for meeting them was much greater. The people of Armenia and Syria had not only suffered the tortures of war but had also been persecuted and massacred. Thousands of Armenians perished in their enforced wanderings in the deserts and mountains because of Turkish persecution.

The most important relief work this year has been done by the American Relief Administration; the Red Cross (q.v.); and the Near East Relief.

COMMISSION FOR RELIEF IN BELGIUM. The destruction wrought by the Germans was so thorough in Northern France, that hardly a single factory could be operated at the beginning of the year without a very large proportion of new equipment. At that time about 60 per cent of the population were destitute. The Commission for Relief in Belgium accordingly made a daily allowance of about 35 cents to those without any funds. The field work of the Commission was continued in Belgium and Northern France until July, 1919. A full description of this field may be found in the preceding YEAR

Book. Food and clothing were shipped to the devastated regions to assist during the period of transition until the governments of Belgium and France could care for their own needs. The books of the Commission for Relief in Belgium and the allied committees in Belgium and France were closed as of April 30, 1919. During the period of operation from 1914-19, food and clothing approximating \$1,000,000,000 in value were supplied to civilians.

AMERICAN RELIEF ADMINISTRATION. Early in the year Herbert Hoover estimated that it would be necessary to send food worth \$1,500,000,000 into Europe to provide for the actual needs from January 1st to July 1st. As Director of European Relief and United States Food Administrator Herbert Hoover reported in January that 1,400,000 tons of food would have to be imported to tide over until the next harvest those regions which the Allies contemplated feeding. The conditions prevailing there then were revealed in his cablegram. "The general situation in the areas covered by recent surveys (Finland, Armenia, Serbia, Jugo-slavia, Poland, Rumania, Bulgaria, Czechoslovakia, Vienna, and Tyrol) is that their animals are greatly reduced, and their crops were far below normal on account of man and animal shortage, ravages of war, and climatic conditions. The surplus harvest, above absolute needs, is rapidly approaching exhaustion, and consequently the towns and cities are in a dangerous condition." Mr Hoover soon called upon the Administration for help. In view of the urgent situation President Wilson cabled to Congress, on January 4th, for an immediate appropriation of \$100,000,000 to be used in supplying food to destitute people outside of Germany during the winter. On January 13th, the House passed the European Famine Relief Bill, providing the appropriation asked, by a vote of 272 to 43 and on January 24th, the Senate also passed the bill by a vote of 53 to 18. President Wilson approved the action February 24th, and on March 1st, appointed Herbert Hoover, Director General of the American Relief Administration. He was authorized to provide for the purchase, transportation, and distribution of food supplies and other urgent commodities and was given practically a free hand. The Headquarters of the American Relief Administration were in Paris with branches in New York and various distributing points in central Europe.

The controlling idea of the American Relief Administration was to aid the liberated territories, rather than the Allies, who were at the time fairly well supplied with food, to get through until the harvest of 1919. The plan of operation of European Relief was an Inter-Allied one. After negotiation an Inter-Allied Council of Supply and Relief was formed, which later merged into the Supreme Economic Council, composed of representatives of the four governments, the United States, Great Britain, France, and Italy, these representatives being of ministerial rank. The Council dealt with various problems of allied relief and economic reconstruction through the appropriate sub-sections of Food, Finance, Blockade, Raw Materials, and Communications. On account of the leading place taken by the United States in the feeding of Europe, Mr. Hoover, the head of the American Relief Administration, was also Director-General of Relief for the Allies,

The Administration started its operations on the facilities provided by the U. S. Grain Corporation, a subsidiary of the Food Administration, and on certain cooperation vouchers issued by the army, the navy, and the Shipping Board, by which means cargoes of foodstuffs were started to northern and southern ports in Europe. Soon after the Armistice \$5,000,000 was drawn from the President's Fund for National Defense for the first support of relief in Europe. On February 24th Congress placed at the disposal of the Administration a fund of \$100,000,000. By the terms of this fund, it was to be used for relief only in certain stipulated countries, not including ex-enemy countries. Early in 1919 missions of the American Relief Administration were established in all the liberated countries of Europe, including Czechoslovakia, Jugo-Slavia, Hungary, Austria, Rumania, Poland, the Baltic Provinces, and Armenia. Operations in these countries were to a preponderating degree on credit. In accordance with the terms of the Armistice, a certain amount of relief supplies were shipped to Germany, payment being made in cash, according to systems worked out at the Brussels Conference by the representatives of the Allies and the Germans. Small cash sales were also made to Bulgaria. The United States could not contribute directly to the relief of Austria, but American stocks were shipped into Austria on the basis of finance provided by the United Kingdom, France, and Italy, upon credits of approximately \$48,000,000 granted by the United States Treasury to these countries. Although European Relief was an Allied enterprise, the United States supplied the largest proportion of foodstuffs, finance, and shipping. Out of a total Allied relief up to July 1, 1919, of approximately 3,000,000 tons, the United States supplied 80 per cent. Out of a total combined relief, cash and credit, supplied by all the Allied Nations, of a value of \$800,000,000, the United States furnished on credit 55 per cent. Of her own 2,500,000 tons of relief deliveries, valued at \$525,000,000, the United States supplied 70 per cent on credit. More than half of the total bottoms for shipping of Allied and Associated Relief was supplied by the United States. The chief contributions, November 11th to July 31st, from the United States are as follows: Finland, 160,000 tons; Belgium, 830,000 tons; Rumania, 102,000 tons; Baltic Provinces, 75,000 tons; Czechoslovakia, 316,000 tons; Germany (for cash), 482,000 tons; and Poland, 266,000 tons. The total relief supplied by the United States went far beyond the resources of the \$100,000,000 supplied by Congress. Under its war powers the Treasury was permitted to make advances to governments engaged in hostilities against Germany. In addition to large monthly credits to Italy, France, and England, the credits issued by the United States for the feeding of Europe amounted to approximately \$300,000,000 from the signing of the Armistice to July 1st. Of this, Belgium took a little less than one-half and \$48,000,000 was loaned to Great Britain, France, and Italy for purchases in America of food for Austria. On November 24th Mr. Hoover submitted his report of approximate receipts and expenditures under the Hundred Million Dollar Appropriation for Relief in Europe. Of this \$100,000,000 the Director-General of Relief turned over to the United States Treasury notes from the Governments of Poland, Czechoslovakia,

Armenia, Russia, Esthonia, Latvia, Lithuania, and Finland, totaling about \$89,000,000. The remaining 11 per cent was expended in direct charity. Of the work for which no reimbursement in cash or credit was asked, by all means the most important was the work of the Children's Relief Bureau, by which in 17 countries in Europe gratuitous rations were given daily to 3,000,000 under-nourished children. This work was organized on a scientific nutrition basis and was an important factor in the maintenance of health and morale. In addition to contributions to Children's Relief, the American Relief Administration paid approximately \$550,000 for freight and expenditures in connection with the distribution of old clothing contributed by the American Red Cross and the Commission for Relief in Belgium. Approximately \$500,000 was also spent on freight in transporting United States army bacon from France to Poland, Czechoslovakia, and Esthonia. All relief supplies purchased by the American Relief Administration were of American origin.

Connected with the work of food relief was the rehabilitation of the communication and in a lesser degree of the exchange systems of central Europe. Through the organization of the American Relief Administration, service was also rendered in the increasing of coal production and its proper distribution to points of political and military stress. The funds for American relief in Europe lasted until July 1st. As the main purpose of the Administration was to relieve the situation until the harvest of 1919, the United States Relief Administration withdrew in September as an official organization of the government. Certain activities of the Administration, notably the Children's Relief for under-nourished and debilitated children continued into 1920 in a private capacity under the name of the American Relief Administration's European Children's Fund. This fund was supported largely by contributions from the nationals in America of distressed European peoples. The work of the American Relief Administration is also continued in certain points of Europe in the operations of technical commissions of experts attached to the new governments, to render aid in the reconstruction of transportation and other economic systems. In September the work of the American Relief Administration in Armenia was taken over by the organization headed by Col. William N. Haskell, Allied High Commissioner in Armenia. This organization operated under the direction of Herbert Hoover.

THE NEAR EAST. The situation in the Near East was characterized by Herbert Hoover as "the most desperate in the world." This situation was partly due to the fact that during the war the Red Cross did not maintain any relief system in Armenia, Syria, the Russian Caucasus, Mesopotamia, Egypt, Palestine, and Macedonia. Mr. R. L. Fowle, who during the last few years administered the financial affairs of the Armenian and Syrian Relief Commission (now the Near East Relief), described the conditions there as being generally chaotic, intense suffering prevailing practically everywhere. In Serbia 1,000,000 faced destitution. Lack of food in this cold mountainous country made it absolutely necessary that additional supplies of clothing be shipped there, if thousands were not to be swept away by disease. Following the armistice the Red Cross attempted to alleviate the condition

of the starving, destitute, and shelterless refugees returning to the land of their former homes. However by July, the Red Cross withdrew from work in Aleppo, Aintab, and other countries north of Jerusalem in Asia Minor, and turned over its supplies to the American Committee for Armenian and Syrian Relief which later operated as the Near East Relief under the terms of a charter granted by Congress and approved Aug. 6, 1919. In addition the Red Cross gave \$6,000,000 to the Near East Relief Committee to carry on the work. "It was imperative that the Near East Relief take over the work of the Red Cross in this region because the Christian symbolism of its name had proven objectionable to the Mohammedans whose cooperation was necessary to carry on the work." By the end of the year \$32,324,516 had been expended in relief work in Armenia, Cilicia, Anatolia, Syria, Palestine, Macedonia, Thrace, Mesopotamia, and Persia. By that time 168 orphanages had been established and were in operation. Over 7000 tons of flour were distributed per month. In addition there were 37 hospitals, with 88,728 clinic attendants each month; 14 rescue homes, where women released from bondage were temporarily cared for; and 82,291 persons were employed in industries maintained by the Relief. Reports from representatives in the Near East indicate that there are 1,200,000 destitute adults; 250,000 homeless children, and 100,000 women who on being released from bondage, will perish unless provision is made for their care by some organization supplied with the necessary funds for relief work. Col. William N. Haskell, appointed on July 5th, representative of the United States, Great Britain, France, and Italy, in Armenia and the Caucasus, was in charge of all operations and expenditures for the Near East Relief. Cablegrams received from him by the Committee, appealing for help immediately, revealed the desperation of the situation. In August, Maj.-Gen. James G. Harbord, formerly General Pershing's Chief of Staff, was sent to Asia Minor and Armenia by the United States government to investigate the state of affairs there and to report on the means of relieving the situation, his mission in no way conflicting with Colonel Haskell's.

JEWISH RELIEF. According to reports received by Felix M. Warburg, chairman of the Joint Distribution Committee of the American Fund for Jewish War Sufferers, the distress and suffering among Jews in Austria, Poland, and Siberia were greater than that experienced during the period of the war. Relief work was carried on through the Joint Distribution Committee in these countries and also in Syria, Palestine, and Egypt. During the past year the Committee in conjunction with the Polish National Department, Relief Section, sent a cargo of food, clothing, and medical supplies valued at \$2,000,000 to Poland, each committee bearing an equal share in the expense. In cooperation with the Near East Relief, clothing, food, and medicine were sent to the Near East, part of the expense (\$300,000) being born by the Joint Distribution Committee. It was understood that the relief was to be administered without discrimination as to Jews and non-Jews. Efforts were also made to send relief to 5,000,000 Jews who at the beginning of the war fled to Siberia and occupied the region extending along the Trans-Siberian Railroad from Omsk to Vladivostok.

tok. Lack of food, clothing, and adequate shelter caused these people to suffer severely. The funds disbursed by the Joint Distribution Committee included money collected by the American Relief Committee of which Louis D. Marshall was president; The Central Relief Committee, 51 Chambers Street, Harry Fischel, treasurer; and the People's Jewish Relief Committee. From January to November, 1919, the Joint Distribution Committee appropriated \$11,445,727 for use in welfare work. From its inception in 1914 to December, 1919, the Committee made appropriations amounting to \$25,086,198. The offices of the Committee are at 20 Exchange Place, New York City.

NATIONAL BUREAU OF INVESTIGATION. As a protection against fraudulent charities and appeals made by irresponsible persons, the War Chest Associations of Cleveland, Syracuse, Indianapolis, Columbus, Detroit, Rochester, Philadelphia, and Toledo organized the National Bureau of Investigation on Oct. 6, 1918, with headquarters at 1 Madison Avenue, New York City, Samuel Mather, president. The War Chest Associations contributed large sums to various relief organizations during the past year. For a brief description of their origin consult the preceding YEAR BOOK. The Bureau took over the supervision of war charities previously performed by the Charity Organization Society of New York and its investigations were approved by the War Department. Some of the standards required of an approved war charity were: an active board of directors; a necessary purpose; reasonable efficiency; no resort to the commission method of soliciting except during "drives"; no use of the "remit or return" method; no entertainment where expenses exceed 30 per cent of the gross proceeds; a complete audit of accounts; and an itemized budget. In January, Mr. N. F. Persons was sent abroad by the Bureau to observe the relief work of the numerous organizations whose operations have been supported by Americans, and to make a general survey of conditions in the various countries. In addition to the personal observations of Mr. Persons, reports were received from Barry C. Smith, Director of the Bureau, concerning conditions in France; and also from relief workers familiar with the situation existing in the Balkans and Poland. On May 10th, Mr. Persons resigned in order to engage in important work for the Red Cross League and Maj. James B. Ford succeeded him as Foreign Representative of the Bureau. No attempt was made to investigate the following organizations working abroad since they were already approved by the United States government: American Red Cross; Knights of Columbus; Young Men's Christian Association; American Library Association; Jewish Welfare Board; Salvation Army; Young Women's Christian Association; and War Camp Community Service. On the basis of its investigations the Bureau issued several "Bulletins of Approved War Activities Abroad." See also *Fraudulent Charities* under RELIEF FOR WAR VICTIMS in the previous YEAR BOOK.

OTHER FUNDS. In Italy important relief work was carried on through the American Free Milk and Relief for Italy, Inc., and the Italian War Relief Fund. Altogether there were about 1,000,000 children in Italy who had been made orphans through the war and the influenza epidemic. It was necessary that these children be provided

with milk in some form and that their education be not totally neglected. The American Free Milk Relief sought to relieve the serious scarcity of milk in Italy by shipping milk in powder form to that country. It had headquarters at the Vanderbilt Hotel, Walter Meacham treasurer, and it had collected \$55,800 by November. The Italian War Relief Fund, through its contributions to the Italo-American Union and other relief organizations in Italy, endeavored to help children whose education had been jeopardized. Its headquarters were at 347 Madison Avenue, New York City, S. R. Bertron Secretary. By November it had received contributions amounting to \$130,116. In Serbia, provision for 40,000 of the 500,000 orphaned children has been undertaken by the Serbian Relief Committee. The expense of maintaining a child is 20 cents a day and the Committee's budget for the year totaled to about \$300,000. The Committee had received \$631,795 in contributions by November. Its headquarters were at 70 Fifth Avenue, New York City, Murray Coggeshall, treasurer. The Serbian Aid Fund started a campaign for clothing to be shipped to Serbia in February. This drive resulted in the collection and shipment of 130 tons of new and used clothing in addition to many cases of shoes, bedding, and hospital supplies, powdered milk and comfort kits. The organization's headquarters were at 1 Madison Avenue, New York City, Otto T. Bannard. It received contributions amounting to \$277,589.

Other important relief organizations, with their headquarters, treasurers, and collections to the end of 1919 were: Fatherless Children of France, 11 West Forty-Sixth Street, New York, Alexander J. Hemphill, \$1,001,327; American Committee for Devastated France, 16 East Thirty-Ninth Street, New York, Dr. A. C. Humphreys, \$1,231,508; Polish Victim's Relief Fund, 33 West Forty-Second Street, New York, Frank A. Vanderlip, \$1,222,114; Federal Council Commission on France and Belgium, 105 East Twenty-Second Street, New York, Alfred R. Kimball, \$626,596; American Committee for Training Maimed Soldiers, Hotel Biltmore, New York, Mrs. Edmund Baylies, \$453,270; Lafayette Fund, Hotel Vanderbilt, New York, Francis Roche, \$308,070; American Jugo-Slav Relief, 511 Fifth Avenue, New York, Walter Jennings, \$260,020; American Women's Hospitals, 637 Madison Avenue, New York, Dr. Sue Radcliffe, \$425,488; Duryea War Relief, 377 Fifth Avenue, New York, Charles E. Warren, \$253,408; Free Milk for France, 675 Fifth Avenue, New York, Henry E. Cooper, \$158,730; and the Stage Women's War Relief, 366 Fifth Avenue, New York, Mrs. Shelly Hull, \$293,903. See also AMERICAN RED CROSS; KNIGHTS OF COLUMBUS; YOUNG MEN'S CHRISTIAN ASSOCIATION; SALVATION ARMY; AMERICAN LIBRARY ASSOCIATION; YOUNG WOMEN'S CHRISTIAN ASSOCIATION; and WAR CAMP COMMUNITY SERVICE.

RELIGIOUS DENOMINATIONS. See articles on the respective denominations

RENOIR, (PIERRE) AUGUSTE. French painter, died at Cagnes, France, December 3. He was one of the chief members of the Impressionist school and his work was mainly in the field of figures, portraits, and landscapes. He was born at Limoges, Feb. 25, 1841, the son of a tailor, and began as a painter on porcelain. Moving to Paris in the latter years of the Second Empire, he studied at the school of Beaux Arts

for a short time and fell in with Monet, Sisley, Pissarro, and other Impressionists whom he joined in their search for new effects. He attempted to reproduce nature in a fresh, clear, and independent spirit. He took part in the first exhibition of the Impressionists in 1874 and frequently after that. He also exhibited several times at the Salon. He drew his inspiration largely from scenes in the life around him and was successful in portraying aspects of the various Parisian cafés, of boatmen on the Seine, of scenes at inns, of open air gatherings of young people, etc. He continued to live in Paris but made short visits to Italy and northern Africa until late in life he settled in the Riviera. For 40 years his work continued to represent the various characters of impressionism. He was especially skillful in the drawing of the female figure and of children, but he studied also the lights and shades in the theatre and scenes on the boulevards. From 1880 on, his success, though always debated, extended rapidly. Examples of his work are the following: "The Dancer" and "The Loge" (1874); "Les Grands Boulevards" (1875); "The Swing" and "The Ball at Montmartre" (1877), both in the Luxembourg; "The Rowers" (1881); "On the Terrace"; the "Beautiful Bather" (1881); "Young Girls at the Piano" (1888); "Female Torso" (1906); "Wounded Girl" (1909). Representative portraits are those of his friends Monet, Sisley (1868), Cézanne (1880), a pastel; of Wagner (1893), Madame Charpentier and her children (1878, Metropolitan Museum, New York), and Mademoiselle Samary (1879).

RENSSELAER POLYTECHNIC INSTITUTE. A non-sectarian institution for the technical education of men, at Troy, N. Y. In the fall of 1919 there were 988 students, 45 being graduates or special students. The faculty numbers 63, and there are five lecturers. During the year an addition to the chemical laboratory, costing \$175,000 was built. Gifts of \$106,000 were received. The library contains 15,000 pamphlets, and 13,000 books on engineering and scientific subjects only. Productive funds amounted to \$1,721,000; the income for 1918-19 was \$256,000. The institute was founded in 1824. Director, Palmer C. Ricketts, E.D., LL.D.

RENTS. See HOUSING.

REORGANIZED CHURCH OF JESUS CHRIST OF THE LATTER DAY SAINTS. This denomination was founded by Joseph Smith in 1830 and reorganized in 1852. It is separate from other Mormon denominations. Its principles have always included monogamy, also loyalty to the local and federal government. In 1919 it had a membership of about 90,000 of which 14,000 were in foreign countries; 800 churches, 750 Sunday schools, with about 40,000 pupils. During the year special efforts were made along educational lines, as well as the expansion of the foreign missionary work. General headquarters are at Independence, Mo.; publishing houses at Lamoni, Iowa, Independence, Mo., and Sydney, Australia. A college is maintained by the denomination at Lamoni, Iowa. The president of the church is Frederick M. Smith, the son of Joseph Smith, the original founder.

RESERVE OFFICERS' TRAINING CORPS. See UNIVERSITIES AND COLLEGES.

RETTET, HOMER P. Geologist, died at Washington, D. C., April 21. He was born at Cleve-

land, Ohio, March 4, 1858; studied at the Columbia School of Mines, 1878 to 1880, and was afterwards engaged in research but in 1895 became an assistant in the Coast and Geodetic Survey, remaining in the service until the time of his death. He had been engaged in important field work in many parts of the United States and in Alaska. Shortly before his death he was in charge of the field station of the survey at Boston; and at the time of his death he was a member of the Mississippi River Commission.

REUNION. The commerce of the island increased to a marked extent in 1918 as compared with the previous year. The imports were valued at \$6,025,145 and the exports at \$5,667,107. France and her colonies continued to supply the largest share of the imports and to receive the largest share of the exports. The chief items entering into the trade between the island and France were: Cotton piece goods; machinery; salted fish; iron sheets and bars, among the imports. The chief items among the exports to France were essential oil, fecula, vanilla, and rum.

REYNOLDS, STEPHEN. British author and expert on fisheries, died at Sidmouth, England, February 14. He had been adviser on inshore fisheries to the development commission and was known as a writer of books and sketches dealing with the life of the fishing population of the west. He was born at Devizes, England, May 16, 1881, and educated there and at Manchester University; went on the staff of the *Anglo-French Review* in 1902; and subsequently devoted himself to the subject of fisheries. During the war he did excellent service through his intimate knowledge of the fisheries of the west. Among his writings may be mentioned: *A Poor Man's House* (1908); *The Holy Mountain* (1909); *Along Shore* (1919); *The Lower Deck*, *The Vary*, and *The Nation* (1912), etc.

RHEUMATIC FEVER. Acute rheumatism is an affection for which we have no actual specific remedy in the sense that a specific remedy must be able to abort the disease in question, yet in salicylic acid and its numerous derivatives, including aspirin and novaspirin, we have remedies which are specific in that they control some of the worst features of the disease including the joint pains; while at the same time they have no power of any kind over the joint symptoms of other acute infections. When joint symptoms yield to these remedies it is safe to regard them as being of rheumatic origin. In the past, developments in the technic of administration constitute true progress and we have seen salicin replaced by salicylic acid, this in turn by sodium salicylate and have seen aspirin succeed the last named. Aspirin is the trade name of acetyl-salicylic acid, which has replaced not only the original salicylates but to a considerable extent the coal tar synthetics which have been used so extensively during the past 30 years for nervous and muscular pains and fevers. It is decomposed in the intestine and absorbed as salicylate, but agrees with the stomach better than the older preparations and is used by the public for self-medication to a degree not seen since the introduction of quinine. An attempt to substitute another derivative known as novaspirin as a safer drug—for aspirin is not without some disadvantages—seems to have failed, although the temporary scarcity of aspirin during the great war may have been the leading motive for sub-

stitution. Quite recently Sejournet has sought to add to our resources by using sodium salicylate hypodermically in acute rheumatism, the injections being made close to the affected joints. The amount injected is 1 ccm. of a 3 per cent solution. In a certain per cent of cases the joint pains vanished almost as soon as if morphine had been injected. Two or three injections at hour intervals were required in other cases, but the course of the disease appeared to be cut short and complications, especially heart disease, prevented. The French author has worked along this line since 1915, but his labors were no doubt interrupted by the war (see *La Presse Médicale*, May 22, 1919).

RHODE ISLAND. POPULATION. By the federal census of 1910 the population was 542,610; by the State census of 1915, it was 595,986; on July 1, 1919, the federal bureau estimated the population of the State to be 648,964.

AGRICULTURE. The following table is compiled from a report of the federal Department of Agriculture.

Crop	Year	Acreage	Prod. Bu	Value
Corn	1919	11,000	495,000	\$921,000
	1918	13,000	572,000	1,030,000
Hay	1919	57,000	a 86,000	2,752,000
	1918	58,000	a 75,000	1,912,000
Potatoes	1919	5,000	425,000	765,000
	1918	5,000	650,000	1,124,000

a Tons.

TRANSPORTATION. The mileage of the State in 1919 was about 1972, practically all of which was operated by the New York, New Haven, and Hartford, or its subsidiary companies. There was no construction during the year.

FINANCE. The receipts for the year ending Dec. 31, 1918, amounted to \$4,573,949 and the disbursements for the same period were \$4,571,256. The balance in the treasury on Jan. 1, 1918, was \$493,547, and at the end of the year it was \$496,240. The funded debt of the State as of Jan. 1, 1919, was \$1,263,843.

EDUCATION. The school population in 1918 was 119,747. The enrollment in the schools was 89,882, while the average daily attendance was 72,220. The average yearly salary for male teachers was \$1415 and for female teachers, \$675. The permanent school fund is \$249,941; the appropriations for the year 1918 for educational purposes amounted to \$618,950. Under the control of the Department of Education are the School of Design, Providence, and the Institute for the Deaf, Providence. The former school has an enrollment of over 500, while the number of pupils in attendance at the latter on Jan. 1, 1919, was 100.

CHARITIES AND CORRECTIONS. The institutions of this nature, conducted by the State, with their situation and number of inmates were as follows: Hospital for Mental Diseases, Cranston, 1388; Infirmary, Cranston, 599; Workhouse and House of Correction, Cranston, 234; Prison, Cranston, 176; Reform Schools, Cranston, 296. It is to be noted that all these institutions are located upon the State Farm, at Cranston, about 7 miles from Providence. The management and control of these institutions are vested in the Penal and Charitable Commission, the successor to the State Board of Charities and Corrections. The Exeter School, established in 1907 for the care of feeble minded children, located at Exeter, is

under the control of the Commission. On Dec. 31, 1918, its population was 376. Likewise, the State Home and School for Children (dependent and neglected) is under its control. This is located at Providence, and has an enrollment of 376. In addition, the Soldiers Home, at Bristol, with 110 members; the Butler Hospital (for the insane) and the State Sanitarium, at Wallum Lake, with an attendance in 1915 of 566, are subject to governmental supervision.

LEGISLATION. One hundred and eighteen public laws were passed at the January, 1919, session of the State Legislature. Among the more important laws are the following. Ch.1724 authorizes the licensing of athletic games on Sunday, thus eliminating the trouble recently caused by the long-defunct Sabbath laws. The corporation franchise tax was amended so that all corporations would pay a minimum of \$2.50 on each \$10,000 or fraction thereof annually. Provision was made by Ch.1737 for State aid to crippled and injured children, under the supervision of the Commissioner of Public Schools. Ch.1740 is designed to control the sale of non-intoxicating beverages. Non-intoxicating is declared to be "not more than 4 per centum by weight of alcohol"; a license system is provided. The title of the Commissioner of Industrial Statistics was changed to Commissioner of Labor, and provision is made for a State Board of Labor, whose duty it is "to do all in its power to promote the voluntary mediation and conciliation of controversies and disputes between employers and employees, and to avoid resorts to strikes, lockouts . . . discriminations, and legal proceedings in or arising out of such controversies . . ." It may, under certain conditions appoint a board of mediation and conciliation for such work, which board shall have power to conduct investigations and summon witnesses to hearings. (Ch.1741) Ch. 1769 creates a Division of Child Welfare in the State Board of Health "for the prevention of maternal and infant mortality, the preparation and issuance of child health literature, the suppression of diseases of young children, and the organizing of child welfare work, etc." Ch 1771, is entitled "An Act to Protect the Government of the State of Rhode Island and the Government of the United States of America," and has the now prevalent provisions against anarchy, and incitement to violence in regard to the established governments. Ch. 1775 provides that savings and other banks and trust companies shall pay an annual tax on certain deposits and profits. Ch.1778 incorporates into statute law the usages in regard to travel on highways, such as passing on the right, etc. Ch.1785 establishes a jeweler's lien for repairs. Ch.1787 revises the procedure in probate courts, etc. Ch.1795 amends the workmen's compensation law of 1912. Ch.1802 purports to "promote Americanization" by the establishing of night schools, etc.

OFFICERS. Governor, R. Livingston Beekman, R.; Lieutenant-Governor, Emery J. San Souci, R.; Secretary of State, J. Fred Parker; Attorney-General, Charles P. Sisson; Treasurer, Richard W. Jennings; Auditor, Philip H. Wilbour; Commissioner of Public Schools, Walter E. Ranger. **JUDICIARY.** Supreme Court: Chief Justice, Christopher F. Parkhurst; Associate Justices, William H. Sweetland, Walter B. Vincent, Darius Baker, Charles F. Stearns.

RHODESIA. An extensive and thinly populated territory north of the Transvaal, consti-

tuting a British protectorate under the administration of the British Africa Company, whose charter dates from Oct. 29, 1889. It is divided into Northern Rhodesia which lies to the north of the river Zambezi, and Southern Rhodesia which lies to the south of that river and comprises Mashonaland and Matabeleland. Northern Rhodesia comprises the two former provinces of Northeastern and Northwestern Rhodesia. Area, estimated at 291,000 square miles with a population estimated at from 877,000 to 884,000, of whom in 1916 only 2165 were Europeans. Seat of government, at Livingstone on the Zambezi River. The chief agricultural products are corn, cotton, wheat, tobacco, and fruits. There is abundant timber; rubber is produced; and gold, copper, lead, and zinc are worked. The exports include live animals, copper ore and other minerals, grain, flour, hides, etc. The imports exclusive of specie in 1918 were valued at £355,752; the exports at £343,338. Administrator in 1919, Sir L. A. Wallace. Southern Rhodesia has an area of about 149,000 square miles with an estimated population of about 770,000 (1918). In 1917 the European population was estimated at somewhat less than 30,000. There is an inadequate supply of timber but the country is well suited to agriculture. Cattle, sheep, and goats are raised, and among the crops, corn, which is the principal one, and tobacco. There are extensive mineral resources and rich gold veins. The output of gold in 1918 was valued at £2,632,000. Other minerals are silver, copper, chrome ore, coal, etc. The total output of the mines in 1917 was valued at £4,693,335. Imports (1918), £2,956,978; exports (exclusive of gold), £1,758,373. Administrator of Southern Rhodesia in 1919, Sir Drummond Chaplin.

RHODES SCHOLARS. See UNIVERSITIES and COLLEGES.

RICE. The international rice situation in 1919 was marked by an acute shortage in the staple in the Far East and the consequent prohibition of rice export in several countries. British India, which ordinarily produces half the world's supply, prohibited the export of rice during the year. Burma restricted it, and Japan laid an embargo on the export from Formosa to meet in part her own requirements. It was estimated that for the year Japan was short over 30,000,000 bushels and as early as November, 1918, the price rose to \$3.50 per bushel and rice riots occurred in the country. During the summer of 1919 it was reported that by the control of exports and otherwise guarding the supply the crisis was passed but that the situation was yet far from normal.

According to provisional estimates by the International Institute of Agriculture, Rome, the Japanese crop of 1919 amounted to about 425,900,000 bushels or about 12 per cent less than the yield of 1918 and about 16 per cent under the five-year average for 1913-17. The Korean yield was approximately one-fifth of the Japanese, and the next largest yield of the countries reporting was produced by the United States.

As estimated by the Department of Agriculture, the rice crop of the United States amounted to 41,059,000 bushels produced on 1,089,000 acres or at the rate of 37.7 bushels per acre. In 1918 the production was 38,606,000 bushels, the area 1,118,550 acres, and the average yield 34.5 bushels per acre. The average farm price on December 1st was \$2.67 per bushel and on this

basis the total crop was worth \$109,613,000, the highest total value on record. The corresponding figures for 1918 were 191.8 cents per bushel and \$74,042,000 total value, and for the five-year period 1913-17, 112 cents and \$34,468,000 respectively.

RICE, CHARLES EDMUND. Judge, died at Wilkes-Barre, Pa., May 16. He was born at Fairfield, N. Y., Sept. 15, 1846, and graduated at Hamilton College in 1867 and at the Albany Law School in 1869. He practiced law at Wilkes-Barre. From 1879 to 1895 he was presiding judge of the 11th judicial district and he was presiding judge of the Superior Court of Pennsylvania from 1895 to 1916 when he retired.

RICE INSTITUTE. An institution of liberal and technical training, at Houston, Texas. It was founded by William Marsh Rice, and dedicated by him to the advancement of letters, science, and art, was incorporated in 1891, but was not opened till 1912. The enrollment for the fall of 1919 was 674, with 50 members in the faculty. The productive funds of the Institute are \$10,000,000. There are between 15,000 and 20,000 volumes in the library. President, Edgar Odell Lovett, Ph.D.

RICHARDS, CHARLES BRINKERHOFF. Mechanical engineer, died at New Haven, Conn., April 20. He was born at Brooklyn, N. Y., Dec. 23, 1833, and for 25 years held the Higgins professorship of mechanical engineers at Yale University, for the last nine years being professor emeritus. He was for many years the engineering superintendent of the Colt's Arms Co., at Hartford, Conn. He was the inventor in 1861 of the Richards indicator for steam engines and served often as consulting engineer for public buildings. In 1889 he was expert commissioner to the Paris Exposition. He was editor of the engineering and technical terms in Webster's *International Dictionary*.

RICHMOND, VIRGINIA. See CITY PLANNING.

RIEMANN, HUGO. Writer on music, died at Leipzig, July 11. He was born near Sondershausen; served in the Franco-German War and was afterwards a conductor and teacher of music until 1878 when he became a lecturer at the University of Leipzig. From 1881 to 1890 he was teacher at the Hamburg Conservatory and then went to the conservatory of Wiesbaden, whence he returned in 1895 as lecturer at the university. He was appointed professor in 1901 and in 1908 became director of the Collegium Musicum. Besides continuing in his other positions in Leipzig, he was made, in 1914, director of the newly-established Forschungsinstitut für Musikwissenschaft, and was a member of numerous foreign musical associations. His writings have been a most important factor in formulating the new science of musicology. He was a thorough investigator in all fields of musical research and published the *Musiklexicon* (1882) (8th ed., 1916) which has been translated into all languages and become a standard. His other writings include: *Handbuch der Harmonielehre* (1887); *Geschichte der Musiktheorie im 9-19 Jahrhundert* (1898); *Geschichte der Musik seit Beethoven* (1901); *Handbuch der Musikgeschichte* (4 vols., 1901-14); *Grosse Kompositionslehre* (3 vols., 1902-03).

RITCHIE, LADY ANNE ISABELLA. British writer, eldest daughter of William Makepeace died at Freshwater, England, February 26. She Thackeray, and widow of Sir Richmond Ritchie,

was born in 1837 and passed her early childhood in Paris, but in 1846 was brought back to England to live with her father in Kensington. She began to publish in 1863 when her first book, *The Story of Elizabeth*, appeared. This was followed by a number of books including six novels. She wrote largely on the subject of her reminiscences, and contributed much to Thackerayana. In 1877 she married her cousin, the late Sir Richmond Ritchie. One of the best known of her novels is *Old Kensington* (1873). The list of her other principal writings is as follows: *The Village on the Cliff* (1865); *To Esther, and other Sketches* (1869); *Toulers and Spinsters* (1873); *Bluebeard's Keys* (1874); *Miss Angel* (1875); *Anne Evans* (1880); *Madame de Sévigné* (1881); *A Book of Sibyls* (1883); *Mrs. Dymond* (1885); introductions to editions of *Cranford, Our Village*, and *The Fairy Tales of Madame d'Aulnoy*; *Alfred Lord Tennyson and his Friends, Portraits and Reminiscences* (folio, 1893); *Chapters from some Memoirs* (1894); an edition of the works of W. M. Thackeray (1898); *Blackstick Papers* (1908).

ROADS AND PAVEMENTS. Highways rather than city pavements have been the centre of interest for several years past and were notably so in 1919. Automobile and heavy motor traffic, combined with deficient steam railway service, have increased the demand for smooth, hard, unyielding road surfaces from city to city and town to town and for the through routes for long distance motor travel and freight haulage. Coincidentally the surfacing of country highways has approached more and more nearly to that of city streets until it has become common to speak of paving country roads. For this purpose bituminous macadam and bituminous concrete, portland cement concrete, and brick are now commonly used for highway surfacing, the bituminous and the brick surfacing being placed on concrete foundations and particular care being taken, in all good work, to secure adequate drainage. For city streets, the same materials are used, together with sheet asphalt, granite block and, in some cases, creosoted wood block, the last two for heavy traffic. Under exceptional conditions, granite block and sheet asphalt have also been used in State highway work. In highway construction 1919 was a record year, as well as being the bright spot in the construction field as regards speedy resumption of work after the war and large volume of work as well. According to estimates made by Thomas H. MacDonald, chief of the United States Bureau of Public Roads, the total outlay for hard surfaced highways in the United States was \$138,000,000 in 1919, or \$2,000,000 more than the previous record figure of 1916. Mr. MacDonald estimated that \$633,000,000, or more than four times the amount spent in any previous year, would be available for road work in the United States in 1920, as follows:

For unfinished 1919 contracts	\$165,000,000
State and county taxes and Federal aid..	273,000,000
One-fifth State and county bond issues not previously available	50,000,000
One-third unexpended balance of State and county bond issues previously available	45,000,000
From new bond issues to be voted in fall of 1919 and spring of 1920.	100,000,000
Total	\$633,000,000

To carry out this immense programme, Mr MacDonald stated, would require a heavy increase over 1919 in material supplies, shipping facilities, labor, and contractor's organization.

Shortage of railway transportation for road materials, as well as the high cost of materials and labor, and the inefficiency of the latter, were serious handicaps to road building in 1919. In some parts of the country stone and gravel for road making at any price were obtained with difficulty. To ease the situation, some of the State highway commissions took great pains to locate gravel pits and quarries and make their location known. Thus, before letting contracts for 115 miles of road improvements on the Dixie and Lincoln highways in Illinois, the highway commission prepared and distributed a map showing where gravel and stone could be had, together with the character of the highways over which road material would have to be hauled and the location of steam and electric railways, with stations and sidings.

Funds for highway construction come mostly from State and county bond issues and from the federal treasury, Congress having recently made millions available for federal aid to highway construction, on condition that the grants be duplicated by State or local funds. County road bond issues have run as high as \$5,000,000 to \$10,000,000 and State highway bond issues go much higher. One of the more notable State bond issues voted in 1919 was \$40,000,000 in California, carried 7 to 1, with every precinct voting yea, making the third State road bond issue in California within a few years and bringing the total authorized up to \$73,000,000. In Michigan, the voters approved a \$50,000,000 bond issue for constructing some 5000 miles of inter-county roads. The Oregon Legislature authorized \$10,000,000 of highway bonds, and the voters of Maine approved an \$8,000,000 issue, 5 to 1. The Kansas Legislature voted to submit to popular vote in 1920 a constitutional amendment to permit State road aid. The Alabama Legislature took like action, and Feb. 16, 1920, was afterwards set for a vote on a \$25,000,000 road bond issue. A bill authorizing \$30,000,000 of road bonds in Arizona was vetoed by the Governor. Texas voters, in November, killed a proposed constitutional amendment that would have authorized the Legislature to vote road bonds up to a total of \$75,000,000, but during the year more than 100 counties in Texas voted a total of some \$80,000,000 of road bonds, one county voting \$6,500,000. Of 68 Ohio counties voting on road appropriations late in 1919 only eight voted no, the 60 voting a total of nearly \$7,000,000. The Canadian Parliament voted \$20,000,000 of Dominion aid, to be made available within a period of five years, each province to receive \$80,000 a year, and the remainder to be apportioned between the provinces according to population, but the aid to any single project is not to exceed 40 per cent of its cost.

In striking contrast with the heavy bond issues of many other States the Iowa Legislature enacted a comprehensive highway improvement law in 1919 which, for the most part contemplates the pay-as-you-go plan. State aid payments will be met from motor-vehicle license fees and the balance of the money required to match federal aid will come from county or township revenues or from assessments on the property benefited. A plan has been worked out under

which 95 per cent of the population will be within $1\frac{1}{2}$ miles of an improved highway. The roads of the State have been classified into 6278 miles of primary, connecting every town of 1000 population and more, and about 98,000 miles of secondary roads. No primary road paving may be started without popular sanction at a county election. When a favorable vote has been cast the county supervisors proceed with the work in accordance with their own programme. Federal aid and motor-vehicle license fees are apportioned to the counties according to their areas. Counties may wait their turn for their portion of the federal and State aid and do all their work at once, collecting 25 per cent of the cost as an assessment on the property benefited, or they may issue 15-year bonds at once, retiring them by their allotment when received. At their discretion, county supervisors may pave a part of their secondary roads, on petition of property owners, through paving districts. If the district is on a county road then 75 per cent of the cost comes from the county road fund and 25 per cent is assessed on the property benefited; if on a township road, the county fund constitutes only 25 per cent, the township pays 50 per cent and the proper benefited 25 per cent. Under legislation passed in 1913, by 1919 some 2900 miles of Iowa roads had been graded ready for permanent surfacing, some 13,000 miles had been made partly ready, and nearly 40,000 culverts and bridges had been built. Although work is done by the counties, the State Highway Commission has a large measure of control over it. The county engineers can be removed for incompetency by the commission, must plan in accordance with commission standards, and must render accounts to that body.

A large percentage of the money hitherto spent for highway improvement throughout the country has gone into improvements the life of which is much shorter than the life of the bonds. This has been partly due to the rapid increase in the number and weight of the motor vehicles but it has come more from ignorance or defiance of sound principles of public financing. Thus, *New York State* fixed the life of its second \$50,000,000 of highway bonds at 50 years, like the first issue, although it was well known by road engineers and might have been learned by all concerned that a large mileage of the road surfaces put down with the first bond issue had worn out within a year after being put in use. A keen and concise engineering analysis of New York State experience has been made by H. Eltinge Breed, formerly first deputy commissioner of highways, New York State (see *Engineering News-Record*, Sept. 4, 1919). Mr. Breed found that from 1898, when the first bonds became available, to the close of 1918 a total of nearly \$101,000,000 had been spent in State highway construction and that since 1909, when records began to be kept, over \$30,000,000 had been spent for maintenance and repairs. For the \$131,000,000, about 8500 miles of roads had been improved, but of that mileage 1600 had already been reconstructed. Of 3525 miles of water-bound macadam and 125 miles of gravel 1400 miles had been rebuilt. Much of this mileage had, presumably, been built early in the period of two decades, but not all, for Mr. Breed cites this as an unfortunate experience with 5.14 miles of 7- and 8-inch water-bound macadam built in 1908, at a cost of \$59,500. In 1912 and 1913

this road was resurfaced with bituminous bound macadam at a cost of \$24,500, since which time \$81,000 have been expended for resurfacing and repairs, bringing the total cost of the road up to \$165,000, besides which \$8000 more was needed to make the road fit for traffic. Mr. Breed estimates that had the 1600 miles of rebuilt road been permanently built at the outset the subsequent maintenance and repair costs would have been reduced sufficiently to build an additional 400 miles of roads.

A notable feature of highway development is the extent to which the various manufacturers of road materials have organized themselves for the promotion of the use of their respective materials, for inspection work to see that the materials are properly used, and for research. Thus, during 1919, the Asphalt Association was organized, established offices in various cities, and arranged for lectures to be given at various engineering schools. The paving brick, wood block, granite block, and portland cement manufacturers are similarly organized, some of them having not only a national association but a number of sectional associations as well, with engineering staffs.

Bibliography. Blanchard, editor. *American Highway Engineer's Handbook*. See PENOLOGY.

ROBILANT, General Count MARIO DI. Italian representative at the Paris Peace Conference. He had won distinction as a brilliant soldier during the war and had represented Italy at the Supreme War Council of Versailles. He had seen diplomatic service, having been military attaché at Berlin. He became inspector general of Macedonian reforms in 1906, and was in the Turkish service when war broke out between Turkey and Italy in 1901. During the first two and a half years of the war he commanded the Italian army. In the summer of 1918 he was transferred to Versailles.

ROCHESTER, UNIVERSITY OF. A non-sectarian institution of learning located in 1850 at Rochester, N. Y., by the Baptists of the State of New York, in cooperation with citizens of the city. Since 1900 women have been received as students, a coordinate college having been established for them under the same faculty as that for the men's college. Enrollment for the fall of 1919—402 men and 275 women in undergraduate work, and 746 students in extension courses. There were 51 members in the faculty. Endowment as of June 30, 1919, was \$2,549,347. On August 1, 1919, George Eastman of Rochester, N. Y., turned over to the university \$2,000,000 to endow the new Eastman school of music. In the gift there was also set aside, \$1,000,000 for the building, and \$500,000 for land, etc., making a total gift of \$3,500,000. On Nov. 11, 1919, the university launched an endowment campaign for an additional \$1,000,000 to use for the increase of salaries of the teaching force, and up to Dec. 15, 1919, \$863,000 had been raised. These items bring the total endowment up to \$5,412,347. In the year 1918-19 the income was as follows: from the endowment, \$128,531; from other sources, \$101,383; total, \$229,914. The library contains 77,000 volumes. President, Rush Rhees, D.D., LL.D.

ROCKEFELLER FOUNDATION. See ROCKEFELLER PHILANTHROPIC BOARDS.

ROCKEFELLER PHILANTHROPIC BOARDS, THE. The Rockefeller Foundation was chartered by the State of New York in 1913

"to promote the well-being of mankind throughout the world." Although its chartered purposes are thus unlimited, it has so devoted its resources to programmes of public health and medical education throughout the world, that these have come to be regarded definitely as its fields. A gift of \$50,000,000 from Mr. Rockefeller was announced on Christmas Day, 1919, for the corporate purposes of the Foundation. A part of this addition to its resources will be used to give special aid to medical education in Canada. Its present resources in securities as reported at the end of 1919 are \$170,000,000, both the income and principal of which are available for appropriation. The emergency of the war was the only occasion for appropriations from the principal funds. Because of its extraordinary demands, the trustees voted to make available \$10,000,000 of the principal. Of this amount, \$5,000,000 was actually used. Special war gifts from Mr. Rockefeller during 1917 and 1918, amounting to \$8,500,000, were also used to help meet the urgent war demands. During 1919 the payment of pledges to various war purposes was completed, bringing the total war expenditures of the Foundation to \$22,500,000. Even during the war the Rockefeller Foundation maintained its regular work in public health and medical education. More extended activities in these fields were made possible during 1919 as fast as pledges to war work were fulfilled.

The Rockefeller Foundation accomplishes its results largely through two classes of agencies: (1) Those agencies which it creates to carry out specific programmes; (2) other existing organizations unaffiliated with the Foundation, to which it makes appropriations in order to enable them to carry specific programmes which are involved in the Foundation's regular programmes of public health and medical education. Agencies of the first class are the departmental or subsidiary boards of the Foundation: (1) The International Health Board; (2) The China Medical Board.

The International Health Board has from the beginning been under the directorship of Mr. Wickliffe Rose. During 1919 the Rockefeller Foundation made available for the use of this Board approximately \$2,000,000. This was expended in public health demonstrations and in the development of coöperative public health programmes in different parts of the world. These programmes, always in coöperation with government authority, in 1919 were carried on principally in 12 Southern States in this country in combating malaria and hookworm disease, and in 21 foreign countries, states, or islands in combating these diseases and yellow fever. Marked progress in the complete eradication of yellow fever has been made during 1919 through its Commission appointed for this purpose and headed by Gen. William C. Gorgas, Surgeon General, Retired, of the United States army. For the purpose of training native personnel and promoting greater efficiency and higher standards in public health, foreign fellowships for the study of public health in the United States have been provided. The International Health Board's Commission for the Prevention of Tuberculosis in France has continued, during 1919, its work begun during the war. As a part of its public health work the Rockefeller Foundation has directly established and is maintaining a

School of Public Health at Johns Hopkins University.

The second subsidiary board of the Foundation, the China Medical Board, is charged with the development of the Foundation's programme of medical education in China. The Foundation's appropriations for its use during 1919, including expenditures for construction, were approximately \$4,000,000. Dr. George E. Vincent, the president of the Foundation, serves as chairman and general director of this board. The China Medical Board has planned two medical centres in China, one at Peking and one at Shanghai. The premedical department of the Peking Union Medical College was opened in 1918. The regular work of the Medical School began in 1919. Plans for work on the Shanghai Medical School, postponed on account of the war, are again being considered. Aid is given by the Foundation through the China Medical Board to medical schools and hospitals already established in China, and a system of fellowships and scholarships is maintained to provide advanced medical study in the United States for American medical missionaries on furlough and for Chinese physicians and nurses.

The Foundation announced an additional subsidiary department at the beginning of 1920 to be known as the Division of Medical Education to be under the directorship of Dr. Richard M. Pearce. In addition to its work outlined above, the Rockefeller Foundation has made appropriations during 1919 to the following organizations to carry out specific work involved in its programmes: (1) The National Research Council, for the establishment of research fellowships in physics and chemistry; (2) The National Organization for Public Health Nursing, for the study of proper methods for the training of public health nurses; (3) The National Committee for Mental Hygiene, for the carrying of its regular work. The executive officers of the Foundation are: George E. Vincent, President, and Edwin R. Embree, Secretary. The offices are at 61 Broadway, New York City.

THE ROCKEFELLER INSTITUTE FOR MEDICAL RESEARCH. The Rockefeller Institute for Medical Research was founded in 1901. It has three chief departments: The laboratories of pathology, bacteriology, chemistry, pharmacology, physiology, experimental surgery, and experimental biology; a hospital for the study of special problems in clinical medicine, both in New York City; and a department of animal pathology, with its farm and laboratories near Princeton, N. J. The results of investigations are reported in various publications and ultimately assembled in "Studies from the Rockefeller Institute for Medical Research." The *Journal of Experimental Medicine* and the *Journal of General Physiology* and the *Journal of Biological Chemistry*, are published under the auspices of the institute as are a series of monographs. On November 2d, John D. Rockefeller gave \$10,000,000 to the Institute, making its total endowment \$27,000,000. During the war, the staff, laboratories, and hospital were turned over to war service, especially for the treatment of wounds and diseases most frequent among soldiers. Since then, the Institute has returned to the wide field of research in which it was engaged before the war.

THE GENERAL EDUCATION BOARD was chartered by Congress in the year 1902 for the pur-

pose of promoting educational progress in the United States. It possesses \$34,011,110.01 endowment and distributes an annual income amounting approximately to \$2,950,000. The board up to June 30, 1919, has contributed to college and university endowments the sum of \$15,698,704.61, conditional upon the raising of an additional sum of \$53,609,438, by the institutions themselves. The board makes appropriations to the State Departments of Education for the purpose of employing rural school supervisors in the following States: Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Maine, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Virginia, and West Virginia. The board has made appropriations aggregating \$6,208,774.11 for the development of medical education at Johns Hopkins University, Yale University, Washington University (St. Louis), the University of Chicago, and the Meharry Medical School (Nashville). The board makes annual appropriations for maintenance to Hampton Institute, Tuskegee Institute, several industrial and normal schools, Fisk University, Morehouse College, Atlanta University, Spelman Seminary, and other academic institutions for Negroes. Appropriations are also made for the equipment of county training schools and for the promotion of teachers' institutes, home makers' clubs, and other related activities. The invitation of the State Educational Commission of North Carolina to co-operate in a general survey of educational conditions and needs in the State of North Carolina was accepted and the survey is now being made. The Board has also maintained the Lincoln School at Teachers' College, an elementary and secondary school of experimental type. Fuller information regarding the activities of the board will be found in its annual report for the fiscal year ended June 30, 1919, a copy of which will be sent upon request. The officers of the board include Wallace Buttrick, President, and Abraham Flexner, Secretary. Address: 61 Broadway, New York City.

ROGERS, CEPHAS BRAINERD. Manufacturer of silverware, died at Meriden, Conn., March 15. He was born at Saybrook, Conn., Dec 30, 1836, and formed the firm of C. Rogers & Brothers in 1866, which in 1902 was united with the United States Silver Co. He retired in 1903. He was an official in several other important financial enterprises of the State.

ROLL, ALFRED PHILIPPE. A well-known French painter, died in November. At the time of his death he was president of the National Society of Beaux-Arts. He was born in Paris in March, 1846, studied under Gérôme and Bonnat who at once perceived his talent. He was especially skilled in his drawing and color and his numerous paintings show extraordinary variety in execution and in subject. Among his earlier works was a successful painting from military life called "Halt." This was followed by subjects from the life of peasants and artisans, including "The Strike" (1880), "Work" (1885), and "The Flood at Toulouse"; several paintings showing great skill in depicting crowds, such as "The Centenary" (the 5th of May, 1879), "War" (1887), and "The Annual Fête of the 14th of July 1880"; the celebrated painting of the "Dedication of the Alexander III Bridge"; paintings on rural subjects, showing a skillful handling of light, "In Normandy";

"Manda Laméttrie, Fermière" (1888), and "Woman with a Bull" (1889); paintings showing especial skill as draftsman, such as "The Changes of Life" (1892-96). Besides these were many purely decorative paintings and a large number of expressive portraits as well as a great variety of miscellaneous studies, landscapes, marine scenes, etc. His works were exhibited in New York in 1915.

ROMAN CATHOLICS. The aftermath of the great World War made 1919 one of the most important of recent years in the affairs of the Church at home and abroad. Repeatedly during the year Pope Benedict XV raised his voice for a Christian peace and a true reconciliation of the warring nations. In his allocution to the Cardinals on Christmas eve he declared that mankind must again become reconciled to God if peace is to reign among men. Representing him, Archbishop Cerretti, Under-Secretary of State and former member of the Apostolic Delegation at Washington, appeared before the delegates of the Allied Nations at Paris and obtained concessions in regard to the former German and Austrian missions and voiced a protest against placing the control of the Holy Land in anti-Catholic influences. Several nations were added to the representatives at the Vatican, and a new rapprochement between France and the Holy See was hinted at. The dismemberment of Austria created several difficult situations in the new states. In Italy the Catholic party gained so large a representation among the Deputies that the government was forced to seek their aid against the Socialist opposition to keep in power. In Belgium the Catholic members of the Chamber of Deputies were largely reduced. In Switzerland the Catholics elected the second largest group in the national assembly, selected a Catholic as President, and had several laws inimical to them repealed. In Holland and Spain Catholics are active in the work of reconstruction. In Argentina the Catholic Social Union organized a popular campaign for the re-establishment and promotion of social peace for the details of which in the first drive \$13,000,000 was collected. In Mexico most of the exiled bishops were allowed to return to their sees and the persecution of the Church partly ceased.

In the United States the National Catholic War Council, through its Administrative Committee, Bishops Muldoon, Schrembs, Russell, and Hayes, issued a pamphlet on *Social Reconstruction: A General Review of the Problems and Survey of Remedies* which formulated a very notable labor programme and emphasized some startling truths concerning social justice that attracted immediate public attention. "The majority of workers," it declared, "must somehow become owners, at least in part, of the instruments of production."

Under date of April 10th the Pope sent a letter to Cardinal Gibbons commending a proposal that the hierarchy of the United States should hereafter hold an annual meeting to discuss and promote the interests and welfare of the Church. This plan was suggested at the belated celebration of the golden episcopal jubilee of Cardinal Gibbons held on February 20th when Archbishop Cerretti, representing the Pope, Cardinal Bégin of Quebec, Archbishop Orozco of Mexico, and more than 80 other prelates joined in personal tributes to the Baltimore Metropolitan and made him a gift of \$50,000. The first of these pro-

posed annual gatherings of the hierarchy accordingly met in Washington, holding four sessions, September 24th-27th, at which 92 prelates attended, his Eminence Cardinal Mercier of Belgium and his auxiliary, Bishop de Wachter, also being among the visitors. This was the first time that the hierarchy of the United States had convened in a general assembly since the Third Plenary Council, at Baltimore, in 1884. Of that Baltimore gathering Cardinal Gibbons was the only survivor. He again presided and the outcome was the organization of the National Catholic Welfare Council to further the religious, educational, and social well-being of the Church in the United States; to aid the press and promote Catholic publicity, to assist all recognized agencies for foreign and home missions, and to provide regularly and efficiently for all public interests of the Church in the United States. In the intervals between the annual meetings of the hierarchy, which have only an advisory but no canonical legislative authority, an administrative committee of seven members, Archbishops Hanna, of San Francisco; Dougherty, Philadelphia; and Dowling of St. Paul; Bishops Canevin, Pittsburgh; Muldoon, Rockford; Russell, Charleston, and Schrems, Toledo, will direct the preparation of reports on all Catholic activities, through five boards, for presentation to the general meeting. It was also decided to make a full and accurate census of the Catholic population, and to ask from Rome more definite instruction on various points in the new code of canon law. A committee was named to consider secular legislation affecting education and other Catholic interests. The administrative committee met in Washington on December 10th, established a permanent office at 1312 Massachusetts Avenue, and formally organized its executive under the chairmanship of Archbishop Hanna. The details of the September conference were embodied in a pastoral letter from the hierarchy, dealing with the various important social and religious problems of the day, to be issued early in 1920.

The Catholic Educational Association held its 16th annual convention at St. Louis, June 23d-27th; the Hospital Association at Chicago, June 25th-27th, and the Superior Council of the St. Vincent de Paul Society at Detroit October 16th-19th; the Knights of Columbus at Buffalo, August 5th. At the latter elaborate plans were outlined to continue in the social reconstruction movement, the organization for welfare work started during the war.

Three cardinals died during the year: Francisco di Paola Cassetta, Bishop of Frascati, March 23; Felix Von Hartmann, Archbishop of Cologne, November 11; Joseph Mary Cos y Macho, Archbishop of Valladolid, December 18. The Pope held a consistory on December 15th and created seven new cardinals: Filippo Camassei, Patriarch of Jerusalem; August Silj, Archbishop of Caesaria; Juan Soldevilla y Romero, Archbishop of Saragossa; Teodoro Valfre di Bonzo, Archbishop of Trebizond; Alessandro Kakowski, Archbishop of Warsaw; Edmund Dalbor, Archbishop of Posen; Adolf Bertram Prince-Bishop of Breslau. The latter was one of the two names "reserved" at the previous consistory. The College of Cardinals now has 64 members with one "reserved in petto." There are 32 Italians and 31 non-Italians; 12 were created by Leo XIII; 30 by Pius

X; and 22 by the present Pope, during whose reign 23 cardinals have died. The oldest Cardinal is De Cabriers, Bishop of Montpellier, who is 89; the next is Cardinal Gibbons, 85. The senior in service is Cardinal Netto of Portugal, created March, 1884; the next is Cardinal Gibbons, June, 1886.

The deaths of these American bishops were recorded in 1919: John F. Cunningham, of Concordia, Kan., June 23; Philip J. Garrigan of Sioux City, Iowa, October 14, and Maurice P. Foley, of Jaro, P. I., August 11. The changes in the hierarchy were important. On February 3d Bishop Austin Dowling of Des Moines was made Archbishop of St. Paul; the Rev. Edmund F. Gibbons of Buffalo, N. Y., Bishop of Albany; the Rev. William Turner, of Washington, D. C., Bishop of Buffalo; Bishop Edward F. Kelly, Auxiliary of Detroit, Bishop of Grand Rapids, Mich.; and the Rev. William A. Hickey of Clinton, Mass., coadjutor Bishop of Providence, R. I. On March 3rd the appointments of Bishop Patrick J. Hayes to be Archbishop of New York, and of the Rev. Albert Anthony Daeger, O. F. M., to be Archbishop of Santa Fe, N. Mex., were officially announced; and on April 2d that of Rev. T. W. Drumm of Cedar Rapids to be Bishop of Des Moines, and November 23d of the Rev. John G. Murray to be auxiliary of Hartford, Conn. The Rev. W. F. X. O'Hare, S.J., of Boston, was named Bishop of Jamaica, W. I., October 19.

According to the *Anuario Ecclesiastico*, the official year-book of the Vatican, in addition to the 64 Cardinals the hierarchy of the Church is made up of 214 Archbishops (residential), 862 Bishops (residential), and 563 titular Bishops and 23 Abbots having their own territory. The Church in the Orient has 6 Patriarchates, 22 Archbishops, 49 Bishops, and 6 Vicariates Apostolic. In different parts of the world the Church has 8 Apostolic Delegates, 178 Apostolic Vicars, and 70 Apostolic Prefects. In November the establishment was announced of an Apostolic Delegation in Japan, with Archbishop F. B. Pietro as first Delegate. Archbishop A. Mascella was consecrated as Nuncio to Chili, on December 28th and Archbishop Pisani appointed Apostolic Delegate to India. The missions in India which previous to the World War were generally served by German priests have been given partly in charge to the American Jesuits, and a number went there during the year to care for the Patna district in the northern section.

The ranking prelate of the hierarchy of the United States is the Apostolic Delegate to Washington, the Pope's personal representative, his Excellency Archbishop John Bonzano. After him come the 14 Archbishops (two of them Cardinals, Baltimore and Boston); 97 bishops, and 20,588 priests—of these 5536 belong to the regular orders. Other totals from the *Official Catholic Directory* show that there are now in the United States 10,460 churches with resident pastors; 5537 mission churches; 110 seminaries with 7865 students for the priesthood; 5788 parish schools with 1,633,599 pupils; 294 orphan asylums and 46,069 inmates; 116 homes for the aged; 216 male colleges and 674 academies for girls. The Catholic population is rated at 17,549,324 for the Continental United States, an increase of 8,471,459 in the previous 25 years. If the Catholic population of Alaska, the Canal Zone, the Virgin Islands, Guam, Samoa, Hawaii,

Porto Rico, and the Philippines is added to the above total it will bring the number of Catholics resident under the American flag up to 26,332,650. There were 762 secular and 264 priests of religious orders serving as chaplains in the army and navy during the World War. In 28 States there is a Catholic population of 100,000 or over, the leaders being New York, 3,089,266; Pennsylvania, 1,867,000; Illinois, 1,481,799; Massachusetts, 1,406,845; Ohio, 866,715; New Jersey, 746,319; Michigan, 631,508; Louisiana, 618,869; Wisconsin, 592,233; California, 589,000; Missouri, 538,692; Connecticut, 523,795.

The Catholic periodicals and publications in the United States number 313, divided as to frequency of issue into: Quarterlies, 35; bi-monthlies, 7; monthlies, 105; semi-monthlies, 7; weeklies, 137; tri-weeklies, 2; bi-weeklies, 5; dailies, 8; irregular, 9. In addition to these there are 72 college publications. The languages used are English, French, German, Polish, Bohemian, Lithuanian, Spanish, Slovak, Slovenian, Croatian, Hungarian, Italian, Russian, Ruthenian, and Rumanian. The dailies are German 2; Polish 2; Bohemian, French, Lithuanian, and Slovenian 1 each; none in English; the nearest is a tri-weekly.

The solemn reading of the decrees confirming the miracles proposed for the Canonization of Joan of Arc took place at the Vatican on April 7th, and of those for the beatification of Louise de Marillac de Gras, founder of the Sisters of Charity, on March 10th. The ecclesiastical court at Quebec has directed the further promotion of the details for the beatification of Father Isaac Jogues, martyred by the Mohawk, N. Y., Indians.

ROOSEVELT, THEODORE. Ex-President of the United States, died at Oyster Bay, Long Island, N. Y., on the morning of January 6th. He had been ill for several weeks before. In fact he had not enjoyed sound health since his explorations in South America before the war, when he contracted a severe fever. He had latterly undergone more or less serious operations and in 1918 he was a sufferer from sciatica and inflammatory rheumatism, but continued his work in disregard of his health. Only a month before his death he was under treatment in a New York hospital, but returned to Oyster Bay at Christmas. Among the latest reports concerning him was a statement to the effect that he was preparing a definite declination to stand as candidate for the presidential nomination in 1920, and it was also said that he had intended soon after the peace was signed to pay a visit to France.

He was born in New York City, Oct. 27, 1858, a descendant of one of the Dutch families that had come to New York when it was still known as New Amsterdam. One of his ancestors on his mother's side had been a revolutionary governor of Georgia. He suffered from ill health during his youth; was educated at Harvard University, studied law at Columbia University, but did not practice. When a young man he showed more interest in natural history than in politics, and gave no especial promise of a conspicuous career. After leaving the university, however, he began to take an interest in politics, and in 1881 he was elected from New York City as a member of the Assembly, being the youngest representative in the Legislature at that time. He took his stand from the first against political

corruption and at the time of a judicial scandal in the State demanded the impeachment of the judges. Attention was drawn to him as a promising representative of the better element, and an advocate of political reform. He was elected delegate at large from New York State to the Republican National Convention of 1884, where he attempted to prevent the nomination of James G. Blaine. When power passed to that element of the party, with which he did not sympathize, he remained for a time out of politics. He passed two years upon a ranch in North Dakota, where his wholesome and active life not only restored him to health, but laid the foundation of his extraordinary physical vigor. In 1889 he was appointed civil service commissioner at Washington, having been prominent in the civil service reform movement and having secured the passage of the first civil service law in New York State. He administered the office with success, introducing many reforms, and while making many enemies won the esteem of the friends of honest government. His next important service was as police commissioner of New York City, an office that he administered with vigor and with success. In 1897 he was appointed Assistant-Secretary of the Navy under President McKinley. While in this office, realizing that intervention in Cuba was bound to come, he was active in the building up of the navy. He served, however, only a year, for the war with Spain drew him into the Cuban campaign. He was resolved to go to the front and to that end recruited a regiment of his own, known as the Rough Riders, consisting, among others, of men from the plains, cow boys, and many personal acquaintances and friends. His part in the war was creditable, but its importance from the military point of view was perhaps exaggerated, owing to certain dramatic aspects of it. He fought with his regiment at Las Guasimas and at San Juan Hill, and during the delay before the fall of Santiago in the summer of 1898, he drew much attention by the so-called "Roosevelt Round Robin," a protest published in the United States against certain vices in the army administration.

Then occurred his candidacy as governor of New York State. He was elected and assumed office at the beginning of 1899, but after six months was nominated as Vice-President, along with McKinley for the presidential election of 1900. This was taken as an indication that politicians of New York State believing he would carry out with embarrassing vigor a programme of administrative reform, decided to shelve him. The plan, if it was intended, failed, for after six months occurred the assassination of President McKinley and the succession of Mr. Roosevelt to the presidency. On all sides it was expected that Mr. Roosevelt who had shown himself impulsive and headstrong throughout his career would insist on having his way, and would quarrel with the party. On the other hand he proceeded cautiously and with tact. He did not sympathize with the indiscriminate attacks upon the corporations on the one hand or with the policy of leaving them entirely to their own devices on the other. Steering a middle course he demanded publicity of accounting and a sane control of business, and he created a new government department, the Department of Commerce and Labor, with full authority to investigate the trusts. Other features of his adminis-

THEODORE ROOSEVELT

tration were: The successful carrying of the Cuban reciprocity system; the exposure and prosecution of the Post Office graft; the dissolution of the Northern Securities Railway combination; and the settlement of the coal strike of 1902. Almost all his acts were the subject of controversy, opinions dividing bitterly on each issue. His settlement of the coal strike was particularly exasperating to the conservative element among the employing class and its dependents, and his ruthless disregard of party expediency in many instances alienated a group of powerful politicians. There was therefore strong opposition to him when he ran for reelection in 1904. But the great organizer of conservative Republican politics, Senator Mark Hanna, died suddenly and the Democratic opponent, Judge Alton B. Parker, turned out to be a not very formidable rival. The result was a comparatively easy victory for Mr. Roosevelt for a second term. He expressed the idea of his mission as chiefly one of education, saying, "My problems have been moral problems and my teaching has been morality." Details of his second administration will be found in the issues of the YEAR BOOK during that period.

It was in his direction of foreign affairs that he became known especially throughout the world. In this field one of the outstanding features was the intervention in the war of the Far East between Russia and Japan, as a result of which the treaty between the two nations was concluded at Portsmouth. Through Roosevelt's influence Japan withdrew some of her most pressing demands, especially her claim for an indemnity, and peace was secured on a basis that seemed to promise permanence. This brought him prominently before the whole world, and resulted in his getting the Nobel prize of 1907. The great event of his career in relation to the American continent was of course the Panama Canal, which stands in a sense as his monument. He solved the difficulties that stood in his way by a course that has ever since been criticized by certain elements in his own country and in Latin-America, namely—the creation of the Panama Republic out of a province of Colombia that had developed revolutionary tendencies. In his Latin-American policy and in fact throughout the entire course of his foreign policy, he was ably seconded by his Secretary of State, Mr. Elihu Root. The general spirit of the new policy introduced by him in Latin-American affairs was that the United States would be responsible for the good behavior of the weaker states in this hemisphere. In the Far East, American diplomacy won a new footing as the result of the Peace of Portsmouth; the sending of the American fleet around the world; the return to China of the American share of the Boxer indemnity; and the open door diplomacy in the Far East which had been carried out by the skillful hands of the late Secretary Hay. His firmness in the defense of American rights was shown by his handling of the Venezuela difficulty in 1902, when he prevailed upon England and Germany to submit their pecuniary claims to arbitration.

His first wife was Alice Hathaway Lee, who died Feb. 14, 1884, and his second Edith Kermit Carow who survived him. By his first wife he had one daughter and by his second four sons and one daughter. His eldest daughter, Alice, married in 1906 the Ohio Congressman, Nicholas

Longworth. His other children were in the order of birth: Theodore, 1887; Kermit, 1889; Ethel, Archibald, and Quentin, the last named being the youngest, born in 1897. All four sons served during the War of the Nations in the course of which Quentin, who had risen to the rank of lieutenant, was killed in an air fight in July, 1918; and Archibald, who became captain in the service, was wounded. Kermit, who also rose to the rank of captain, served with distinction in the British royal artillery in Mesopotamia, whence he was transferred July, 1918, to the American artillery in France. Theodore, after graduating from Harvard, going into business, and serving in the war, devoted himself to a political career, and was prominent in politics in 1919, being elected in November to the New York Assembly on the Republican ticket by the largest majority ever given to a candidate from his district.

ROSSELL, WILLIAM TREAT. American army officer, died at New Brighton, Staten Island, October 11. He was born at Mt. Vernon, Ala., Oct. 11, 1849, and graduated at the United States Military Academy in 1873. He served on the Atlantic and Gulf coasts, and on the Ohio and Mississippi Rivers as engineer, and was a member of the Mississippi River Commission, 1906-13, and president of the Board of Engineers for Rivers and Harbors, 1909-13. After his retirement from active service on Oct. 11, 1913, he was engaged on the Highway Commission of New York State as advisory engineer in 1914, and was Federal Commissioner of the New York Harbor Line Commission, 1915. During the war he was called again into active duty, April, 1917.

ROSSETTI, WILLIAM MICHAEL. British author, died at London, England, February 5. He was born Sept. 25, 1829, a son of Gabriele Rossetti. Among his writings may be mentioned the following: A blank-verse translation of Dante's Comedy, *The Hell*, (1865); *Fine Art, chiefly Contemporary*, (1867); *Lives of Famous Poets*, (1878); *Life of Keats*, (1887); *Dante G. Rossetti as Designer and Writer*, (1889); *Memoir of Dante G. Rossetti*, (1895); *Gabriele Rossetti* (translated autobiography, 1901); *Some Reminiscences*, (1906). He was editor of the *Germ*, (1836); of Shelley's *Poems*, (1870); of Chaucer's *Troilus and Criseyde*, (1875); of Moxon's *Popular Poets*, (1870); of Wm. Blake's *Poems* (Aldine edition, 1874); of *Poems by Dante and Christina Rossetti*, (1886, 1896, 1904); of *Ruskin, Rossetti, Preraphaelitism*, (1898); of *Preraphaelite Diaries and Letters*, (1900); of *Rossetti Papers*, (1862-1870, 1903); *Dante and his Convito*, (1910).

ROTHSCHILD, Baron LAMBERT. Brussels banker, died January 30, in Paris. He took an active part in the World War, aiding in the creation and operation of the Belgian Relief Commission. In 1914 he guaranteed the payment for 38,000 tons of foodstuffs purchased through Herbert C. Hoover. This was the first purchase made by the organization which later became the Commission mentioned. He also assumed responsibility for part of the \$10,000,000 tribute demanded by von Bissing from the city of Brussels. He and his wife played a part in bringing Rumania into the war on the side of the Allies, the Baroness escaping arrest for her activities only through the intervention of Brand Whitlock, the American minister. The

Baron was held hostage by the Germans in 1914 until \$2,000,000 was paid. He was wounded while serving with the Belgian army.

ROWING. Rowing regained its pre-war popularity in 1919 despite the fact that the inter-collegiate regatta on the Poughkeepsie course of the Hudson River was not held. An international happening of importance was the victory scored by Alfred Felton of Australia on the Thames, England, over Ernest Barry for the world's sculling championship. Barry had held the title since 1912 but Felton proved an easy winner, his margin being six lengths.

The annual races between Harvard and Yale were rowed over the New London course for the first time since 1916 and greatly to the surprise of the experts the Blue carried off the laurels in the varsity event. Yale's time was 21 minutes 42½ seconds and Harvard's, 21 minutes 47½ seconds. The Harvard crews were victorious in both the second varsity and freshman contests.

The crew of the United States Naval Academy had a most successful season, defeating Pennsylvania and Syracuse in the American Henley. The Childs Cup race was won by Pennsylvania but the Quakers later bowed to Cornell in a dual race. Yale triumphed over Princeton in an early season contest.

It was estimated that more than 25,000 persons witnessed the National Regatta events held on the Connecticut River at Worcester, Mass. The Duluth Boat Club as in the past captured the majority of the honors. Jack Kelly of the Vesper Boat Club of Philadelphia was the individual star, winning the sculling title in easy fashion and establishing a new amateur record of 1 minute 14¾ seconds for the quarter-mile.

The Oxford-Cambridge race was again postponed. This classic has not been held since 1914 but it is expected that 1920 will see its revival.

RUBBER. The production and consumption of crude rubber tended toward normal in 1919 with the gradual removal of restrictions and other war measures. The plantation crop was estimated at about 320,000 tons to which could be added some 40,000 tons of wild rubber, giving a total production for the year of about 360,000 tons. The production in 1920 was estimated at between 360,000 and 370,000 tons; for the 1921 crop, 381,000 tons; for 1922, 403,000 tons, and for 1923, 430,000 tons, these amounts being based of course on the plantations.

In addition to the United States whose imports are given below, the United Kingdom was expected in 1919 to take about 40,000 tons; France 30,000 tons, Italy 15,000 tons, Canada, 10,000 tons, Japan 10,000 tons, and the rest of the world 25,000 tons, a total consumption of 350,000 tons out of the 360,000 tons produced. The consumption in 1919 was estimated as sufficient to take care of the production and that was anticipated for 1920 and 1921 also.

As distinct from the consumption of rubber British capital owned in 1919 approximately 80 per cent of the production sources in the form of the plantation rubber industry. From July, 1914, to June, 1915, the United States took 141,000 tons of rubber and the United Kingdom 21,000; in the 12 months from July, 1918, through June, 1919, the United States took 180,000 tons and the United Kingdom only 50,500 tons, and as Great Britain has a large transit trade, a great part of this even was reexported as crude rubber.

In 1919 shortage of labor was felt on the rubber plantations of the Straits Settlements, where cheap coolie labor had been employed, and there was beginning to be a demand for agricultural machinery such as tractors and harvesters whose extensive use was being discussed.

The total importations of crude rubber into the United States in 1919 amounted to 226,033 tons as compared with 156,230 tons in 1918. The government restrictions on imports had been done away with in December, 1918, but other causes still existed and served to reduce what would have been used if available.

The increases in 1919 over 1918 were due in a large measure to the broad demand, and it was clearly evident that the industry in the United States was steadily expanding. This was shown by the plans that were being discussed for the opening of a rubber exchange in New York so as to facilitate trading in this commodity.

U S RUBBER IMPORTS, CALENDAR YEAR 1919

Plantations	192,270
Paras	27,058
Africans	3,340
Central	1,422
Guayule	1,501
Manicobas & Matto Grosso	442
Total	226,033

The prices of crude rubber in the New York market showed considerable fluctuation but with a downward trend as increased ocean shipping became available. In January upriver fine rubber declined from 64½ cents to 58 cents and with minor fluctuations reached a low point of 47½ cents in the middle of December, closing the year at 49 cents. First latex crepe opened the year at 58 cents, which figure it reached again in February after a decline, and then fell steadily until July when a bottom of 40 cents was touched. The same in general held true for smoked sheet ribbed rubber, which went to 38½ cents in July. From this point with increased demands, and with but few recessions prices began to go up, finishing the year with 55 cents for both first latex crepe and for ribbed smoked sheets.

In 1919 The Rubber Association of America published statistics it had compiled dealing with the number of employees, total production, and crude rubber consumed in the rubber industry 1917-18. One hundred three out of 452 manufacturers furnished information, but these represented 73 per cent of the rubber output in 1917; and the same percentage was therefore employed in estimating the totals for 1918. The number of employees reported by the minority was 151,078 in 1917 and 148,787 in 1918, a diminution of 3896 or 1.88 per cent. Applying this percentage to the total number reported in 1917 gives 203,818 as the total number of employees in 1918. The 103 manufacturers sold \$819,159,105 worth of goods in 1918 as compared with \$654,948,376 in 1917, an increase of 26.4 per cent. Applying the same method to the total sales, \$1,122,135,760 was given as the estimate for 1918 compared with the \$895,816,248 reported for 1917. It was stated that the product of the 103 in 1918 was very nearly equal to the total product of 1917. The total amount of crude rubber used in 1918, 322,606,605 pounds, was only a little over 5 per cent more than the 306,113,652 pounds consumed in 1917.

While the total amount of rubber used for tires increased slightly, 237,168,347 pounds in 1918 and 233,386,796 pounds in 1917, the quantity used for other rubber goods was greater relatively, so that the proportion of rubber for tires was a shade under three-fourths of the total in 1918 instead of a little above as in 1917. The increase in boots and shoes was about a sixth, 31,468,843 pounds; that in mechanical goods very slight, 22,101,528 pounds and that in other products almost a third, 31,897,887 pounds.

The importance of rubber products in the war was shown in the statistics of the total amounts of rubber material purchased by the Motors and Vehicles Division of the Office of the Quartermaster-General, Director of Purchase and Storage, from April 18, 1918, when the procurement of motor vehicles, tires, and spare parts was consolidated in the Quartermaster Corps, and all the motor vehicle procuring organizations of all the corps of the Army from April 6, 1917, to Dec. 16, 1919. These were as follows:

Article	Quantity	Value
Tires	325,983	\$13,655,363.72
Tubes	898,092	2,381,439.84
Casings	784,145	15,654,601.56
Class "B" Solids (original equipment)	108,127	4,798,552.38
Hose and tubing	576,936	105,851.69
Patches (tires)	121,873	21,096.18
Vulcanizing rubber	729	552.94
Battery parts, hard rubber	17,028	1,999.62
Miscellaneous	2,188	822.13
Grand total		\$36,570,280.06

The cancellation of tires and tubes made up to June 30, 1919, amounted to 159,974 units, or 2,704.69 tons

Noteworthy progress was made in attempts to provide for future reserve or emergency supplies of rubber in the United States independent of imports from distant tropical countries. This was marked by the publication of "A Rubber Plant Survey of Western North America." By Harvey Monroe Hall and Thomas Harper Goodspeed at the University of California Press, Berkeley, Cal

In this important work there were recorded the results of an extensive botanical survey of the Great Basin region for rubber-producing plants, begun in 1917 as a war-emergency measure.

During 1918 this developed into a comprehensive search throughout the West for all species known or suspected to contain rubber. The survey was to be continued to determine the possibilities of rubber production in the West. Rubber was found in 25 of the species examined, although in only four was it high enough to warrant the hope for its recovery on a commercial scale.

The *Chrysothamnus*, or "rabbit brush," was found very widely distributed and according to the investigators could supply a rubber to which they have given the name of chrysil. This is found in the individual cells of the shrub as in guayule, principally in the parenchymatous elements of the cortex and not in the latex. The rubber is found in the older and larger shrubs in the inner bark of the stems. The investigators found that the plants range in altitude from about sea level in some of the desert basins to 8000 feet in the Southern Colorado mountains. The plants were most abundant and of maximum

size in the Great Basin area, becoming more and more scattered and apparently diminishing in their percentage of rubber as this centre of distribution was departed from.

The best samples carried only 3 per cent of rubber and most of them ran less than 2 per cent.

An estimate of what might be expected as to extracted product was given as follows:

Districts	Pounds
No. 1—East Central California and adjacent Nevada	3,280,000
No. 2—Mojave desert, California	400,000
No. 3—Northeastern California and adjacent Nevada and Oregon	1,000,000
No. 4—West Central Nevada	7,680,000
No. 5—Northern and Central Nevada	23,700,000
No. 6—Utah	20,000,000
No. 7—Colorado	24,300,000

There are other regions and other rubber bearing plants which would doubtless bring the possible available supply up to 300,000,000 pounds

An interesting American rubber project on which progress was being made in 1919 involved the planting of new rubber areas in the Philippine Islands, particularly in Mindanao. Here large tracts had been cleared in 1918 and 1919 for planting with *Hevea*. This was chiefly the work of Dr. J. W. Strong, representing American capitalists and was of great interest as there was unquestionably a wonderful field for rubber plantations in the southern islands as in the British and Dutch possessions to the north and west. It was thought that once this work was started with proper government support the industry might be made important.

Another new source of rubber production was Papua or British New Guinea which was entering the plantation rubber field in earnest. One company in 1919 had nearly 2000 acres with 152,000 trees, over 50,000 of which could be tapped. It produced 89,928 pounds of rubber in 1918 as compared with 54,303 pounds in 1917. Another company has 920 acres planted with *Hevea*. It was thought that with a rise in the price of rubber, or if Australia would establish preferential trade conditions, the Papuan rubber might compete in Australia with that from Singapore.

In Germany government management of the rubber industry ended by a notice dated September 20th, and taking effect September 21st. Thus the German Imperial Minister for Industry officially ended the confiscation of and obligation to register crude rubber, gutta percha, balata, reclaimed rubber, asbestos, partly or wholly finished manufactures, and also the prohibitions against producing them. Provision also was made for the dissolution of The Association for the Sale of War Tires at the end of the year while the prohibition of importation of automobile tires was formally retained, nevertheless, adequate quantities were to be admitted free in so far as German industry could meet the demand but the question was largely one of securing adequate crude rubber and fuel for the plants. A more serious difficulty was the procuring of the necessary textiles.

The Hamburg crude rubber market sought to resume business on a small scale but the question of international exchange and credits even with Holland was a serious matter and terms were unfavorable.

In Italy efforts were being made to develop the rubber industry by establishing preferences.

Italy's consumption of raw rubber had increased four-fold in the period 1910-18. In the last named year it imported 7545 metric tons of crude rubber. Turin and Milan were the important centres for the rubber and allied industries, though there were factories also at Genoa, Leghorn, and Naples. These employ about 20,000 workmen and produce every kind of rubber article; automobile, motorcycle and bicycle tires are the most important and the output of insulated wire and cables is very large. A Royal decree issued in 1919 regarding telephone equipment gave the preference and a protection of 10 per cent to Italian goods, produced by Italian capital and labor and using native material, and next to foreign firms, established in Italy and producing their goods in that country a preference and a protection of 5 per cent.

An interesting statement of the amount of *Hevea* rubber yielded per acre on the average in the various rubber plantation districts of India, Ceylon and the British and Dutch East Indies was published in the *Bulletin of the Rubber Growers' Association of South India*. A summary follows:

	Average pounds per acre		
	1917	1916	1915
Ceylon	312	253	248
South India	218	232	187
Johore	298	283	328
Negri Sembilan	298	283	228
Perak	382	367	353
Selangor	344	340	331
Straits Settlements	247	252	243
Sumatra	326	309	305
Java	322	303	253
Borneo	226	224	170

The highest record in the list was 607 pounds in a Selangor estate in 1917, the lowest 81 pounds in the Straits Settlements in 1916.

RUBINSTEIN, ARTHUR. See *MUSIC, Artists, Instrumentalists*.

RUMANIA. A European constitutional kingdom situated on the Black Sea, including the former principalities of Wallachia and Moldavia, and the territory of Dobruja. It is separated from Hungary by the Carpathian Mountains and the Transylvania Alps, from Bulgaria by the Danube River, and from Russia by the Pruth River. Capital Bucharest. During the German occupation in 1916 the government was removed to Jassy but returned to Bucharest after the defeat of the Central Powers. On Jan. 11, 1919 the government by royal decree annexed the territory of Transylvania which on Dec. 2, 1918 had declared its independence of Hungary. (See preceding YEAR BOOK.) The area and population in the following paragraph were somewhat indeterminate because the exact limits of the country were not fixed in 1919. It was estimated that its area in May, 1918, was about 50,720 square miles.

AREA AND POPULATION. The area and population were indeterminate in 1919 because the exact limits were not fixed. Before the War of the Nations, the area was given at 53,489 square miles, including the territory taken from Bulgaria by the treaty of Bucharest, Aug. 7, 1913, which had an area of 2969 square miles. The population according to the census of Dec. 19, 1912 was 7,508,009. This includes an estimate of the population acquired as a result of the Balkan wars, which consisted for the most part of Turks, and comprised the two depart-

ments of Durostor and Caliacra. The four historic divisions of the country with their populations in 1912 are as follows: Wallachia, 3,298,394; Moldavia, 2,145,464; Oltemia, 1,413,897; the Dobruja, 381,306. The capital Bucharest had a population on Jan. 6, 1917, of 308,987. The other large towns with their populations for 1914 are: Galatz, 72,512; Braila, 65,911; Ploesti, 57,376; Craiova, 51,877.

PRODUCTION, ETC. The leading crops are wheat, corn, barley, oats and rye. No later figures for acreage under crops are available than those given in the preceding YEAR BOOK, which date from 1914 when the acreage of plowed lands was placed at 13,074,922. The forests had an acreage of 6,935,120 of which 2,712,582 were State-owned. The chief industries are timber felling and sawing, sugar (from beets), and, above all, the petroleum industry. Among the smaller industries may be mentioned, barge and boat building, boot and shoe-making, tanning, stone-quarrying, and coal-mining. In the new province of Transylvania there are coal and iron industries and some steel is produced. The clothing of the population is produced in local manufactures and to some extent from cloth manufactured in the country, but also from imported cottons. The city populations wear European clothing. In 1919 it was reported that the year's crops of cereals would be sufficient for the needs of the population and that there would be no necessity for further distribution of food and clothing in the form of relief. According to the department of statistics at Bucharest, the extent of the wheat sowing for 1919 was 1,200,000 hectares (1 hectare = 2.47 acres) for the old Kingdom of Rumania—or about 60½ per cent of the surface devoted to this cereal in normal times. The crop in general was good and may be estimated, on an average, at 16 hectolitres (1 hectolitre = 2.8 bushels) per hectare, which would bring the total production to more than 145,000 carloads. No recent figures for finance were available. According to a British authority, the debt on June 30, 1918, was £210,680,000, and the revenue and expenditure (estimates of 1916-17) balanced at £25,828,772.

FOREIGN CAPITAL. In 1919 the Rumanian minister of industry and commerce pointed out that despite the size and wealth of the country, as well as the protectionist policy of the state and special laws for the development of national industries, Rumanian capital was relatively unimportant in industry. The great industrial enterprises which developed in Rumania and are based on the natural resources of the country belonged, he said, almost exclusively to foreign capital. After calling attention to the probable cause of this state of affairs, which he ascribed mainly to the preference of Rumanian capital for immediate returns from investments in purely commercial lines and real property, he indicated the relative importance of foreign capital as follows: Of a total of more than 500,000,000 lei (\$96,500,000 at normal exchange) invested by foreigners in Rumania, the Germans controlled 23.7 per cent; the Dutch, 19.5 per cent; Great Britain, 18.8 per cent; Austria-Hungary, 12.9 per cent; Belgium, 11.3 per cent; France, 7.3 per cent; the United States, 4.8 per cent; Italy, 1.4 per cent; Bulgaria, 0.4 per cent. By far the greater part of this capital was invested in the petroleum industry, the only exceptions being in

the case of Austria-Hungary, which had most of its capital invested in the exploitation of Rumanian forests; Belgium, which controlled the sugar industry, and Bulgaria, which controlled three small mechanical factories. Foreign capital represented 80.2 per cent of the total paid-up capital, both Rumanian and foreign, invested in industry in the country, and Germany and Austria-Hungary were represented by 36.4 per cent of the total foreign capital so invested.

GOVERNMENT. Under the constitution dating from 1866 and modified in 1879 and 1884, the legislature consists of a senate and a chamber of deputies, elected by indirect vote, subject to various qualifications in respect to income and the payment of taxes. The King has a suspensive veto. Executive power resides in a council of ministers. The King in 1919 was Ferdinand I (born, Aug. 24, 1865), who succeeded to the throne Oct. 11, 1914; Crown Prince Carol (born Oct. 15, 1893). The ministry at the beginning of 1919 was under the premiership of J. J. C. Bratiano who was also minister of foreign affairs (appointed Dec. 14, 1918).

HISTORY

After the expulsion of the army of occupation the country was governed by decrees issued by the council of ministers and sanctioned by the king. King Ferdinand approved by decree of January 10th, the official pact of union. The movement against the government in January and February ended in open revolt. It arose from food scarcity, industrial unrest, political propaganda, and the bad state of the national finances. Rumania was fighting on the one hand with Soviet Russia and on the other with Bolshevik Hungary, her chief motive apparently being the acquisition of territory. This at least was the prevailing view in the Allied press, but there were strong defenders of her course, especially in France, who denied that it was marked by the spirit of aggression. King Ferdinand in an interview during the early part of April described his country as an island surrounded by mortal enemies and warned Europe that its safety was threatened unless Rumania held out against its assailants. For an account of the Rumanian invasion and occupation of Hungary, see *AUSTRIA-HUNGARY, History*, and for discussion of questions between her and the Allies, see *WAR OF THE NATIONS*. The last stage of the protracted diplomatic dispute in the course of which numerous notes were interchanged was as follows: The Supreme Council addressed another note to Rumania, November 20th, referring to the difficulties raised by Rumania to the signing of the Treaty with Austria, and asking whether she intended to follow the policy of the Allies, withdraw from Hungary, and deduct the material requisitioned by her in Hungary, from the amount claimed as reparation. No reply being received to this note, the Council dispatched another note (the eleventh), December 3d, which was in effect an ultimatum. It reviewed her failures to comply with the demands of the Allies and fixed December 8th as the time limit within which a satisfactory reply should be given. The Rumanian delegates signed the Austrian and Bulgarian treaties on December 10th just after the American delegates had left Paris.

RUSSELL, GEORGE WILLIAM ERSKINE. British author and politician, died in London on

March 17. He was born in London, Feb. 3, 1853, the youngest son of Lord Charles Russell, and was educated at Harrow and University College, Oxford. He became a member of Parliament in 1880 when the Liberals swept the country, but lost his seat in 1885. Returned to Parliament in 1892 he was immediately appointed under-secretary for India, but two years later was transferred to the same office in the Home Department. He abandoned political life in 1895, leaving his seat in Parliament, and gave his time to journalistic work, and the writing of books, among which may be mentioned the following: *A Londoner's Log-Book*; *The Household of Faith*; *Collections and Recollections* (two series, 1898); *St. Alban the Martyr, Holborn*; *Fifteen Chapters of Autobiography*; *Edward King, 60th Bishop of Lincoln*, (1912); *The Spirit of England*, (1915); *A Short History of the Evangelical Movement*, (1915); *Portraits of the Seventies*, (1916); *Arthur Stanton*, (1917).

RUSSELL SAGE FOUNDATION. This organization was incorporated in 1907 for the improvement of social and living conditions in the United States. Its work is primarily research and publication, and its staff consists of men and women trained in special lines of investigation and social organization. For this reason, in 1917, when the United States entered the war, the Foundation was able to offer the services of a group of specialists to the government. The work of the Division of Statistics and Education, both under the direction of Leonard P. Ayres, has consisted largely of statistical investigation and reports, employing a number of trained statisticians. After the declaration of war, Dr. Ayres, accompanied by eight members of his staff, went to Washington, where they immediately organized a Division of Statistics for the Council of National Defense. The first part of their service consisted in the preparation of organization charts and plans for most of the important war agencies, including the army, the navy, the Food and Fuel Administrations, the Committee on Aircraft Production, and War Industries Board and others. The second part of the service dealt with war statistics and consisted in the preparation and presentation in graphic form of accurate information with regard to numbers of men available for military service, quantities of supplies needed, ordered, and delivered, questions of shipping, of the transportation of the American Expeditionary Force and other data. By the beginning of 1918, it became evident that this phase of the statistical work was so important to the army and so confidential in nature that it was no longer feasible to conduct it as a civilian activity. Accordingly it was organized as a branch of the work of the General Staff with Colonel Ayres in charge.

The Department of Recreation, which has for some years studied and promoted methods of public recreation and the constructive use of leisure time, applied its experience to the needs of soldiers and sailors, under the direction of Lee F. Hanmer, and Clarence A. Perry. This department assisted the government in the organization of the Commission on Training Camp Activities. After the armistice the work of the Commission on Training Camp Activities was reorganized as the Education-Recreation Division of the General Staff.

Mary Van Kleeck, Director of the Division of Industrial Studies, which has been engaged continuously in the study of industrial conditions, organized the Woman in Industry Service of the Department of Labor. This service aimed to preserve standards and safeguards of industry while meeting the demands for women's labor in the production of war materials. It formulated standards with regard to hours, wages, night work, hazardous occupations, and questions of general welfare. It has been continued under a special appropriation from Congress.

Arthur H. Ham, formerly Director of the Division of Remedial Loans, was able to apply his study of remedial loans, credit unions, and problems allied to war savings to the work of the War Savings Society Bureau of New York. Mr. Ham was also one of the special committee which formulated the national Plan of the 1919 Savings Campaign under the War Loan Organization of the Department of the Treasury.

The Department of Surveys and Exhibits which has specialized in social surveys, planning, advising, and organizing local surveys and exhibits, applied its resources to the utilization of graphic material by governmental and private agencies for war purposes. The Director of the Department, Shelby M. Harrison, assisted in numerous surveys, the more important being a recreation survey to determine the extent and character of amusement provided in New York City for soldiers and sailors and the preparation of plans for a study of social conditions in war production centres.

The Charity Organization Department, besides carrying on its regular work, assisted the Red Cross in its Home Service work. The Department of Child-Helping, Hastings H. Hart, Director, was utilized in a series of intensive surveys of the public social agencies of West Virginia, South Carolina, Florida, and Alabama. Frederick W. Jenkins, Librarian and Director of Publications, organized library work at the Pensacola Naval Air Station in Florida. He also served as editor of the *Statistical News*, published by the War Industries Board. During the war, offices were furnished the New York County Chapter of the American Red Cross and the Commission on Training Camp Activities used the building as New York headquarters. Headquarters of the Foundation are at 130 E. 22d St., New York City, with John M. Glenn, General Director.

RUSSIA. The boundaries of the Russian republic were still unsettled at the close of the year. The part of the country not controlled by the Bolsheviks had been divided into independent states, including Finland, Poland, the Ukrainian republic, the Baltic republics, Georgia, etc. (See these titles.) The anti-Bolshevik movements by the close of the year had for the most part collapsed and the bulk of the Allied troops had been withdrawn (see below under *History*). Owing to the confused conditions and the difficulty of distinguishing facts from propaganda, the descriptive information below relates mainly to pre-war conditions.

AREA AND POPULATION. The only definite figures later than those given in the 1918 YEAR BOOK (q.v.), were given out by the Soviet government. According to these the population under the control of the Soviets in February, numbered 86,000,000, or about 60 per cent of the

population of the old Russian Empire, exclusive of Poland. The 1915 figures of the Central Statistical Committee, omitting Poland and Finland, give area and population as follows:

	Area sq. mi.	Population
European Russia	1,867,737	131,796,800
Caucasus	181,173	13,229,100
Siberia	4,831,882	10,377,900
Central Asia	1,366,832	11,254,100

The same census, omitting Poland, gives the ethnical divisions of these regions as follows:

Aryans	92,209,909
Jews	3,803,011
Uralo-Altayans	17,656,108
Georgians	1,352,496
Other Caucasians	1,091,756
Chinese, Japanese, and Koreans	86,113
Hyperboreans	33,602
All others	4,773

Statistics of births and deaths, and the resulting increase in population, in European Russia, exclusive of Finland, were as follows for 1910, 1911 and 1912 respectively:

Year	Births	Deaths	Increase
1910	5,233,711	3,598,249	1,635,462
1911	5,265,665	3,222,275	2,043,390
1912	5,238,186	3,185,962	2,052,224

Immigration to the United States from Russia was at its peak in 1913, and would doubtless have shown an increase in 1914 had not the war intervened. The figures for the past 10 years are as follows:

1910	186,792
1911	158,721
1912	162,395
1913	291,040
1914	255,660
1915	26,187
1916	7,842
1917	12,716
1918	4,242
1919	1,403

The total immigration from Russia to the United States for the period from 1873 to 1910 was 2,200,000. From 1820 to the end of 1919, it was 3,311,406.

RELIGION. On the accomplishment of the revolution in 1917, the state church was disestablished, its property expropriated, and freedom of religion declared. The state church was Græco-Roman, with an independent synod, though it maintained friendly relations with the four patriarchs of Jerusalem, Alexandria, Antioch and Constantinople. It dates from 1721, and comprises three metropolitans, those of Petrograd, Kiev and Moscow. The census of 1897 gave the adherents of the larger sects as follows: Orthodox or State church, 87,123,604; Dissidents, 2,204,596; Armenian Gregorian, 1,179,241; Roman Catholic, 1,467,994; Lutheran, 3,572,653; Jews, 5,215,805; Mohammedans, 13,906,972; Buddhists, 433,863; all others, about 500,000.

EDUCATION. All schools and educational institutions were secularized by the government by decree of Dec. 28, 1917. There were universities at Petrograd, Moscow, Kiev, Kharkov, Kazan, Odessa, Dorpat, Saratov and Tomsk, and a new one was established in Perm in 1917. A women's university was established at Petrograd in 1916.

and the Soviet government has since established universities at Voronezh and Yalta, and a school of technology at Ivanov-Vosnesjensk. The rather extravagant claim has been put forward that scientific research receives more encouragement in Russia than in any other country, the scientists and students receiving subventions from the government and being left free to follow their own bent in their investigations. Theological, pedagogical, medical, legal, technical, and language schools, etc., exist in the larger centres, and education is nominally compulsory up to 18 years of age. The census of 1919 gave the total number of students, exclusive of Finland, as 8,038,109, or 49.9 per 1000 inhabitants, but the *Statistical Annual* for 1913 gave figures showing that out of every 100 persons up to nine years of age, 27 were able to read and write. That was under the government of the Czar. The Soviet government has established an extensive school system, though under the serious handicap of a lack of trained teachers.

PRODUCTION, ETC. The wealth of Russia in Europe, as estimated by Prof. E. L. Bogart for the Carnegie Endowment for International Peace, was \$60,000,000,000. This compares with \$187,739,071,090, the total wealth of the United States in 1912 as figured by the Census Bureau at Washington, \$55,391,000,000, the wealth of France in 1908; \$67,012,000,000, the wealth of the United Kingdom in 1908, and \$130,000,000,000, the capital wealth of the British Empire in 1917, estimated by a crown minister, and divided as follows: United Kingdom, 80 billion dollars; Canada, 10 billions; Australia, six billions; New Zealand, one and a half; South Africa, three; India and Ceylon, 18; colonies and protectorates, including Egypt, eight billions.

Russia is almost exclusively an agricultural country; the principal cereal crops are grown successfully only in the southern and central sections, and to some extent in Siberia. The vast territories that form the basins of the Dnieper, the Don and the Volga rivers, with their famous deep, rich soil, are the great granaries of the country. These sections alone comprise 563,000 square miles and are inhabited by 70,000,000 of the population. The country north of Petrograd is mostly barren and is sparsely populated. In the Archangel district less than 1200 square miles of land is arable, most of which is given up to pasturage.

Though the people are largely agriculturists, they dwell together in communities, there being 521,705 villages with less than 100 inhabitants. Of villages of from 100 to 1000 inhabitants there are 185,157, while there are only 35 cities with more than 100,000 people. See preceding YEAR BOOKS.

COMMERCE. The trade of the United States with Russia, which totaled \$438,323,202 in 1917, fell to \$28,095,525 in 1918, and for the year ending June 30, 1919, was \$58,510,050; of which \$2,927,434 consisted of imports from Russia in Europe, \$2,736,841 from Russia in Asia, \$11,390,318 of exports to Russia in Europe, and \$41,455,457 exports to Russia in Asia. We received in 1918 the following articles:

Articles From European Russia	Value
Bristles	\$ 16,386
Flax	2,529,859
Furs and skins, undressed	970,577

Licorice root	204,300
Potassium carbonate	1,228,092
Seed, sugar-beet	852,972
All other articles	982,417
Total	\$6,784,603

From Asiatic Russia

Furs, undressed	\$ 547,936
Licorice root	174,632
Platinum	2,000,000
Sausage casings	201,944
Seeds, grass	52,420
Seeds, sugar-beet	62,528
All other articles	935,944
Total	\$3,975,404

Our trade with both European and Asiatic Russia for the six years 1913-1918 has been as follows:

Year	U S Imports from Russia	U. S Exports to Russia
1913	\$24,377,070	\$ 26,909,707
1914	14,569,397	27,956,337
1915	3,086,595	170,231,829
1916	8,618,695	468,814,550
1917	14,514,431	423,808,771
1918	10,760,007	17,335,518

The total trade of Russia with all nations for the same year, as far as the figures are available, was as follows:

Year	Imports	Exports
1913	707,627,000	782,869,000
1914	565,466,000	492,386,000
1915	586,360,000	206,945,000
1916	550,000,000	201,000,000
	<i>Rubles</i>	<i>Rubles</i>

During the last few years, owing to the abnormal conditions, considerable Siberian wool has been shipped through Vladivostok. Most of it comes from Mongolia and central and western Siberia, and on the restoration of pre-war conditions will doubtless find an outlet through European Russia.

Among the few ports of Russia, Archangel is one of the most important. It is also one of the important ports of the world in exports of flax, grain (Siberian) lumber, tar, pitch, and turpentine. It is closed to navigation by ice during the winter, but the British have established a base at Economy on the northern extremity of Povrakulski Island, which is kept open by icebreakers until late in the winter, and whence a railroad runs to Archangel. Navigation is usually possible to Archangel direct for 210 days of the year.

ECONOMIC CONDITIONS. In March great suffering was reported in the city of Petrograd from lack of water. This had caused a spread of disease, especially typhus. The prices of necessities had risen, according to press reports, to enormous figures, a kilo of tea, (2½ lbs.), for example, being quoted at nearly \$190, and petroleum and other necessities having reached an almost prohibitive figure. The use of electric light was restricted and many proprietors of lodging-houses were summoned before the revolutionary tribunal for violation of this rule. The manufacture of the necessary locomotives for railways was reported to be far below the requirements. Crowds of workmen were said to be scattering over the country in search of work and it was reported that only about 60,000 were left in the city of Petrograd.

Hardly a week passed without a long report from some quarter in regard to the suffering and destitution. These reports varied according as they came from Bolshevik or anti-Bolshevik sources. The larger part of them in the American press came from the latter. Many of the accounts were reported to be by eyewitnesses. The following, which was reported in a French paper, is fairly typical. Like many others it cited no authority, but in general it agreed with the accounts of all travelers except those who were either more or less sympathetic with the Bolshevik régime or who were strongly opposed to the policy of intervention in Russia. The account is attributed to a professor who had recently arrived in France from Petrograd. He said that bread, flour, milk, eggs, and even meat, were still to be found in Petrograd when he left the city in April, but at fabulous prices. Bread, for example, cost from 30 to 35 rubles a pound. Wages and salaries had risen, to be sure, but the value of money had greatly depreciated, owing to the enormous circulation of paper money. Oil, fats, and sugar were hardly ever to be found, except among the sailors, the troops of the Red Guard, and the commissaries of the people. The lack of them had caused great mortality among children and old people, and was progressively reducing the strength of the people. He denied, however, the reports in the newspapers that people were dying in the streets. Death was common because, in their enfeebled condition, some slight ailment carried them off after a few days. The price of butter had risen to 200 rubles a pound. Vegetable oil, formerly abundant, had nearly disappeared. The problem of obtaining sufficient fats for cooking was apparently insoluble. Various expedients to meet this need had been tried in vain, for example: In the closing months of 1918 a considerable quantity of cod liver oil had entered from the Scandinavian countries and in many families it was employed in the roasting of horse meat, and in the frying of potatoes; but the supply was soon exhausted. There was even talk of employing castor oil for this purpose, and means were suggested for deodorizing it. In January and February, 1919, when the commissary of provisions was unable to distribute bread, he distributed raw oats on several occasions, and various dishes were made of them. Thousands of inhabitants had perished already, and hundreds of thousands of others were slowly dying.

Various arguments were used on behalf of the economic intervention of the Allies. It was argued that the economic system of the country should be re-organized against Bolshevism; that such an organization might proceed by creating zones, depots of provisions, and lines of relief. France was called upon to take part in this, as the old ally of Russia, and because she had need of Russian products. A good outlet for her metal products would be afforded, while Russian kerosene and other coal products would make up for her lack of coal. Furthermore, it would raise the prestige of France in Russia and would tend to friendship between France and Russia. See below under *History*.

RAILWAYS. While there was little to be recorded in the way of railway development and extension in Russia it was credibly reported that a concession for the building of the long projected Great Northern Railway in Russia

had been granted during the year to a Norwegian-American syndicate. In this connection the *Svensk Handelstidning* of Stockholm reprinted an official report of the franchise granted by the "Severnaya Kommuna" (Northern Commune), of Petrograd, in which it was stated that the constructing syndicate was backed by American capital, mentioning the name of "Hannevig"—well known in Norwegian financial and commercial circles—as one of the principals. In this report, as printed, provision was made for the failure of the financial group mentioned to take up the work by the alternative proposition to offer the concession in the financial markets of the world.

The Great Northern Railway was planned and its immediate construction urged by a special commission headed by the assistant minister of ways and communications, I. N. Borissov, created in 1916 for the purpose of formulating the whole railroad programme of the Russian Empire. At that time throughout the entire railroad system of the country rapidly increasing congestion was being experienced and operation and traffic suffered accordingly. The commission urged the immediate construction of several new trunk lines, equipped for heavy traffic, stating that the economic development of the country depended upon such added facilities. An extensive programme of railroad construction was recommended which included the building of 4150 miles in the five years 1917-1921, with an additional 1400 annually during the succeeding five years, and called for the construction of between 28,000 and 30,000 miles of railway between 1917 and 1926, affording Russia between 70,000 and 75,000 miles of railroad by 1927. The budget for materials and labor necessary for this programme was estimated by the commission at \$600,000,000.

For immediate construction this commission urged the Great Northern Railway, running north of, and parallel to, the Trans-Siberian railroad, and designed to relieve the heavy traffic on the latter, which in 1916 had been increasing at an annual rate of 20 per cent and to stimulate the development of the vast coal and mineral resources of the Urals, the natural resources and of North Russia generally.

Its proposed route was from Soroka, a station midway on the Murman Railway, near the Gulf of Onega, via Kotlas, a town on the Dvina River, thence across the Ural Mountains, and so on to the junction of the Obi and Irtysh Rivers in Siberia. The plans also called for two main lines from Kotlas to Zvanka, where the Murman Railway joins the Petrograd-Vyatka-trans-Siberian line, or else to run past Zvanka directly to Petrograd. Together with proposed shorter spur lines into important industrial districts, the project represented about 2000 miles of railway.

The concession as offered in 1919 first comprised the construction and operation of a Russian standard gauge (5 ft.) road for general traffic and in addition valuable rights to exploit vast tracts of forest and mineral land. The company also was to be permitted to establish and operate shipyards, ports, and steamship lines, and to receive free of charge, districts suitable for the establishment of towns and villages. Further, it was to be entitled to use all water power in the neighborhood of the railway. With such undertakings a part of the railway

enterprise it might be considered that under ordinary circumstances and the natural possibilities of Russia the concession would be highly valuable. In return for these advantages and rights the Russian Soviet Republic stipulated that it should receive one-half kopeck per pood (36 lb.) for ore mined, without regard to the kind of ore; and collect a charge of 5 per cent of the London market price on all timber cut. The company, however, was to be relieved from income and industrial taxes, paying, instead, 25 per cent of its net profit.

Aside from the political conditions affecting the granting of the concession, it was universally admitted that the road, should it be built, would be of incalculable importance to the future development of North Russia, bringing transportation for the first time to the vast mineral, coal, timber, petroleum and agricultural resources of North Russia.

FINANCE. Only fragmentary figures on finance were given out by the authorities down to the beginning of 1919. From estimates available in April of that year, the expenditures in thousands of rubles for periods of six months beginning with January, 1918, were as follows, the figures for 1919 being provisional: January to June, 1918, 17,602,727; July to December, 1918, 29,074,194; January to June, 1919, 49,100,000. On Oct. 31, 1918, official figures placed the debt at 30,000,000,000 rubles, which apparently represented only credit notes issued under the Bolshevik government, for the circulation, including notes issued under the Czar and under the first provisional government, was placed officially in November at 50,000,000,000 rubles. The finance minister declared on January 3d that the expenses of the government of Soviet Russia doubled about every six months, and the above figures nearly bore out that statement. The main cause was the depreciation of the ruble. Frequent reports of travelers as to the extraordinary prices for the necessities of life in Russia were published during the year. That they were not greatly exaggerated would appear from the following table published by an official newspaper giving the prices of products in Moscow, March 15th.

	Rubles
Rye bread	lb. 20-30
Loaf sugar	lump 2½
Creamery butter	lb. 100-120
Cocoa	lb. 70-80
Beef	lb. 30-35
Pork	lb. 70-80
Horseflesh	lb. 13-15
Sausages	lb. 30-60
Fish	lb. 20-40
Milk	quart 8-10
Cheese	lb. 120
Eggs	each 7
Tea	lb. 260-300
Potatoes	lb. 7-8
Cabbage	lb. 15
Soap	lb. 25-30
Cigarettes	per ten 3-4
Matches	box 3
Sewing cotton	reel 13-25
Goloshes	pair 220-280
Slippers	pair 350-900
Boots	pair 550-1,000

GOVERNMENT. The text of the constitution of the Federal Soviet Republic was published July 19, 1918. For details, see preceding YEAR BOOK. The highest authority is the All-Russian Congress of Soviets, which elects an All-Russian Central Executive Committee of not more than

200 members. Supreme legislative and administrative power is vested in this committee, which chooses a Council of People's Commissioners for the general administration, consisting of 18 members. The three principal commissioners at the beginning of 1919 were as follows: President of the Council, Vladimir Ilitch Ulianov-Lenin; Military Affairs and Navy, Leo Trotsky; Foreign Affairs, M. Tchitcherin. See COÖPERATION; NAVAL PROGRESS; WAR OF THE NATIONS.

HISTORY

ANTI-BOLSHEVIST FORCES AT THE BEGINNING OF THE YEAR. In the Ural region anti-Bolshevist Russian forces were reported on Dec. 25, 1918, to have occupied Perm, having defeated the Bolsheviks and taken 8000 prisoners. This was heralded as a success on the part of Admiral Kolchak's military administration. On December 30th the success of the latter's troops was reported to have continued, and they were said to have taken 31,000 prisoners. Other events reported in the press at the beginning of the year were: Detention of British civil and military functionaries in Moscow. It was said that they were kept in prison and badly treated. Some members of the Danish legation had succeeded in reaching Finland, having had some difficulty in escaping. There remained in Russia no representatives of the neutral countries. The Bolshevik leaders were openly saying that they would be in a strong position, because the Entente could not move until the spring. Tales of cruelty continued to be circulated, and it was said that the population of Petrograd had sunk to 800,000 including the Red Guards, and that many were dying of starvation in the streets daily.

In the first part of the year the course of the various anti-Bolshevik movements in Russia may be summed up as follows: At Omsk in Siberia the remnants of the Socialist Revolutionary party that had supported Kerensky, set up a transitory, All-Russian government. Admiral Kolchak, professing to represent the moderate democratic element that favored the renewal of a constituent assembly, gathered a considerable army from the scattered constitutionalists in Siberia, and took charge of this Omsk government. General Denikin held the coast of the Black Sea as far east as Sukhum, and had dispatched expeditions to the Crimea and to the vicinity of the Donetz coal region. His army numbered 180,000 men, of whom 80,000 were Kuban Cossacks; of the rest 20 per cent were said to be ex-officers of the Russian army. Krasnoff's army lay to the north, and was estimated at 250,000 to 300,000, consisting almost exclusively of Don Cossacks. At the beginning of the year they were marching on Tsaritsin for the purpose of linking the Siberian army with the Czecho-Slovaks. In Ukraine General Skoropadski was a fugitive and the power, nominally, was in the hands of General Petlura, who was said to have declared himself a Socialist and to have invited the assistance of the Ukrainian Bolsheviks. His force was composed of miscellaneous elements gathered chiefly by the hope of plunder and the high pay. Kieff was cut off from Odessa and his troops occupied Nikolaieff and Kherson, and were on the point of taking Odessa when the Allies arrived. In that neighborhood a French and Greek force

was operating, supported by a naval squadron in the Black Sea. The region between the Crimea and Ekaterinodar was overrun by Bolshevik irregulars who were reported to be pillaging the country. In the Caucasus the Bolsheviks held the lower Volga as far down as Astrakhan, and the Caspian coast as far south as Petrovsk. Toward the west their lines extended to within fighting range of the Don Cossacks and Denikin's troops. At Archangel a temporary government had been set up under Tchaikovsky with the aid of the British and Allied expeditionary forces which had been gathered at that point and on the Murman coast with a view to driving on toward Petrograd and proceeding in the direction of the Kolchak army. The Baltic provinces had set up independent governments which were resisting the Bolsheviks. Polish forces were operating on the southern front toward Minsk, and still further to the south a Rumanian force was fighting towards Ukraine. There was division among the anti-Bolshevik forces. In Ukraine, for example, the army of General Petlura was operating not only against the Bolsheviks but against the Poles and the Rumanians, and later against Denikin. The Rumanians also were fighting against Denikin.

CONDITIONS IN FEBRUARY. On February 7th a successful raid by a detachment of the French foreign legion was reported in the neighborhood of Archangel. Fighting, however, was still going on. The reports in the beginning of February indicated that Lenin was taking a dark view of the prospects of the new government which he said was, after all, only an experiment. He was further quoted as saying that the old economic conditions had bequeathed many specialists to the government, and that they must be invited to join the government in its work. Meanwhile reports of the execution of the four Russian Grand Dukes were published. This execution was said to have taken place on January 28th in a suburb of Petrograd, and at the same time 172 other persons, including 28 women, were said to have been shot for having taken part in an Anglo-French organization. According to this report, the Grand Duke Nickailovitch, had been arrested at the end of December, 1918, and kept with four others in a small cell in prison. Although he had been a man of purely artistic and literary tastes, and had kept aloof from politics and military affairs, he was accused of having favored, at a recent date, the Cadet party. At the same time the Grand Duke Paul Alexandrovitch, uncle of the Czar, was kept in prison at Vologda, whence in January he was transferred to Petrograd. It was learned at his examination that his son had been shot while in the Urals. The Grand Duke George Mikhailovitch, had been arrested in February, 1918, and kept in prison. He too was confined at the prison in the suburb of Petrograd.

THE BOLSHEVIST GOVERNMENT. According to reports in the papers, at the beginning of March a definite break had taken place between the extremists led by Trotsky and Zinovieff on the one hand and the moderate party of Lenin on the other. At this time considerable comment was occasioned by the report in the United States of an offer which Lenin had made to America. The former American ambassador to Russia, in his evidence before the Senate propaganda investigating committee, said that Mr.

Raymond Robins, former Red Cross representative in Russia, had returned to the United States bearing a message from the Bolshevik government, offering under certain conditions to make concessions to the United States similar to those granted to Germany under the Brest-Litovsk treaty. At the beginning of March Zinovieff declared, on the occasion of the anniversary of the assassination of the emperor Alexander II, that the Red army was destined to fight, not only in Russia, but also in the streets of London, Paris and Rome for the great ideal of communism, and he warned the bourgeoisie of Europe to keep their hands off the Red republic, saying that they would take Petrograd only by passing over the dead bodies of the Bolsheviks.

THE CAREER OF KOLCHAK. Early in March important successes of the Kolchak forces were reported. The offensive between Perm and the Siberian railway was said to have pushed back the Bolsheviks over 30 miles, and broken their front over a distance of 20 miles. The Bolsheviks were reported to be retiring and to have left large masses of prisoners in the hands of the Kolchak troops. A little later the latter were said to have formed two large salients extending within the enemies' line for more than 40 miles and threatening their railway communications. By the end of April Kolchak had captured Glazov, between Viatka and Perm, and there was hope of a junction with the forces at Archangel. By May 3d he had established his headquarters at Ekaterinburg.

The government that he had set up at Omsk appeared to be a more stable government than its predecessors, and secured a reputation for military successes and for ability to maintain law and order. In regard to these military successes, however, the reports printed in the newspapers appeared to come from sanguine partisans who expressed hopes rather than realities, for victories were repeatedly announced in conspicuous articles only to be denied a few days later in articles more or less concealed in the concluding pages of the newspapers. Hence it was not known how much of the reputation for success was simply a matter of propaganda, and as time went on suspicion that the press accounts bore no relation to actuality was strengthened by the fact that although a long series of triumphs had been hailed by the newspapers, at the end of them it appeared that Kolchak was steadily losing ground and finally was on the verge of collapse. However, the reputation won by him served to bring about a conditional recognition of his government on June 12th by Japan, and the Council of Four. He took his stand publicly as a representative of democratic principles, and declared that as part of his programme he would hold elections for a constituent assembly as soon as he should reach Moscow, or if conditions at that time were too disturbed, that he would attempt to reconvoke the former Constituent Assembly which had been overthrown by the Bolsheviks. He further agreed to recognize the independence of Poland and Finland and to come to friendly arrangements with the other governments within the former Russian empire. In return, the associated Powers agreed to supply arms, munitions, food, and money, but not troops, in assisting the new government. Soon afterwards, however, Kolchak's forces were driven back about 200 miles by a vigorous Bolshevik advance. The

BOLSHEVISM IN RUSSIA
Truckload of Bolsheviks Spread Propaganda Through the Streets of Moscow

latter occupied Ufa, June 8th, and recovered Ekaterinburg, July 17th. In the summer and early autumn frequent reports of Kolchak's successes were circulated widely by the best known newspapers in the Allied countries, and resting apparently on no foundation whatever. At the same time, as the result of persistent propaganda, he was held up by the most serious journals as the true representative of the Russian people, and any doubt expressed as to his military success or as to the political forces behind him was attributed as pro-Bolshevism. Finally, however, on November 15th, the news came that his capital had been taken by the Bolsheviks and that his army was being driven back. In November and December there were frequent reports of disputes between the Czechoslovaks in Russia and the Kolchak government, in which the latter was accused of committing atrocities upon persons who entertained democratic convictions. Down to the end of the year there were conflicting reports both as to the merits and as to the success of the Kolchak venture, but his armies were shattered, the movement had collapsed, and he himself was a fugitive.

THE ARCHANGEL FRONT. The following are examples of the reports of the press in regard to the Archangel operations early in the year: Severe fighting was reported on February 14th, when it was said that the Bolsheviks were exerting pressure to the south and southwest, but that the Allies on the southern front had dealt a successful counter-attack. Renewed fighting was reported at Archangel, March 1st, and the Allies were said to have occupied definitely a point some 360 miles south of the Port Murmansk. During the next few days, engagements were reported to the general advantage of the Allies. It was reported on March 14th that fighting was going on in the Vaga sector and that attacks by the Bolsheviks had been repulsed; also that the enemy had made an unsuccessful attack upon Murmansk. Later the Bolsheviks claimed to have captured a village on the Vaga River. Successful raids by the Allied troops on the Archangel front were reported in April. These and many other successes of the Archangel forces, though constantly emphasized in the press dispatches, were of no importance whatever. The hold of the Allies on the country was always precarious. Hope of a junction with Kolchak vanished after his retreat in the summer, and from that time on the British began to withdraw. Meanwhile sharp criticism had been leveled at a military policy which kept the Allied troops in this quarter with these results and finally it was stated, on January 17th, that all Allied forces on this front would be withdrawn as soon as possible. It was reported on April 10th that the American forces were discontented and had even threatened mutiny. The report as to the mutiny was denied in certain quarters but all reports indicated a spirit of discontent, especially as a result of ignorance as to what purpose their presence in Russia actually served. In June they were withdrawn. On May 30th Mr. Winston Churchill in the House of Commons explained that all military powers on this front would be turned over to the Russian troops that were opposing the Bolsheviks, and on June 14th a British contingent also was withdrawn from this region. General Rawlinson was sent

from England, August 1st, to direct the process of evacuation. Some unimportant rear actions were fought, and on October 2d the last of the troops were embarked. On November 8th, Mr. Lloyd George definitely announced the abandonment of British aid to the anti-Bolshevist party, and an envoy was sent to arrange with the Bolshevik government for an exchange of prisoners.

THE DENIKIN CAMPAIGNS. The Cossack generals, Krasnoff and Denikin in March, aided by the British, held the region between the Caspian and Black Seas, and expected to advance up the rivers Don and Volga; but in less than two months the Don Cossacks were nearly surrounded by Trotzky's troops. The army of Denikin was attacked on two sides,—by the Bolsheviks on the north and the Georgians on the south. The trans-Caspian region was relinquished by the British, but as Kolchak still held Orenburg, the Bolsheviks could not profit from this gain. At the end of July General Denikin, aided by the British, was reported to have gained brilliant victories over the Bolshevik army, and retaking, according to the reports, the Don and Donetz basins, which contained supplies and plunder. After the retreat of Kolchak, hopes centred in Denikin, whose progress was reported as continuing throughout the summer and early autumn. In December, however, news of reverses began to appear in the newspapers. It was learned that by December 10th, his forces were in retreat. They tried in vain to prevent the Bolsheviks from making their way through the Donetz coal basin toward the Black Sea and the Caucasus. They were steadily driven back over a wide front, and at the close of the year their position was critical.

UKRAINE. At the beginning of the year the complicated situation in Ukraine may be presented briefly as follows: A Cossack hetman, Skoropadski, who had been set up by the Germans as dictator, had been overthrown. The Poles thereupon seized Kholm and Eastern Galicia; the Cossacks, aided by the British, attacked the Ukrainians on the east; the Bolsheviks had pushed down from the north, while the French, reinforced by Greeks and Senegalese, occupied Odessa; the Rumanians, with the consent of the French, had occupied Bessarabia; and the Turks were claiming Crimea. In the midst of this confusion of claims and hostilities, the Ukrainians rallied to the support of two members of the Social Democratic party, namely General Petlura and Vladimir Vinnichenko, former prime minister of the Ukrainian republic. These leaders, though they could muster a sufficient number of men, lacked money, trained officers, and experts, and they made urgent appeals to the Allies, who, however, paid no attention to them. Petlura was driven out of Kiev after unsuccessful appeals for aid to the French who refused to give it except on the condition that France should have complete military and industrial control of Ukraine for an indefinite period. Two months before the fall of Kiev the request of the Ukrainian representative at Paris for admission to the Peace Conference was refused. Another aspect of the difficult and complicated situation was the fact that the French had committed themselves to the support of the Poles in their claim to Eastern Galicia with the exception of the city of Lemberg, although the population of that region is chiefly Ukrainian.

Meanwhile the Bolsheviks were making converts among the Ukrainians, who had come to the conclusion that the British and French, especially the latter, were aiming to take their lands away from them and place the country under a reactionary rule. About this time it was reported that a Franco-Grecian army of 50,000 men was pushing on a triumphant march to the north, winning brilliant victories over the Bolsheviks and finally capturing Kiev. It was subsequently reported, however, that instead of this a Franco-Grecian army had advanced a short distance from the coast, had been defeated, and had abandoned Odessa on April 6th. The Bolsheviks by May 1st had possession of Sevastopol, and Kherson. In the west a Franco-Rumanian army, organized in November by General Berthelot, had made some progress toward Kiev, toward the end of the year, but it was obliged to retire to the Rumanian border. General Petlura, regaining Kiev in May, threatened the Bolshevik communications with Odessa. Some prospect of conciliation in the matter of handling the Ukrainian situation was indicated on May 3d when President Wilson, in response to a renewed appeal for help, invited the Ukrainian government to send delegates to Paris for the discussion of territorial claims in dispute between Poland and Ukraina.

MILITARY SITUATION IN SEPTEMBER. The following account of the situation in Russia at the end of September is derived from French military sources, and illustrates the point of view in certain French quarters, and the tendency of French diplomacy. The information is evidently derived from sources sympathetic with the policy of Allied intervention in Russia. It was reported at that time that there were 15 armies maintained on a war footing by the Soviet government of Russia; that they were well-organized and subject to an iron discipline, and that they had plenty of arms and munitions. Against them there were formidable forces, but they were dispersed and lacked all unity of direction. In the east and southeast was the army of Kolchak which, after some notable successes, had been obliged to fall back on Orenburg in Siberia, under the pressure of Trotsky's armies which were in greater strength than before, because the strain at certain other points was relieved. At the end of September a new offensive of Kolchak was reported, but there had been frequent disappointment in respect to his advance movements. To the south Denikin was pushing on to Kharkov and executing an independent movement between Kolchak and Petlura, who was at a long distance from his left wing. Petlura was acting against Kiev, which he captured September 2d, but had to retire on the approach of General Denikin, and the Bolsheviks, as a result of this conflict between them, recaptured the city soon afterwards. More to the north were the Poles, who after some successful advances, had been checked on the Berezina. They seemed, however, to be on the point of resuming their march toward Mohilev. Finally in the north were the Letts in Upper Livonia and the Estonians with the troops of Yudenitch on their left. The latter commanded the army of a new provisional government which had been set up in the northwest under M. Lianozov, for the regions of Petrograd, Novgorod and Pskov. In this region, however, conditions were in a chaotic state and it was impossible

to know precisely what was going on. On the west the Soviets were menaced by both the Poles and the Letts. The advance from different directions threatened to penetrate the upper valleys of the Dwina and Dnieper and strike at Vitebsk and Mohilev, in which case they would outflank the five hostile Soviet armies occupying White Russia and the Ukraine. This would greatly aid the plans of Denikin and Petlura. Against it, the Germans were said to be doing all in their power. They had left in Courland, in disregard of the treaties, the troops of Von der Goltz, about 40,000 strong, and to the north near the Wilna was the army of Lieven, strongly suspected of operating in German interests. The motive attributed to the Germans was to hold out a constant menace in the rear of the Polish army, which moreover had lost to some degree its moral independence and freedom of action by events in Upper Silesia. Meanwhile, in order to mislead the Allies, a revolt was reported to have broken out among the troops of Von der Goltz. This revolt was said to have been in reality encouraged by the German government, though Ebert protested that he had no authority in the matter and no means of restoring discipline, declaring that he had recalled Von der Goltz, but that the latter had not obeyed. He pointed to the good effects of this disobedience, since the presence of Von der Goltz at Mitau had already produced a salutary effect. The President declared that he had no other means of acting than by persuasion. He condemned the excesses of the soldiers, but he could do no more. The answer to this in French military quarters was that if President Ebert had conformed loyally to the agreements into which his own government had entered he would long ago have withdrawn from the Lettish provinces the troops that were now giving trouble. President Ebert was also accused of surreptitiously and fraudulently twisting the terms of the treaty in regard to the reduction of the German effectives to 100,000 men. It was believed that the Germans were resorting to the same tactics that followed the Napoleonic victories when Scharnhorst and others had clandestinely created a new German army. Expedients were already in operation toward the building up of a new army in Germany around the nucleus of the Reichswehr. See *WAR OF THE NATIONS, French criticism of the treaty*. It was said on all sides in French military quarters that Germany was playing a trick on the Allies; that in the Baltic provinces, in Upper Silesia, and in the very heart of Germany, military plans at variance with the treaty were being carried out. Meanwhile the Yudenitch advance failed and he retreated to Reval.

MILITARY SITUATION, DECEMBER 31. Fighting was going on between the Red forces and the Estonians at points on the Narva front at the very moment that their peace delegates were signing an armistice. (See paragraph below on *Dorpat Conference*.) On the Petrograd front the situation of the Yudenitch army in November was serious and in the following month it was reported to be utterly routed. Omsk, the Kolchak capital, had been taken, as noted above. On December 13th, the capture of 10,000 of his troops and 500 officers was reported; on December 26th this was followed by the news that Tomsk and seven other Siberian towns had fallen; and at the end of the year the way to

Irkutsk, the new capital, was said to lie open to the Bolsheviks. Denikin's headquarters had been taken, and the position of his army at the close of the year was, as noted above, precarious.

THE PRINKIPO SCHEME. A suggestion was put before the public by the *Manchester Guardian* at the close of 1918 for a meeting of the various parties in Russia with representatives of the Allies at a conference which should be held at Prinkipo in the Sea of Marmora. At the initiative of President Wilson it was considered at the Conference soon after it assembled, and the proposal was made at the end of January. The Bolsheviks made a tentative offer of acceptance, but the other parties refused. The attitude of the conservative press in the Allied countries was hostile. The project completely failed, but on account of circumstances connected with it was the subject of discussion during many months. The matter became involved in an acrimonious controversy in September on account of the testimony of Mr. William Bullitt before the Senate Foreign Relations Committee in the United States. Mr. Bullitt was an expert of the American peace commission, who formerly had been Washington correspondent for the *Philadelphia Ledger*. He was afterwards appointed to a position in the state department, and, having gained the interest of Colonel House and Mr. Lansing, became a member of the American delegation to the Peace Conference. He was associated with writers of a radical tendency; among others, Mr. Lincoln Steffens with whom he was sent on a mission to Russia after the Prinkipo plan was dropped. This journey to Russia, according to him, was kept secret from the other Allied representatives with the exception of the British. His object was to find out how the fighting could be stopped, and to return as soon as possible with the terms which the Soviet government would accept for peace. According to Mr. Bullitt's testimony, the Prinkipo plan came up in the first days of the Conference early in January when Mr. Lloyd George proposed a meeting of all the Russian factions in Paris. Mr. Bullitt produced the minutes of the Conference of the Council of Ten at the meeting of January 21st. He said that after President Wilson had suggested a meeting with the Russian representatives in the east it was agreed that Mr. Wilson should draft a plan for a conference at Prinkipo. French opposition caused the abandonment of the proposal, but, according to Mr. Bullitt, Lloyd George was still determined on some such meeting. Then occurred the attempted assassination of M. Clemenceau (February 19th) and Lloyd George declared that it was impossible to go on with the project, which, meanwhile, was opposed also by the anti-Bolsheviks in Russia. Then followed Mr. Bullitt's mission to Russia above-mentioned. Along with him went Captain Pettit and Mr. Lincoln Steffens. They were in Russia for only a short time, and they returned with a proposal of peace from Lenin's government. Mr. Bullitt read this proposal to the Senate committee, saying that it had not been made public in Paris and that Colonel House had been enthusiastic in its favor. As to the attitude of Mr. Lloyd George, Mr. Bullitt testified as follows: Mr. Lloyd George said he did not know about British public opinion, and, calling attention to the attitude of a well-known British newspaper, asked

if he could be expected to do anything in face of that sort of thing. But he added that some one should be sent to Russia, and he discussed the qualifications of several persons. Mr. Bullitt said that Mr. Lloyd George urged him to make his report public, but when he submitted it to the commission no one was willing to assume responsibility for its publication. Mr. Bullitt characterized the remarks of Lloyd George in the House of Commons as an extreme case of misleading the public. After returning from Russia Mr. Bullitt resigned from the mission, declaring his dissatisfaction with the treaty and with the President's attitude, and he addressed an open letter to the President, saying that by his failure to insist upon a just peace he had been faithless to millions of liberals who had once believed in him. Mr. Bullitt's evidence contained other features that caused a sensation that was seized upon with eagerness by the opponents of the administration and the critics of the treaty. He said that the American Secretary of State had told him on May 19th that if the Senate and the American people understood this treaty it would be defeated; that the League of Nations was useless and that parts of the treaty were thoroughly bad. He said that Mr. Lansing, General Bliss, Mr. White and Colonel House had all been dissatisfied with many of the things that the President had agreed to. As to Mr. Lloyd George, he said that when he returned to England intending to recommend favorable action on the Soviet proposal he found that Lord Northcliffe and Winston Churchill had rounded up a conservative majority against him. "In dealing with Mr. Lloyd George," said Mr. Bullitt, "you must remember that you cannot take any of his public statements seriously." Mr. Lloyd George's answer to the charges of Mr. William Bullitt was published on September 15th to the effect that his report of private conversations between himself and Mr. Lloyd George and the latter's secretary, as printed in the newspapers, was a tissue of lies. The proposals which Mr. Bullitt took with him to Russia were of a private and unofficial nature, but he gave them out to the Senate in his testimony. They contained the following chief points: Immediate cessation of hostilities; opening of railways and ports; free passage to and from Russia of Allied Nationals; general political amnesty on both sides; restoration of trade relations; withdrawal of Allied troops as Russian armies were demobilized; the present government to remain in control of occupied territories. The terms brought back by him from Lenin coincided practically, he said, with these conditions. Another attempt to negotiate with the Soviet government, after a recess of the British Parliament, began when Colonel Malon, a young Liberal member, was sent to Estonia and returned with a new offer of peace terms which corresponded to those made public by Mr. Bullitt with the exception that it made a threat of transferring the offer to the Central Powers if the Allies did not accept it. This new movement was characterized by the French and other papers hostile to a policy of negotiation as a return to the Prinkipo plan and was sharply criticized.

THE BALTIC PROVINCES. The Baltic provinces that were struggling for independence were Estonia, Lithuania, and Latvia (Lettland), the last-named comprising the region to the north

of Lithuania east of the Baltic and south of the Gulf of Riga comprising the former province of Courland. Down to the beginning of 1919 they were under the domination of the "Baltic barons," an aristocracy of German descent, who owned a large proportion of the land. After the Russian collapse the peasants seized their property. The barons raised a considerable army, estimated at 50,000 men, under Bermond, a former Russian officer, which proceeded ostensibly to operate against Petrograd, but its real object was to restore the barons to their land ownership. His army was said to consist partly of mercenaries hired in Germany, partly of former Russian prisoners of war, and Russian loyalists. This army set out for the capture of Riga, along with the army of General von der Goltz. The latter's troops were partly professional soldiers and partly German land-seekers and adventurers. It invaded Lithuania, but was ordered by the Peace Conference to desist. Later it advanced toward Riga, but Von der Goltz was compelled to resign by the Peace Conference, and in November his successor, General Eberhardt, proceeded to withdraw the troops. Meanwhile the Lettish army drove the troops of Bermond out of Riga, and they were finally placed under the command of General Eberhardt who sent them back to Germany. Mitau was surrendered by the German-Russian troops without resistance. The Berlin government had made peremptory demands that the German troops in the Baltic region, known as the "Iron Division," should withdraw, and issued an ultimatum threatening severe penalties which was published November 1st. At the end of the year the retirement was in progress, amidst charges of atrocities on both sides.

DORPAT CONFERENCE. On December 31st an armistice was agreed upon between Estonia and Soviet Russia. This followed a long period of discussion in which the issue seemed doubtful. The decision was at last reached that Estonia would make a month's trial of the arrangement, and test the good faith of the Soviet government. The armistice was to last nominally for only a week, being terminable by either party after that time at 24 hours' notice, but it was provided that the armistice must be ratified by the Estonian Constituent Assembly, and this body did not meet again until the end of January. There had been deep distrust of Bolshevism on the part of the Estonians, but the Moscow delegates persisted in assuring them that they were representatives of a responsible government which sought to live at peace with its neighbors. There was not much confidence on either side that permanent peace would result. The Bolshevik delegates, while admitting that they were glad to conclude peace with one of their enemies, were apprehensive of the future, being especially suspicious of France who, they said, was not unlikely to encourage some military adventure that might make it necessary for Soviet Russia to maintain an army of 3,000,000 men.

INTERVENTION. The subject of intervention was constantly discussed during the year. The participation of the United States dated from July, 1918, as noted in the preceding YEAR BOOK, when the United States and Japan agreed to join in a movement from Vladivostok as a base, to coöperate with the Czecho-Slovaks. Its purpose was to provide in Russia for self-government and the intervening Powers dis-

claimed any aggressive purpose or territorial ambitions. With the military forces there was also a relief expedition and a commission of industrial and agricultural experts from the United States to aid in the restoration of economic life in Russia. This undertaking was carried out with the approval of Great Britain, France and Italy, which Powers, together with China, each sent a small body of troops into Siberia also. The Japanese course at first gave the Allies some anxiety, for instead of sending a body of 7000 men as agreed upon she sent a body of 72,000. The United States government brought the matter up with the Japanese Ambassador and a large number of Japanese troops were recalled from Siberia.

As time went on the spirit of criticism awoke in the United States as well as in other countries in respect to the policy of interference. For example, in the United States Senator Hiram Johnson of California characterized the policy as a wretched adventure and as utterly stupid. On the other hand it was defended by leading men in all countries as, for example, by the French Foreign Minister, Stephen Pichon, and British politicians, such as Lord Curzon and Lord Milner. In the United States, Senator Hitchcock and others who spoke for the administration came to its defense. The British Government in January proposed a more conciliatory policy toward Soviet Russia but this failed to meet the approval of Parliament, and then as an alternative policy the so-called "sanitary cordon" was adopted. By this the Allied troops held the passage to the north and along with Russian and Czecho-Slovak forces they held the Trans-Siberian Railway eastward from Omsk; British troops, along with the Cossacks, controlled Turkestan and trans-Caucasia; an Allied squadron on the Black Sea supported the French and Greek force at Odessa; and the buffer states guarded the western front. As a result of this an intermittent state of warfare continued between Bolsheviks and anti-Bolsheviks with varying successes, and with the singularly vague and contradictory reports indicated in the preceding paragraphs.

BRITISH INTERVENTION. Intervention of the British government in Russia was the subject of sharp attack in Great Britain just as American intervention was in the United States. In January the attitude of the British from a military point of view was indicated as follows: The military situation as it appeared in the previous spring must be recalled in order to understand present conditions. At that time the Germans were seeking to obtain a decision in the West, and the main idea of the Allies was to prevent the Germans from obtaining this decision. In order to do this the Germans must be kept from transferring any more troops from Russia to the west and also from penetrating into Russia and absorbing her rich resources. Unless these things were done the effects of American assistance would be neutralized. Apart from purely military necessities the war could not end without the political as well as the military collapse of Germany. Now Russia had for decades been penetrated by German interests, and after the war, unless she were thwarted, Germany would be able in a short time to absorb the great territories of Russia and Siberia. In 1918 it was impossible for the Allies to dispatch large forces, but weak as their forces were

they had contributed extensively to the overthrow of Germany. The Germans had withdrawn 48 divisions from the east to the west after the Bolsheviks came into power, but after the Allies landed in Archangel these withdrawals ceased for three months. The statement concluded with the following remark: "Even the more violent of the opponents to our present commitments in Russia can hardly fail to be moved by the prospects of what would happen to such populations, [that is, the populations which had been protected by the Allied advances], should the Allied forces be withdrawn." From this point of view Lloyd George's proposal in January of a conciliatory policy toward Russia was bitterly attacked. During the year, however, anti-intervention sentiment steadily gained ground. See GREAT BRITAIN and WAR OF THE NATIONS.

FRENCH OFFICIAL VIEW OF INTERVENTION. In regard to the Murmansk front M. Pichon in his defense of French policy on March 26th declared that France had intervened in agreement with the Tchaikovsky government and for several months the situation had remained unchanged. At Archangel after a long period of quiet the Bolsheviks suddenly took the offensive and the Allies were driven back but they established themselves in solid positions. At that time the figures of the Allied troops in that region were as follows: British, 13,100; Americans, 4820; French, 2349. There was a smaller number of Italians and Serbs, and the Russians on the side of the Allies numbered 11,770. He gave out the usual misinformation in regard to the Kolchak government. He said that it was increasing daily in strength and that it represented Russian unity, etc., whereas as a matter of fact it was known to be failing throughout the year. An agreement had been reached in Siberia he said between the French and the British governments that the French General Janin should be commander-in-chief of the operations and the British General Knox should command the rear. The Bolshevik position at this point was becoming more difficult and dispatches showed that the Allied troops had advanced in the direction of Samara and were enveloping the Bolshevik army which was retreating. The Allies had settled the difficult Trans-Siberian question providing for the transport of provisions for the troops. In southern Russia the military campaign in that region had been assigned to France and the forces of the different nationalities were as follows: French, 140,000; Rumanians, 190,000; British, 190,000; Italians, 40,000; Serbs, 140,000; Greeks, 200,000. The situation in the Ukraine was uncertain. General Denikin had declared that the Russian people had always remained true to the Allies. As to Bolshevism M. Pichon characterized it not as a government but as an organization of anarchy. He said that he recognized the seriousness of the question and that it was not merely a French problem but a problem for all the Allies and that France could not alone achieve its solution. M. Clemenceau and he had agreed on the policy of the "Sanitary Cordon" which should bar the road to Bolshevism but it was not their intention to attempt the penetration of Russia. The Conference had the Russian problem before it at that time and it was becoming simplified. If the Allies should abstain from intervening in Russia the danger was that

Germany would certainly develop a Russian policy and would intervene. The danger against which the Allies were fighting was that of Russia as an ally of Germany.

INTERVENTION (UNITED STATES). Many persons in the United States who were strongly opposed to Bolshevism, and anxious to employ the best means against its spread, were in doubt as to the wisdom of the government's policy of intervention. They complained that the arguments and explanations offered by the government were inadequate both as to the policy in general and as to the question of blockade or commercial non-intercourse in particular. For example, those who doubted the wisdom of the policy of shutting off food from the Russian population argued that if the food supplies were withheld on the ground that they would not reach the people who needed them, but would be appropriated by the Bolshevik government for distribution chiefly to its troops or to classes loyal to it, and so strengthen the party in power without really benefiting the meritorious and suffering elements in the population, then it might be stipulated in advance that the United States should control the distribution. The offer of the United States to send food supplies to Russia subject to the retention of control over their distribution might be made, and then if it were refused the responsibility would rest upon the Bolshevik government. It was argued that in such a case the odium attaching to the Bolshevik government would be the best weapon against it. It seemed unreasonable that the case for withholding food supplies should be allowed to rest where those in favor of that policy were apparently willing to let it rest. This obvious inquiry as to why an offer of supplies could not be made subject to some such stipulation met with no response. For example, so late as the beginning of November after these aspects of the question had been before the intelligent part of the American public for over a year an official of the State Department explained the American policy by simply repeating the argument that the supply of food would aid the Bolsheviks in their policy of extinguishing the middle classes; that they would appropriate three times as much to the army as to the civilian population; and that they would pay no attention to the real needs of the community. The argument made no reference whatever to the possibility of overcoming this difficulty.

In the second place, those who were open-minded on the subject of a Russian policy could not understand the argument for intervention and blockade which was based on the fact that the Bolshevik government was aggressive and propagandist, and left no means unemployed for instilling its doctrines into other populations, and undermining their governments. For the Bolshevik government had repeatedly declared its willingness to cease this propagandist activity if foreign states ceased their aggression against the Russian government. The government official quoted above merely repeated the argument that it was the declared purpose of the Bolsheviks to carry revolution throughout the world, and that they had on every possible occasion sought by means of their propaganda to overthrow the American government. He added nothing to explain why a pacific policy toward Russia could not put an end to that

propaganda and so tend to check the spread of Bolshevism.

In short, the arguments in favor of intervention overlooked the very questions that were raised not merely by opponents of that policy, but by persons who merely desired enlightenment. The most obvious objections and the sort of answers that would occur immediately to the reader's mind were entirely ignored by many of the government's spokesmen in their arguments in spite of the prolonged discussion on the subject. There was a great abundance of writing all tinged with sympathy for Bolshevism, all seeming to rest on a sentimental basis, and producing only partisan arguments. On the other hand there was a vast amount of argument for intervention which was equally based on an ex-parte view, and took no account of the value of evidence. In general common sense and a reasonable regard for obvious objections were equally lacking on each side of the dispute. It was assumed by most debaters that if any one opposed intervention he sympathized with Bolshevism, and that if he favored it it was because he was more loyal to the existing order than those who were opposed. Thus for the persons who were opposed to Bolshevism, but were in doubt as to whether the policy pursued by the American and Allied governments was wise, there was very little of value in the whole discussion.

The press generally took sides without, apparently, giving any thought to the subject. The following from a leading newspaper is typical of the mental attitude of a large part of the press. Commenting on the official statement above-mentioned that the aggressive character of the Russian government justified the course of the Allies, the writer noted the fact that the Bolshevik government had repeatedly offered to give up its aggressive propaganda in other countries in return for peace, but added that Bolshevism was after all a missionary religion, and that Lenin while promising to suspend the revolutionary agitation in other countries, would not keep that promise longer than suited his convenience. This was the only point advanced by the writer against the contention that conciliation on the part of the Allies would check the spread of Bolshevism; that at least it would deprive the Bolsheviks of one argument which seemed to excuse their aggressive policy; that the spread of Bolshevism had not been checked by the Allied invasion of Russia; that in general the spread of unsound doctrine was not in the modern civilized world found to be most effectively restrained by violence, and that the spirit of the argument employed by the writer would logically lead, if put into practice, to war upon any country on the face of the earth whose social, political or religious views were objectionable to other states—in short, that one government was justified in attacking any other on the ground that it did not approve of its political or social creed, and that even if the other government agreed not to spread that creed outside of its dominions, it must be assumed that that government was lying.

The attitude of the interventionists in the United States is illustrated by the following summary: The advocates of an aggressive policy against Bolshevik Russia believed that the Bolsheviks were trying to make Esthonia dependent on their own government, and that they hoped to do so if their country were allowed to

trade with the west through Esthonia. There were advantages to both parties in such an arrangement, for Esthonia needed Russian trade while Russia needed the Baltic ports as an outlet for her commerce. Another proposal was that the Esthonian government should pardon all convicted Bolshevik propagandists or revolutionary agitators. This was said to mean that the Bolshevik agents in the future were to be left undisturbed in their work of propaganda. The interventionists complained that the Allies were doing nothing to relieve the situation. They said that the anti-Bolshevik elements in Russia were doing what they could to help the Bolsheviks. Kolchak had postponed recognition of the border states, saying that only the Russian Constituent Assembly when it meets can consent to the alienation of Russian territory. Kerensky had recognized Finland and Poland, but since then various anti-Bolshevik groups had not recognized any of the border states. Economic interests were likely to bring about a union between Bolshevik Russia and all of these border states, as soon as Russia returned to a settled condition. In the Ukraine even among those who favored political separation there was support of the plan for economic union with Russia. These border states were claiming political independence and the Bolsheviks were saying to the world that they agreed to this independence. On the other hand Kolchak postponed his answer and thus created distrust among these people, who naturally inclined to the more favorably disposed Bolsheviks. The interventionists while admitting that among the anti-Bolshevik groups there were some who really wanted to restore old Russia, asserted that there were many liberals among them who would be content with a federalism that would give self-government to the border peoples and even political independence. Those elements however did not convince the border states of their good-will. No aid was given to Yudenitch by the Esthonians because they feared that his victories would destroy their independence. In Ukraina Petlura was fighting against Denikin, chiefly for the reason that the latter's triumph would mean an end to Ukrainian independence. There were some vague promises of federalism held out by the liberal element among the anti-Bolsheviks, but even these were conditional upon the continued hostility on the part of the border states toward the Bolsheviks. Toward the end of December the interventionists recognized the unfavorable situation of the anti-Bolsheviks. Yudenitch had been completely defeated and Denikin was on the defensive. Kolchak as has already been said had lost almost everything that he had gained. Hence they argued that it was necessary for the anti-Bolsheviks to recognize the independence among these border people and thus win them away from the Bolsheviks. Interventionists were alarmed at the prospect of peace with Soviet Russia. M. Poska, Foreign Minister of Esthonia, was suspicious of any real sentiment in favor of peace on the part of Soviet Russian government. The Allies, it was argued could do much by promising definitely to aid the border states. In the first place they could give them economic aid for the moment, and in the second place they could help them in bringing about an agreement as to the policy to be followed toward Russia. The Secretary of State of the United States declared that the United

States did not want to see Russia dismembered. He said that any government recognized in the Ukraine would be an All-Russian government.

INDUSTRIAL CONDITIONS. Lenin's confession of inability to apply the principles of strict socialism to production was noted in the previous YEAR BOOK. Early in 1919 the policy of reversion to capitalistic methods was discernible, although it had not yet been practically applied on a large scale. For example, an official journal gave definite accounts of concessions to foreign bankers for railway building and for the exploitation of forests, and at the end of March the Moscow government decided to offer a concession to foreigners for the building of a canal connecting the Amu-Darya with the Caspian. Lenin had declared that the technical methods, but not the finance of capitalism would be resumed, meaning by this that the capitalistic system in regard to factory and workshop management would be introduced. In 1919 he published a pamphlet on the new tasks of the Soviet authority in which he called for severe industrial discipline, saying that while the workmen till then had been absolute masters of the factories, the interests of the revolution now required their submission to the will of the managers, for the time for strict communism was not ripe. He demanded the introduction of piece-work and the employment of specialists to whom high salaries would be paid. Trotsky also issued statements to the same effect in the newspapers. In the matter of the trade in food products, this change of policy was also observed. For example, a decree declared that freedom of trade was restored in all products except bread, salt, sugar, vegetable fats, and meat for army consumption, which continued to be state monopolies.

LENIN. The personality of Lenin was much discussed during the year and accounts of him appeared in rapid succession, all varying, however, with the sympathies of the writers. According to several accounts Lenin like other revolutionaries of former times was of noble family. His father was a councillor of state and he was a noble by hereditary right. His two sisters and two brothers were like himself possessed of revolutionary ideas and at one time were under police surveillance. His brother, Alexander, was executed for participation in a terrorist plot in 1887. Lenin was brought up in the orthodox faith and studied at the gymnasium of Simbirsk and the universities of Kazan and St. Petersburg, showing himself an excellent scholar. He was arrested as a Socialist and exiled to Siberia. He was set at liberty in 1900, and left Russia. From that time on he was prominent as one of the Socialist leaders and became well known in the meetings of Socialists, especially in the recent Conference of Zimmerwald. Apart from his theories his influence in the Bolshevik party was due to his extraordinary intelligence, iron will, indomitable courage, complete absence of selfish, material interests, and his wide acquaintances. He appeared to have absolute faith in his theories and absolute confidence in himself. In the country where so many persons were suspected of financial corruption his reputation for perfect honesty gained him powerful support. As to the severity of his measures he was characterized in the anti-Bolshevik press as extremely cruel, but in a different way from Trotsky and others who were accused of being either naturally ferocious or dominated by vengeful motives, for

his cruelty was not of a personal sort, but only the result of a ruthless resolve to do anything that would benefit the cause even if it involved the massacre of thousands. He was furthermore older than most of his colleagues and he held the position not only of dictator, but also of a sort of teacher.

RYE. The total yield of rye in 1919 as reported provisionally by the International Institute of Agriculture, Rome, for Spain, France, Italy, the Netherlands, Rumania, Switzerland, Canada and the United States was about 173,360,000 bushels which constituted nearly one-tenth of the world's production in normal times. The yield in 1919 of the countries mentioned was less by about 7,880,000 bushels, or 4.1 per cent, than the yield the preceding year but as compared with the average from 1913 to 1917 it showed an increase of approximately 31,500,000 bushels or 24 per cent. The yields by countries for the year were as follows: Spain 27,060,000 bushels, France 27,856,000 bushels, Italy 4,574,000 bushels, the Netherlands 14,068,000 bushels, Rumania 3,555,000 bushels, Switzerland 1,576,000 bushels and Canada 8,241,000 bushels. The yield of Bohemia was placed at 22,410,000 bushels.

The United States according to estimates by the Department of Agriculture produced 88,478,000 bushels on an area of 6,963,000 acres or at the rate of 12.7 bushels per acre. In 1918 the production was 91,041,000 bushels on 6,391,000 acres or at the rate of 14.2 bushels per acre while the average data for 1913 to 1917 inclusive showed a production of 50,001,000 bushels, an area of 3,151,000 acres and an average acre yield of 15.9 bushels. The larger crops of rye in 1918 and 1919 were the result of recommendations by the government for the purpose of increasing the supply of bread grains under the stress of war.

The average farm value of rye on Dec. 1, 1919 was 134.5 cents per bushel, or 17.1 cents under the corresponding value of the year before but 25.5 cents above the average price on that date for the five-year period 1913 to 1917. The total value of the crop based on these bushel values was \$119,041,000 in 1919, \$138,038,000 in 1918 and \$54,489,000 the average for the five-year period. The area sown to rye in the fall of 1919 was only 5,530,000 acres as compared with 7,232,000 acres sown for the 1919 crop but of which only 6,963,000 acres were harvested. All important rye-growing States reported reduced acreages and in North Dakota, the leading State, the area was reduced from 2,068,000 acres in 1919 to 972,000 acres sown for the crop of 1920.

The results of studies by the Missouri Agricultural Experiment Station on the cost of producing rye indicated an average cost of 82 cents per bushel for the years 1910 to 1917 inclusive. The crop at this rate paid the farmer \$4.05 for every 10 hours of labor spent on it.

SABINE, WALLACE CLEMENT WARE. Physicist, died at Boston, Mass., January 10. He took the lead in organizing the Lawrence Scientific School at Harvard, became its dean and was afterwards professor of physics in the university. He was born at Richmond, Ohio, June 13, 1868, studied at Ohio University and at Harvard, where he held the Morgan Fellowship and became an assistant in physics. He devoted himself so diligently to teaching that at first he

did not have time for researches but after 1895 when he became assistant professor of physics he conducted important investigations in the acoustic properties of large buildings. For an appreciation of his work see the article by his colleagues in the *Science*, April 10th. He went to France in 1916 to give a course of lectures as exchange professor at the Sorbonne and he took part in conducting tubercular patients from the French hospitals to Switzerland under the Rockefeller foundation. His over-work led to his incurring the disease and his lectures were postponed but recovering after some months he gave a course at Paris. This followed a period of activity in the service of the Allied governments.

SAFETY AND HEALTH. See LABOR LEGISLATION.

SAFETY AT SEA. The United States Steamboat Inspection Service reported for the fiscal year ending June 13, 1919, that the total number of accidents on American vessels that resulted in loss of life was 194. The total number of lives lost was 543, of which 202 were passengers. Of the lives lost 170 were from suicide, accidental drowning, and other causes beyond the power of the Service to prevent, leaving a loss of 373 lives fairly chargeable to accidents, collisions, foundering, etc. There was an increase of 43 in the number of lives lost as compared with the previous fiscal year. Passengers to the number of 323,317,657 were carried on vessels required by law to make report of the number of passengers carried. Dividing this number by 202, the total number of passengers lost, shows that 1,600,582 passengers were carried for each passenger lost. There were 2349 lives saved by means of life-saving appliances required by law.

The following disasters to American shipping as reported by the Steamboat Inspection Service for the fiscal year ending June 30, 1919, resulted in an unusually large loss of life.

July 5, 1918, at midnight, excursion steamer *Columbia*, while descending the Illinois River, hit right-hand bank opposite Wesley City, Ill., with the result that the steamer sank, causing the loss of 87 lives.

July 31, 1918, at 10.20 p.m., the steamer *Poseidon*, proceeding from Boston, Mass., to Norfolk, Va., collided with the steamer *Somerset*, near Five Fathom Bank Lightship, causing the steamer *Poseidon* to sink and resulting in the loss of five lives.

Aug. 3, 1918, at 3.20 p.m., the steamer *Berwind*, an army transport, while en route from Nantes to Brest, France, was torpedoed by a submarine, with the result that the vessel sank, causing the loss of four of the crew.

Aug. 13, 1918, about 5.10 p.m., the steamer *Frederic R. Kellogg*, when about 12 miles north of Barnegat Light and five miles offshore, was struck by a torpedo, which resulted in the sinking of the vessel in 15 seconds. Seven of the crew lost their lives.

Sept. 3, 1918, about 2.04 a.m., the U. S. C. T. *Lake Owens* was sunk by an enemy vessel off the coast of Cornwall, England. Five members of the crew were killed and 10 injured.

Sept. 6, 1918, about 1.45 a.m., in latitude 39° 20' N., longitude 74° 13' W., the steamer *Almirante* was sunk as a result of a collision with

the steamer *Hisko*. Six members of the crew were lost.

Oct. 3, 1918, at 11.20 p.m., the steamer *Lake City*, while on a voyage from Tampa, Fla., to Baltimore, Md., collided with the steamer *James McGee*, proceeding from New York, N. Y., to Mexico, about five miles southeast of American Shoal Lighthouse, causing the *Lake City* to sink in about two minutes. The master and 29 others of the crew were lost.

Oct. 4, 1918, about 12.45 a.m., the steamer *San Saba* was struck by a mine or torpedo while on a trip from New York to Tampa, Fla., and Mobile, Ala., about 10 miles off Barnegat Buoy, breaking in two and sinking immediately. Thirty of the crew were lost.

Oct. 16, 1918, at 5.20 p.m., when the steamer *Dumar* was 22 miles west of the island of Guam, she was struck by lightning, from which she caught fire and became a total loss. Nineteen of the crew lost their lives.

Oct. 20, 1918, about 5 p.m., the freight vessel *Yenrut*, en route from Salt Key to Philadelphia, Pa., foundered during a severe gale in latitude 25° N., longitude 72° 15' W., resulting in five of the crew losing their lives.

Dec. 3, 1918, while en route from San Francisco, Cal., to the Philippine Islands, via Honolulu, the steamer *Bento Suarez*, loaded with cargo of explosives, foundered at sea during a northeast gale, in latitude 21° 30' N., longitude 156° 11' W., causing the loss of nine of the crew.

Dec. 24, 1918, when about 260 miles from Chatham Island, the American bark *Aryan* took fire and burned. The crew left the ship in lifeboats, and eight were lost.

Jan. 11, 1919, the steamer *Yuna*, while en route from San Domingo to New York, via Turks Island, struck a reef on the west end of the Mouchoir Banks, and was totally destroyed. Sixty-four persons lost their lives.

Jan. 11, 1919, the steamer *Castalia* foundered off Cape Sable. Forty-two of the crew were saved by the Norwegian steamer *Bergenfiord*. One man was drowned and four died from exposure.

May 24, 1919, about 1 o'clock a.m., the passenger steamer *Virginia* caught fire and was totally destroyed. At the time of the accident the steamer was bound for Norfolk, Va., from Baltimore, Md., in the vicinity of Smith's Point Lighthouse. Six persons lost their lives.

SHIPWRECKS ON THE GREAT LAKES. In 1919 the life and property loss to shipping on the Great Lakes included 74 lives and 19 ships and was the greatest since 1913, when 29 vessels, valued at \$3,313,000, with capacity of 121,000 tons were lost along with 254 lives mostly in the big gale of November 9th to 11th.

The greatest loss of life during the season of 1919 was on Lake Superior, when the steamer *John Owen*, with a crew of 22, and the steamer *Myron*, with 17 men, went down, leaving only one survivor. Many lives were lost when the passenger steamer *City of Muskegon* went to pieces.

Dec. 3, 1918, the forward section of the steamer *Manola* (having been previously cut into two sections to permit the passage of same through the Welland Canal), in tow of the steamer *Michigan*, foundered during a heavy snowstorm on Lake Ontario, when about five miles south of Duck Island. The captain and entire crew of 10 men were lost.

Another shipwreck was the loss of the steamer *Homer Warren* on Lake Ontario, with a crew of nine and seven lives were lost on the barges *Dundurn* and *Quebec*, which were wrecked on Lake Erie and at Port Colborne.

The greatest property loss was when the steamer *D. R. Hanna* was sunk in Lake Huron last May in collision with the steamer *Quincy A. Shaw*. The *Hanna*, which was the only modern ship lost on the Great Lakes in 1919, had a carrying capacity of 10,200 tons, and was insured for \$430,000. She had a cargo of 380,000 bushels of wheat.

Next to the *Hanna* the barge *Chicamauga*, which foundered on Lake Huron, was the largest freighter lost. Her capacity was 4200 tons. The other vessels lost carried from 500 to 3500 tons.

A total valuation of \$1,336,500 was placed on the boats lost in 1919. Their trip capacity was 47,250 tons, and, figuring 20 trips for each, they could move 945,000 tons in a season.

WRECK OF THE MANXMAN. Dec. 17, 1919, the British steamer *Manxman* foundered in mid-ocean, and 43 members of the crew were drowned, the remainder, numbering more than a dozen, being picked up by the British steamship *British Isles* from London, December 2d, for New York. The *Manxman* left Portland, Me., for Gibraltar on Dec. 11, 1919, with a cargo of 200,000 bushels of wheat, valued at \$500,000.

SAGE, JOHN CHARLES. Episcopal Bishop, died at Salina, Kan., October 3. He had been consecrated Bishop in January, 1918. He was born at Cleveland, Ohio, on Sept. 12, 1866, and studied at Western Theological Seminary in Chicago. He was ordained priest in 1893 and officiated at Berwyn, Ill., 1893-1896; Dixon, Ill., 1896-1902; Dubuque, Iowa, 1902-11; Keokuk, 1911-1918. Meanwhile he had been elected missionary Bishop of the diocese of Salina, Kan., Oct. 19, 1917. From 1903 to 1913 he was editor of the *Iowa Churchman* and from 1917 on was managing editor of *The Witness*. He wrote *Private Prayers for the Faithful*.

ST. CHRISTOPHER. See ST. KITTS AND NEVIS.

ST. HELENA. An island of volcanic origin in the South Atlantic 1200 miles from the western coast of Africa, belonging to Great Britain. Area, 47 square miles; population (1911), 3520; estimated civil population (Jan. 1, 1918), 3634. Capital, Jamestown.

ST. KITTS AND NEVIS. An administrative division of the Leeward Islands (q.v.), constituting along with Anguilla a presidency, belonging to Great Britain. Area of St. Kitts, 65 square miles; population (1911), 26,283; Nevis, 50 square miles, with a population of 12,945; Anguilla, 35 square miles with 4075. Chief town of St. Kitts, Basseterre (population, 8159); of Nevis, Charlestown (912). Administrator at the beginning of 1919, Maj. J. A. Burdum.

ST. LOUIS. See DOCKS AND HARBORS.

ST. LUCIA. One of the Windward Islands in the West Indies; a British colony. Area, 233 square miles; population in 1911, 48,637; estimated Mar. 31, 1918, 53,788. Capital, Castries, a coaling station and naval base. Chief products: Sugar, cocoa, rum, and limes. Administrator and colonial secretary at the beginning of 1919, Lieut.-Col. W. B. Davidson-Houlston.

SAINT PIERRE AND MIQUELON. The

main islands of two groups off the south coast of Newfoundland, belonging to France. Area, 93 square miles, of which 83 were in the Miquelon group; total population 4652 (4209 in the St. Pierre group). Chief town, St. Pierre.

SAINT THOMAS. See SAO THOMÉ AND PRINCÍPE.

SAINT VINCENT. One of Great Britain's Windward Island colonies in the West Indies. Area, about 150 square miles; population in 1911, 41,877; estimated, Mar. 31, 1918, 50,669. Capital, Kingstown, with a population of 4300. Half of the chain of small islands known as the Grenadines are included under its administration, the other half being under that of Grenada. It produces cotton, arrowroot, rum, sugar, cocoa, and spices. Acting administrator and colonial secretary at the beginning of 1919, Anthony De Freitas.

SAIONJI, KINMOCHI, Marquis. Leading member of the Japanese Peace Delegation at the Paris Peace Conference. For nearly 50 years he had been a prominent figure in Japanese politics. He was born in Kyoto in 1849 of a noble family and while still in his youth took part in the great debate following the revolution of 1868. He lived in Paris from 1869 to 1880 studying law and literature and associated there with the younger radicals of the third Republic. On returning to Japan he joined Prince Ito and others in a campaign for liberal ideas. He was member of the Ito commission which was sent abroad to study constitutional government in 1882. In 1885 he represented his country at Vienna and later at Berlin. In 1893 he became vice-president of the House of Peers and he held cabinet positions in 1894-96, and in 1898 in the ministry of Ito. In 1900 he supported Prince Ito in the formulation of the programme of the new Constitutional party and succeeded him as leader of it in 1903. He did excellent service after the treaty of Portsmouth in averting a national crisis in consequence of its terms. He was prime minister from 1906-1908, during which time the railways were nationalized and important agreements reached with France and Russia; and he was for the second time prime minister, 1911-12. He resigned his leadership of the Constitutional party in 1915 giving his place to Mr. Hara who was prime minister of Japan in 1919.

SAKATA, JUJIR. Japanese minister to Spain, died at Madrid November 27. He was known both in the United States and in England. He was born in 1869 and 1896 entered the diplomatic and consular service. He became attaché at Washington in 1897, and was consul-general in London, 1906-11. He was director of the Commercial Affairs Bureau till October, 1916, when he was appointed minister to Madrid.

SAKHALIN. An island off the east coast of Siberia of which the part south of the 50th parallel of north latitude belongs to Japan and is called Karafuto, and the part north of that line belongs to Russia, constituting the province of Sakhalin. Japanese Sakhalin, or Karafuto, has an area of about 13,148 square miles, with a population (1917) of 68,207. The area of the Russian province is 14,668 square miles with a population estimated Jan. 1, 1915 at 34,000. See KARAFUTO.

SALANDRA, ANTONIO. Italian representative at the Paris Peace Conference. At the

outbreak of the war he had been Prime Minister of Italy. He was born in the province of Apulia and entered Parliament at an early age. He there acquired reputation in the fields of finance and jurisprudence and he was under-secretary for finance in the Crispi ministry, 1893-1896; Minister of Agriculture, 1899-1900, and Prime Minister after the fall of Giolitti in 1913, holding that office during the first 18 months of the war. He maintained the policy of neutrality and was responsible for Italy's declaration of that policy at the beginning of August, 1914, but he also went forward under the changed conditions and was responsible for the declaration of war on Austria in May, 1915.

SALMON. See ALASKA.

SALOMAN, WILLIAM. American banker, died in New York City December 14th. He was born in Mobile, Ala., in 1852 of a well-known Jewish family and was educated in Philadelphia and New York. He entered the firm of Speyer and Company and became a partner. He afterwards retired and was for three years chairman of the board of directors of the Baltimore and Ohio railroad. Resigning that position in 1902 he founded the banking house which bears his name. He was a director of a large number of important corporations. The Americanization of foreigners always greatly interested him and he founded the Educational Alliance of which he was the treasurer for 15 years.

SALT. The total production of salt in the United States in 1918 was 7,238,744 short tons, an increase of 260,567 short tons, or 4 per cent, over the output in 1917. The total value was \$26,940,361, an increase of 30 per cent over the figure for 1917, which was \$19,940,442.

Rock salt production amounted to 1,683,941 short tons, an increase of about 5 per cent, valued at \$5,684,661; an increase of 46 per cent. The output of evaporated salt amounted to 2,724,203 short tons, valued at \$20,010,435, an increase of nearly 10 per cent in quantity and 34 per cent in value. The production of salt in brine was 2,830,600 short tons, valued at \$1,245,265, a decrease of 2 per cent in quantity, but an increase of 15 per cent in value.

Michigan, New York, and Ohio were first, second, and third, respectively, in quantity produced. See GEOLOGY.

SALVADOR. A Central American republic on the Pacific Coast to the east of Guatemala. Capital, San Salvador.

AREA AND POPULATION. The area is estimated at 8170 square miles and the population Jan. 1, 1917, at 1,287,722 of whom about two-thirds were Mestizos and about one-sixth Indians. In 1917 the births numbered 49,963 and the deaths 41,750. The population of the cities was estimated as follows: San Salvador, 65,148; Santa Ana, 58,820; San Miguel, 29,374. During the earthquake of June 7, 1917, the towns of Nejapa, Armenia, and Quetzaltepeque were destroyed. Primary instruction is free and compulsory. No later figures are available for education than those given in the preceding YEAR BOOK. According to a British authority the expenditure on public instruction in 1917 was £100,650. There is a national university at the capital with faculties of law, medicine, pharmacy, engineering, and dentistry.

PRODUCTION. Agriculture is the main occupation and the chief product is coffee, which in 1916 had an acreage of about 153,517 acres.

The crop of 1917 was damaged by the earthquake and volcanic eruption. Other products are corn, sugar cane, cotton, cacao, peanuts, yams, indigo, tobacco, rubber, and various vegetables. Large deposits of ore exist in the western part. One of the richest mining zones is the district of Metapan which produces copper, iron, lead, silver, nickel, and platinum. The ores are found near the surface and their richness increases with the depth. In parts of the zone there is an adequate supply of water power and the region is reached by a branch of the local railway and will later be crossed by the Pan-American Railway. Discoveries of gold and silver were also reported in 1919 as well as new oil fields which promised a considerable development.

COMMERCE. Trade is chiefly with the United States and Great Britain. In 1917 the United States supplied 62 per cent of the imports. Coffee makes up about nine-tenths of the total exports, amounting in 1917 to 36,253 metric tons, valued at 21,147,078 pesos silver.

RAILWAYS AND SHIPPING. The railway in operation in 1917 was recorded at 264 miles. In that year vessels entered at the ports of Salvador numbered 354 with a tonnage of 520,759.

FINANCE. The legal standard of value is silver. The silver peso rose in value from \$.42 in 1916 to \$.7234 at the beginning of 1918. The following account of the national receipts and expenditures from Jan. 1, 1910 to May 31, 1919, is supplied by the Pan-American Union on the basis of official reports: The receipts and expenditures amounted to 115,445,657 and 128,261,280 silver pesos respectively, showing a deficit of 12,815,623 pesos. The receipts were derived from the following sources: Import duties, 55,081,191 pesos; exports, 15,958,318 pesos; liquor revenue, 25,486,350.02 pesos; stamp papers and postage stamps, 3,766,018 pesos; direct taxes, 2,912,349 pesos; sundry services, 6,448,637 pesos; sundry incomes, 5,792,794 pesos; while the expenses were as follows: National assembly, 814,826 pesos; presidency of the Republic, 687,130; departments of government, 21,899,120; of public works, 14,170,723; of agriculture, 766,639; of foreign relations, 2,359,129; of justice, 6,447,020; of public instruction, 9,016,067; of public benefit, 6,186,178; of the treasury, 7,425,910; of public credit, 27,811,096; and of war, 30,677,440 pesos.

An addition to the budget was voted by the Assembly on September 12th. It provided for an increase in the revenue by 13,688,000 pesos, and of the expenditures by 13,687,146.

In September the Assembly declared the gold coinage of the United States legal tender.

GOVERNMENT. Legislative power is vested in a National Assembly consisting of a single chamber of 42 deputies elected by universal suffrage for one year and executive power in a president elected for four years. President in 1919, Carlos Melendez.

SALVATION ARMY. An organization for relief work in the United States, using the military system for control of its workers. During the year 1919 \$14,000,000 was subscribed through the Home Service Fund, a change in method of financing that has resulted in greatly increased efficiency of the army's machinery. Some of this money was used to pay off debts and also to provide much equipment that was badly needed. The army continued to perform with the American Forces in Germany such welfare

and inspirational work as was conducted in 1918. Much of the war work adjacent to the permanent camps at home, which was originally considered as being but temporary, has so commended itself to the authorities as to require the placing of it upon a permanent basis. Child Welfare Work was carried forward in many institutions, the largest of which is the Lytton Springs Orphanage and Industrial Farm in California, where the child population was nearly 300. The international character of the organization assures to it abundant scope for its missionary zeal. There are 65 countries and colonies occupied by the army, many of them being heathen lands, where direct missionary work is possible.

In the army there were in 1919 about 1000 corps and outposts; 3000 officers and cadets; 300,000 meetings with an attendance of about 25,000,000 persons; 75 hotels scattered all over the United States with accommodations for 1,656,528; 92 industrial homes with accommodations for 2483; 11 slum posts and nurseries where about 50,000 children were sheltered; 25 rescue homes and maternity hospitals with accommodations for 486. Large numbers of Thanksgiving and Christmas dinners are provided every year to the poor in various cities. Evangeline C. Booth is the commandant of the United States forces, and her headquarters are in New York.

SALVEGO-RAGGI, Marquis. Italian representative at the Paris Peace Conference. He was an accomplished diplomat, having served in various embassies and acquired prominence as the Italian minister in China during the Boxer difficulties. He was ambassador in Paris after the resignation of Signor Tittoni.

SALZBURG. Before the disruption of the Austro-Hungarian Empire, a crownland of Austria, lying to the east and north of Tirol, and bordered on the north by Germany. Area, 2763 square miles; population according to the census of December, 1910, 214,737; estimated in 1913, 221,304. According to the census of 1910 the Austrian subjects numbered 208,562, of whom 99.73 per cent were German, and the Catholics formed 98.47 per cent of the population. Capital, Salzburg, with a population estimated in 1914 at 37,300. See AUSTRIA-HUNGARY.

SAMOA. A group of islands in the Pacific near latitude 14° south, of which the islands east of 171° east longitude have belonged to the United States since Feb. 13, 1900, and the islands to the west of that line belonged to Germany till shortly after the outbreak of the war in 1914, when they passed into the hands of New Zealand. The area of the latter group is variously estimated at from 990 to 1300 square miles with a population according to the census of 1917 of 41,128. See GERMAN SAMOA. The area of the American group is also variously estimated at from 77 to about 100 square miles, with a population according to the 1916 census of 7550. The chief island Tutuila (area 55 square miles) is mountainous, well wooded, and fertile, with a population (1916) 5885. The harbor at Pago-Pago on the southern coast of Tutuila is considered one of the best and safest in the South Seas and is an important naval station.

SAMOS. One of the Anatolian islands, formerly tributary to Turkey, but occupied by Greece before the end of the war and adminis-

tered through a Greek prefect. Area, about 181 square miles; population according to the provisional census of 1913, 68,940, of whom most were Greek Orthodox. Capital Vathy, with a population of about 8000.

SANDERSON, Sir PERCY. Formerly British consul-general at New York, died at Reading, England, July 14. He was born in London, July 7, 1842, entered the Indian military service, but retired in 1870, and was consul-general and later chargé d'affaires in Rumania for several years. He was consul-general at New York from 1894-1907.

SAN FRANCISCO. See MUNICIPAL OWNERSHIP AND WATER-WORKS.

SANITATION. See GARBAGE AND REFUSE DISPOSAL; SEWERAGE AND SEWAGE TREATMENT; WATER-WORKS AND WATER PURIFICATION.

SANKEY REPORT. See INDUSTRIAL RECONSTRUCTION.

SANTO DOMINGO. See DOMINICAN REPUBLIC.

SÃO THOMÉ AND PRINCIPE. Two islands belonging to Portugal off the coast of French Equatorial Africa in the Gulf of Guinea near the equator about 125 miles from the mainland. Area, 363 square miles; population in 1914, 58,907, of whom 53,969 were in São Thomé. The whites numbered 1570. Chief products: Coffee, cacao, rubber and cinchona.

SARAWAK. A British protectorate comprising the northwestern part of the island of Borneo with an area of about 42,400 square miles and a population estimated at 600,000. Capital, Kuching, with about 25,000 inhabitants. In 1917 the imports were £775,769; exports, £1,027,454. Exports included rubber, pepper, sago flour, and gold. Shipping entered and cleared in 1917, 208,482 tons. The trade is chiefly with Singapore. The government was under the late Rajah Sir James Brooke, who was succeeded May 17, 1917 by his son, Charles Vyner Brooke. British Agent for Sarawak and British North Borneo, and high commissioner for Brunei at the beginning of 1919, Sir Arthur Henderson Young.

SARGENT, FREDERICK. Electrical engineer, died at Chicago, Ill., July 26. He was born in Cornwall, England, Nov. 11, 1859, and came to the United States in 1883. He was consulting engineer in Chicago after 1890. At the World's Fair (1893), he was manager of the mechanical and electrical departments.

SASKATCHEWAN. One of the Prairie Provinces of Canada, separated from Alberta on the west by the meridian of 110° west longitude and extending from Montana and North Dakota to the Northwest Territories, with Manitoba on the east. Capital, Regina. Estimated area, 251,700 square miles; population (1911), 492,432; estimated (1916), 647,835, of whom 471,673 were rural. Population of Regina (1916), 26,105. Lieutenant-Governor at the beginning of 1919, Richard S. Lake; Prime Minister, W. M. Martin. See CANADA.

SAVINGS BANKS. In the United States all savings banks are classified as commercial and government or postal. The commercial savings banks are divided into two classes, mutual and stock, the former being found almost exclusively in the Eastern States while the latter are most numerous in the West and South. The *Annual Report of the Comptroller of the Currency* showed that there were on June 30, 1919,

622 mutual and 1097 stock savings banks in the United States. Savings departments of national banks and trust companies are not included in these figures.

The total resources of the 622 mutual savings banks were \$5,171,551,000. This included loans and discounts amounting to \$2,335,996,000, and investments in bonds and securities of \$2,491,607,000. They had no capital stock on account of their form; surplus funds aggregated \$333,420,000, and undivided profits \$65,013,000. Individual deposits amounted to \$4,751,113,000. All these items showed slight increases over the previous fiscal year.

The 1097 stock savings banks showed aggregate resources of \$1,281,254,000, an increase of about \$100,000,000 although there were 97 less banks than on June 30, 1918. The principal items of resources were: Loans and discounts, \$777,941,000; bonds and other securities, \$295,131,000. Capital stock paid in amounted to \$62,740,000; surplus and undivided profits were \$47,741,000; and individual deposits were \$1,151,464,000. Changes as compared with one year earlier were irregular and inconsequential.

UNITED STATES POSTAL SAVINGS BANKS. On June 30, 1919, the close of the fiscal year, there were in operation 6439 postal savings depositories, including 724 branch post offices and stations. In this system an account may be opened by any one 10 years of age; no one may have more than one account; the accounts of married women may not be drawn upon by their husbands; the amounts of deposits may not be disclosed by post office employees; deposits bear 2 per cent a year, but no interest is paid for less than a full year; and deposits may be exchanged for United States postal savings bonds bearing 2½ per cent interest in denominations of \$20, \$100, and \$500. The maximum which any depositor may have to his credit is \$2500. There were no important changes in the system during the last fiscal year. Deposits increased during the year from \$148,471,499 to \$167,323,260, a gain of \$18,851,761 or 12.7 per cent. The number of depositors decreased from 612,188 to 565,509, a loss of 46,679 or 7.62 per cent. The average principal per depositor increased from \$242.53 to \$295.88, a gain of \$53.35 or 22 per cent. Postal savings funds were held at the close of the year by 5211 banks, of which 3239 were national banks. The system continues to be self-supporting. The profit in the fiscal year 1919 was \$1,616,087.25, compared with \$1,135,288.61 in 1918, a gain of \$480,798.64 or 42 per cent.

Some of the larger offices, with the number of depositors and amount of deposits, were as follows: New York, 153,321, \$40,058,215; Philadelphia, 14,059, \$2,697,086; Boston, 13,302, \$3,141,614; Detroit, 13,521, \$5,614,034; Chicago, 22,748, \$7,743,441; Brooklyn, 53,837, \$12,611,149; Cleveland, 5692, \$2,133,805; Cincinnati, 3837, \$850,039; Newark, 7974, \$2,116,739; St. Louis, 4274, \$1,281,851; Kansas City, 3957, \$1,259,150; Portland, Ore., 5964, \$1,881,493; Seattle, 4259, \$1,477,693; Toledo, 2631, \$1,231,386; San Francisco, 4859, \$1,212,760; Pittsburgh, 9075, \$3,942,140; Buffalo, 4351, \$1,471,144; and Milwaukee, 4426, \$1,825,771. Statistics by countries are presented in the table on page 603.

SAWYER, Sir JAMES. Pathologist, died, January 27. He was born at Carlisle, England, Aug. 11, 1844, and educated at Birmingham and

London universities. He became professor of pathology at Queens College, Birmingham, 1875, and was professor of *materia medica* from 1878 to 1885 and of medicine 1885 to 1891. He wrote a number of medical works including *Causes and Cure of Insomnia and Maladies of the Heart*.

SAXE-MEININGEN, CHARLOTTE, Duchess of. Oldest sister of the former emperor William of Germany, died at Baden-Baden October 3d. She was born in 1860 and married the heir to the throne of Saxe-Meiningen in 1873. She was known for her cleverness and wit and her interest in sports. On the occasion of a prize fight in 1912 she was prominent in German newspapers in connection with her alleged interest in boxing. In the celebrated libel case against Count von Moltke, Maximilian Harden tried to call her as witness on the ground that it was she who had supplied him with information in regard to the Eulenburg disclosure, but the court refused to summon her. Her husband did not come to the throne till June 25, 1914, and Saxe-Meiningen declared itself a republic in November, 1918.

SAXONY. A term applied to the three following divisions of the former German empire: (1) the Kingdom (proclaimed a republic in November, 1918), of Saxony which was one of the constituent states of the empire; (2) the grand duchy of Saxony or Saxe-Weimar (proclaimed a republic, November, 1919); (3) the province of Saxony in Prussia. Area of the former Kingdom of Saxony, 5787 square miles; population (December, 1910), 4,806,661; estimated (1914), 4,984,500. Area of Grand Duchy, 1394 square miles; population (1910), 417,149. Area of Prussian province, 9756 square miles; population (1910), 3,089,275. After the Kingdom, Saxony was proclaimed a republic, Nov. 9, 1918, steps were taken for the erection of a constitutional body and in January, 1919, the Saxon People's Chamber was elected and was engaged during the spring in drafting a constitution. Representation of political groups was distributed as follows: Majority Socialists, 42; Democrats, 22; Independent Socialists, 15; Conservatives, 13; German People's Party, 4. See GERMANY.

SCANDINAVIAN ALLIANCE. See CO-OPERATION.

SCANDINAVIAN LITERATURE. DANISH. *Fiction*. Gunnar Gunnarsson, whose stories have until now dealt with modern Iceland, went back to the ninth century for material for his *Edbrødre* (*Sworn Brothers*). The work shows the author's usual ability in portraying Icelandic life. Henrik Pontoppidan's *Et Kærlighedscentyr* (*An Adventure of Love*), is the story of a woman who leaves her husband and after his death finds happiness in a union with her lover. The story is not very convincing. In *Lillemor* (*Little Mother*), Martin Andersen-Nexo continued the series begun last year with *This Child of Man*. Emil Rasmussen's *Bag gyldne Mure* (*Behind Gilded Walls*), is a sequel of *The Polish Blood*. Like the latter story it shows a first hand knowledge of life and conditions in Poland and arouses our sympathy. Thit Jensen wrote two books, *Kærlighedens Kaabe* (*Love's Cloak*), depicting a young man's battle with disease, and *Gerd*, the heroine of which is a typical twentieth century woman. Einar Bang's *Forliset* (*The Wreck*), pictures in a realistic and convincing manner the relent-

* The figures of population are for the nearest date to which the statistics of savings banks relate. ^a Exclusive of 4804 deposits of \$443,154 in savings banks in Faroe Islands and 196,258 savings deposits of \$47,456,285 in ordinary banks. ^b Exclusive of Brunswick. ^c Exclusive of data for three large private savings banks in Batavia, Socrabaja, and Macassar, and the small banks of Amboina and Menado. ^d The total is exclusive of \$769,307,000 worth of securities held by the savings banks to the credit of depositors. ^e The peseta has been converted at the rate of 22.75 cents. ^f Exclusive of government stock held for depositors, amounting to \$507,302,905 in the postal savings banks and to \$31,876,524 in the trustee savings banks. ^g Exclusive of the population of the feudatory states. ^h Exclusive of savings deposits in chartered banks and special private savings banks. ⁱ At the end of 1912 the private savings banks held deposits of \$4,271,955.

lessness of life. Morten Kamphøener's *Det slesvigske Regiment* (*The Sleswig Regiment*), is the story of Sleswig soldiers compelled to fight for the cause of their oppressors. Johannes V. Jensen's *Norne-Gæst* goes back to the saga period and gives a splendid picture of early humanity. Among collections of short stories may be mentioned Sophus Michaëlis's *Træbukken* (*The Wooden Horse*).

SCIENCE, LITERARY CRITICISM, ETC. In *To Essays om vor Erkendelse* (*Two Essays on Perception*), Herbert Iversen discusses the psychological philosophical aspects of "validity" and "time." Georg Brandes's *Cajus Julius Cæsar* shows a very keen appreciation of Cæsar and his contemporaries, as well as a thorough understanding of Roman institutions of the time. Regmor Stampe's book on *H. C. Andersen* makes particularly clear this author's relations to his surroundings. In *Nordboer* (*Northerners*), Vilhelm Andersen attempts to characterize and differentiate the literary tendencies of the three northern countries. Frederik Poulsen's *Oraklet i Delfi* (*The Oracle at Delphi*), treats in a very exhaustive and scholarly manner of the significance of the oracle in Greek civilization.

NORWEGIAN. Fiction. The central idea of Katharina Gjerdahl's *Porcelansdukken* (*The China Doll*), is class consciousness. The heroine, who belongs to an official family living in isolation breaks the traditions of the house by marrying into the family of a well to do merchant. Lilly Heber's *Det dages* (*Dawning*), gives artistic expression to the idea of a development of the soul after death. The work contains beautiful thoughts, but these are not always well organized. In his story *Henrik Srane* Vebli Vislie pictures the conflict between orthodoxy and the higher criticism. The rationalism of the hero, who is a minister, causes his estrangement from his wife and his congregation, and finally ends in his downfall. In Olav Duun's *Jurikinger* we are made to feel how secret powers fight an old family until all the strength of its past generations seems collected in one of its youngest members. As usual, Duun gives us a highly concentrated narration. Hans E. Kinck's *Sneskarlen brast* (*The Snow Shovel Broke*), a study in the life of the common people, is a novel executed along exceptionally broad lines. The psychology and milieu are particularly good.

SCIENCE, LITERARY CRITICISM, ETC. Gerhard Gran and Albert Dresder each gave us a book on *Henrik Ibsen*. Dresder's book, which is particularly good, is almost a translation of the German book which the author wrote a few years ago. The purpose of Edv. Lehmann's *Stedet og vejen* (*The Place and the Way*), is to show how the Jewish, heathen, and Christian civilization have gone through the same stages of development. Of great importance to Landsmaal literature is Arne Garborg's translation of Homer's *Odysseu*. In many of its passages we feel the spirit and power of the Edda.

SWEDISH. Drama. Per Hallström wrote two plays, *Karl XI*, and *Gustaf III*, both of which have good historical atmosphere, yet the problems presented remind us of the present. Ernst Bredberg contributed *Furstor* (*Princes*), and Tom Forssner *Den stora donationen* (*The Big Donation*).

POETRY. Swedish literature suffered a loss by the death of Oscar Stjerne, whose *Lovsänger*

och andra dikter (*Songs of Praise and Other Poems*), were issued during the year. Although these poems were written during the illness of the author, they are pervaded with a strain of optimism. They are marked, as is the author's poetry in general, by the influence of Fröding. Bertel Gripenberg has probably never shown as strong lyric power as in his *Under fanan* (*Under the Flag*), a volume inspired by the civil war in Finland in the spring of 1918. Johan Nordling's *Samlad låga* (*Centred Flame*), is a volume of lyrics which show a wealth of feeling combined with rare powers of description. Like a voice from the past came E. N. Söderberg's *Vårrefleaser och höstdazrar* (*Spring Images and Autumn Lights*). Söderberg belongs to the idealistic school of the sixties and seventies and reminds us somewhat of Wirsén. Among volumes written by Swedish poets in America may be mentioned Aron Ingvall's *Till vänskapen* (*To Friendship*), which is full of sentiment and pervaded with an optimistic idealism.

FICTION. Selma Lagerlöf's *Bannlyst* (*Under the Ban*), is written in the same vein as *The Emperor of Portugallia*. Henning Berger in *Järntrappan* (*The Iron Stair Case*), gave us a specimen of novel of adventure, a genre rare in contemporary Swedish literature. In *Asu-Hanna* Elin Wägnér also struck out in a new direction—the naturalistic delineation of common people. The theme of Sven Lidman's *Huset med de gamla fröknarna* (*The House with the Spinsters*), is the value of memories and traditions. Hjalmar Bergman's *En dods memoarer* (*The Diary of a Dead Man*), pictures the helplessness of man and his dependence on conditions. In Martin Koch's *Anteckningar från havet* (*Notes from the Sea*), we notice the author's usual admiration for the laborers, this time the toilers on the sea shore.

LITERARY CRITICISM, ETC. Johan Mortensen's *Från Röda Rummet till sekelskiftet* (*From "The Red Room" to the End of the Century*), treats the naturalistic and symbolistic literature of Sweden, with particular reference to Strindberg as the exponent of naturalism. Anton Black's *Geijers gotiska diktning* (*Geijer's Gothic Writings*), touches on the different influences and movements that affected Geijer, treating especially his journey to England and its results. In *Det levande förflutna* (*The Living Past*), Johan Landquist gave us a number of essays on authors and institutions. Martin Nilsson's *Olympen* (*The Olympus*), is an exposition of classical mythology containing many original theories.

SCHAEFFER, NATHAN C. State superintendent of education of Pennsylvania, died at Lancaster, Pa., March 15. He was born in Berks County, Pa., Feb. 13, 1849, and graduated at Franklin and Marshall College, Pa., 1867; studied in the Theological Seminary of the Reformed Church and at German universities. From 1875 to 1877 he was on the teaching staff of Franklin and Marshall College, and from 1877 to 1893 he was principal of the Keystone State Normal School. He held the office of State Superintendent of Public Instruction in Pennsylvania from 1893 to the time of his death. During that time he held important educational and religious positions and wrote *Thinking and Learning to Think*, (1900), and *History of Education in Pennsylvania*. After 1893 he was editor of the *Pennsylvania School Journal* and he

also edited *Bible Readings for Schools*, (1897). He contributed widely to educational and theological journals.

SCHAUFFLER, ADOLPH FREDERICK. Clergyman, died in New York City, Feb. 18. He was born at Constantinople, Turkey, Nov. 7, 1845, graduated at Williams College, 1867, and studied at Union and Andover Theological Seminaries; ordained to the Congregational ministry, 1871. After holding pastorates in Brookfield, Mass., and New York City, he was superintendent of the New York City Mission Tract Society, 1887-1902, and after that president of the New York City Mission. He wrote *Ways of Working*, (1891); *The Teacher, the Child and the Book*, (1900); *The Pastor as Leader of Sunday School Forces*, (1903); *Sparks from a Superintendent's Handbook*, (1909).

SCHERMERHORN, FREDERICK AUGUSTUS. Capitalist, died in New York City, March 20. He was born in New York City, Nov. 1, 1844; served with distinction in the New York volunteers in the Civil War. He was trustee of important educational and art institutions.

SCHILLIG, OTTILIE. See MUSIC, Artists, Vocalists.

SCHIRMER, RUDOLPH E. One of the foremost American music-publishers, died at Santa Barbara, Cal., on August 20. He was born in New York, July 22, 1859. After graduation from Princeton University, in 1880, he entered the Columbia Law School, and was admitted to the bar in 1884. The next year he entered the firm of G. Schirmer, founded by his father in 1861, and after the latter's death became president of the corporation in 1893. During his administration branches were established in Boston (The Boston Music Co.) and London (G. Schirmer, Ltd.), and the famous Schirmer Library of Musical Classics was begun in 1894. In 1915 appeared the first number of *The Musical Quarterly*, which numbers among its contributors the most famous writers on music in Europe and America, and occupies a unique position among musical periodicals published in the United States. When the Institute of Musical Art was founded, in 1905, Mr. Schirmer presented it with the extensive Schirmer Circulating Library. Throughout his career he was the champion of the American composer, whose ambition he stimulated through the publication, without expectation of adequate financial returns, of works in the larger forms. Besides, he built up a successful book-business through the publication of important books dealing with the theory and history of music. At the time of his death the catalog of the house comprised over 28,000 numbers.

SCHMIDLAPP, JACOB GODFREY. American banker and philanthropist, died in New York City, December 18. He was born at Piqua, Ohio, Sept. 7, 1849, and was engaged in the cigar and whiskey business in Memphis 1868-74. He removed to Cincinnati in 1874, where he organized the Export Storage Company and the Union Savings Bank and Trust Company. He was president or director of a large number of important financial institutions and a member of many bodies for the improvement of social conditions. He gave large sums for the education of children and was owner of model tenements in Cincinnati.

SCHREINER, WILLIAM PHILIP. Former Prime Minister of Cape Colony, died in London, England, June 28. He was born in Cape Colony in 1857 (a brother of Olive Schreiner, the authoress), educated at Cape University and Cambridge, England. In 1893 he was a member of the second Rhodes ministry. He was twice attorney-general. After long service in the provincial legislative assembly he was senator in the Union of South Africa, 1910-14. He was prime minister of Cape Colony, 1898-1900. In 1914 he was made High Commissioner in England for the Union of South Africa.

SCOTLAND. A division of the United Kingdom comprising the northern part of the island of Great Britain with adjacent isles. Area, 30,405 square miles, of which the land area is 29,796. Population (census of Apr. 2, 1911), 4,760,904; estimated in 1918 (civilian), 4,886,300. See GREAT BRITAIN.

SCOTT-GATTY, Sir ALFRED. An English composer, died at London, in March. He was born at Ecclesfield Vicarage, York, Apr. 26, 1847. He was especially known for his musical plays for children. He also wrote several hundred songs.

SENEGAL. See FRENCH WEST AFRICA.

SERBIA. A Balkan kingdom which in December, 1918, was proclaimed a part of the new unitary state of Serbs, Croats, and Slovenes (see JUGO-SLAVIA). It is separated from Hungary by the Danube and the Save and bordered by Bulgaria on the east, Albania and Montenegro on the west, and Greece on the south. Capital, Belgrade. See *Government* below.

AREA AND POPULATION. The area is given as 33,891 square miles. No later figures for population are available than those given in preceding YEAR BOOKS. The total estimated population in 1911 was 4,615,567. These estimates apply to the period between the close of the Balkan wars and the beginning of the War of the Nations and include the territory acquired by the Treaty of Bucharest (July 25, 1913), namely parts of Saloniki, Monastir, and Kosovo, with a total area of 15,241 square miles, and a total population of 1,703,866. Belgrade in 1911 had a population estimated at 90,890; Nish, 24,949; Kragujevatz, 18,452; Leskovatz, 14,266. Greek Orthodox is the state religion and in Old Serbia 2,881,220 out of the 2,957,207 inhabitants were reported in 1911 as of that faith.

RESOURCES, ETC. The resources are mainly agricultural, and the prevailing land tenure is that of peasant proprietorship. Of the total area, 21 per cent is reported as arable. Before the war fruit products formed 13 per cent of the exports. Forests cover 6.3 per cent of the surface and the state-owned forests in 1916

had an area of 1,375,000 acres. Mineral resources are also considerable and are worked in part by the state. According to the United States Bureau of Foreign and Domestic Commerce in 1919, Serbia's recovery promised to be rapid despite her sufferings from the effects of the war. As the country lacked industries in the main, the ravages of war extended chiefly to the cutting down of fruit trees, and the commandeering of the domestic cattle. But the people soon returned to their farms. Several good harvests promised to place the country well along on the road of recovery, although the replacing of the lost live-stock would take some time. Unlike some of the near-by countries, the Serbian peasant usually owns his small farm, and there are few large landholders or even rich men. Serbian villages are largely self-supporting. Before the war Austria supplied the greatest share of the imports, but much of this trade will now go to other countries. It was announced during the year that the Rumanian government had waived the seizure of building material for the bridge over the Save and of the 400 railway trucks and 13 locomotives kept back in Rumania. This material, which was detained by the former Rumanian government, was essential for the reconstruction of the railway bridge over the Save destroyed by the Austrians at the time of their retreat. The failure to repair the bridge had caused an interruption of direct communication between Constantinople and Saloniki and western Europe.

GOVERNMENT. After the armistice Serbia took a leading part in the formation of the new Jugo-Slav state. On December 1st the National Council representing the Jugo-Slavs, sent a delegation to Belgrade requesting Serbia to join the union of Serbs, Croats, and Slovenes, and Prince Alexander in the name of his father King Peter of Serbia declared Serbia's adherence to the union. At the close of the year Prince Alexander was chosen to act as regent of the new state and a ministry was appointed under the Serbian premier. See JUGO-SLAVIA and WAR OF THE NATIONS.

SETHBRIDGE, Sir ROGER. British publicist, died at Exbourne, England, February 15. He was born in Devonshire in 1840, and educated at Oxford, where he graduated with high honors. He was twice appointed government professor of political economy in the state colleges of Calcutta University. He continued for some years in the Indian service, and wrote widely on Indian subjects for the press. Returning from India he entered politics and in 1885 was elected to Parliament. He retired in 1892. He was vice-president of the Tariff Reform League.

SEVENTH DAY ADVENTISTS. See ADVENTISTS.

SEWAGE TREATMENT. See SEWERAGE.

SEWANEE. See SOUTH, UNIVERSITY OF THE.

SEWERAGE AND SEWAGE TREATMENT. Sewer construction continued along familiar lines of design during the year with checks in amount of work due to high cost and other abnormal conditions. The construction of sewage treatment works was also below normal. The older methods of treatment were followed in the main.

Studies of the *activated sludge* process were continued at Milwaukee, where it is expected that a larger plant to treat the sewage of the entire city by this process will soon be built.

Houston, Texas, is still the only city of considerable size which has adopted activation for treating all its sewage, and the only city, large or small, that has yet ventured to install apparatus for dewatering the sludge to a moisture content of 10 per cent in order to produce marketable fertilizer base. Even yet dewatering apparatus has been provided at only one of the two works at Houston and at the close of the year this apparatus was not yet in daily use, repeated delays having been caused in overcoming mechanical difficulties. The dewatering apparatus at Houston consists of plate presses, conveyors and a revolving dryer in which heat is applied. Small activated-sludge plants are in use at Coleman, Gainesville, San Angelo, San Marcos and Quanah, Texas. A plant built two or three years ago at Escanaba, Mich., has not been put in use owing to the non-completion of the outlet sewer to the plant. Reports on a 1,000,000-gallon demonstration plant built and operated at *Easton, Pa.*, at the expense of the patentee to show the possibilities of a *lime-electrolytic* or "*direct-oxidation*" process were made public in midsummer. The plant consists of a modified form of electrolytic cell tried again and again for more than a quarter century to treat sewage by electrolysis, combined with chemical treatment and mechanical agitation, this combination being preceded at Easton by both coarse bar screens and fine perforated-plate screens and followed by sedimentation, and no attempt being made to devise a means for sludge disposal. Besides the occasional operation of the plant by the proprietor of the process a more elaborate test was made under the observation of the engineering division of the State Department of Health of Pennsylvania. An official report on these tests indicated that the process would produce a satisfactory effluent, but at a high cost, and that studies of sludge disposal should be made. (See *Engineering News Record*, Sept. 18, 1919, for summary of the test and editorial discussion of both this test and a subsequent one by a committee of the Franklin Institute, which made a favorable but incomplete and misleading report on the subject, printed in the *Journal* of the Franklin Institute for August, 1919.) At the close of the year Easton had not decided whether to adopt the process, but a contract for a larger plant of the same kind was let by Allentown, Pa., and another by Phillipsburg, N. J., subject to changes at the demand of the respective state health departments if the plants did not give satisfactory results. A report by the engineer of the Oklahoma Health Department in December showed that of seven electrolytic plants of an earlier type built in that State since 1912 only one is now in operation and that for but eight hours a day. At *Cleveland, Ohio*, contracts for one of three proposed sewage-treatment works were let in 1919 after a long series of experiments and much delay. This plant, known as the *Westerly* works, is designed to treat the sewage of 300,000 people and will consist of coarse bar screens, grit chambers, and two-story or Imhoff settling and sludge digestion tanks, with chlorination in summer to disinfect the effluent on account of its discharge into the lake near bathing beaches. This type of plant was adopted at Cleveland after a long series of experiments with the activated-sludge process and after much consideration had been given

to the use of fine revolving disk screens instead of Imhoff tanks. Worcester, Mass., also decided against the activated-sludge process after experimental tests, adopting instead Imhoff tanks, sprinkling filters and finally settling tanks. Tests of a new Reinsch-Wurl screen plant at the foot of Dyckman St., New York City, gave results reported as satisfactory.

Proposed changes in an existing sewage-works at Madison, Wis., the third plant built there in 20 years, make timely a review of the history of sewage disposal in that city as an illustration of what happens in many cities on account of changes in the theory and practice of sewage treatment and of the failure of many city councils to secure, or having secured to follow, the advice of competent engineers. As far back as 1886, Madison was advised to treat its sewage by chemical precipitation. In 1894, another engineer recommended broad irrigation, but no works were built. In 1895 the city council adopted plans by still other engineers for chemical precipitation and intermittent sand filtration, but again no works were built. In 1897 a special committee, including a prominent engineering professor at the University of Wisconsin, advised filtration. Again nothing was done. In 1898, ignoring all earlier engineering advice, the city let a contract for a patented process of treatment never tried in this country, but used a little in England, consisting of chemical treatment by means of "ferrozone" and subsequent filtration through "polarite." The contract provided that the effluent should be equal in quality to the natural water of Lake Mendota, into which the effluent was to be discharged. The contractor substituted lime for "ferrozone" as a precipitant, but the plant did not produce an effluent of the required character and was abandoned by the contractor in January, 1900. The city operated the plant for a time but abandoned it in January, 1902. Meanwhile septic tanks and cinder filter beds had been built by the city. This plant soon became too small but it was not until 1912 that the city decided to build another. This was similar to the second plant, but larger and built at a new location. In 1913, changes in the plans for the third plant were advised by an outside consulting engineer, but on account of construction difficulties all these were not adopted. In 1919, the same consulting engineer was called in and renewed his recommendations, with the likelihood that the changes would soon be made.

SHANDAKEN TUNNEL. See AQUEDUCT.

SHANTUNG. One of the eighteen provinces of China proper. Area, 55,970 square miles; population, estimated at 25,810. Capital, Chinan. On its east coast is Kiao-chow seized by Germany in November, 1897, whose port Tsingtau, was captured by Japanese and British forces, Nov. 7, 1914, and was afterwards administered by the Japanese. According to information published at the end of 1919 the trade of the port had nearly doubled since the Japanese occupation. By agreement of May 25, 1915, Japan obtained from China all mining and railway privileges previously enjoyed by the Germans. Japan's claim to Shantung was one of the chief issues of the Peace Conference and led to prolonged controversy, furnishing the basis of many

attacks upon the Treaty on the part of its opponents in the United States. See WAR OF THE NATIONS; also KIAO-CHOW.

SHAW, ANNA H. Woman suffragist, died at Philadelphia, Pa., July 2. She was born in Newcastle-on-Tyne, England, Feb. 14, 1847, but was brought to the United States in childhood, and graduated at the Boston University theological school, 1878, and at the medical school, 1885. She became a Methodist preacher and lecturer but was refused on account of sex, appealed to the General Conference at Cincinnati in 1880, but appeal was refused; ordained by the Methodist Protestant church, Oct. 12, 1880, the first woman ordained in that body. She began her campaign as suffrage lecturer in 1885. She was president, 1904-15, and afterwards honorary president of the National American Woman Suffrage Association. She was one of the best known and most effective of the American workers for the suffrage. She wrote *The Story of a Pioneer*.

SHAW, J. BYAM. British painter, died in London, England, January 26. He was born at Madras, India, Nov. 13, 1872, entered the Royal Academy School in 1889. In 1893 his first picture, "Rose Mary," was exhibited. He illustrated many works of celebrated authors.

SHEDLOCK, JOHN SOUTH. British writer on music, died in London, England, January 9. He was born at Reading, England, Sept. 29, 1843; taught music many years and was critic for the *Academy* and *Athenaeum* (1900-15). He translated Beethoven's Letters and wrote *Beethoven-Cramer Studies*; and *The Pianoforte Sonata*.

SHEEP. See LIVE STOCK.

SHEFFIELD, WILLIAM PAINE. Former Congressman, died at Providence, R. I., October 19. He was born at Newport, R. I., June 1, 1807; graduated at Brown University in 1880; studied law in Paris and at Harvard University, and practiced after 1880 in Newport. He was member of Congress 1909-11. In politics, he was a Republican.

SHELDON, GEORGE RUMSEY. Banker, died at Carbondale, Ill., January 14. He was born at Brooklyn, N. Y., April 16, 1857; graduated at Harvard, 1879, engaged in banking and was an official also of various electric and traction companies, railroads, the Bethlehem Steel Corporation, and many others.

SHERMAN ANTI-TRUST LAW. See TRUSTS.

SHERWOOD, EDGAR HARMON. An American pianist, died at Rochester, N. Y., June 1. He was born at Lyons, N. Y., Jan. 29, 1845. He wrote over 100 piano-pieces and songs.

SHIPBUILDING. In 1919 for a second time the United States took first rank among the shipbuilding nations of the world and its contribution of new tonnage was stated at 4,075,385 gross tons, or 57 per cent of the total for the year. With some 800 seagoing vessels turned over by the American builders to the United States Shipping Board it was possible to establish some 42 regular trade routes. In fact in the three months of April, May, and June, as will appear from the table below, there were turned over to the Shipping Board completed and ready for operation 382 vessels with a dead weight register of 2,013,893 tons.

The war had developed shipbuilding as one of the greatest of American industries and it had been fostered as the construction had been

done on government account and with government assistance. Consequently the armistice and the general discussion of the government shipping policy, as well as the question of the disposal of vessels ordered during the war, naturally occasioned considerable uncertainty as to the future of shipbuilding. Eight months after the armistice was signed about 100,000 gross tons of steel vessels for foreign trade were

gross tons for foreign owners, a total of 1882 vessels of 2,721,281 gross tons. Of the 1919 output, 916 vessels of 3,569,824 gross tons were built of steel, an increase of 434 vessels and 1,699,465 gross tons over 1918.

The accompanying tables of vessels built and officially numbered in the United States in 1919 was reported by the Bureau of Navigation, Department of Commerce:

Kinds	Atlantic and Gulf		Pacific		Great Lakes		Western rivers		Total

* Includes 4 vessels of 10,635 gross tons built of reinforced concrete.

† Includes 11 vessels of 3,356 gross tons built of reinforced concrete.

‡ Includes 7 vessels of 2,133 gross tons built of reinforced concrete.

under order on private account in American shipyards, but this amount began to increase reaching 350,000 tons by October, 550,000 tons by November, and approaching 1,000,000 tons at the end of the year. This construction was entirely for American account and was important as nearly filling the deficiency caused by the reduction in the building programme of the Shipping Board. Much of this private construction, in fact almost 50 per cent, consisted of tankers which the Shipping Board had not ordered as liberally as the cargo vessels. The quality of American ships turned out after the armistice was shown by the fact that of 600 steamers built in the United States under the inspection of Lloyds Register, all received the highest possible rating.

Labor costs were high in American yards so that there was an advantage for Great Britain but builders in that country had their yards full of orders and could not assure deliveries within two or three years. On the other hand the organization and equipment of American yards had been planned with respect to rapid construction and this was designed to figure in the competition for business. American costs were coming down and American labor was becoming more efficient.

During the calendar year 1919 private American shipyards built 2338 merchant vessels of 4,213,891 gross tons, which were officially numbered for American shipowners, and accordingly either were in trade or about to engage in trade at the end of the year. American shipbuilders also built 25 vessels of 44,250 gross tons for foreign owners, making a total output of 2363 vessels of 4,258,141 gross tons for the 12 months. In comparison with these figures it may be stated that during the calendar year 1918 the corresponding output was 1834 vessels of 2,622,588 gross tons for American and 48 vessels of 98,693

The United States Shipping Board made a report on the American shipbuilding industry in 1919 which indicated that a production had been attained never before reached or even hoped for in the United States. This report stated that the statistics of production would bear out the most optimistic statements made when the shipping programme was launched shortly after the beginning of the war with Germany.

According to statistics for the year ended December 31st, total deliveries aggregated 6,229,323 dead weight tons. Of this total 4,838,673 was composed of steel vessels and 1,338,650 represented the wooden tonnage.

DELIVERIES FOR 1919

	Number	D. W. tons
Steel	741	4,838,673
Composite	12	42,000
Wood	403	1,338,650
Concrete	3	10,000
Total	1,159	6,229,323

During the year 1919 tonnage was delivered by the Emergency Fleet Corporation at the following rate:

1919—	No. of ships	Deadweight tons
January	27	163,400
February	40	241,150
March	44	254,175
April	108	543,690
May	137	787,450
June	119	587,858
July	130	694,828
August	132	707,175
September	146	791,553
October	118	595,833
November	90	485,170
December	77	507,541
Total	1,168	6,358,823

These figures being compiled later than those in the foregoing paragraph show slight discrepancies but indicate the rate of delivery during the year. Deliveries for the preceding years were as follows:

	Ships	Deadweight
1917	49	302,115
1918	533	8,029,506

The maximum yearly construction prior to the organization of the Emergency Fleet Corporation was approximately 875,000 deadweight, but the average from 1910 to 1917 was approximately 425,000 deadweight per year.

The record of the Emergency Fleet Corporation for its entire activities was considered even more striking and may be briefly recapitulated. Since the work was first begun in 1917 ships had been delivered amounting to 9,557,444 dead weight tons, while 10,892,440 tons had been launched. Keels had been laid for 2216 vessels of 13,055,161 tons. Ships delivered to the end of 1919 numbered 1740.

The following summary gives a survey of the whole shipbuilding activities.

KEELS LAID		
	Number	D. W. tons
Steel	1,637	11,014,461
Composite	18	63,000
Wood	594	1,904,200
Concrete	12	73,500
Total	2,216	13,055,161
LAUNCHED		
	Number	D. W. tons
Steel	1,879	8,941,740
Composite	18	63,000
Wood	571	1,851,700
Concrete	7	85,000
Total	1,975	10,892,440
DELIVERED		
	Number	D. W. tons
Steel	1,200	7,717,394
Composite	18	63,000
Wood	519	1,767,050
Concrete	3	10,000
Total	1,740	9,557,444

According to Lloyd's Register the total tonnage launched during 1919 was 7,144,549 tons gross, the greatest amount on record. These figures showed an increase of 1,697,000 tons as compared with 1918 and 3,811,000 tons as compared with the pre-war record year of 1913. The vessels launched in the United States in 1919 aggregating 4,075,385 tons gross equalled 57 per cent of the world's output. The record of the United Kingdom, 1,620,442 tons gross, was 272,422 tons more than in 1918, but still nearly 16 per cent below the record year of 1913. The output outside of the United Kingdom, namely 5,524,107 tons, was more than three and one-third times the output of the United Kingdom, while in 1913, the last complete year before the war, the United Kingdom total was actually 35 per cent more than the total launched abroad.

The production of tonnage in Great Britain during the past year was less than in 1918. However, it must be remembered that British yards were engaged in reconditioning the vast

fleet of ships, after their war service, and this effectually prevented the shipbuilders from giving their undivided effort to the building of vessels. Harland & Wolff lead in the year's output, with 28 ships, aggregating 186,061 gross tons. Workman, Clark & Co. of Belfast ranked second, with 13 ships of 87,636 tons, and Swan, Hunter & Wigham Richardson third, with 19 ships and 72,240 tons.

British builders concentrated upon cargo ships, although a few liners were carried over from the war period. In December the Beardmore yard launched the Anchor liner *Cameronia*, which was laid down after the signing of the armistice.

According to the returns of Lloyd's Register the shipping under construction throughout the world on December 31 aggregated 2138 vessels of a total of 7,861,363 gross tons. The British total was stated as 757 vessels, of 2,994,249 gross tons, and the American as 647 vessels of 2,966,515 tons, indicating that Great Britain had under construction at the end of the year slightly more than the United States.

Lloyd's Register compared the British building with that of 1918 as follows (figures in gross tons):

	Dec 31, 1919	Dec 31, 1918
Steam—		
Steel	2,980,938	1,975,962
Ferro-concrete	1,700	..
Wood and composite	2,502	1,240
Total	2,985,140	1,977,202
Sail—		
Steel	3,388	2,750
Ferro-concrete	5,571	..
Wood and composite	150	..
Total	9,109	2,750
Total steam and sail	2,994,249	1,979,952

The size of the vessels under construction in the United Kingdom was summarized as follows:

Gross tonnage—	Number	
	Steam	Sail
100 and under 500 tons	141	15
500 and under 1,000 tons	76	8
1,000 and under 2,000 tons	68	..
2,000 and under 3,000 tons	63	..
3,000 and under 4,000 tons	61	..
4,000 and under 5,000 tons	40	..
5,000 and under 6,000 tons	112	..
6,000 and under 8,000 tons	77	..
8,000 and under 10,000 tons	41	..
10,000 and under 12,000 tons	9	..
12,000 and under 15,000 tons	24	..
15,000 and under 20,000 tons	18	..
20,000 and under 25,000 tons	4	..
25,000 and under 30,000 tons
30,000 and under 40,000 tons
40,000 tons and above
Total	734	23

The following details were given of new work and launches in Great Britain during the quarter ended Dec. 31, 1919 (in gross tons):

	Gross tonnage	
	Steam	Sail
Vessels commenced	601,572	2,060
Vessels launched	451,915	7,439

The total of merchant vessels being built outside of the United Kingdom on December 31st according to the quarterly return of Lloyd's Register is as follows:

	No.	Gross tonnage
United States	647	2,966,515
British dominions	113	251,480
Belgium	8	26,293
China	10	85,700
Denmark	56	100,335
France	65	216,775
Greece	2	1,500
Holland	126	328,338
Italy (including Trieste)	125	314,547
Japan	64	309,474
Norway	61	92,719
Portugal	9	5,210
Spain	28	107,463
Sweden	67	110,765
Total	1,381	4,867,114

The tonnage being built in the world at the end of December, under the inspection of the Surveyors of Lloyd's Register, excluding vessels, the construction of which has not actually commenced, and excluding all vessels of less than 100 tons, amounts to 4,775,346 tons.

On the above basis the tonnage building in the United Kingdom exceeded by 27,732 tons that under construction in the United States, where the decrease in the building of new tonnage amounts to as much as 504,000 tons, compared with the figures for September. This was the first time since this country became a shipbuilder on a large scale that British ship yards showed signs of regaining their former supremacy.

The largest increase in British shipbuilding was at the Tyne yards, in which more than 500,000 tons were under construction. The tonnage building in the United Kingdom at the end of December showed an increase of more than 177,000 tons, compared with that of September, although it fell short more than 60,000 tons of the figures for the June quarter.

Lloyd's figures of ship construction on Dec. 31, 1919 showing that British yards then had under construction about 30,000 gross tons more than American ones were however disputed in the United States. Three months previously, according to the same authority, the United States was building 653,000 gross tons more than Great Britain. In the intervening three months the total of all merchant shipping building for the United States had decreased 504,000 gross tons, while that of Great Britain had increased 177,000 tons. It was in this period, according to the British figures, that the British yards caught up with the American. Lloyd's figures were said to disagree not only in regard to total tonnage of all types, but as to tonnage of the various types.

According to Lloyd's, the total of all types of tonnage building for the two countries at the end of 1919 was:

	Gross tons
Great Britain	2,994,249
United States	2,966,515
British lead	27,734

Figures supplied by the United States Shipping Board showed that the total being constructed for the Board was 3,223,072 deadweight tons, the equivalent of 2,148,714 gross tons. Adding to this latter figure the total of 977,488 gross tons building to private order in American

yards at the same date, as shown by a summary prepared by the Atlantic Coast Shipbuilders' Association from the records of Lloyd's Register and the American Bureau of Shipping, the American aggregate was 3,126,202 tons, and instead of a British lead the situation is shown to be:

	Gross tons
United States	3,126,202
Great Britain	2,994,249
American lead	131,953

These figures, as indicated, were for all types of tonnage. While the United States had turned out a large volume of wooden vessels in the past few years, British output of this description was practically negligible. Accordingly more interest attaches to the comparative estimates as of steel tonnage under construction. Figures in this respect were widely at variance with the American records, as the following tables show. Lloyd's gives the aggregate of steel shipping under construction for the two countries on December 31st as:

	Gross tons
Great Britain	2,991,597
United States	2,662,992
British lead	328,605

The Shipping Board reports that the steel ships under construction for its account totaled 3,118,872 deadweight tons, the equivalent of 2,079,248 gross tons. The 977,488 gross tons reported building in the United States for private account on the same date represented steel ships only, making the aggregate of steel vessels under construction here, according to the American estimate, 3,056,736 gross tons.

AMERICAN BUREAU OF SHIPPING. The great expansion in American shipping led to an active attempt during the year to have the United States government officially recognize the American Classification Society, American Bureau of Shipping, just as the British government official had recognized Lloyds and France the Bureau Veritas. Accordingly such a bill was introduced into Congress during the year 1919.

This bill which seemed likely of early passage provided "That for the classification of vessels of the United States, and for such other purposes as are the proper functions of a classification bureau, all departments of the government and all commissions created by the government are hereby directed to recognize the American Bureau of Shipping as their agency, so long as the American Bureau of Shipping continues to be maintained as an organization which has no capital stock and pays no dividends: Provided, That the Secretary of Commerce and the chairman of the Shipping Board shall each appoint one representative who shall represent the government upon the executive committee of the American Bureau of Shipping, and the bureau shall agree that these representatives shall be accepted by them as active members of such committee. Such representatives of the government shall serve without any compensation, excepting necessary traveling expenses: Provided further, That the official list of merchant vessels published by the government shall hereafter con-

tain a notation clearly indicating all vessels classed by the American Bureau of Shipping."

WORLD'S SHIPBUILDING IN 1919 The official returns of the world's shipbuilding for 1919 compiled by Lloyd's Register are given in the accompanying tabulation:

Countries	Steamers and motor vessels				Sailing vessels and barges		Total	
	No	Gross tonnage	No.	Gross tonnage	No.	Gross tonnage	No.	Gross tonnage
United States:								
Atlantic Coast	362	1,797,862	46	82,289	66	88,041	1,051	4,075,385

* Including 10 vessels of 20,455 tons built of reinforced concrete. † Includes 11 steel sailing vessels of 10,483 gross tons. By countries they were: China 2, of 420 tons, United States 9, of 11,063 gross tons

It will appear from the table that the United States led Great Britain and all other nations in the launching of tonnage during 1919, the figures showing that 57 per cent of the world's shipping was produced in American yards. The United States launched 1051 vessels, aggregating 4,075,385 gross tons. Great Britain had a total of 612 vessels, aggregating 1,620,442 tons. Japan and Canada ranked next. The Japanese yards turned out 133 steel vessels with a gross register of 611,883 tons. Holland launched a greater number of ships, but Canada produced a greater tonnage.

BRITISH SHIPBUILDING. From the accompanying tabulation it will appear that the output of the United Kingdom was 1,620,442 tons gross, which does not include war vessels. This was 272,322 tons more than in 1918, but was still nearly 16 per cent below the record year of 1913. In 1919 62 steamers, each of 6000 tons and upward were launched of which 4 were of over 10,000 tons each. The largest was the *Arundel Castle*, of 22,150 tons, launched at Belfast for the Union-Castle Line. The next largest vessels

concrete, 102 trawlers and a large number of vessels designed for Channel, coasting and other special services. The average tonnage of steamers launched in the United Kingdom during 1919 was 2930 tons, but if steamers of less than 500 tons be excluded the average reached 4006 tons, compared with 4593 in 1918, 4933 in 1917, 4080 in 1916, 3791 in 1915 and 4460 in 1914. The launches for the year included 17 steamers with a total tonnage of 148,188 tons which were to be fitted with steam turbines and five vessels of 32,936 tons which were to have Diesel engines. The four largest vessels mentioned above were all to be fitted with geared turbines. The largest Diesel engine vessel launched during the year was of 6980 tons. The output of the United Kingdom could be divided as follows: On the Clyde, 525,747 tons; on the Northeast Coast, 716,295 tons; at Belfast, 213,720 tons, and at all other ports together, 164,680 tons. This is shown in more detail in the table.

The British shipbuilding returns for 1919 as recorded by *Lloyd's Register* were as follows:

District	No	Steamers		Barges		Total	
		Tons (gross)	No.	Tons (gross)	No.	Tons (gross)	No.
Aberdeen	23	8,862	1	710	24	9,572

SHIPPING. No economic or political question was of greater significance during 1919 than the question of providing for ocean commerce and the restoration of trade as well as its furtherance and development in new fields and by new methods. In the new era following the great world war it was inevitable that there should be a greater interrelation of the world's commercial interests than ever, and every prospect of greater competition in the world's markets where a large and efficient mercantile marine would be an important and possibly a predominating influence. Consequently in 1919 the building and operation of ships, which was a military necessity during the war became an equally vital matter in peace. The question of SHIPBUILDING (q.v.) has already been discussed, but the questions of operation and fundamental policy were no less important. Interest centered in large measure in the merchant marine of Great Britain and the United States, as these countries were considered already to have begun a friendly rivalry with important results to the world's commerce and politics. It may be said here, however, that in all the maritime countries internal and industrial conditions had their effect on shipping and shipping problems. Strikes that curtailed production and shipments affected cargo, dock handler's strikes, and other labor difficulties prevented loading and caused delay, while various policies, governmental and political, all reacted on shipping. In January the U. S. Shipping Board ordered all requisitioned ships except those needed by the War and Navy Departments returned to their owners, but this policy was delayed in its full execution until May, as these craft were employed in moving foodstuffs to the suffering peoples of Europe, and it was stated that more than 2,000,000 tons dead weight were employed in such relief work. The ships then turned back were altered from troop carrying to their original commercial functions, this reconditioning being an important work in the United States as also in Great Britain. Freight rates dropped from war time prices, but they were much above those of the former days of peace, and private owners reaped rich returns in the active business.

The ships built and owned by the United States government were allocated to various American operators who received a percentage of the gross freights for their services in management and operation. To do this there were formed a number of shipping companies, to whom an income was assured without requiring heavy capital or financial risks.

During the year the transportation of coal from America was an important item and succeeded the shipments of food supplies. With the shortage of fuel in Europe, due to strikes and especially to reduced production in British mines, and the small or entirely failing output in France and Belgium, not to mention Italy and Scandinavia, the coal situation became acute, and there resulted traffic unprecedented, for example over one million tons were shipped in September and October. America had ample wares in addition for export to Europe, South America, Asia, and elsewhere, so that shipping was in active demand and well and profitably employed.

High ocean freights continued during the year. These were affected by port troubles, in-

cluding strikes, congestion, and also by the increasing cost of coal and labor. A ton of British shipping, according to British ship owners, performed approximately but half the service that it did five years previously, and there was great congestion at various British ports with much idle shipping. Other reasons for high ocean freights in Great Britain were labor troubles, increased cost of ships, higher insurance values and higher cost of repairs and maintenance, increases in officers' and seamen's wages, heavier bills for food and ship stores, higher dock dues and higher prices for bunker coal. Before the war coal could be obtained in Great Britain for \$3.65 to \$4.87 per ton. At the end of 1919, bunker coal cost \$17.08 to \$26.77 per ton, the average price for five British ports being \$22 per ton. Wages had increased more than 100 per cent. and where once it was possible to construct in Great Britain a vessel for from \$24 to \$29 per ton, for 1919 the same vessel cost \$146 per ton.

STRIKES AFFECTING SHIPPING. American shipping in 1919 was seriously affected by labor troubles which were felt in their remote as well as immediate consequences. The harbor boatmen at the port of New York left their employment from March 4th to April 17th, and for 19 days in July there was a walkout of both officers and unlicensed personnel on vessels in the Atlantic and Gulf Coasts, resulting in increased wages of 10 per cent. In October, some 140,000 longshoremen at Atlantic and Gulf Ports took part in an unauthorized strike which caused nearly 700 vessels to remain idle from three to six weeks. In this strike the steamship operators were successful and the longshoremen returned to work. About this time came the coal strike which prevented the exportation of coal.

U. S. SHIPPING BOARD PERSONNEL. On account of changes in personnel and reorganization the work of the Shipping Board was hampered in a measure during the year and it was criticized for lack of fixed policies. Among the more important resignations were Chairman Edward N. Hurley, Commissioners Charles R. Page, Henry M. Robinson, Director of the Division of Operations J. H. Rosseter, Vice-President Charles E. Piez, head of the Emergency Fleet Corporation; Vice-President John E. Barber, in charge of the Ship Sales Division, and Frank E. Ferris, managing agent, New York. John Barton Payne became chairman and reorganization and retrenchment was the keynote of the incoming administration. While it was considered necessary to reduce the organization which was large and expensive, at the same time the work of the board suffered as well as the interests of the shipping companies.

LEGISLATION. Congress did not settle on any fixed policy for the merchant marine and there was little legislation bearing on the subject. One bill was passed which sought to place American tonnage on a parity with ships of foreign register and repealed the emergency measure, which permitted foreign vessels to ply in coastwise services.

The first American passenger service to Germany was inaugurated on December 20th when the *Manchuria*, owned by the International Mercantile Marine Company, sailing under the flag of the American Line, cleared for Hamburg with a record transatlantic mail and general cargo, in-

cluding 25 first-class passengers. The *Manchuria* was to be followed by her sister ship *Mongolia*, which sunk the first German submarine destroyed by gun fire directed by a crew aboard an American steamship, and a regular service was to be maintained between New York and Germany.

TOTAL AMERICAN SHIPPING. The total listed American shipping on Dec. 31, 1919 as reported by the Bureau of Navigation of the Department of Commerce, was 28,731 vessels of 15,441,786 gross tons. At the beginning of the current fiscal year on July 1, 1919, there were seagoing ships numbered 2058 of 7,300,022 gross tons, of which the United States government represented by the Shipping Board owned 982 of 3,827,201 gross tons, or 52 per cent, while on January 1, 1919, American listed seagoing ships of 1000 gross tons or over numbered 1663 of 5,656,856 gross tons, of which the government, represented by the Shipping Board, owned 608 of 2,303,015 gross tons, or 41 per cent of the tonnage. During the calendar year 1919 American registered enrolled and licensed tonnage increased from 11,261,444 gross tons to 15,325,000, of which increase nearly all was of seagoing ships of 1000 gross tons or over, and of this increase 3,637,777 gross tons were owned by the Shipping Board and had been built with appropriations by Congress. Up to June 30, 1919, the expenditures of the construction division of the Shipping Board aggregated \$2,512,692,000, of which \$1,741,997,945 were expended during the fiscal year ending June 30, 1919, or at the rate of about \$150,000,000 a month.

Studying the complete returns for the first quarter of the fiscal year 1919-1920 ending Sept. 30, 1919, it would be found that the distribution of tonnage registered for the foreign trade and enrolled or licensed (small vessels) for domestic trade and the additions made during the three months ended December 31st, would be as follows:

	Sept. 30, 1919		Following three months' increase	
	No	Gross tons	No	Gross tons
Registered	5,347	7,860,070	315	1,190,314
Enrolled	12,752	6,178,998	106	70,187
Licensed	10,023	135,520	188	6,757
Total mer marine.	28,122	14,174,588	609	1,267,288

During the following three months ending December 31st, the seagoing ships of 1000 gross tons or over increased 250 of 1,101,692 gross tons. Seagoing ships of 1000 gross tons or over on December 31st, numbered 2584 of 9,588,787 gross tons, of which the United States government, represented by the Shipping Board, owned 1465 of 5,940,742 gross tons, or 62 per cent.

The value of exports of the United States carried in American ships, including the Great Lakes, during the year ending June 30, 1919, was \$1,617,234,923, and for the two years ending June 30, 1919, was \$2,594,953,852.

GREAT LAKES SHIPPING. According to the annual report of the Lake Carrier's Association there was a generally unsatisfactory season during 1919 for its fleet of 385 ships.

The uncertainty in the steel trade in the early spring soon after the opening of navigation commenced the season inauspiciously and this was followed by almost all known elements

antagonistic to favorable operations. According to the report the strike of ore and coal handlers occurring simultaneously with the shopmen's strike, followed by the steel workers' and miners' walkouts, served to check the movement of coal and ore during the greater part of the season; the longshoremen's strike, which choked export elevators, reflected upon the fall grain movement, and, as a climax, the final month of navigation was marked by a severity of weather unprecedented in a score of years, the report stated.

On the statistical side the report gives the total net tonnage for the season as 91,500,000, against 114,000,000 during 1918. In only two of the last seven years, 1914 and 1915, was the total lower than in 1919. There was a decrease in ore shipments from 1918 of approximately 14,000,000 tons with a total of 47,177,395. Coal shipments declined 6,000,000 tons to 26,424,068, and embargoes at the seaboard reduced the total grain tonnage by half a million, the season's total being 6,091,703. Movement of stone, another of the principal cargoes, fell off nearly a million tons from 1918, to a total of 6,407,285.

The fleet of the Lake Carrier's Association, which at the beginning of the season, consisted of 1,982,830 tons, lost 16 vessels through sales, withdrawals from membership or destruction by the elements.

INCREASE IN SEAMEN. Along with the increase in the number and tonnage of American ships came an increase in the number of seamen. The total number of masters, officers and men required to man the registered, enrolled and licensed vessels of the United States, including 1450 documented yachts and aggregating 15,325,000 gross tons, on December 31st, was 266,000.

In the list of merchant vessels of the United States for June 30, 1919, the number of crew, excluding master, of the 29,600 vessels and yachts included in the list was figured. Adding the master for each vessel, the totals were as follows: Steam vessels, 156,114; motor vessels, 42,941; sail vessels, 21,672; unrigged vessels, 11,425, total, 235,152. The new vessels documented during the year after the list went to press required masters, officers and men aggregating about 31,000, thus making a total of about 266,000.

Salt water tonnage at the end of 1919 was three-fourths the total American tonnage, but as it included the larger ships with relatively small crews in proportion to tonnage, the total number required to man salt-water ships was estimated at about 175,000. On June 30, 1915, the total number of masters, officers and men required for American merchant vessels and yachts was 187,921, of whom 60,354 were required for sea going ships. These figures showing the great growth in American shipping may be compared with those of Great Britain for 1914 when the number of masters, officers and men employed on 12,486 merchant vessels of England, aggregating 20,300,000 gross tons, was 295,652, of whom 210,672 were employed on 3941 steamers in the foreign trade.

AUSTRALIAN GOVERNMENT OPERATION. An interesting example of state operation of shipping was to be found in Australia where the gross earnings of the Commonwealth Line of steamers (exclusive of ex-enemy vessels) during the fi-

nancial years ended June, 1917, and June, 1918, were £1,390,457 and £2,095,978, while the net earnings for the same periods were £426,394 and £915,879 respectively.

The capital cost of the 15 "Austral" vessels up to Sept. 30, 1918, was £2,105,000. The receipts and working expenses of the line from its inception to Sept. 30, 1918, were:

Receipts, including insurance on lost vessels	£4,455,000
Working expenses	2,334,000
Surplus receipts	£2,121,000

Accordingly in approximately two years the net receipts of the line exceeded the capital cost of the vessels. Moreover the vessels considerably appreciated in value from the time of their purchase.

Until June, 1917, ex-enemy vessels were operated by the Navy Department, and as each voyage was completed after that date they were put under the management of the Commonwealth Line of steamers. The gross and net earnings of these vessels are as follows:

	Gross earnings	Net earnings
1914-15	£145,503	*28,470
1915-16	646,209	327,924
1916-17	1,272,621	585,921
1917-18	2,292,354	1,223,850
1918-19	3,327,912	1,448,176
Total	£7,684,599	£3,576,901

* Loss.

Freights charged by the Commonwealth Line, although in excess of those of pre-war times, were much below those charged by the shipping companies and there has necessarily been fluctuation, but at the time when the ruling rates to the United Kingdom for wheat were 125s and 130s per ton the rate charged by the Commonwealth Government Line was 120s. At a later date the line found it necessary to increase its rate to 150s. Then the ruling rate was 235s, while 275s was offered to neutral vessels for wheat to Europe.

The Commonwealth Government Line carried to and from Australia 682,576 tons of cargo, including 3,366,686 bags of wheat and flour, 146,472 bales of wool, and 43,321 tons of cornsacks. In addition to the foregoing, the ex-enemy fleet carried 337,496 tons of cargo, making a total of 1,020,072 tons.

SHIPWRECKS. See SAFETY AT SEA.

SHIRLEY, PAUL. See MUSIC, Chamber-Music.

SHOCK. The mysterious something known as shock, which follows severe injuries, emotional crises, etc., has never apparently existed as such outside of the English-speaking countries. French, German and other scientists have no term to correspond with it and employ the English word. Frenchmen refuse in the main to see the existence of one basic condition but rather numerous separate affections which possess some general resemblance, but are by no means the same. The great war has focussed universal attention on this phenomenon and our knowledge is bound to be greatly modified in consequence. Moore of Liverpool has recently written to the effect that primary shock may follow alike on sudden heart failure, emotional

causes, hemorrhage, severe pain, etc., and that the state of the brain is one of anemia with unconsciousness. A person may very quickly come out of this condition, which is therefore not so serious *per se*; but if he fails to come out of it in 20 or 30 minutes, a peculiar state develops in which metabolism shuts down—for a while completely, but after some time is resumed to the extent of about one-third the normal rate, visualized by the consumption of one-third the normal amount of oxygen. The resulting accumulation of carbon dioxide has heretofore been thought of as constituting an acidosis, which is the supposed individual cause of secondary shock, and management has been directed largely to the treatment of acidosis by giving alkalis. Moore seeks to show, however, that the blood instead of becoming less alkaline really becomes more so, and that the phenomenon of secondary shock is due to the increase in the blood of alkali. The great desideratum is that the tissues resume normal oxidation, which must be artificially promoted in all possible ways. The subject should be kept warm by blankets and hot bottles, and should inhale oxygen. No attempts should be made to rid the body of carbon dioxide, the natural stimulant of the respiratory centre; on the contrary the patient should receive an increased amount of this gas if possible. Alkalies should never be given unless an acidosis is actually present.

SHOES, SHOE INDUSTRY. See BOOTS AND SHOES.

SHONTS, THEODORE PERRY. American railway president and financier, died Sept. 21 in New York City. Born in Crawford County, Pa., on May 5th, in 1856, and after a brief period during which he practiced law took part in railway building on lines which now form parts of the Iowa Central and Burlington systems. He came into national prominence in 1905 when President Roosevelt appointed him chairman of the Isthmian Canal Commission in which he did important work in making the plans for the canal. On resigning from this position in January, 1907, he became president of the Interborough Metropolitan Co. (afterwards the Interborough Consolidated Corporation) in New York City, and later of the New York Railways Co., and of the Rapid Transit Subway Construction Co. As the leading figure of the New York Rapid Transit system he was widely known. He was also president of several railways in the Middle West and an officer of other corporations.

SHOOTING. Frank Wright of Buffalo, N. Y. won the national amateur championship at single targets in the Grand American Handicap Tournament held at Chicago, Ill. The first round resulted in a tie between Wright, William Akard of Fairplay, Mo., and R. D. Morgan of Washington, D. C., but Wright was victorious in the shoot-off by straight scores of 25 each. The doubles championship went to Nic Arie of Menard, Tex. The woman title holder for the year was Mrs. A. H. Winkler of Chicago, Ill.

J. E. Jennings of Todmorden, Ontario, Canada, was the winner of the national amateur trap shooting tournament held at Travers Island, N. Y. F. S. Wright finished second and G. S. McCarthy third. In an intercollegiate shoot held at New Haven, Conn., Yale defeated Dartmouth by 448 to 424. A cable match contested between America and England was won by the

former with a score of 7617 to 7523 out of 8000. The A. E. F. championship shoot at Le Mans, France, was captured by Corp. L. A. Peyton with 550 out of 600.

SIAM. A monarchy of south eastern Asia, between 6° and 20° south latitude and 97° and 106° east longitude, with an approximate length from north to south of 1200 miles and a breadth of 480 miles; coast line, 1300 miles. Capital, Bangkok

POPULATION, ETC. The kingdom is divided into 18 provinces or monthons, each under a lord lieutenant with the exception of the monthon of Bangkok, which is under the minister of local government. Area, about 195,000 square miles; population (1915-16), 8,819,686. The population of Bangkok is estimated at 628,675, of whom 200,000 are Chinese, and that of the island of Puket at 179,600. Buddhism is the prevailing religion and Siamese the official language. No later figures for education are available than those given in the preceding YEAR BOOK. According to the latest census all but 833,972 males and 88,756 females were classed as illiterate. Agriculture is primitive. The chief product is rice, which is the national food and the staple export, the exportation for the year ending Mar. 31, 1918, being 1,115,782 tons. The next industry in importance is the cutting of teak-wood, which has been chiefly in British hands. It is found mainly in the northern provinces. The exports of teak in 1917-18 were 44,825 tons, valued at £423,567. Dense forest covers a large part of the area of upper Siam. There are rich and varied mineral resources. Tin is exploited in considerable quantities on the island of Puket.

COMMERCE. The following information in regard to Siam's foreign trade was published by the United States Bureau of Foreign and Domestic Commerce, Oct. 29, 1919: According to the customs returns the aggregate declared value of Siam's foreign trade entered at the port of Bangkok for the fiscal year ended Mar. 31, 1919, amounted to 265,123,347 ticals (\$98,095,638) as compared with 220,872,696 ticals (\$81,722,898) in the previous fiscal 12 months, being a gain in the total trade for the period under review of 44,250,651 ticals (\$16,372,740). The following table shows the approximate comparative value, in United States currency at the rate of 37 cents to one tical, of the imports and exports by principal classes for the years given:

Classes	1914-15	1915-16	1916-17	1917-18	1918-19
IMPORTS					
General merchandise	\$24,879,224	\$24,737,360	\$29,345,151	\$31,745,423	\$34,768,400
Alcoholic liquors	602,736	690,731	837,874	794,729	592,860
Opium	1,069,684	1,118,340	1,025,649	2,013,424	1,108,556
Gold leaf	1,126,595	773,485	1,062,825	1,265,280	1,631,515
Treasure	1,358,344	596,602	230,988	99,874	42,678
Total	\$29,036,583	\$27,916,518	\$32,502,487	\$35,918,730	\$38,144,009
EXPORTS					
Rice	\$31,578,232	\$32,449,847	\$36,987,188	\$36,208,814	\$48,875,662
Teak	1,866,450	1,817,391	1,879,174	2,037,356	2,071,041
Other goods	3,388,654	3,952,143	5,187,740	5,820,338	6,764,399
Reexports	523,190	709,220	772,613	1,089,329	1,855,964
Treasure	251,504	282,227	122,282	648,331	384,563
Total	\$37,608,030	\$39,210,828	\$44,948,997	\$45,804,168	\$59,951,629

The Siamese customs returns also show that 6,689,469 ticals (\$2,475,104) worth of goods were imported from the United States into Siam in 1918-19 as compared with 4,798,727 ticals (\$1,

775,529) worth in 1917-18, while the declared value of the exports invoiced at the consulate at Bangkok for shipment from Siam to the United States for 1918-19 was \$199,257, against \$200,146 for 1917-18.

GOVERNMENT. Executive power is vested in the king who is advised by a cabinet consisting of the heads of the departments. There is a legislative council empowered to promulgate the laws in the event of the crown's disability, but royal assent to legislation is otherwise indispensable. Western methods of government have been introduced of late years and administration has been aided by an American adviser in foreign affairs, a British judicial adviser, a French legislative adviser, and legal counselors of other nationalities. King at the beginning of 1919, Chao Fa Maha Vajiravudh; heir presumptive, Prince Chao Fa Chrakabongs Phuvanarth.

SIBERIA. The northern Asiatic part of Russia. Area, 4,831,882 square miles; population, estimated Jan. 1, 1915, 10,377,900. Chief cities, Irkutsk (population, 129,700), Tomsk (116,664), and Vladivostok (91,464). The following information based on the British government's Board of Trade report was published in November: Siberia is rich in many raw materials and food products. Western Siberia is especially interesting, as it is more thickly populated and more developed than the eastern region. The quantity of grain, given in poods (1 pood equals 36.1128 pounds), produced in 1913-18 was as follows:

Years	Rye Poods	Wheat Poods	Oats Poods	Barley Poods
1913	11,727,897	8,753,368	10,123,281	1,421,003
1914	16,197,239	10,435,115	11,310,160	1,640,717
1915	9,018,297	5,125,576	4,013,178	611,960
1916	12,013,204	11,572,480	8,695,123	1,125,840
1917	11,225,569	10,635,750	9,825,318	1,191,000
1918	11,322,884	12,375,789	11,058,640	1,269,143

From the harvest of 1918 the following quantities remained in government hands, not consumed and not exported to other governments: Rye, 466,734 poods; wheat, 2,604,054 poods; oats, 3,921,859 poods, and barley, 179,529 poods. It was considered that about 16 per cent of the yearly production of the government was available for export. The yearly production of hemp was about 150,000 to 180,000 poods. The yearly production of flax was about 100,000 poods. The yearly production of hides was as follows: Cat-

tle, 40,000 to 50,000; horse, 10,000 to 15,000, and calfskins, 50,000 to 60,000. Hides were sent generally to the fair of Nizhni. The greatest part of calfskins were bought for the United

States. During the war hides and calfskins were used for local needs and the army. The yearly production of bristles has been about 50,000 poods. Before the war this article was sent to Irbit, Nizhni, or Moscow, where it was purchased assorted, and then sent to exterior markets. About 50,000 poods of horsehair was produced yearly. Before the war it was sent by Siberian merchants to Irbit, Nizhni, or Moscow, where it was sold to exporters. The fur trade before the war was chiefly in German hands. Local merchants worked with Leipzig directly or through their Moscow agents. The following furs are collected in this government: Squirrel, white fox, red fox, ermine, kolinsky, sable (light and medium), light fitch, wolverine, wolf, bear, lynx, river otter, and white hare. Timber is not exported but is used only for local needs. Cedar is sometimes sent to Petrograd in planks. Local timber mills are quite small and primitive, but during the war a big timber mill was constructed at Maklakovo, near Yeniseisk. Cedar, fir, pine, larch, and birch are available. In December, 1917, Siberia was proclaimed an independent republic with its capital at Tomsk, and on Nov. 18, 1918, Admiral Kolchak was made Supreme Governor at Vladivostok. For an account of the false reports of this and other anti-Bolshevist governments and their final collapse in 1919, see RUSSIA and WAR OF THE NATIONS.

SIBERIAN OCEAN. See POLAR RESEARCH, ARCTIC

SIDGREAVES, WALTER. Director of the Stonyhurst College Observatory, died June 12: well known for his work in stellar spectroscopy. He was educated at Stonyhurst College and was professor of physics there for 25 years. He served in several expeditions for astronomical observation and received exhibition gold medals for his work in stellar photography.

SIERRE LEONE. A British colony and protectorate on the west coast of Africa, bounded by Siberia on the east and French Guinea on the north. The colony proper has an area of about 4000 square miles and a population (1911) of 75,572, of whom 702 were whites. Chief town, Freetown, with a population (1911) of 34,090. Area of protectorate, 27,000 square miles: population (1911), 1,327,560. Chief exports: Palm kernels, kola nuts, and palm oil. Chief imports: Cotton manufactures, tobacco, coal, and spirits. Exports of palm kernels were valued in 1917 at £842,508; kola nuts, £321,105; palm oil, £62,375. Statistics for trade and finance for successive years follow:

	1914 £	1915 £	1916 £	1917 £
Imports	1,405,049	1,255,755	1,290,817	1,332,752
Exports	1,250,478	1,254,621	1,233,544	1,497,995
Revenue	675,689	504,424	551,106	546,449
Expend.	680,146	546,771	582,940	512,844
Shipping*	2,780,118	1,635,119	1,553,312	1,526,640

* Tonnage entered and cleared.

SILESIA. The name of a division of the Austro-Hungarian monarchy and also of a province of Prussia before the defeat of the Central Powers, and the readjustment under the Treaty; final distribution of its territory undetermined at the close of 1919. The former was a crownland of Austria with an area of 9888 square miles, and a population at the census of Dec. 31, 1910, of 756,949, of whom Austrian subjects

numbered 741,456, distributed according to vernacular as follows: German, 43.90 per cent; Polish, 31.72; Bohemian, Moravian, and Slovak, 24.33. Catholics were placed at 84.52 per cent of the total population. Capital, Troppau, with a population (1910) of 50,762. It joined Bohemia, Slovakia, and Moravia in forming the new Czecho-Slovak state which came into existence Oct. 21, 1918. The Prussian province of Silesia is the largest of the divisions of Prussia, the area being 15,573 square miles, and the population (1910), 5,225,962. Capital, Breslau. See CZECHO-SLOVAKIA; AUSTRIA-HUNGARY; and WAR OF THE NATIONS.

SILK. The silk industry in 1919 presented special conditions of its own, and reflected economic and financial phases affecting the commercial world generally in the effort to restore itself to normal or peace conditions. With a commodity produced in large measure in one continent and consumed or manufactured in another, it was but natural that the vicissitudes of foreign exchange should affect prices and shipments. Likewise, in 1919 there was a shortage of the world's crop, quite a natural and immediate consequence of a great war, and also an increased consumption in manufacturing based on the extraordinary demands for silk products in the United States and the countries not affected by the war, and by the attempts of European manufacturers, including those of Germany and Austria, to resume their former activity. As a single indication of changes in the industry it might be mentioned that Japan in 1919 was acquiring high-power looms and modern equipment for her factories, and was manufacturing 100 per cent more silk than a few years previously.

Naturally, raw silk as well as the finished silk industry reflected the universal high prices due to increased cost of labor, shortened hours of employment, and deficiencies of transportation, along with the consumption of stocks and the decreased crop for the year, which, not only in the case of Italy and France, but also in Japan, was from 30 to 40 per cent below normal. The effect of such conditions on prices may readily be realized, even if the speculative elements, of which there were some in the Eastern markets, are neglected. Prices started somewhat weak in January, but soon hardened, and there was an increase up to nearly the end of the year. Thus, in the Yokohama market early in January Kansai No. 1 was quoted at 1500 yen, and Sinshui No. 1 at 1480 yen; at the end of the year Sinshui No. 1 was quoted at 3430 yen. Regarding prices in the New York Market, it may be said that Sinshui No. 1 sold at \$6.65 a pound on January 1st, and at \$14.20 a pound at the end of the year. In other words, the leading grades increased in price at New York during 1919 from \$6 to \$7 a pound, to \$14 to \$15 a pound. New York quotations for important grades at the end of the year were as follows:

<i>Japanese</i>	
Filature Kansai Double Extra Cracks	14.65
Filature Kansai Extra 13/15	14.45
Filature Best No. 1 Extra 13/15	14.35

Italian

Extra Classicals	14 00
Best Classicals	13.50

These were higher prices, the world over, than ever before, with the possible exception of 1876 when there was a period of inflation due to the failure of the world's silk crop. Furthermore, after 1919 a serious shortage was anticipated.

The world's silk crop of 1919, in comparison with two previous years, was estimated as follows:

	1919 Kilos	1918 Kilos	1917 Kilos
Europe			
Italy	2,280,000	2,695,000	2,820,000
France	200,000	240,000	205,000
Spain	70,000	75,000	70,000
Austria Hungary	100,000	150,000	150,000
Total (Europe)	2,650,000	3,160,000	3,245,000
Levant and Asia Minor	500,000	1,040,000	1,040,000
Asia			
Japan	14,000,000	14,250,000	15,445,000
China	4,500,000	4,650,000	4,580,000
Canton	2,350,000	1,875,000	2,345,000
India	100,000	115,000	110,000
Grand Total	24,100,000	25,090,000	26,765,000

As will appear from the tables, raw silk comes to the United States chiefly from Japan, China, and Italy, and during the calendar years 1918, 1917 and 1916, the imports were as follows:

From	1918 Pounds	1917 Pounds	1916 Pounds
Italy	5,503	149,347	1,534,990
France	3,872	15,839	105,993
Japan	27,074,811	29,396,022	24,375,173
China	5,750,902	6,934,418	6,366,635
Other Countries	30,365	7,205	71,949
	32,865,453	36,502,831	32,454,740

Of the 1918 total 14,901,911 pounds were imported in the first six months and 17,963,542 pounds in the second half of the year.

In the 10 months ending October, 1919, Japan alone supplied to the United States \$194,000,000 worth of raw silk out of the \$251,000,000 worth imported in the 10 months ending with October; China, \$45,000,000 worth; Italy, \$11,000,000; while the total from all other countries was less than \$1,000,000 value.

Total imports of raw silk into the United States during the fiscal year 1918-19 and earlier years were as follows:

	1918-1919 Pounds	1917-1918 Pounds	1916-1917 Pounds
Italian Silk		12,568	572,400
Japan Silk	28,395,447	30,249,585	26,633,900
Canton Silk	1,954,091	2,530,615	2,116,900
China Silk	3,382,400	2,873,070	2,937,400
Tussah Silk	520,734	913,950	1,218,400
Totals	34,202,672	36,579,788	33,529,000

In 1919 American manufacturers of silk were compelled to pay higher prices for raw silk from abroad, than in any preceding year. Nevertheless, the value of imports of raw silk was the largest on record, according to a careful estimate made late in the year by the National City Bank. The value of the raw silk imported into the United States in the calendar year 1919 exceeded \$300,000,000, against \$180,000,000 in 1918, \$156,

000,000 in the fiscal year 1917 and \$120,000,000 in the fiscal year 1916, the first fiscal year in which it crossed the hundred million dollar line. These figures apply to "raw silk as reeled from the cocoons" and do not include "waste silk," which would probably add about \$12,000,000 to the grand total. The quantity imported, even at the high prices, was greater than in any earlier year. The price of raw silk imported was the highest ever recorded, averaging \$8.42 per pound in October, as against an average of \$3 per pound in the fiscal year 1915.

The silk industry in the United States in 1919 was marked not only by prosperity and profits, but by the greatest volume of business ever experienced, all the way from mill to retailer. In fact, it was estimated that the production of American silk mills would amount in value at the factory to approximately \$750,000,000, as compared with \$250,000,000 in the census year 1914. In both broad silks and ribbons there was an unprecedented and constant demand. Along with higher prices went greater yardage and with a purchasing public eager and well supplied with money to buy, the demand for all grades of material was such as to put silk back on the luxury list, which it had for a time left, as fabrics and knitted articles came within the command of the average person. Subsequent to the Armistice there was a demand for increased mill capacity, and many buildings convenient to silk mills were altered and used, rather than wait for the erection of entirely new structures (see TEXTILE MANUFACTURING). There were apparently well justified criticisms of lack of efficiency in the operation of many American mills, but under the great profits secured it was possible to ignore faulty conditions in many cases. At the end of the year mills and selling agents had disposed of their stocks well into the future, and it was estimated that the output of the industry had reached a point where the people of the United States were buying manufactures of silk at a rate of over \$1,000,000,000 a year.

The exports of silk dress goods from the United States in the calendar year 1918 went to more than 50 different countries and colonies, even including the great silk manufacturing countries of Great Britain and France, with smaller quantities, comparatively, to Italy, Japan, and China; while exports of silk wearing apparel went to more than 20 countries. Canada was the largest purchaser of silk dress goods, with a total of nearly \$7,487,000; Argentina, \$450,000; Mexico, \$353,000; Australia, \$313,000; Italy, \$236,000; Cuba, \$215,000; Great Britain, \$59,000; and France, \$30,000.

The total exportation in 1909 of silk manufactures made from silk brought from the opposite side of the globe amounted to less than \$1,000,000, increasing to \$2,000,000 in 1912, \$5,250,000 in 1916, \$7,250,000 in 1917, over \$12,000,000 in the fiscal year 1918, and was estimated at approximately \$25,000,000 for the calendar year 1919. These figures of silk manufactures exported do not include those of artificial silk, which amounted during the calendar year 1919 to nearly \$10,000,000.

During 1919 German silk manufacturers were active, and while they realized that competition in some fields would be difficult if not impossible, yet they recognized that in other fields they had a good opportunity, and in England, where they planned to do a large business, France was con-

sidered the only serious competitor. In certain specialties, German manufacturers were assured of orders. German exports during the first six months of 1919 increased from 3,000,000 to 9,000,000 double hundred weight, and in value from 153,000,000 to 561,000,000 marks. In August the value of the silk exports rose to 738,000,000 marks, which was about the normal peace volume, but this must be considered in view of the depreciated condition of German currency, as the quantity was only about one-sixth of normal. The factories in the Rhineland in particular received many orders during the year.

In the manufacture of artificial silk Germany looked forward to the future with some complacency, with France and the United States as her only competitors in this field. No serious competition was expected from England, while Belgium was beginning to construct her factories.

SILVER. The total production of silver in the United States and territories during the calendar year 1919 was 55,285,196 fine ounces. At the average New York price of fine silver (\$1.12085), it had a value of \$61,966,412. Compared with 1918, these figures indicated a reduction of 12,524,943 ounces and a decrease in total value of \$4,518,717. The total for 1919 was also less than that for 1917 by 16,455,166 ounces.

The decrease in the output of silver is shown in the following table for four years:

TOTAL SILVER PRODUCTION OF UNITED STATES AND TERRITORIES

Year	Quantity Fine ounces	Value *
1916	74,414,802	\$48,861,502
1917	71,740,362	58,408,851
1918	67,810,139	66,485,129
1919	55,285,196	61,966,412

* On basis of average yearly price of fine silver in New York.

While silver production has been decreasing, the value of the production has shown a corresponding increase.

AVERAGE NEW YORK PRICE OF FINE SILVER

	Per ounce
1916	\$.65661
191781417
191898046
1919	1.12085

The following table shows the production of silver by States and Territories in 1918 and 1919. It was prepared from the joint statements of the Bureau of the Mint and the Geological Survey.

Philippines	13,000	14,392
Total	67,810,139	55,285,196

Montana had the largest silver production of any State in 1918 and 1919. Most of the silver produced in that State comes from copper ores, but added quantities were derived from zinc ores in 1919.

Silver in 1919 occupied a unique position in finance and economics, and what seemed incredible a few years previous when the free and unlimited coinage of the white metal at a ratio of 16 to 1 was agitated became a fact, and a value in excess of that ratio was attained during the year. However, labor and other conditions notably a decline in the prices and output of copper and lead acted to curtail production which for the year was estimated tentatively at 55,285,196 fine ounces, valued at \$61,966,412, or a decline of 12,524,943 ounces from 1918. The world's production of silver in 1918 was estimated by the United States Mint at 177,394,900 fine ounces and in 1917 at 174,187,800 fine ounces, but no figures for 1919 were available, when the YEAR BOOK went to press although the best statistical opinion was that there was a decrease in the last named year. In the Cobalt district, as well as in British Columbia, on account of labor difficulties, there was a cessation of production for two months and as a result the year's output was stated at about 20,000,000 ounces. From Mexico for the first 10 months of the year exports sent into the United States totaled \$51,233,802 but the increased activity that was reported at the various mines in the early part of the year however fell off later.

EXPORTS AND IMPORTS. The total exports of silver from the United States in the calendar year 1919 were valued at \$239,001,000 and exceeded the imports, \$98,389,000, by \$149,611,000. In 1918 the exports were \$252,846,000 and the imports \$71,375,000 or an excess of exports of \$181,470,000. The greater part of the imports were from Mexico though Canada and the Central American states also contributed. Of the exports practically one-half of which the greater amount was mint silver, was taken by India, and about one quarter by China, to which country over 120,000,000 ounces had been exported in 1918 and 1919. Great Britain in the first 10 months of 1919 took \$17,500,000 of silver largely for coinage purposes as it had been found necessary to increase its subsidiary coinage. Of the silver produced in the United States it was estimated that less than \$40,000,000 worth was exported most of the metal sent out being coin or bullion, and almost one-half of the domestic product being used in the arts and for subsidiary coinage where the moving picture industry is an important consumer. The United

States purchased for coinage during the year silver valued at \$11,068,400.

SILVER PRICES. For many years London was the silver market of the world and for centuries price records have been maintained there. For brief and convenient reference the history of silver prices has been divided into the following seven periods:

	Per ounce
1. The Tudor period.....	85d
2. The Stuart period.....	65d
3. The 18th century.....	63d
4. The first half of the 19th century.....	60d
5. The second half of the 19th century, with a fairly steady decline from 60d to 30d.....	45d
6. The pre-war period of the present century, 24d to 30d.....	27d
7. Post-war prices To-day.....	70d

The war period witnessed a gradual advance in the price, due in part to artificial conditions. The free issue of paper money for small sums checked the rise, but the collapse of Russia and consequent rouble hoarding increased it. This gradual increase is indicated below by the yearly prices in London from 1915 to 1919:

	Highest quotation	Lowest	Range of prices	Average price
1915.....	27½d	22½d	4½d	23½d
1916.....	37½d	26½d	10½d	31½d
1917.....	55d	35½d	19½d	40½d
1918.....	49½d	42½d	7d	47½d
1919.....	79½d	47½d	31½d	57½d

In 1919 the monthly average at New York and London varied considerably as will appear from the accompanying table from the *Engineering and Mining Journal* (New York), which also gives prices for 1918 and 1917:

MONTHLY AVERAGE PRICE OF SILVER

Mo.	New York			London		
	1917	1918	1919	1917	1918	1919
Jan.	75.630	88.702	101.125	36.682	44.356	48.438

New York quotations, cents per ounce troy, fine silver, London, pence per ounce sterling silver, 0.925 fine.

On Dec. 16, 1919, silver reached a high price of 79½d. an ounce in London, a point never before attained in that market's history. In New York the high level mark of 137½ cents was reached on November 25th, and was the highest figure since 1866. The price in the American market naturally was affected by the action of the Treasury Department which on May 6th, removed the maximum price of 101½ cents per ounce, and also all restrictions on exports. With the foreign demand silver moved up to 121 cents on May 27th, declined in June to 104 cents, and then after staying about 110 cents began in September to rise until the maximum of 137½ cents referred to above was reached on November 25th. From that time there was a

decline to 131 cents at the end of the year, due to the decision of the United States to release standard silver dollars for export to China through the agency of three important American banking companies with Chinese branches, namely the International Bank Corporation, the Asia Banking Corporation and the Park-Union Foreign Banking Corporation. Under the so-called Pittman Act as discussed in the YEAR BOOK for 1918 under *Silver*, the Secretary of the Treasury was authorized to melt up as bullion standard silver dollars in the United States Treasury. This was done in 1919 on behalf of the British government and up to May about \$90,000,000 had been so melted for export to India. This practice was then stopped and a free market in silver resulted. The government of India had difficulty during the year in maintaining its silver reserve which from October declined so that in place of a maximum of 5200 lakhs of rupees (one lakh is equal to \$100,000) at the end of the year there was a reserve of about 4600 lakhs, notwithstanding a total note issue of 18,000 lakhs. The coinage and currency of India accordingly became a serious matter and further and large purchases of silver, the removal of restrictions on imports of silver or other financial measures apparently would have to be undertaken. In China there was an active demand for silver both for hoarding and for the ordinary coinage of commerce. China through arrangements made with the United States Treasury already referred to had stabilized world, and the East as never before figured.

With the world's supplies of gold carefully conserved and with much paper currency it was inevitable that there should be a shortage of subsidiary coinage and a demand for silver for that purpose. Since 1916 Great Britain had coined nearly 40,000,000 of silver and the European countries would have been glad to secure this metal for the same purpose. In November the export of coins as well as the melting of coins, was forbidden in Great Britain, and then when silver reached a price of over 70d. the export of bullion also was prevented. The result was that New York took the place of London as the world's silver market and at the end of the year this market as well as that in San Francisco was quite independent of London though London's price was looked to as forming the basis. Silver in the East is so important as the medium of exchange that its movement affects the exchange situation of the entire civilized world and the East as never before figured in the world's commerce at the end of 1919.

The Pittman Act of Apr. 23, 1918, provided for destroying 300 millions of silver dollars and the purchase of bullion to the same amount, so that the government might secure the profit on the increased coinage value of silver. On Dec. 16, 1919, Representative McFadden, of Pennsylvania, introduced in the House a bill to authorize the Secretary of the Treasury to remove this limit, and to melt or break up and sell as bullion the standard silver dollars in the Treasury of the United States, and against them to issue Federal Reserve notes of small denomination. The bill also provided that any silver certificates which may be outstanding against such standard silver dollars so melted or broken up should be retired at the rate of one dollar face amount of such certificates for each standard

silver dollar so melted or broken up. The sales of such bullion were to be made at such prices not less than one dollar per ounce of silver, 100 per cent fine, and upon such terms and under such requirements as shall be established from time to time by the Secretary of the Treasury. Representative McFadden's bill also provided for reducing the standard of fineness for silver coins, and for permitting the use of copper alone, as well as copper or silver in the alloy of the gold coinage.

The council for the London Chamber of Commerce late in November recommended that in view of the price of silver and the possible disappearance of silver currency, the government should prepare and have ready for issue when required a nickel coinage of the lower denominations instead of issuing notes of a lower value than five shillings. This action was taken in view of the necessity of adequate currency and the loss to the government when it purchased silver at more than coinage value and permitted unscrupulous persons to hoard up coins and sell the bullion at corresponding profit. The plan was understood to involve, not the issuing of nickel coins similar to those of the United States, where 25 per cent nickel is alloyed with 75 per cent copper, which would afford in the case of the British coins too heavy a piece, but to make a new alloy, consisting of 60 per cent silver, 22½ per cent nickel and 17½ per cent zinc, which would provide coins of approximately the same size, though with rather less than two-thirds of the face value, on the basis of November, 1919, prices of silver.

See NICKEL.

SIMMONS COLLEGE. A non-sectarian institution for the education of women, founded in 1899 at Boston, Mass. The enrollment for the summer session was 246, for the fall the registration for regular courses was 1251, while the total registration was 1342. The faculty numbers 133; of these 19 are new this year. The library contains approximately 30,000 volumes. The endowment funds as of June 30, 1919, amounted to \$2,425,771; the income for the same period was \$241,464. The courses of study comprise household economics, secretarial work, public health nursing, library science, social work, etc. President, Henry Lefavour, Ph D., LL.D.

SIMONS, JAMES. Lawyer and newspaper owner, died at Charleston, S. C., July 4. He was born at that city Nov. 30, 1839, educated at South Carolina college and at Leipsic. He served in the Confederate army in the Civil War. After 1894 he was president of the *Charleston Courier* and he was the speaker of the South Carolina House of Representatives, 1882-90. After 1898 he was president of the Society of the Cincinnati in South Carolina.

SIMPSON, ALBERT B. American clergyman, died at Nyack, N. Y., October 30. He was one of the chief evangelists of the time and an important figure in foreign missions. He was born in Canada, Dec. 15, 1844, educated at Knox College, Toronto, and ordained to the Presbyterian ministry in 1865. He held pastorates at Hamilton, Ontario, 1865-74, Louisville, Ky., 1874-81, and after 1881 in New York City. In 1887 he founded the Christian Alliance, which was combined with the International Missionary Alliance 10 years later under the name of the Christian Missionary Alliance, and from that

time was president and general superintendent. He did a notable work in the raising of relief funds for the poor and in sending out large numbers of foreign missionaries. He maintained a Missionary Training Institute and other institutions at Nyack, and was pastor of the Gospel Tabernacle in New York City, for which he raised large sums, on certain occasions \$50,000 or more at a single meeting. His effectiveness as an evangelist was remarkable and his religious activities in other fields covered a wide range, including the editorship of religious periodicals and the authorship of numerous books of which the following may be mentioned: *The Gospel of the Kingdom*, (1893); *Outlook on Missionary Lands*, (1897); *The Holy Spirit in the Old and New Testaments*, (1899); *Christ in the Bible*, (16 volumes, 1902-09); *Echoes of the New Creation*, (1903); *The Cross of Jesus*, (1910); *We Would See Jesus* (1910); *When the Comforter Came*, (1911); *The Old Faith and the New Gospel*, (1911); *Christ Life*, (1911).

SINGAPORE. See STRAITS SETTLEMENTS.

SINGH, Sir GANGA, Maharajah of Bikaner. Representative of British India at the Paris Peace Conference. He had a long record of war service, having served in China, Egypt, France, and Asia Minor. In 1917 he was the first Indian prince admitted to the Imperial War Conference and Cabinet, and his speeches at that time on the subject of reform in India made a deep impression.

SINHA, Sir SATYENDRA PRASSANO. Representative of British India at the Paris Peace Conference. He was brought up in humble circumstances in an Indian village, but succeeded by hard work in securing the means to study for the bar in England. He rose rapidly in his career and was the first Indian to be appointed advocate-general of Bengal. In 1910 he became a member of the provincial executive council. He was also the first Indian to hold an important judicial office. In the Imperial War Conference and the War Cabinet of 1917 he was a member in association with the Maharajah of Bikaner. In the beginning of 1919 he was chosen under-secretary for India.

SINN FEIN. See GREAT BRITAIN, *History*.

SKATING. The skating season in 1919 was greatly handicapped by the open winter and the fact that the Federal government objected to the use of ammonia by the artificial ice rinks. No national championships were contested. Charles Jewtraw of Lake Placid made the best showing in the Eastern championships, winning the 220 yard, half mile, and three-mile events. Joe Moore won the mile and three-mile Metropolitan titles. The feature of the 1920 season will be the races between Robert McLean, world's champion, and Oscar Mathiesen of Sweden which are to be held in Sweden.

SLAVONIA. See CROATIA AND SLAVONIA.

SLEEPING SICKNESS. This term has been applied to several entirely different diseases in which continuous somnolence is the leading symptom. In two of these the incidence is epidemic, but the sleeping sickness of South Africa, the virus of which is transmitted only by certain species of flies, is an exotic and local malady which need not concern us. The sleeping sickness which is of interest to the public in Europe and the United States breaks out at long intervals and fortunately is not widely spread. It is known technically as leth-

argic encephalitis (or inflammation of the brain) and its nearest of kin among diseases are the cerebral lesions which are seen rarely in influenza and the cerebral form of infantile paralysis. In fact its similarity to these twin evils is what makes it dreaded because of the suggestion that it might diffuse itself like those maladies on a large scale. Thus far, however, it has claimed few victims and many of these recover. In Switzerland at a time when the disease had not yet visited that country the medical men were keenly watching for its first appearance, but the disease eluded their vigilance and the first patient to be attacked suffered apparently from tuberculous meningitis, a not uncommon and fatal affection. Only during the autopsy was the nature of the case recognized. In order to prove the correctness of the diagnosis in the absence of a sure criterion Dr. Muller Bergalone, the pathologist, had to exclude from consideration every other form of brain inflammation, which he was able to do with the exception of the cerebral form of infantile paralysis, with which it apparently coincided. But there were not at the time any cases of the latter affection in the vicinity nor had any been seen. Moreover the spinal cord was not in the least affected and while an exclusive localization of infantile paralysis in the brain has been seen, it is very uncommon and probably would never occur save in the midst of a large epidemic when great individual variation is to be expected. There is no certain way of recognizing the disease which causes infantile paralysis—i.e., no specific germ or serum reaction—but it seems safe to assert that despite these close resemblances the two diseases have nothing in common.

SLIFER, HIRAM JOSEPH. Civil engineer, died in Chicago, Ill., February 3. He was born at Colman, Pa., Oct. 12, 1857, entered the railway service and became a superintendent of division, general manager and consulting engineer successively of several important systems.

SMITH, HERBERT H. Naturalist, died March 22 in a railroad accident. He was born at Manlius, N. Y., Jan. 21, 1851; studied at Cornell University 1868-72 and in 1874 pursued researches in the fauna of the Amazonian regions of Brazil and afterwards wrote a series of articles for American magazines. The result of his travels was a volume on Brazil, the Amazons and the Coast, (1879). He pursued further scientific researches in Brazil, traveled extensively 1881-86, and got together an important series of specimens which he bestowed upon museums. It was estimated that he had collected some 200,000 specimens representing about 30,000 species. From 1890 to 1895 he spent much of his time in making collections in Trinidad and the Windward Islands and he gave the results to the British Museum. He contributed largely to encyclopedias and dictionaries within his field of research. For an appreciation of his work see the article in *Science* by Mr. W. F. Holland.

SMITH COLLEGE. A non-sectarian institution for the education of women, founded in 1871 at Northampton, Mass. In the fall of 1919 there were enrolled 2011 students, and there were 190 members of the teaching faculty. The productive funds of the institution amount to \$2,255,412 and the income for the year was \$114,542. The library contains 77,233 volumes. This

year is the first during which examinations for admission have been required for all subjects. President, William Allan Neilson, Ph.D., LL.D.

SMITHSONIAN INSTITUTION. This institution was founded in 1846 by act of Congress, as result to the bequest of James Smithson of England, who left his property to the United States of America "to found at Washington an establishment for the increase and diffusion of knowledge among men." The business of the Institution is conducted by the Board of Regents composed of the Vice-President, the Chief Justice of the United States, three members of the Senate, three members of the House of Representatives, and six other persons outside of those offices. According to secretary's report for the year ending June 30, 1919, the total permanent funds were \$1,074,794.36. The income for the year amounted to \$144,100.53 which added to the cash balance of \$1,289.90, made a total of \$145,390.43. Disbursements, \$595,000.

Expeditions were carried on in the Canadian Rockies, the Middle Atlantic States, and French Congo. In the latter place, Mr. R. L. Garner collected many specimens of apes which were shipped to the National Museum in Washington. Shortly before the close of the fiscal year a collecting expedition to Africa was organized under the direction of Edmund Heller and in conjunction with the Universal Film Manufacturing Co. This expedition is to plunge into the interior of the continent to collect animals, plants, and other material for uses in comparison in working up the collections made in Africa by Col Theodore Roosevelt, Paul Rainey, and others. Dr. J. N. Rose spent three months making botanical collections in Ecuador, obtaining 6000 botanical specimens, 100 jars of fruit seeds and plant products, a number of wood specimens, and samples of bark. Mr. Philip A. Means conducted archeological investigations in Peru and Bolivia. The following is quoted from his report: "Two of the least known places visited were Maranga and Pando. They are very close together, and about six miles northwest of Lima. In its prime, Maranga had four fine terraces, with a spacious terrace-plain at the top. At the bottom the pyramid is about 450 feet square and the summit terrace-plain is about 250 feet by 350. The material of construction is adobe. This pyramid is probably of Inca construction; it is much like the Inca-built Temple of the Sun at Pachacamac and has yielded many Inca artifacts."

On Jan. 29, 1919, a bill was introduced in the House of Representatives by Congressman F. C. Hicks, providing for the erection of a museum of history and of the arts as a memorial to Theodore Roosevelt. It was intended that the proposed museum should contain the extensive collections already in the National Museum of relics and mementoes of illustrious patriots of our country and of the events conspicuous in its history. The bill provided that such a building would be administered by the Regents of the Smithsonian Institution. The matter was not acted on at the time.

The Institution and its branches issued during the year 98 volumes and separate pamphlets. The total distribution was 161,288 copies. The number of accessions during the year which were added to the library of the Institution totaled 7502 making a grand total of over half a million titles. The total number of acces-

sions to the National Museum received during the year was 526,845. During the year the Museum began the collection of a series of war relics. One of the most instructive features of this collection was an exhibit showing the development of the airplane, from the original Langley models to the first government-owned aeroplane of the world, purchased by the United States from the Wright Brothers in 1909. The Bureau of American Ethnology distributed 11,483 volumes, an increase of 4139 over the number sent out last year. The library accessioned 380 new books and 210 pamphlets. The total number of packages handled by the International Exchange Service during the year was 270,860, an increase over the number for the previous year of 3914. The total number of animals in the National Zoological Park at the close of the fiscal year was 1336, including 528 mammals, 71 reptiles, and 737 birds. Visitors to the park during the year numbered 1,964,715—a daily average of 5383.

SMUTS, General JAN. South African representative at the Paris Peace Conference. He was born in South Africa, educated in Cape Province, and served with distinction in the Boer War, in spite of his youth. Among his exploits was the Boer raid into Cape Colony, and when peace was made in 1902 he stood along with General Botha in popular estimation as one of the great leaders of the Dutch. During the period of reconstruction and union he cooperated loyally with General Botha. When war broke out he took command of the columns invading German South West Africa and carried the operations to complete success. In 1916 he was in command of the British against the enemy in German East Africa, and destroyed the German power in that region. After that he went to England to represent South Africa at the Imperial War Cabinet of 1917. He was one of the leading figures before and during the Peace Conference as a representative of liberal ideas, and to him were attributed the main features of the original plan for a League of Nations. The ideals for which he contended were but imperfectly represented in the final document which, however, he supported as the best result that could be obtained. He stood for a policy of conciliation after the war, and for a definite break with the old system of national ambitions operating through a balance of power.

SOCIAL ECONOMICS. The interests of economists has been growing away gradually from the viewpoint of the classical economists who are primarily interested in increased production, and the tendency now is to lay stress upon the welfare of workers and the improvement of social and industrial conditions, or upon a more equitable distribution of the product of social industry. While the classical economists centred their attention not upon the health, intelligence, and happiness of the working classes but rather upon the conditions of maximum profit making from the employer's standpoint, the social economists declare that life is not for work, but rather for enjoyment and the development of personality. This forced attention to problems of health, education, and citizenship of the working classes. The movement has been accompanied by extensive activity for the protection of women and children in industry, for

the reduction of poverty and crime, for the improvement of public health, for better housing and city planning, and the cultivation of the ideal of the normal life for all members of society. In this connection the reader should consult the following: CHILD LABOR; LABOR; LABOR LEGISLATION; MINIMUM WAGE; OCCUPATIONAL DISEASES; OLD AGE PENSIONS; SOCIAL INSURANCE; POLITICAL ECONOMY; SOCIOLOGY; WOMEN IN INDUSTRY; and WORKMEN'S COMPENSATION.

SOCIAL HYGIENE. While social hygiene properly comprises all measures that tend to the preservation of the family as a social unit, most of the work done under this name has in practice been limited to an attack on the venereal diseases and prostitution. In these directions the year 1919 showed remarkable progress in the United States largely as a result of the impetus gained during the war and the breaking down of the taboos which have prevented general discussion of the subject in the past. The venereal diseases have been the focus of principal interest in social hygiene because of the importance of the problem they represent. They are being attacked all over the country by what is known as the American Plan which recognizes that they are spread mainly through prostitution and can be brought under control by an attack simultaneously from four different directions—law enforcement, medical measures, education and recreation.

LAW ENFORCEMENT. The disappearance of red light districts or segregated areas of prostitution in cities has continued until such officially recognized prostitution is practically extinct in our country. Very few cases of communities in which prostitution is openly tolerated can be found to-day in the United States. Following the abolition of the red light districts, almost every State has carried on a vigorous war against commercial prostitution, both because of its active part in the dissemination of venereal disease and because it is recognized as an evil in itself. The interest in this from the public health side may be measured by the fact that 38 States applied during 1919 to the U. S. Interdepartmental Social Hygiene Board for the establishment of bureaus for protective social measures to combat prostitution. The most important development of the year in law enforcement has been the growing tendency to equality in the treatment of the two sexes. Eleven States strengthened their laws in 1919 to make this possible. Whereas formerly prostitutes alone were apprehended and their patrons allowed to go free, it is now being generally recognized that such a policy is as futile as it is unjust. The following States now have fornication laws which make a single act of sexual intercourse, outside of marriage, illegal for a person of either sex: Connecticut, Florida, Hawaii, Kentucky, Maine, Massachusetts, Minnesota, New Hampshire, New Jersey, North Carolina, North Dakota, Pennsylvania, Rhode Island, Utah, Virginia, West Virginia, and Wis-

consin. The League of Women Voters and many other organizations have made sex equality part of their platform and are determined to bring about equal application of justice as between prostitutes and their patrons. There has been a steady increase in recognition of the need for protective and reformatory work to prevent the creation of new prostitutes. Laws were enacted providing for the establishment of reformatories and women prison farms and the commitment thereto under the indeterminate sentences in the States of Arkansas, California, Illinois and Washington. Injunction and Abatement laws which permit premises used for prostitution to be closed by civil procedure were enacted in 1919 by Alabama, Delaware, New Hampshire, and North Carolina. A model law for the control of venereal diseases prepared by the Surgeons General of the army, navy, and Public Health Service was passed in 1919, in the following States: California, Colorado, Connecticut, Delaware, Florida, Illinois, Iowa, Michigan, Montana, Nebraska, New Hampshire, New York, North Carolina, North Dakota, Oklahoma, Oregon, South Carolina, South Dakota, Utah, Vermont, Washington, and Wisconsin. The validity of this type of law which provides for the quarantine of cases of venereal diseases was upheld by the highest courts of Nebraska, Kansas, Texas and Washington, and by inferior courts in Arkansas, Kentucky, and Ohio. The important work of the law enforcement carried out by the army and navy for their own protection during the war was largely brought to a close during the year, but both branches of the service established permanent bureaus to carry on the work of combating the venereal diseases.

MEDICAL MEASURES. Under the Chamberlain-Kahn Act passed by Congress in 1918, \$4,100,000 were made available for combating venereal diseases during a period of two years, and a special board composed of representatives of the War, Navy and Treasury Departments and called the U. S. Interdepartmental Social Hygiene Board was created to disburse this money. Allotments were made to the individual States on the condition that they duplicate the allotment from their own funds. In 1919 the only States failing to take advantage of this offer were Pennsylvania and Nevada, together with the District of Columbia. Venereal Diseases were made reportable in practically every State and the results of this have universally been found advantageous. War has been continued on the quack doctor and on self-medication by means of patent medicines. The number of public clinics for venereal diseases has now reached nearly 500. Most hospitals continue to refuse admission to patients suffering from venereal diseases. Many members of the medical profession received intensive education through their work in the army where more than a quarter of a million cases of venereal diseases were treated; and partly as a result of this medical journals have been full of articles on the diagnosis, treatment and control of venereal diseases during the past year. Occasional experiments have been made in medical prophylaxis through the establishment of disinfectant stations for civilians and through the use of prophylactic packets for self-medication. These experiments have so far been either inconclusive or unsuccessful and dependence for controlling venereal diseases is still

placed on the repression of prostitution and prompt long continued treatment of persons infected. In the medical field, the activities of State boards of health have been the outstanding feature in social hygiene during the year, and it appears that the venereal diseases are now an integral part of the programme of practically every health department.

EDUCATION. The State boards of health have carried on an immense amount of educational work which has been reinforced by the U. S. Public Health Service, the American Social Hygiene Association, and many other voluntary organizations. Funds were provided by the U. S. Interdepartmental Social Hygiene Board to permit the establishment of reinforcement of departments of hygiene in more than 30 normal schools and State universities in which sex hygiene is to be taught in relation to other branches of the subject. A million employees in 60,000 industrial plants have been reached by a special industrial programme, while many boys have been shown a "Keeping Fit" exhibit prepared by the U. S. Public Health Service and circulated by the State boards of health. Motion pictures, newspaper advertising, sermons, lectures, and other means of publicity have been widely used. In addition, about 5,000,000 men received detailed information about social hygiene through the army and navy. Few attempts have been made to teach hygiene in the schools, the general opinion being that it is the duty of parents to give such information.

RECREATION. The need of wholesome recreation as a means of prophylaxis against the abuses of sex has won general recognition, and the activities of social service organizations in this field have been invaluable.*

ABROAD. Both Great Britain and Canada established ministries of public health during the past year and created bureaus in them for combating venereal diseases. The programme they are following is in general similar to that of the United States. In France there has been considerable agitation, but it has not yet crystallized into any new action. Japan has begun efforts to limit the number of prostitutes. An association headed by Count Okuma was organized to work for social hygiene. The new republic of Poland established a strong bureau of social hygiene and began educational and medical work, as did Czecho-Slovakia and Hungary. In Australia social hygiene was made a part of the "Strength of Empire" movement.

SOCIAL INSURANCE. The theory of social insurance has been more and more widely accepted since it was originally inaugurated in Germany in the year 1881. Under social insurance, provision is made to distribute economically among many, the losses resulting from the hazards of modern industry, which would otherwise fall crushingly upon a very few. At the present time many forms of social insurance are established in the industrial countries of the world: workmen's compensation, old-age pensions, health (or sickness) insurance, including maternity insurance, unemployment insurance, widows' and orphans' insurance (in the United States known as mothers' pensions)—all of these have been in operation long enough so that their

effectiveness may be appraised. The first two are treated under separate headings in this volume; the others will be discussed in the present article:—

HEALTH INSURANCE. Certain diseases can be traced as resulting directly from the conditions of work existing in various industries; these are known as occupational diseases (q.v.), and in many countries such diseases are taken care of under the workmen's compensation laws (q.v.). However most sickness cannot be clearly and directly traced to an industry, and yet the costs to society are the same. Accordingly, health insurance has been widely adopted in order that the risk may be equitably distributed. Two forms have been established—compulsory health insurance, and voluntary health insurance with a state subsidy. The first system exists in Germany, Austria, Hungary, Luxemburg, Norway, Serbia, Great Britain, Roumania, Russia, the Netherlands, and Sweden; it is compulsory also in Italy for railroad workers, and in France for miners and seamen. The system of voluntary health insurance supplemented by state subsidized insurance is found in France, Switzerland, Belgium, Denmark, New Zealand, and Sweden. In practice it tends toward the obligatory form: in France, Italy, and Denmark it is required in certain occupations, and Sweden and certain cantons of Switzerland have recently placed obligatory systems upon their statute books. The only countries of importance that cling to entirely voluntary health insurance without government subsidy are Turkey, Bulgaria, Greece, Albania, Montenegro, Spain, Portugal, and the United States.

During the past few years there has been a growing interest in the United States in the project of health insurance. Reports of the draft boards showed that over one-third of the young men of the country were physically unfit for military service; it has been pointed out that sickness causes seven times as much appeal to charity as industrial accidents; that approximately one-third of those too ill to work receive no medical care; that every year 15,000 mothers die from causes connected with childbirth, and that 250,000 infants succumb during the first year of their lives; that the degenerative diseases are everywhere tending to increase rather than diminish.

All of these facts have forcibly pointed to the need for action, and many social scientists and social workers have suggested a system of workmen's health insurance as the most logical means of attempting a solution. A number of States have appointed official investigating committees to look into the question, but unfortunately nothing has as yet crystallized into actual legislation. The past year has witnessed unusual interest in certain quarters. A bill passed the New York State Senate with the full support of the State federation of labor and scores of civic organizations, which sought to provide for sick wage-earners and their dependents full medical attention for 26 weeks in any year, and special maternity care for insured women and the wives of insured men. Cash benefit, in order not to interfere with trade union and fraternal benefit funds, was set at 66 $\frac{2}{3}$ per cent of wages, but in no case more than \$8 per week. A burial benefit of \$100 was included. The expense of these benefits was to be met by equal contributions from employers and workmen; administra-

tion was in the hands of local mutual funds democratically managed by representatives of both sides, under supervision of the State industrial commission. After passing the Senate, the health insurance measure, together with legislation providing for a minimum wage and an eight-hour day for women and children in industry, was killed in the Assembly by the action of Speaker Sweet and the Rules Committee, who blocked further progress and forced an adjournment. This action was denounced most emphatically by the entire metropolitan press, and supporters of the bills declared that next year they would be revived and public opinion would be invoked to secure their passage.

During 1919, five State commissions which had been appointed to investigate health insurance rendered their reports. The Ohio commission recommended the adoption of a system of compulsory health insurance in that State providing for cash benefits, medical care, opportunity for physical restoration, and vocational reeducation to guard the workers from (1) loss of wages, (2) cost of medical care, and (3) loss of earning power. The Wisconsin Special Committee on Social Insurance rendered its report in January, in which it found that "a careful study of the subject, in the light of economic and social conditions in Wisconsin, has led the committee to the conclusion that the acceptance of compulsory health insurance is neither practicable nor feasible at this time." This decision was based upon the ground that there seemed to be no urgent demand for such legislation in the State. The committee recommended that existing agencies for the prevention of sickness be extended and improved, and that occupational diseases be included in the workmen's compensation act. A minority report recommended the adoption of compulsory health insurance. The Health Insurance Commission of Pennsylvania also reported in January. The commission was handicapped by the fact that only \$5000 had been appropriated for its work, and it contented itself with making a general study of the problem and recommending further investigation. The Legislature provided for the printing and distribution of this report. The Commission of Public Welfare of Connecticut was appointed in 1917 to investigate and report on hours of labor and minimum wage, health insurance, mothers' pensions, and occupational disease. Its recent report declared that Connecticut should not be the first to experiment with health insurance. It recommended that occupational diseases should be included under the compensation law, and favored the establishment of mothers' pensions. In the majority report of the Illinois Commission also, it was stated that the findings "do not justify the recommendation of compulsory health insurance," although a minority report was heartily in favor of it.

Maternity insurance has never been adopted in the United States. This insurance is designed to aid working women in meeting the unusual costs and loss of wages attendant on childbirth, and has been very generally developed in all countries having health insurance, as an integral part of their social insurance systems.

UNEMPLOYMENT INSURANCE. Until recently, destitution due to unemployment was never considered as a matter that concerned society as a whole, and the costs of which should be dis-

tributed through a system of insurance. But unemployment insurance was first originated by labor unions, and in 1901 the city of Ghent, Belgium, in order to relieve the pressure of slack times, offered subsidies to unions which paid unemployment benefits. This plan rapidly spread to other countries. Great Britain in 1911 adopted a nation-wide system of compulsory unemployment insurance which at that time embraced some 2,500,000 workers and has since been greatly increased in its scope. During the period of demobilization it is reported that England was paying out \$5,000,000 every week in unemployment benefits. The system is supported by contributions exacted from both employers and employees and the government also contributes to the fund from which the worker, if unemployed, may receive a small weekly cash benefit for 15 weeks in any year. Definite incentive to the employer to reduce his labor turnover, and to the worker to hold his job is held out by offering both of them refunds for steady work.

Belgium instituted a system of unemployment benefits during the year, effective May 4th. The benefits are to be paid in cash, the sum to be determined in each case by the degree of need; i.e. the sum paid to any family is to be determined by the difference between its needs and its resources, within the limits of a subsistence scale worked out by the government. Any supplementary assistance must come from the local authorities, and must be in the form of food or clothing. 75 per cent of the cost of the project is borne by the government and 25 per cent by local institutions,—viz., the commune, province, charitable institutions, and private donations.

Italy, also, adopted a scheme of unemployment insurance in 1919. According to *Tribuna*, June 10th, a decree has been issued by the Italian government providing that benefits be paid varying in amount according to the age and sex of the unemployed, and to the population of the district of residence. Such grants are not to be started until the eighth day after the last wages were received, and only persons registered at their local employment bureaus are entitled to benefits.

WIDOWS' AND ORPHANS' INSURANCE OR MOTHERS' PENSIONS. The expense of voluntary insurance in private companies has led in certain countries to government intervention in providing for workingmen's families whose breadwinner has died. Survivors' insurance, of this type exists in Germany, France, Holland, and Austria. Pensions are provided for both widows and orphans. In the United States at the present time, 39 States make some public provision for mothers left with young children to support; similar provision is made in Canada, Denmark, and New Zealand. The statutes providing for these mothers' pensions vary greatly; some provide only for widows, and others for women who are divorced and deserted, or whose husbands are in prisons or asylums, or otherwise incapacitated; age-limits vary also—children up to 13 years of age being provided for by some, and up to 17 years of age by others; the amount of the pensions vary from \$2 per week for each child, to \$25 per month for one child, and \$15 for each additional child. See **OCCUPATIONAL DISEASES.**

SOCIALISM. THE INTERNATIONAL. During the war while the International Socialist Bureau

existed, the International as an organization was virtually suspended. Efforts were made to revive it in 1918 by the celebrated meeting at Stockholm, which was the subject of endless discussion in the press. It had been proposed by the members of the Dutch and Scandinavian Socialist parties but, in spite of the vigorous efforts to overcome the difficulties occasioned by the national spirit, the project failed. The Socialists of the Allies were not ready to meet in any congress at which German representatives would have a voice. In September, 1918, there was an Inter-Allied Labor and Socialist Conference in London and arrangements were made for holding an international conference while the Peace Conference was in session. This conference which was called at Berne in February, 1919, is described in the following paragraph. The Bolsheviks of Russia refused to recognize this International and they set up one of their own at Moscow, which was vaguely called throughout the year by certain parties, the "Third" International, although according to a large portion of the party it had no right to such a name (see *Moscow Conference*, below). The moderate parties including the British Labor party favored the second International, that is to say, the organization resulting from the Berne conference but would have nothing to do with the Moscow organization. The second International organized on the basis of the Berne arrangement met at Amsterdam in April. An executive committee was formed consisting of M. Branting, Swedish Socialist leader, Mr. Arthur Henderson, Secretary of the British Labor party, and M. Camille Huysmans, Secretary of the International Bureau.

BERNE CONFERENCE. On Feb. 2-9, 1919, the International Socialist Conference was held at Berne having been summoned by the International Socialist Bureau. The President was H. Branting of Sweden and among the members participating in discussions were the following: Kautsky, Haase, Eisner, Müller, Janson, and Wells of Germany; Adler, Austria; Macdonald, Bunting, Ethel Snowden, J. H. Thomas, MacGurk, Shirkie, and Henderson, Great Britain; Lunget, Renaudel, Milhaud, Cachin, Thomas, Mistral, Loriot, Verfeuil, France; Huysmans, Belgium; Troelstra, Holland; O'Brien, Ireland; Kinf, Hungary; Justo and de Tomasso, Argentina; Locker, Palestine. Delegates were also present from Alsace-Lorraine, Czechoslovakia, Denmark, Sweden, Finland, Lettland (Latvia), Georgia, Esthonia, Russia, Poland, Greece, Bulgaria, Armenia, Spain, and Canada. Twenty-six countries were represented in it, by 94 delegates, including Majority and Minority Socialists from Germany, and Constitutional Socialists from Russia. Countries that refused to send delegates were Norway, Switzerland, Belgium, Italy, Rumania, and Serbia. In other countries the Communist groups refused to send delegates. The representatives from Australia and Ukraine arrived too late for the meeting and the delegates from the American Socialist party were unable to arrive in time. The principal points discussed or decided at the Conference were as follows: First, in regard to the responsibility for the war, it was decided to leave this question to the next International Conference. Second, The League of Nations; resolutions were passed demanding that the League should endeavor to prevent future wars; that it should abolish all

standing armies and bring about disarmament; create an International Court; enforce decision by economic weapons; protect small nations; provide for free trade; enforce the International Labor Charter. Third, Self-determination of all nationalities was advocated and annexation and economic and political spheres of influence were condemned. Fourth, there was a lively discussion of the issues raised by the Russian revolution. A resolution was adopted providing for the dispatch of a mission to Russia and leaving the subject of Bolshevism over to the next conference. The Conference decided in respect to this matter that socialization consisted in the methodical development of economic life under democratic control and that the arbitrary taking over of a few undertakings by small groups of men was not Socialism. It condemned a dictatorship of any group that had no chance of gaining the support of the majority of the people. Other resolutions dealt with the return of prisoners of war and with provisions for continuing the work of the Conference.

LUCERNE CONFERENCE. After the Berne Conference the committee for the reconstitution of the International held a session at Lucerne, August 2d-9th and received the reports of the committees which had been chosen at the Berne Conference. At these meetings the points of view of the Berne delegates were again expressed. Resolutions were passed protesting against the reactionary movement in Hungary, the pogroms in Poland, the massacres in Armenia, the Allied intervention in Russia, the continuance of the blockade against the Soviet government, and the Allied support of the counter-revolutionary forces in Russia. The Conference decided that a meeting of the International Labor and Socialist Conference should be held at Geneva, Feb. 2, 1920, and it drew up a programme that should come before it for discussion. It was decided also that there should be a meeting of the parliamentary representatives of the Labor and Socialist parties in order to create a permanent committee of these parties and arrange a plan of joint action for the parliamentary groups of the different countries.

MOSCOW CONFERENCE. An International Communist Conference was held at Moscow, March 2d-6th, consisting of 32 delegates and representing the communistic radical Socialist groups in 12 different countries. It was decided that a Third International should immediately be formed. The work of the Zimmerwald Conference was completed. The subjects discussed included the programme of the Communist International; the dictatorship of the proletariat; the attitude toward other Socialist parties and toward the Berne Conference; the location of the Bureau of the new International Conference; the present European situation and the policy of the Allies. The manifesto of this Communist Conference declared that its members, representing the Communist revolutionary proletariat in the different countries were carrying out the programme that had been drawn up by Karl Marx, 72 years before. It attacked the German Socialists who had supported their government during the war. It accused Great Britain, the United States, France, and Italy of responsibility for the war and of selfish motives; characterized the war as an imperialistic catastrophe; declared that finance had militarized the state, and that the ruling classes had steadily betrayed the workingmen. It maintained that henceforth there was

no possibility of a return to free competition, that to bring to an end the prevailing crisis the only available means was the establishment of a proletarian dictatorship. It considered the national state as too restricted a form for the continued development of productive forces. It said that the power of capitalism had never been so destructively shown as during the war especially in regard to the colonies, for the populations of the colonies had fought on a scale never before known and they were finding that they were to remain in the future the slaves of England and France. Other features of the manifesto exhibited a similar spirit. In concluding it declared that in all countries where the masses had been awakened and had begun to think, workmen, soldiers, peasant councils were constantly being formed, and that international union was the first step in organizing the Socialist movement, and it ended with the following appeal: "Join us, proletarians, in every country—flock to the banner of the workmen's councils, and fight the revolutionary fight for the power and dictatorship of the proletariat."

PAN-AMERICAN CONGRESS An important congress was held April 26th to May 1st consisting of Socialist Labor delegates at Buenos Aires, Argentina. It represented Socialist and Labor organizations of Argentina, Chile, Bolivia, Peru, Uruguay, and Paraguay. Among the resolutions that it adopted were a protest against the violation of the right of peoples to self-determination; an expression of good-will toward strikers in Buenos Aires and on the farms; and the commendation of women in their struggle for economic, social, and political freedom. It also demanded a 44-hour week; the prohibition of child labor; the minimum wage; the nationalization of the land; compulsory education to the age of 16, etc.

BELGIUM. In the elections of November 16th, the Belgian Socialists elected 67 deputies, as against 40 in the former Chamber, and thus became one of the strongest groups in Parliament. (See *BELGIUM, History*.) This success was attributed by their leaders to several causes. In the first place universal suffrage was for the first time equally applied on the principle of one man, one vote, the old system of plural voting being discarded. Then in Belgium the working-classes and peasants formed a solid *bloc* without regard to racial or other differences. Walloon working men and Flemish peasants were united as Socialists, and there was no division in the labor party. Again, the programme was moderate and practical, including development of social insurance, workmen's housing plans, state ownership of unexploited mines, development of the sanitary service, etc. Finally, the Belgian Socialists were free from any suspicion of pro-Germanism or anti-nationalism. They had refused to come to any understanding with the German Socialists. The well-known Socialist leader Emile Vandervelde, referring to this point in an interview, remarked: "We chiefs of the party were inclined under certain conditions and in certain respects to favor a renewal of the relations with the International, and in consequence with German Socialism; but the mass of the workmen, who trusted us, opposed it vehemently and obstinately; and we had to bow to their will. What better proof could there be of the patriotic and national spirit of the Belgian working class?" He went on to say that the Belgian

Socialist journals at the close of the year were reprinting the revelations by the German Socialist Kautzky of the Kaiser's comments on dispatches during the critical days of July, 1914, and accompanying them with bitter censure of the German Socialists for complicity with German aggression. He cited the following passage from the Brussels *Peuple*, an organ of the Socialists: "Our readers must not be the victims of the German majority Socialists' trickery. To excuse their own treason to the principles of the International the German majority Socialists wish to propagate throughout the world this silly and grossly demagogic legend which consists in saying: 'All that is the fault of capitalism.'"
